TO THE INSTRUCTOR

As indicated in its preface, *Vector Mechanics for Engineers: Statics* is designed for the first course in statics offered in the sophomore year of college. New concepts have, therefore, been presented in simple terms and every step has been explained in detail. However, because of the large number of optional sections which have been included and the maturity of approach which has been achieved, this text can also be used to teach a course which will challenge the more advanced student.

The text has been divided into units, each corresponding to a well-defined topic and consisting of one or several theory sections, one or several Sample Problems, a section entitled *Solving Problems on Your Own*, and a large number of problems to be assigned. To assist instructors in making up a schedule of assignments that will best fit their classes, the various topics covered in the text have been listed in Table I and a suggested number of periods to be spent on each topic has been indicated. Both a minimum and a maximum number of periods have been suggested, and the topics which form the standard basic course in statics have been separated from those which are optional. The total number of periods required to teach the basic material varies from 26 to 39, while covering the entire text would require from 41 to 65 periods. If allowance is made for the time spent for review and exams, it is seen that this text is equally suitable for teaching a basic statics course to students with limited preparation (since this can be done in 39 periods or less) and for teaching a more complete statics course to advanced students (since 41 periods or more are necessary to cover the entire text). In most instances, of course, the instructor will want to include some, but not all, of the additional material presented in the text. In addition, it is noted that the text is suitable for teaching an abridged course in statics which can be used as an introduction to the study of dynamics (see Table I).

The problems have been grouped according to the portions of material they illustrate and have been arranged in order of increasing difficulty, with problems requiring special attention indicated by asterisks. We note that, in most cases, problems have been arranged in groups of six or more, all problems of the same group being closely related. This means that instructors will easily find additional problems to amplify a particular point which they may have brought up in discussing a problem assigned for homework. Accessible through Connect are problem sets for each chapter that are designed to be solved with computational software. Solutions for these problems, including analyses of the problems and problem solutions and output for the most widely used computational programs, are also available through Connect.

To assist in the preparation of homework assignments, Table II provides a brief description of all groups of problems and a classification of the problems in each group according to the units used. It should also be noted that the answers to all problems are given at the end of the text, except for those with a number in italic. Because of the large number of problems available in both systems of units, the instructor has the choice of assigning problems using SI units and problems using U.S. customary units in whatever proportion is found to be most desirable for a given class. To illustrate this point, sample lesson schedules are shown in Tables III, IV, and V, together with various alternative lists of assigned homework problems. Half of the problems in each of the six lists suggested in Table III and Table V are stated in SI units and half in U.S. customary units. On the other hand, 75% of the problems in the four lists suggested in Table IV are stated in SI units and 25% in U.S. customary units.

Since the approach used in this text differs in a number of respects from the approach used in other books, instructors will be well advised to read the preface to *Vector Mechanics for Engineers,* in which the authors have outlined their general philosophy. In addition, instructors will find in the following pages a description, chapter by chapter, of the more significant features of this text. It is hoped that this material will help instructors in organizing their courses to best fit the needs of their students. Acknowledgement and thanks are given to Amy Mazurek for her careful preparation of the solutions contained in this manual.

David Mazurek

DESCRIPTION OF THE MATERIAL CONTAINED IN *VECTOR MECHANICS FOR ENGINEERS: STATICS,* Eleventh Edition

Chapter 1
Introduction

The material in this chapter can be used as a first assignment or for later reference. The six fundamental principles listed in Sec. 1.2 are introduced separately and are discussed at greater length in the following chapters. Section 1.3 deals with the two systems of units used in the text. The SI metric units are discussed first. The base units are defined and the use of multiples and submultiples is explained. The various SI prefixes are presented in Table 1.1, while the principal SI units used in statics and dynamics are listed in Table 1.2. In the second part of Sec. 1.3, the base U.S. customary units used in mechanics are defined, and in Sec. l.4, it is shown how numerical data stated in U.S. customary units can be converted into SI units, and vice versa. The SI equivalents of the principal U.S. customary units used in statics and dynamics are listed in Table 1.3.

The instructor’s attention is called to the fact that the various rules relating to the use of SI units have been observed throughout the text. For instance, multiples and submultiples (such as kN and mm) are used whenever possible to avoid writing more than four digits to the left of the decimal point or zeros to the right of the decimal point. When 5-digit or larger numbers involving SI units are used, spaces rather than commas are utilized to separate digits into groups of three (for example, 20 000 km). Also, prefixes are never used in the denominator of derived units; for example, the constant of a spring which stretches 20 mm under a load of 100 N is expressed as 5 kN/m, not as 5 N/mm.

In order to achieve as much uniformity as possible between results expressed respectively in SI and U.S. customary units, a center point, rather than a hyphen, has been used to combine the symbols representing U.S. customary units (for example, 10 lb·ft); furthermore, the unit of time has been represented by the symbol s, rather than sec, whether SI or U.S. customary units are involved (for example, 5 s, 50 ft/s, 15 m/s).

However, the traditional use of commas to separate digits into groups of three has been maintained for 5-digit and larger numbers involving U.S. customary units.

Chapter 2
Statics of Particles

This is the first of two chapters dealing with the fundamental properties of force systems. A simple, intuitive classification of forces has been used: forces acting on a particle (Chap. 2) and forces acting on a rigid body (Chap. 3).

Chapter 2 begins with the parallelogram law of addition of forces and with the introduction of the fundamental properties of vectors. In the text, forces and other vector quantities are always shown in bold-face type. Thus, a force **F** (boldface), which is a vector quantity, is clearly distinguished from the magnitude *F* (italic) of the force, which is a scalar quantity. On the blackboard and in handwritten work, where bold-face lettering is not practical, vector quantities can be indicated by underlining. Both the magnitude and the direction of a vector quantity must be given to completely define that quantity. Thus, a force **F** of magnitude $F = 280$ lb, directed upward to the right at an angle of 25° with the horizontal, is indicated as $\mathbf{F} = 280$ lb ∠ 25° when printed or as $\underline{F} = 280$ lb ∠ 25° when handwritten. Unit vectors **i** and **j** are introduced in Sec. 2.7, where the rectangular components of forces are considered.

In the early sections of Chap. 2 the following basic topics are presented: the equilibrium of a particle, Newton's first law, and the concept of the free-body diagram. These first sections provide a review of the methods of plane trigonometry and familiarize the students with the proper use of a calculator. A general procedure for the solution of problems involving concurrent forces is given: when a problem involves only three forces, the use of a force triangle and a trigonometric solution is preferred; when a problem involves more than three forces, the forces should be resolved into rectangular components and the equations $\Sigma F_x = 0$, $\Sigma F_y = 0$ should be used.

The second part of Chap. 2 deals with forces in space and with the equilibrium of particles in space. Unit vectors are used and forces are expressed in the form $\mathbf{F} = F_x\mathbf{i} + F_y\mathbf{j} + F_z\mathbf{k} = F\boldsymbol{\lambda}$, where **i**, **j**, and **k** are the unit vectors directed respectively along the *x*, *y*, and *z* axes, and $\boldsymbol{\lambda}$ is the unit vector directed along the line of action of **F**.

Note that since this chapter deals only with particles or bodies which can be considered as particles, problems involving compression members have been postponed with only a few exceptions until Chap. 4, where students will learn to handle rigid-body problems in a uniform fashion and will not be tempted to erroneously assume that forces are concurrent or that reactions are directed along members.

It should be observed that when SI units are used a body is generally specified by its mass expressed in kilograms. The weight of the body, however, should be expressed in newtons. Therefore, in many equilibrium problems involving SI units, an additional calculation is required before a free-body diagram can be drawn (compare the example in Sec. 2.3C and Sample Probs. 2.5 and 2.9). This apparent disadvantage of the SI system of units, when compared to the U.S. customary units, will be offset in dynamics, where the mass of a body expressed in kilograms can be entered directly into the equation $\mathbf{F} = m\mathbf{a}$, whereas with U.S. customary units the mass of the body must first be determined in lb·s^2/ft (or slugs) from its weight in pounds.

Chapter 3
Rigid Bodies:
Equivalent Systems of Forces

The principle of transmissibility is presented as the basic assumption of the statics of rigid bodies. However, it is pointed out that this principle can be derived from Newton's three laws of motion (see Sec. 16.1D of *Dynamics*). The vector product is then introduced and used to define the moment of a force about a point. The convenience of using the determinant form (Eqs. 3.19 and 3.21) to express the moment of a force about a point should be noted. The scalar product and the mixed triple product are introduced and used to define the moment of a force about an axis. Again, the convenience of using the determinant form (Eqs. 3.41 and 3.44) should be noted. The amount of time which should be assigned to this part of the chapter will depend on the extent to which vector algebra has been considered and used in prerequisite mathematics and physics courses. It is felt that, even with no previous knowledge of vector algebra, a maximum of four periods is adequate (see Table I).

In Secs. 3.12 through 3.15 couples are introduced, and it is proved that couples are equivalent if they have the same moment. While this fundamental property of couples is often taken for granted, the authors believe that its rigorous and logical proof is necessary if rigor and logic are to be demanded of the students in the solution of their mechanics problems.

In Section 3.3, the concept of equivalent systems of forces is carefully presented. This concept is made more intuitive through the extensive use of *free-body-diagram equations* (see Figs. 3.34 through 3.41). Note that the *moment* of a force is either not shown or is represented by a green vector (Figs. 3.10 and 3.22). A red vector with the symbol is used only to represent a *couple*, that is, an actual system consisting of two forces (Figs. 3.33 through 3.41). Section 3.4D is optional; it introduces the concept of a *wrench* and shows how the most general system of forces in space can be reduced to this combination of a force and a couple with the same line of action.

Since one of the purposes of Chap. 3 is to familiarize students with the fundamental operations of vector algebra, students should be encouraged to solve all problems in this chapter (two-dimensional as well as three-dimensional) using the methods of vector algebra. However, many students may be expected to develop solutions of their own, particularly in the case of two-dimensional problems, based on the direct computation of the moment of a force about a given point as the product of the magnitude of the force and the perpendicular distance to the point considered. Such alternative solutions may occasionally be indicated by the instructor (as in Sample Prob. 3.9), who may then wish to compare the solutions of the sample problems of this chapter with the solutions of the same sample problems given in Chaps. 3 and 4 of the parallel text *Mechanics for*

Engineers. It should be pointed out that in later chapters the use of vector products will generally be reserved for the solution of three-dimensional problems.

Chapter 4
Equilibrium of Rigid Bodies

In the first part of this chapter, problems involving the equilibrium of rigid bodies in two dimensions are considered and solved using ordinary algebra, while problems involving three dimensions and requiring the full use of vector algebra are discussed in the second part of the chapter. Particular emphasis is placed on the correct drawing and use of free-body diagrams and on the types of reactions produced by various supports and connections (see Figs. 4.1 and 4.10). Note that a distinction is made between hinges used in pairs and hinges used alone; in the first case the reactions consist only of force components, while in the second case the reactions may, if necessary, include couples.

For a rigid body in two dimensions, it is shown (Sec. 4.1B) that no more than three independent equations can be written for a given free body, so that a problem involving the equilibrium of a single rigid body can be solved for no more than three unknowns. It is also shown that it is possible to choose equilibrium equations containing only one unknown to avoid the necessity of solving simultaneous equations. Section 4.1C introduces the concepts of statical indeterminacy and partial constraints. Section 4.2 is devoted to the equilibrium of two- and three-force bodies; it is shown how these concepts can be used to simplify the solution of certain problems. This topic is presented only after the general case of equilibrium of a rigid body to lessen the possibility of students misusing this particular method of solution.

The equilibrium of a rigid body in three dimensions is considered with full emphasis placed on the free-body diagram. While the tool of vector algebra is freely used to simplify the computations involved, vector algebra does not, and indeed cannot, replace the free-body diagram as the focal point of an equilibrium problem. Therefore, the solution of every sample problem in this section begins with a reference to the drawing of a free-body diagram. Emphasis is also placed on the fact that the number of unknowns and the number of equations must be equal if a structure is to be statically determinate and completely constrained.

Chapter 5
Distributed Forces:
Centroids and Centers of Gravity

Chapter 5 starts by defining the center of gravity of a body as the point of application of the resultant of the weights of the various particles forming the body. This definition is then used to establish the concept of the centroid of an area or line. Section 5.1C introduces the concept of the first moment of an area or line, a concept fundamental to the analysis of shearing stresses in beams in a later study of mechanics of materials. All problems assigned for the first period involve only areas and lines made of simple geometric shapes; thus, they can be solved without using calculus.

Section 5.2A explains the use of differential elements in the determination of centroids by integration. The theorems of Pappus-Guldinus are given in Sec. 5.2B. Sections 5.3A and 5.3B are optional; they show how the resultant of a distributed load can be determined by evaluating an area and by locating its centroid. Section 5.4 deals with centers of gravity and centroids of volumes. Here again the determination of the centroids of composite shapes precedes the calculation of centroids by integration.

It should be noted that when SI units are used, a given material is generally characterized by its density (mass per unit volume, expressed in kg/m^3), rather than by its specific weight (weight per unit volume, expressed in N/m^3). The specific weight of the material can then be obtained by multiplying its density by $g = 9.81$ m/s^2 (see footnote, page 234 of the text).

Chapter 6
Analysis of Structures

In this chapter students learn to determine the internal forces exerted on the members of pin-connected structures. The chapter starts with the statement of Newton's third law (action and reaction) and is divided into two parts: (*a*) trusses, that is, structures consisting of two-force members only, (*b*) frames and machines, that is, structures involving multiforce members.

After trusses and simple trusses have been defined in Sec. 6.1A, the method of joints and the method of sections are explained in detail in Sec. 6.1B and Sec. 6.2A, respectively. Since a discussion of Maxwell's diagram is not included in this text, the use of Bow's notation has been avoided, and a uniform notation has been used in presenting the method of joints and the method of sections.

In the method of joints, a free-body diagram should be drawn for each pin. Since all forces are of known direction, their magnitudes, rather than their components, should be used as unknowns. Following the general procedure outlined in Chap. 2, joints involving only three forces are solved using a force triangle, while joints involving more than three forces are solved by summing *x* and *y* components. Sections 6.1C and 6.1D are optional. It is shown in Sec. 6.1C how the analysis of certain trusses can be expedited by recognizing joints under special loading conditions, while in Sec. 6.1D the method of joints is applied to the solution of three-dimensional trusses.

It is pointed out in Sec. 6.1B that forces in a simple truss can be determined by analyzing the truss joint by joint and that joints can always be found that involve only two unknown forces. The method of sections (Sec. 6.2A) should be used (*a*) if only the forces in a few members are desired, or (*b*) if the truss is not a simple truss and if the solution of simultaneous equations is to be avoided (for example, Fink truss). Students should be urged to draw a separate free-body diagram for each section used. The free body obtained should be emphasized by shading and the intersected members should be removed and replaced by the forces they exerted on the free body. It is shown that, through a judicious choice of equilibrium equations, the force in any given member can be obtained in most cases by solving a single equation. Section 6.2B is optional; it deals with the trusses obtained by combining several simple trusses and discusses the statical determinacy of such structures as well as the completeness of their constraints.

Structures involving multiforce members are separated into frames and machines. Frames are designed to support loads, while machines are designed to transmit and modify forces. It is shown that while some frames remain rigid after they have been detached from their supports, others will collapse (Sec. 6.3B). In the latter case, the equations obtained by considering the entire frame as a free body provide necessary but not sufficient conditions for the equilibrium of the frame. It is then necessary to dismember the frame and to consider the equilibrium of its component parts in order to determine the reactions at the external supports. The same procedure is necessary with most machines in order to determine the output force **Q** from the input force **P** or inversely (Sec. 6.4).

Students should be urged to resolve a force of unknown magnitude and direction into two components but to represent a force of known direction by a single unknown, namely its magnitude. While this rule may sometimes result in slightly more complicated arithmetic, it has the advantage of matching the numbers of equations and unknowns and thus makes it possible for students to know at any time during the computations what is known and what is yet to be determined.

Chapter 7
Forces in Beams and Cables

This chapter consists of five groups of sections, all of which are optional. The first three groups deal with forces in beams and the last two groups with forces in cables. Most likely the instructor will not have time to cover the entire chapter and will have to choose between beams and cables.

Section 7.1 defines the internal forces in a member. While these forces are limited to tension or compression in a straight two-force member, they include a shearing force and a bending couple in the case of multiforce members or curved two-force members. Problems in this section do not make use of sign conventions for shear and bending moment and answers should specify which part of the member is used as the free body.

In Section 7.2 the usual sign conventions are introduced and shear and bending-moment diagrams are drawn. All problems in these sections should be solved by drawing the free-body diagrams of the various portions of the beams.

The relations among load, shear, and bending moment are introduced in Sec. 7.3. Problems in this section should be solved by evaluating areas under load and shear curves or by formal integration (as in Probs. 7.85 through 7.88). Some instructors may feel that the special methods used in this section detract from the unity achieved in the rest of the text through the use of the free-body diagram, and they may wish to omit Sec. 7.3. Others will feel that the study of shear and bending-moment diagrams is incomplete without this section, and they will want to include it. The latter view is particularly justified when the course in statics is immediately followed by a course in mechanics of materials.

Section 7.4 is devoted to cables, first with concentrated loads and then with distributed loads. In both cases, the analysis is based on free-body diagrams. The differential equation approach is considered in the last problems of this group (Probs. 7.124 through 7.126). Section 7.5 is devoted to catenaries and requires the use of hyperbolic functions.

Chapter 8
Friction

This chapter not only introduces the general topic of friction but also provides an opportunity for students to consolidate their knowledge of the methods of analysis presented in Chaps. 2, 3, 4, and 6. It is recommended that each course in statics include at least a portion of this chapter.

Section 8.1 is devoted to the presentation of the laws of dry friction and to their application to various problems. The different cases which can be encountered are illustrated by diagrams in Figs. 8.2, 8.3, and 8.4. Particular emphasis is placed on the fact that no relation exists between the friction force and the normal force except when motion is impending or when motion is actually taking place. Following the general procedure outlined in Chap. 2, problems involving only three forces are solved by a force triangle, while problems involving more than three forces are solved by summing x and y components. In the first case the reaction of the surface of contact should be represented by the resultant **R** of the friction force and normal force, while in the second case it should be resolved into its components **F** and **N**.

Special applications of friction are considered in Secs. 8.2 through 8.4. They are divided into the following groups: wedges and screws (Sec. 8.2); axle and disk friction, rolling resistance (Sec. 8.3); belt friction (Sec. 8.4). The sections on axle and disk friction and on rolling resistance are not essential to the understanding of the rest of the text and thus may be omitted.

Chapter 9
Distributed Forces
Moments of Inertia

The purpose of Sec. 9.1A is to give motivation to the study of moments of inertia of areas. Two examples are considered: one deals with the pure bending of a beam and the other with the hydrostatic forces exerted on a submerged circular gate. It is shown in each case that the solution of the problem reduces to the computation of the moment of inertia of an area. The other sections in the first assignment are devoted to the definition and the computation of rectangular moments of inertia, polar moments of inertia, and the corresponding radii of gyration. It is shown how the same differential element can be used to determine the moment of inertia of an area about each of the two coordinate axes.

Section 9.2introduces the parallel-axis theorem and its application to the determination of moments of inertia of composite areas. Particular emphasis is placed on the proper use of the parallel-axis theorem (see Sample Prob. 9.5). Sections 9.3 and 9.4 are optional; they are devoted to products of inertia and to the determination of principal axes of inertia.

Sections 9.5 and 9.6 deal with the moments of inertia of masses. Particular emphasis is placed on the moments of inertia of thin plates (Sec. 9.5C) and on the use of these plates as differential elements in the computation of moments of inertia of symmetrical three-dimensional bodies (Sec. 9.5D). Section 9.6 is optional but should be used whenever the following dynamics course includes the motion of rigid bodies in three dimensions. Sections 9.6A and 9.6B introduce the moment of inertia of a body with respect to an arbitrary axis as well as the concepts of mass products of inertia and principal axes of inertia. Section 9.6C discusses the determination of the principal axes and principal moments of inertia of a body of arbitrary shape.

When solving many of the problems of Chap. 5, information on the specific weight of a material was generally required. This information was readily available in problems stated in U.S. customary units, while it had to be obtained from the density of the material in problems stated in SI units (see the last paragraph of our discussion of Chap. 5). In Chap. 9, when SI units are used, the mass and mass moment of inertia of a given body are respectively obtained in kg and kg·m^2 directly from the dimensions of the body in meters and from its density in kg/m^3. However, if U.S. customary units are used, the density of the body must first be calculated from its specific weight or, alternatively, the weight of the body can be obtained from its dimensions and specific weight and then converted into the corresponding mass expressed in lb·s^2/ft (or slugs). The mass moment of inertia of the body is then obtained in lb·ft·s^2 (or slug·ft^2). Sample Problem 9.12 provides an example of such a computation. Attention is also called to the footnote on page of the 530 regarding the conversion of mass moments of inertia from U.S. customary units to SI units.

Chapter 10
Method of Virtual Work

While this chapter is optional, the instructor should give serious consideration to its inclusion in the basic statics course. Indeed, students who learn the method of virtual work in their first course in mechanics will remember it as a fundamental and natural principle. They may, on the other hand, consider it as an artificial device if its presentation is postponed to a more advanced course.

Section 10.1 is devoted to the derivation of the principle of virtual work and to its direct application to the solution of equilibrium problems. Section 10.2 introduces the concept of potential energy and shows that equilibrium requires that the derivative of the potential energy be zero. Section 10.1D defines the mechanical efficiency of a machine and Sec. 10.2D discusses the stability of equilibrium.

The first groups of problems in each assignment utilize the principle of virtual work as an alternative method for the computation of unknown forces. Subsequent problems call for the determination of positions of equilibrium, while other problems combine the conventional methods of statics with the method of virtual work to determine displacements (Probs. 10.55 through 10.58).

TABLE I: LIST OF THE TOPICS COVERED IN *VECTOR MECHANICS FOR ENGINEERS: STATICS*

		Suggested Number of Periods		
Sections	**Topics**	**Basic Course**	**Additional Topics**	**Abridged Course to be used as an introduction to dynamics**[+]
1.	INTRODUCTION			
1.1–6	This material may be used for the first assignment or for later reference			
2.	STATICS OF PARTICLES			
2.1	Addition and Resolution of Forces	0.5–1		0.5–1
2.2	Rectangular Components	0.5–1		0.5–1
2.3	Equilibrium of a Particle	1		1
2.4	Forces in Space	1		1
2.5	Equilibrium in Space	1		1
3.	RIGID BODIES: EQUIVALENT SYSTEMS OF FORCES			
3.1	Vector Product; Moment of a Force about a Point	1–2		1–2
3.2	Scalar Product; Moment of a Force about an Axis	1–2		1–2
3.3	Couples	1		1
3.4A–4C	Equivalent Systems of Forces	1–1.5		1–1.5
*3.4D	Reduction of a Wrench		0.5–1	
4.	EQUILIBRIUM OF RIGID BODIES			
4.1A–1B	Equilibrium in Two Dimensions	1.5–2		1.5–2
4.1C	Indeterminate Reactions; Partial Constraints	0.5–1		
4.2	Two- and Three-Force Bodies	1		
4.3	Equilibrium in Three Dimensions	2		2
5.	CENTROIDS AND CENTERS OF GRAVITY			
5.1	Centroids and First Moments of Areas and Lines	1–2		
5.2	Centroids by Integration	1–2		
5.3	Beams and Submerged Surfaces		1–1.5	
5.4	Centroids of Volumes	1–2		
6.	ANALYSIS OF STRUCTURES			
6.1A–1B	Trusses by Method of Joints	1–1.5		
*6.1C	Joints under Special Loading Conditions		0.25–0.5	
*6.1D	Space Trusses		0.5–1	
6.2A	Trusses by Method of Sections	1–2		
6.2B	Combined Trusses		0.25–0.5	
6.3	Frames	2–3		1–2
6.4	Machines	1–2		0.5–1.5
7.	INTERNAL FORCES AND MOMENTS			
7.1	Internal Forces in Members		1	
7.2	Shear and Moment Diagrams by FB Diagram		1–2	
7.3	Shear and Moment Diagrams by Integration		1–2	
*7.4	Cables with Concentrated Loads; Parabolic Cable		1–2	
*7.5	Catenary		1	
8.	FRICTION			
8.1	Laws of Friction and Applications	1–2		1–2
8.2	Wedges and Screws	1		
*8.3	Axle and Disk Friction; Rolling Resistance		1–2	
8.4	Belt Friction	1		
9.	MOMENTS OF INERTIA			
9.1	Moments of Inertial of Areas	1		
9.2	Composite Areas	1–2		
*9.3	Products of Inertia; Principal Axes		1–2	
*9.4	Mohr’s Circle		1	
9.5	Moments of Inertia of Masses[#]		1–2	
*9.6	Mass Products of Inertia; Principal Axes and Principal Moments of Inertia		1–2	
10.	METHOD OF VIRTUAL WORK			
10.1A–1C	Principle of Virtual Work		1–2	
10.1D	Mechanical Efficiency		0.5–1	
10.2	Potential Energy; Stability		1–1.5	
	Total Number of Periods	26–39	15–26	14–21

[+] A sample assignment schedule for a course in dynamics including this minimum amount of introductory material in statics is given Table V. It is recommended that a more complete statics course, such as the one outlined in Tables III and IV of this manual, be used in curricula which include the study of mechanics of materials.

[#] Mass moments of inertia have not been included in the basic statics course since this material is often taught in dynamics.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS

Problem Number*		
SI Units	U.S. Units	Problem Description
		CHAPTER 2: STATICS OF PARTICLES
		FORCES IN A PLANE
		Resultant of concurrent forces
2.1, *3*	2.2, 4	graphical method
2.5, 8	2.6, *7*	law of sines
2.9, 10	2.11, *12*	
2.14	2.13	special problems
2.16, *18*	2.15, 17	laws of cosines and sines
2.19, *20*		
		Rectangular components of force
2.*22*, 23	2.21, 24	simple problems
2.*25*, 27	2.26, 28	more advanced problems

2.32, 34	2.31, *33*	Resultant by $\Sigma F_x = 0$, $\Sigma F_y = 0$
2.35, 36	2.37, *38*	
2.39, 40	2.*41*, 42	Select force so that resultant has a given direction
2.*F1*, *F4*	2.*F2*, *F3*	Free Body Practice Problems
		Equilibrium. Free-Body Diagram
2.44, *45*	2.43, 48	equilibrium of 3 forces
2.46, *47*		
2.49, 50	2.51, *52*	equilibrium of 4 forces
2.53, 54	2.55, *56*	
2.57, 58	2.59, *60*	find parameter to satisfy specified conditions
2.61, 62	2.63, *64*	
2.65, *66*	2.67, 68	special problems
2.69, *70*		
		FORCES IN SPACE
		Rectangular components of a force in space
2.71, 72	2.75, *76*	given F, θ, and ϕ, find components and direction angles
2.73, 74	2.77, *78*	
2.*80*, 82	2.81, 82	relations between components and direction angles
2.*83*, 84		
2.85, *86*	2.87, 88	direction of force defined by two points on its line of action
2.89, *90*		
2.91, 92	2.*93*, 94	resultant of two or three forces
2.95, 96	2.97, *98*	
2.*F5*, *F6*	2.*F7*, *F8*	Free Body Practice Problems
		Equilibrium of a particle in space
2.99, *100*	2.103, 104	load applied to three cables, introductory problems
2.101, *102*		

---

* Problems which do not involve any specific system of units have been indicated by underlining their number. Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
2.107, 108	2.*105*, 106	intermediate problems
2.109, 110	2.*111*, 112	
2.115, 116	2.113, *114*	advanced problems
2.117, 118	2.119, *120*	
2.121, *122*	2.123, 124	problems involving cable through ring
2.125, *126*		special problems
2.127, 131	2.128, *129*	Review problems
2.*132*, *134*	2.130, 133	
2.135, 136	2.137, *138*	
2.C1, C3	2.C2	Computer problems
2.C4	2.C5	

CHAPTER 3: RIGID BODIES; EQUIVALENT SYSTEMS OF FORCES

SI Units	U.S. Units	Problem Description
		Moment of a force about a point: Two dimensions
3.1, 2	3.*3*, 6	introductory problems
3.4, 5	3.7, *8*	
3.9, *10*	3.11, 12	direction of a force defined by two points on its line of action
3.13, *14*		
3.15		derivation of a formula
3.17, 18	3.*16*	applications of the vector product
		Moment of a force about a point: Three dimensions
3.*19*	3.20	computing **M** = **r** × **F**, introductory problems
3.*21*, 23	3.22, 25	computing **M** = **r** × **F**, more involved problems
3.*24*, 26		
3.28, 29	3.27, 30	using **M** to find the perpendicular distance from a point to a line
3.32, 33	3.*31*, *34*	
3.35	3.36	Scalar Product
3.37, *38*	3.39, 40	Finding the angle between two lines
3.41, *42*	3.43, 44	
3.45	3.46	Mixed triple product
3.47, 48	3.49, *50*	Moment of a force about the coordinate axes
3.51, 52	3.53, *54*	
3.57, 58	3.55, *56*	Moment of a force about an oblique axis
3.59, 60	3.61, *62*	
	3.63	
*3.*66*, *67	*3.64, *65	Finding the perpendicular distance between two lines
*3.68, *69		
3.70, 71	3.*72*, 73	Couples in two dimensions
3.74		
3.78, 79	3.*75*, 76	Couples in three dimensions
	3.77, 80	

---

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
3._81_, 83	3.82, 84	Replacing a force by an equivalent force-couple system: two dimensions
3._85_, 86		
3.87, _88_	3.89, 91	Replacing a force-couple system by an equivalent force or forces
3.90, _92_		
3.93, 95	3._94_, 97	Replacing a force by an equivalent force-couple system: three dimensions
3.96, 98	3.99, _100_	
3.101, 102	3.104	Equivalent force-couple systems
3._103_		
3._107_	3.105, 106	Finding the resultant of parallel forces: two dimensions
3.110, 111	3.108, _109_	Finding the resultant and its line of action: two dimensions
3.116, 117	3._112_, 113	
3.118	3.114, 115	
3.119, 120	3._121_, 122	Reducing a three-dimensional system of forces to a single force-couple system
3.124, 125	3._123_, 126	
3.127, 128	3.129, 130	Finding the resultant of parallel forces: three dimensions
*3._131_, *_132_		
		Reducing three-dimensional systems of forces or forces and couples to a wrench
*3.133, *_135_	*3.134, *136	axis of wrench is parallel to a coordinate axis or passes through _O_
*3.137		force-couple system parallel to the coordinate axes
*3._139_, 140	*3._138_	general, three-dimensional case
*3.141	*3._142_	special cases where the wrench reduces to a single force
*3.143, *144	*3.145, *146	special, more advanced problems
3.147, 148	3._149_, 150	Review problems
3.151, 153	3._152_, 154	
3.156, _157_	3._155_, 158	
3.C1, C4	3.C2, C3	Computer problems
3.C5	3.C6	

CHAPTER 4: EQUILIBRIUM OF RIGID BODIES

EQUILIBRIUM IN TWO DIMENSIONS

_4.F1, F4_	_4.F2, F3_	Free Body Practice Problems
4.1, 2	4._3_, 4	Parallel forces
4.5, 6	4.7, _8_	
4.9, _10_	4.12, 14	Parallel forces, find range of values of loads to satisfy multiple criteria
4.11, _13_		
4.15, _16_	4.17, 18	Rigid bodies with one reaction of unknown direction and one of known direction
4.19, _20_		
4.22, 25	4._21_, 23	
4.26, 28	4.24, _27_	
4._29_, _30_	4.33, 34	
4.31, 32		
4.35, 36	4._37_, _38_	Rigid bodies with three reactions of known direction
4.39, 40	4.41, 42	

---

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
4.45, 46	4.43, *44*	Rigid bodies with a couple included in the reactions
4.47, 50	4.48, *49*	
4.51, 52	4.53, 54	Find position of rigid body in equilibrium
4.*56*, *58*	4.55, 57	
4.59	4.*60*	Partial constraints, statical indeterminacy
		Three-force bodies
4.62, 63	4.61, *64*	simple geometry, solution of a right triangle required
4.65, 67	4.66, *68*	simple geometry, frame includes a two-force member
4.69, *70*	4.71, 72	more involved geometry
4.73, *74*		
4.75, *76*	4.77, 79	
4.78, 81	4.80	
4.*82*		
4.83, 84	4.86, *87*	find position of equilibrium
4.85, 88	4.*89*, 90	

EQUILIBRIUM IN THREE DIMENSIONS

SI Units	U.S. Units	Problem Description
4.*F6*, *F7*	4.*F5*	Free Body Practice Problems
4.91, *92*	4.93, 94	Rigid bodies with two hinges along a coordinate axis and an additional reaction parallel to another coordinate axis
4.95, *96*		
4.99, 100	4.97, *98*	Rigid bodies supported by three vertical wires or by vertical reactions
4.101, 102	4.103, *104*	
4.106, 107	4.105, 110	Derrick and boom problems involving unknown tension in two cables
4.108, 109	4.*111*, 112	
4.113, *114*	4.115, 116	Rigid bodies with two hinges along a coordinate axis and an additional reaction not parallel to a coordinate axis
4.117, *118*		
4.119, 122	4.120, 121	Problems involving couples as part of the reaction at a hinge
4.123, 124	4.*125*, *126*	Advanced problems
4.129, *130*	4.127, 128	
4.131, *132*		
4.133, *134*	4.135, 136	Problems involving taking moments about an oblique line passing through two supports
4.138, *139*	4.137, 140	
	4.141	
4.*144*, 145	4.142, 143	Review problems
4.146, 148	4.*147*, 149	
4.*150*, 153	4.151, *152*	
4.C2, C5	4.C1, C3	Computer problems
4.C6	4.C4	

CHAPTER 5: DISTRIBUTED FORCES: CENTROIDS AND CENTERS OF GRAVITY

SI Units	U.S. Units	Problem Description
		Centroid of an area formed by combining
5.1, 3	5.2	rectangles and triangles
5.4		
5.6, 9	5.*5*, 7	rectangles, triangles, and portions of circular areas
	5.*8*	

---

* Problems which do not involve any specific system of units have been indicated by underlining their number. Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number* SI Units	 U.S. Units	 Problem Description
5.11, *12*	5.10, 13	triangles, portions of circular or elliptical areas, and areas of analytical functions
5.14, *15*		
5.16, 17	5.*18*, 19	Derive expression for location of centroid
5.20, *22*	5.21, 23	First moment of an area
5.24, *25*	5.26, *27*	Center of gravity of a wire figure
5.29, 30	5.*28*, 33	Equilibrium of wire figures
5.31, 32		Find dimension to maximize distance to centroid
		Use integration to find centroid of
5.*36*	5.34, 35	simple areas
5.37, *38*	5.39	areas obtained by combining shapes of Fig. 5.8A
5.40	5.41	
	5.*42*	parabolic area
5.43	5.44	areas defined by different functions over the interval of interest
5.45, 46	*5._47_	homogeneous wires
*5.48, *49		areas defined by exponential or cosine functions
	5.*50*, 51	areas defined by a hyperbola
		Find areas or volumes by Pappus - Guldinus
5.52, 54	5.53, *56*	rotate simple geometric figures
5.55, 57		
5.60, *61*	5.58, *59*	practical applications
5.64, *_65_	5.62, 63	
		Distributed load on beams
5.66, 67		resultant of loading
5.71	5.*68*, 69	reactions at supports
	5.70	
5.73	5.*72*	parabolic loadings
5.74, *75*	5.76, 77	special problems
5.78, *79*		
		Forces on submerged surfaces
5.81, 82	5.80, 84	reactions on dams or vertical gates
5.*83*, *86*	5.85	
5.87		
5.88, 89	5.90, *91*	reactions on non-vertical gates
5.92, 93	5.94, *95*	
		Centroids and centers of gravity of three-dimensional bodies
5.98, 99	5.96, 97	composite bodies formed from two common shapes
5.100, *101*	5.102, 103	composite bodies formed from three or more elements
5.104, *105*		
5.106, 107	5.*108*, 109	composite bodies formed from a material of uniform thickness
5.110, 113	5.111, *112*	
5.114, 116	5.*115*, 117	composite bodies formed from a wire or structural shape of uniform cross section
5.118, 121	5.119, *120*	composite bodies made of two different materials
		use integration to locate the centroid of
5.122	5.123, 124	standard shapes: single integration
5.125, *126*	*5.128, *129	bodies of revolution: single integration
5.*127*		

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
5.132	*5.130, _131_	special applications: single integration
5._133_, *134		bodies formed by cutting a standard shape with an oblique plane: single integration
	5.135, 136	special applications: double integration
5.138, 141	5.137, 139	Review problems
5._142_, 144	5._140_, 143	
5._145_, 148	5.146, _147_	
5.C2, C3	5.C1, C4	Computer problems
5.C5, C6	*5.C7	

CHAPTER 6: ANALYSIS OF STRUCTURES

TRUSSES

SI Units	U.S. Units	Problem Description
		Method of joints
6.2, 4	6.1, 3	simple problems
6.6, 8	6._5_, _7_	
6.9, _10_	6.11, 12	problems of average difficulty
6.13, _14_		
6.17, 18	6.15, _16_	more advanced problems
6.21, 24	6.19, _20_	
6._25_, _26_	6.22, 23	
	6.27, 28	
6.29, 30		designate simple trusses
6.32, 34	6._31_, _33_	find zero-force members
*6.36, *37	*6.35, *38	space trusses
*6.39, *40	*6._41_, *_42_	
		Method of sections
6.43, 44	6.45, 46	two of the members cut are parallel
6._47_, _48_		
6.49, 50	6.51, 52	none of the members cut are parallel
6.53, 54	6._57_, _58_	
6.55, 56	6.59, 60	
6.61, 62	6._63_, _64_	K-type trusses
6.65, 66	6.67, 68	trusses with counters
6.69, 70	6.71, 72	Classify trusses according to constraints
6._73_, _74_		

FRAMES AND MACHINES

SI Units	U.S. Units	Problem Description
6._F1_, _F4_	6._F2_, _F3_	Free Body Practice Problems – Frames
		Analysis of Frames
6.75, 77	6.76, _78_	easy problems
6.79, 80	6.81, _82_	

---

* Problems which do not involve any specific system of units have been indicated by underlining their number. Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
6.83, *84*	6.87, 88	problems where internal forces are changed by repositioning a couple or by moving a force along its line of action
6.85, *86*	6.89	
6.90		replacement of pulleys by equivalent loadings
6.91, 92	6.93, 94	analysis of frames supporting pulleys or pipes
	6.95, 96	analysis of highway vehicles
6.*97*, *98*	6.99, 100	analysis of frames consisting of multiforce members
6.101, 102	6.103, 104	
6.*105*, *106*		
6.107, 108	6.109, 110	problems involving the solution of simultaneous equations
6.112, 113	6.*111*, *114*	
6.115	6.116	
6.117	6.118	unusual floor systems
6.*119*, *120*	6.121	rigid and non-rigid frames
6.*F6*, *F8*	6.*F5*, *F7*	Free Body Practice Problems – Machines
		Analysis of Machines
6.122, 125	6.123, 124	toggle-type machines
6.*126*, 127		
6.128		
6.131, 132	6.129, 130	machines involving cranks
6.133, 134		
6.137, 138	6.*135*, *136*	machines involving a crank with a collar
6.139, 140		robotic machines
6.143, 144	6.141, *142*	tongs
6.147, 148	6.145, 146	pliers, boltcutters, pruning shears
6.149, *150*	6.151, 152	wrench, find force to maintain position of toggle
6.155, *156*	6.153, 154	force in hydraulic cylinder
	6.*157*, *158*	
6.159, 160	*6.161, *162	gears and universal joints
*6.163		special tongs
6.164, 165	6.166, *167*	Review problems
6.*169*, 170	6.168, 171	
6.*173*, 174	6.172, *175*	
6.C2, C4	6.C1, C3	Computer problems
6.C6	6.C5	

---

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
		CHAPTER 7: FORCES IN BEAMS AND CABLES
		Internal forces in members
7.3, 4	7.1, 2	simple frames
7.*5*, *6*		
7.9, 10	7.7, 8	curved members
7.11, 12	7.*13*, *14*	
7.15, 16	7.17, 18	frames with pulleys or pipes
7.19, 20		
	7.*21*, *22*	effect of supports
7.23, 24	7.25, 26	bending moment in circular rods due to their own weight
7.*27*, *28*		
		BEAMS
		Shear and bending-moment diagrams using portions of beam as free bodies
7.29, 30	7.31, 32	problems involving no numerical values
	7.*33*, *34*	
7.35, 36	7.*37*, *38*	beams with concentrated loads
7.39, 40	7.41, 42	beams with mixed loads
7.*43*, *44*	7.45, 46	beams resting on the ground
7.47, 48		
7.49, 50	7.51, 52	beams subjected to forces and couples
7.*53*, *54*		
7.55, 56	7.59, *60*	find value of parameter to minimize absolute value of bending moment
7.57, 58	7.*61*, *62	
		Shear and bending-moment diagrams using relations among ω, V, and M
7.63, 64	7.65, 66	problems involving no numerical values
7.*67*, *68*		
7.69, 70	7.73, 74	problems involving numerical values
7.71, 72	7.*75*, *76*	
7.77, 78	7.81, 82	find magnitude and location of maximum bending moment
7.79, 80	7.*83*, *84*	
7.*85*, *88*	7.86, 87	Determine V and M by integrating ω twice
7.89, 90	*7.91, *92	Find values of loads given bending moment at two points
		CABLES
		Cables with concentrated loads
7.93, 94	7.95, 96	vertical loads
7.97, 98	7.*99*, *100*	
7.101, 102	7.103, 104	horizontal and vertical loads
7.*105*, *106*		
		Parabolic cables
7.107, *108*	7.109, 110	supports at the same elevation
7.112, *113*	7.111, 114	
7.115, 116	7.117, 118	supports at different elevations

---

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
*7.119		Derive analogy between a beam and a cable
7.120, 121	7._122_, _123_	use analogy to solve previous problems
*7.124	*7.125, *126	Derive or use $d^2y/dx^2 = w(x)\ T_0$
		Catenary
7.129, 130	7.127, 128	given length of cable and sag or T_m, find span of cable
7._131_, _132_		
7.133, 136	7.134, 135	given span and length of cable, find sag and/or weight
7.139, 140	7._137_, _138_	given span, T_m, and w, find sag
7._141_, _142_	7.143, 144	given T_0, w, and sag or slope, find span or sag
7.145, 146	*7.147, *148	
*7.151, *152	7._149_, *_150_	special problems
*7.153		
7.154, _155_	7.156, 158	Review problems
7.157, _159_	7._160_, 161	
7.163, 164	7._162_, 165	
7.C2, C4	7.C1, C3	Computer problems
7.C5, C6		

CHAPTER 8: FRICTION

SI Units	U.S. Units	Problem Description
8._F1_, _F4_	8._F2_, _F3_	Free Body Practice Problems – Frames
8.1, 2	8.3, 4	For given loading, determine whether block is in equilibrium and find friction force
8.7, 9	8.5, _6_	Find minimum force required to start, maintain, or prevent motion
8.10	8._8_	
8.13, 14	8.11, 12	Analyze motion of several blocks
8._15_, _16_	8.17, 18	Sliding and/or tipping of a rigid body
8.21, 22	8.19, 20	Problems involving wheels and cylinders
8.25, _26_	8.23, _24_	Problems involving rods
8.27, _28_	8.29, 30	Analysis of mechanisms with friction
8.32, _33_	8._31_, 34	
	8.35	
8.37, 39	8.36, _38_	Analysis of more advanced rod and beam problems
8.40	8.41, _42_	
8.43, 44	8.46, 47	Analysis of systems with possibility of slippage for various loadings
8.45		
8.48, 49	8.52, 53	Wedges, introductory problems
8._50_, _51_	8.57	
8.54, 55		
8.56		
8.59, 64	8._58_, 60	Wedges, more advanced problems
8.65	8._61_, 62	
*8.66, *67	8.63	

---

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
8.68	8._69_, _70_	Square-threaded screws
8.72, 73	8.71, 74	
8._75_, _76_		
8.77, 79	8.78, _83_	Axle friction
8.80, 81	8.84, _87_	
8.82, _85_	8.88, 89	
8.86, _91_	8.90	
8.92, *94	8.93, _97_	Disk friction
*8._95_, *_96_		
8.100, 101	8.98, 99	Rolling resistance
8.102		
		Belt friction
8.105, 106	8.103, 104	belt passing over fixed drum
8._107_, _108_		
8.109, 112	8.110, 111	transmission belts and band brakes
8.113, 114	8._115_, _116_	
	8.117	
8.118, 119	8.120, 121	advanced problems
8.124, 125	8._122_, _123_	
8.126, _127_	8.128, 129	
8._132_, 133	8.130, 131	derivations, V belts
8.134, _135_	8.136, 137	Review problems
8.138, _139_	8.140, 141	
8.143, 144	8._142_, _145_	
8.C1, C3	8.C2, C5	Computer problems
8.C4, C6	8.C7	
8.C8		

CHAPTER 9: DISTRIBUTED FORCES: MOMENTS OF INERTIA

MOMENTS OF INERTIA OF AREAS

		Find by direct integration
9.1, 3	9.2, 4	moments of inertia of an area
9.6, 8	9._5_, _7_	
9.9, 12	9.10, 11	
9._13_, _14_		
9.15, 17	9.16, 18	moments of inertia and radii of gyration of an area
9._19_, _20_		
9.21, 22	9.23, _24_	polar moments of inertia and polar radii of gyration of an area
9.25, 26	9._27_, 28	
*9.29	*9.30	Special problems
		Parallel-axis theorem applied to composite areas to find
9.31, 33	9.32, 34	moment of inertia and radius of gyration
9._35_, _36_		

---

* Problems which do not involve any specific system of units have been indicated by underlining their number. Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
9.39, 40	9.37, *38*	centroidal moment of inertia, given I or J
9.41, 42	9.43, 44	centroidal moments of inertia
9.47, 48	9.*45*, *46*	centroidal polar moment of inertia
		centroidal moments of inertia of composite areas consisting of rolled-steel shapes:
9.49, 52	9.50, 51	doubly-symmetrical composite areas
9.54, 55	9.*53*, *56*	singly-symmetrical composite areas (first locate centroid of area)
		Center of pressure
9.58, *60	9.57, 59	for end panel of a trough
9.*61*, *62*		for a submerged vertical gate or cover
*9.64	*9.63	used to locate centroid of a volume
*9.65	*9.66	special problems
		Products of inertia of areas found by
9.67, 68	9.69, *70*	direct integration
9.71, 72	9.*73*, 74	parallel-axis theorem
9.75, 78	9.76, *77*	
		Using the equations defining the moments and products of inertia with respect to rotated axes to find
9.79, 80	9.81, 83	$I_{x'}$, $I_{y'}$, $I_{x'y'}$ for a given angle of rotation
9.*82*, *84*		
9.85, 86	9.87, 89	principal axes and principal moments of inertia
9.*88*, *90*		
		Using Mohr's circle to find
9.91, 92	9.93, 95	$I_{x'}$, $I_{y'}$, $I_{x'y'}$ for a given angle of rotation
9.*94*, *96*		
9.97, 98	9.99, 100	principal axes and principal moments of inertia
	9.*101*, *102*	
9.104, 105	9.103, *106	
9.107, 108	9.*109*, *110*	Special problems
		MOMENTS OF INERTIA OF MASSES
		Mass moment of inertia
9.111, 112	9.113, 114	of thin plates: two-dimensions
9.117, 118	9.*115*, *116*	
9.119, 120	9.121, 122	of simple geometric shapes by direct single integration
9.*123*, *125*	9.124, *126	
9.128	9.127	and radius of gyration of composite bodies
9.*129*, 130	9.131, *134*	special problems using the parallel-axis theorem
9.132, 133		
9.135, 136	9.138, 139	of bodies formed of sheet metal or of thin plates: three-dimensions
9.*137*, *140		
9.141, 142	9.143, *144*	of machine elements and of bodies formed of homogeneous wire
9.145, 148	9.*146*, 147	
		Mass products of inertia
9.149, 150	9.151, 152	of machine elements
9.*153*, *154*		of bodies formed of sheet metal or of thin plates
9.155, 156		
9.157, 158	9.159, 160	of bodies formed of homogeneous wire
9.162	9.161	Derivation and special problem

* Problems which do not involve any specific system of units have been indicated by underlining their number. Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number* SI Units	 U.S. Units	 Problem Description
9.165, 166	9.*163*, *164*	Mass moment of inertia of a body with respect to a skew axis
9.169, 170	9.167, 168	
	9.*171*, *172*	
9.175, 176	9.173, 174	Ellipsoid of inertia and special problems
9.*177*, *178*		
*9.179, *180	*9.182, *183	Principal mass moments of inertia and principal axes of inertia
*9._181_, _*184_		
9.*187*, 188	9.185, 186	Review problems
9.189, 193	9.*190*, 191	
9.*194*, 195	9.*192*, 196	
9.C3, C5	9.C1, C2	Computer problems
*9.C7, *C8	9.C4, C6	

CHAPTER 10: METHOD OF VIRTUAL WORK

		For linkages and simple machines, find
10.1, 3	10.2, 4	force or couple required for equilibrium (linear relations among displacements)
10.5, 6	10.*7*, *8*	
10.*11*, 12	10.9, 10	force required for equilibrium (trigonometric relations among displacements)
10.*13*, 14		
10.17, 18	10.15, 16	couple required for equilibrium (trigonometric relations among displacements)
10.*21*, *22*	10.19, 20	force or couple required for equilibrium
		Find position of equilibrium
10.23, 24	10.*25*, *26*	for numerical values of loads
10.27, 28		
10.*29*, 32	10.30, 31	linear springs included in mechanism
10.33, *34*	10.36, 38	
10.35, 37		
10.39, 40		torsional spring included in mechanism
10.43, 44	10.*41*, *42*	Problems requiring the use of the law of cosines
	10.45, 46	
10.48, 50	10.*47*, 49	Problems involving the effect of friction
10.*51*, 52		
		Use method of virtual work to find:
10.53, 54		reactions of a beam
10.*55*	10.*56*	internal forces in a mechanism
	10.57, 58	movement of a truss joint
		Potential energy method used to
10.62, *63*	10.*59*, 60	solve problems from Sec. 10.4
10.64, 65	10.61, 66	
10.67	10.68	establish that equilibrium is neutral
		find position of equilibrium and determine its stability for a system involving:
10.69, 72	10.70, 71	gears and drums
10.73, 74		torsional springs
10.77, 78	10.*75*, *76*	linear springs
10.*79*, *82*	10.80, 81	
10.*85*, 86	10.87, 88	

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE II: CLASSIFICATION AND DESCRIPTION OF PROBLEMS (CONTINUED)

Problem Number*		
SI Units	U.S. Units	Problem Description
10.83, *84*		two applied forces
		determine stability of a known position of equilibrium for a system with
10.89, 93	10.*90*, 91	one degree of freedom
10.94, 96	10.92, *95*	
*10.*97*, *98	*10.*99*, *100	two degrees of freedom
10.103, *104*	10.101, 102	Review problems
10.105, 107	10.*106*, 108	
10.*111*, 112	10.*109*, 110	
10.C2, C3	10.C1, C4	Computer problems
10.C5, C6		
10.C7		

---

* Problems which do not involve any specific system of units have been indicated by underlining their number.
Answers are not given to problems with a number set in italic type.

TABLE III: SAMPLE ASSIGNMENT SCHEDULE FOR A COURSE IN STATICS

This schedule includes all of the material of *VECTOR MECHANICS FOR ENGINEERS: STATICS* with the exception of Sections 3.4D, 6.1D, 7.4–7.5, 8.3, and 9.6C.

			50% OF THE PROBLEMS IN EACH OF THE FOLLOWING LISTS USE SI UNITS AND 50% U.S. CUSTOMARY UNITS					
			ANSWERS TO ALL OF THESE PROBLEMS ARE GIVEN IN THE BACK OF THE BOOK				NO ANSWERS ARE GIVEN IN THE BOOK FOR ANY OF THESE PROBLEMS	
Period	Sections	Topics	List 1	List 2	List 3	List 4	List 5	List 6
1	1.1–6	Introduction						
2	2.1–2	Addition and Resolution of Forces	2.5, 15, 27, 31	2.10, 17, 29, 37	2.11, 16, 26, 36	2.6, 19, 28, 35	2.12, 18, 30, 33	2.7, 20, 25, 38
3	2.3	Equilibrium of a Particle	2.43, 50, 63, 65	2.48, 49, 59, 69	2.46, 55, 61, 67	2.44, 51, 62, 68	2.45, 56, 64, 66	2.47, 52, 60, 70
4	2.4	Forces in Space	2.71, 81, 85, 97	2.72, 82, 89, 94	2.75, 84, 88, 92	2.77, 79, 87, 91	2.76, 80, 86, 93	2.78, 83, 90, 98
5	2.5	Equilibrium in Space	2.103, 107, 119, 125	2.104, 108, 113, 121	2.101, 106, 116, 123	2.99, 112, 115, 124	2.102, 105, 120, 126	2.100, 111, 114, 122
6	3.1	Vector Product, Moment of a Force about a Point	3.4, 12, 23, 27	3.5, 11, 26, 30	3.7, 13, 25, 28	3.6, 9, 22, 29	3.3, 14, 21, 31	3.8, 10, 24, 34
7	3.2	Scalar Product, Moment of a Force about an Axis	3.43, 48, 61, *68	3.39, 47, 55, *67	3.41, 53, 57, *64	3.37, 49, 58, *65	3.42, 50, 56, *69	3.38, 54, 62, *66
8	3.3	Couples	3.71, 84, 87, 99	3.70, 82, 90, 97	3.73, 86, 89, 96	3.80, 83, 91, 95	3.75, 85, 88, 100	3.72, 81, 92, 94
9	3.4	Equivalent Systems of Forces	3.106, 111, 126, 127	3.105, 110, 122, 128	3.102, 108, 120, 129	3.101, 114, 119, 130	3.107, 112, 121, 131	3.103, 109, 123, 132
10		EXAM NUMBER ONE						
11	4.1	Equilibrium in Two Dimensions	4.1, 14, 19, 23	4.2, 12, 15, 24	4.4, 13, 17, 25	4.7, 9, 18, 22	4.3, 10, 16, 27	4.8, 11, 20, 21
12	4.1	Equilibrium in Two Dimensions	4.34, 36, 43, 52	4.33, 35, 48, 51	4.31, 42, 46, 57	4.32, 41, 47, 55	4.30, 37, 44, 58	4.29, 38, 49, 56
13	4.2	Two- and Three-Force Bodies	4.63, 72, 75, 86	4.62, 71, 81, 90	4.66, 73, 77, 88	4.61, 69, 79, 83	4.68, 74, 76, 87	4.64, 70, 82, 89
14	4.3	Equilibrium in Three Dimensions	4.93, 100, 110, 117	4.94, 99, 105, 113	4.91, 103, 107, 116	4.95, 97, 106, 115	4.92, 104, 111, 118	4.96, 98, 112, 114
15	4.3	Equilibrium in Three Dimensions	4.122, 127, 133	4.119, 128, 138	4.121, 131, 135	4.120, 129, 140	4.126, 132, 134	4.125, 130, 139
16	5.1	Centroids and First Moments	5.1, 10, 24, 33	5.3, 13, 20, 26	5.5, 14, 23, 30	5.2, 11, 21, 31	5.8, 15, 25, 28	5.7, 12, 22, 27
17	5.2	Centroids by Integration	5.34, 43, 58, 64	5.35, 40, 53, 60	5.37, 44, 54, 63	5.39, 41, 52, 62	5.38, 42, 59, *65	5.36, *47, 56, 61
18	5.3	Beams and Submerged Surfaces	5.66, 76, 81, 94	5.67, 77, 82, 90	5.70, 74, 80, 89	5.69, 78, 84, 88	5.72, 75, 83, 95	5.68, 79, 86, 91
19	5.4	Centroids of Volumes	5.102, 107, 119, 122	5.103, 106, 117, 125	5.100, 111, 114, 124	5.104, 109, 116, 123	5.101, 112, 115, 126	5.105, 108, 120, 127
20		EXAM NUMBER TWO						
21	6.1	Trusses: Method of Joints	6.2, 11, 21, 30	6.4, 12, 24, 27	6.1, 13, 23, 29	6.3, 9, 22, 28	6.7, 14, 25, 33	6.5, 10, 26, 31
22	6.2	Trusses: Method of Sections	6.45, 54, 68, 69	6.46, 53, 67, 70	6.43, 59, 62, 71	6.44, 60, 61, 72	6.47, 57, 64, 73	6.48, 58, 63, 74
23	6.3	Analysis of Frames	6.75, 88, 102, 109	6.77, 89, 101, 110	6.76, 83, 100, 107	6.81, 85, 99, 108	6.78, 84, 105, 111	6.82, 86, 106, 114
24	6.4	Analysis of Machines	6.123, 134, 145, 149	6.124, 133, 141, 155	6.127, 129, 144, 153	6.122, 130, 143, 154	6.126, 135, 142, 150	6.128, 136, 146, 156
25	6.1–4	Review of Chapter 6	6.15, 52, 91, 151	6.19, 51, 92, 152	6.17, 50, 94, 140	6.18, 49, 93, 137	6.16, 48, 98, 157	6.20, 47, 97, 158
26	7.1	Internal Forces in Members	7.1, 12, 18, 23	7.2, 11, 17, 24	7.3, 8, 19, 26	7.4, 7, 20, 25	7.5, 14, 22, 27	7.6, 13, 21, 28
27	7.2	Beams	7.36, 46, 50, 59	7.35, 45, 49, 59	7.42, 48, 52, 55	7.41, 47, 51, 58	7.38, 43, 54, 60	7.37, 44, 53, 61
28	7.3	Beams	7.65, 70, 81, *89	7.66, 69, 82, *90	7.64, 73, 78, 86	7.63, 74, 77, 87	7.68, 75, 83, 85	7.67, 76, 84, 88
29		EXAM NUMBER THREE						
30	8.1	Laws of Friction	8.1, 18, 32, 36	8.2, 17, 27, 41	8.3, 14, 30, 40	8.4, 13, 29, 39	8.8, 16, 33, 38	8.6, 15, 28, 42
31	8.2	Wedges and Screws	8.52, 54, 63, 73	8.53, 55, 62, 72	8.48, 57, 65, 74	8.49, 60, 64, 71	8.50, 58, 70, 76	8.51, 61, 69, 75
32	8.4	Belt Friction	8.104, 109, 121, 126	8.103, 112, 120, 133	8.105, 110, 119, 128	8.106, 111, 118, 129	8.108, 115, 123, 127	8.107, 116, 122, 132
33	9.1	Moments of Inertia of Areas	9.1, 10, 17, 23	9.3, 11, 15, 28	9.4, 12, 16, 21	9.2, 9, 18, 22	9.5, 14, 19, 24	9.7, 13, 20, 27
34	9.2	Composite Areas	9.34, 42, 51, 58	9.32, 41, 50, *60	9.31, 43, 52, 57	9.33, 44, 49, 59	9.35, 45, 56, 61	9.36, 46, 53, 62
35	9.3	Product of Inertia	9.72, 83, 86	9.71, 81, 85	9.76, 79, 87	9.74, 80, 89	9.77, 84, 88	9.73, 82, 90
36	9.4	Mohr’s Circle	9.93, 97, 103	9.95, 98, *106	9.92, 100, 107	9.91, 99, 108	9.94, 102, 110	9.96, 101, 109
37	9.5	Moments of Inertia of Masses	9.112, 121, 135, 147	9.111, 122, 136, 143	9.113, 119, 138, 142	9.114, 120, 139, 141	9.116, 123, *140, 146	9.115, 125, 137, 144
38	9.6	Principal Axes	9.152, 158, 167, 175	9.151, 155, 168, 176	9.149, 159, 165, 174	9.150, 160, 166, 173	9.154, 163, 171, 178	9.153, 164, 172, 177
39		EXAM NUMBER FOUR						
40	10.1	Virtual Work	10.1, 9, 18, 20	10.3, 10, 17, 19	10.2, 12, 16, 24	10.4, 14, 15, 23	10.8, 13, 21, 25	10.7, 11, 22, 26
41	10.1	Virtual Work	10.31, 35, 46, 53	10.30, 37, 45, 54	10.32, 36, 43, 57	10.33, 38, 44, 58	10.34, 42, 47, 55	10.29, 41, 51, 56

TABLE IV: SAMPLE ASSIGNMENT SCHEDULE FOR A COURSE IN STATICS

This schedule includes all of the material of *VECTOR MECHANICS FOR ENGINEERS: STATICS* with the exception of Sections 3.4D, 6.1D, 7.4–7.5, 8.3, and 9.6C.

75% OF THE PROBLEMS IN EACH OF THE FOLLOWING LISTS USE SI UNITS AND 25% U.S. CUSTOMARY UNITS

ANSWERS TO ALL OF THESE PROBLEMS ARE GIVEN IN THE BACK OF THE BOOK

Period	Sections	Topics	List 1a	List 2a	List 3a	List 4a
1	1.1–6	Introduction				
2	2.1–2	Addition and Resolution of Forces	2.5, 15, 27, 34	2.10, 17, 29, 32	2.8, 16, 26, 36	2.9, 19, 28, 35
3	2.3	Equilibrium of a Particle	2.43, 50, 57, 65	2.48, 49, 58, 69	2.46, 54, 61, 67	2.44, 53, 62, 68
4	2.4	Forces in Space	2.71, 81, 85, 95	2.72, 82, 89, 96	2.74, 84, 88, 92	2.73, 79, 87, 91

39		EXAM NUMBER FOUR				
40	10.1	Virtual Work	10.1, 9, 18, 28	10.3, 10, 17, 27	10.5, 12, 16, 24	10.6, 14, 15, 23
41	10.1	Virtual Work	10.31, 35, 52, 53	10.30, 37, 48, 54	10.32, 40, 43, 57	10.33, 39, 44, 58
42	10.2	Potential Energy	10.69, 80, 86, 96	10.72, 81, 83, 94	10.74, 77, 88, 89	10.73, 78, 87, 93

TABLE V: SAMPLE ASSIGNMENT SCHEDULE FOR A COMBINED COURSE IN STATICS AND DYNAMICS

This schedule is intended for a 4-semester-credit-hour course consisting of (1) the abridged Statics course defined in Table I of this manual and (2) the standard Dynamics course defined in Table I of the Dynamics Instructor's Manual. Note that the Statics portion of the course is designed to serve only as an introduction to Dynamics; a more complete coverage of Statics is recommended for curricula including courses in Mechanics of Materials (see Tables III and ff. of the Statics Manual).

50% OF THE PROBLEMS IN EACH OF THE FOLLOWING LISTS USE SI UNITS AND 50% U.S. CUSTOMARY UNITS

			ANSWERS TO ALL OF THESE PROBLEMS ARE GIVEN IN THE BACK OF THE BOOK				NO ANSWERS ARE GIVEN IN THE BOOK FOR ANY OF THESE PROBLEMS	
Period	Sections	Topics	List 1	List 2	List 3	List 4	List 5	List 6
1	1.1–6	Introduction						
2	2.1–2	Addition and Resolution of Forces	2.5, 15, 27, 31	2.10, 17, 29, 37	2.11, 16, 26, 36	2.6, 19, 28, 35	2.12, 18, 30, 33	2.7, 20, 25, 38

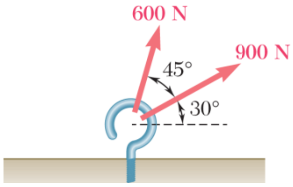
CHAPTER 2



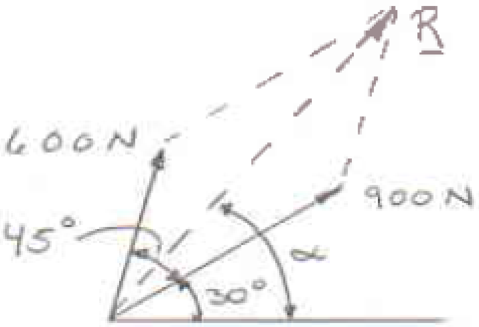
600 N
900 N
45°
30°

PROBLEM 2.1

Two forces are applied as shown to a hook. Determine graphically the magnitude and direction of their resultant using (*a*) the parallelogram law, (*b*) the triangle rule.

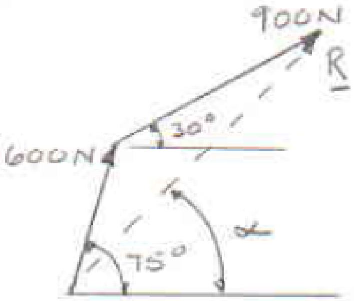
SOLUTION

(*a*) Parallelogram law:



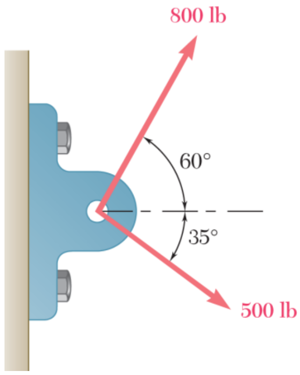
R
600 N
900 N
45°
30°
α

(*b*) Triangle rule:



900 N
R
600 N
30°
75°
α

We measure: $R = 1391 \text{ kN}, \quad \alpha = 47.8°$ $\mathbf{R} = 1391 \text{ N} \measuredangle 47.8°$ ◀



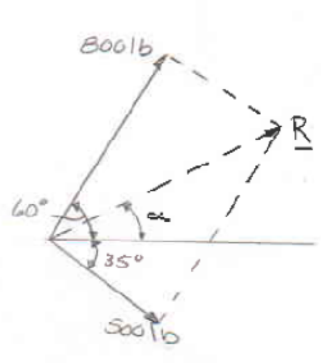
800 lb
60°
35°
500 lb

PROBLEM 2.2

Two forces are applied as shown to a bracket support. Determine graphically the magnitude and direction of their resultant using (*a*) the parallelogram law, (*b*) the triangle rule.

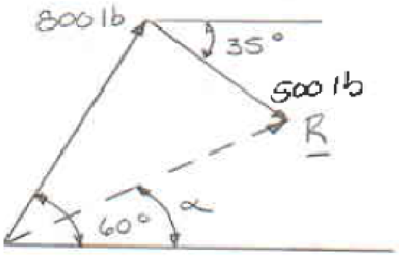
SOLUTION

(*a*) Parallelogram law:



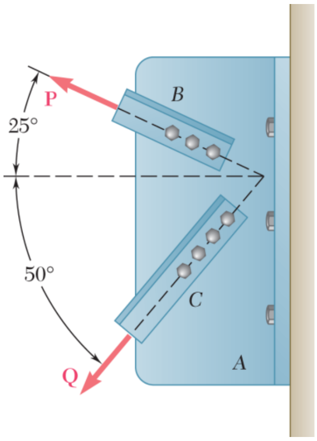
800lb
R
60°
α
35°
500 lb

(*b*) Triangle rule:



800 lb
35°
500 lb
R
60°
α

We measure: $R = 906$ lb, $\alpha = 26.6°$ $R = 906$ lb ∠ 26.6° ◀

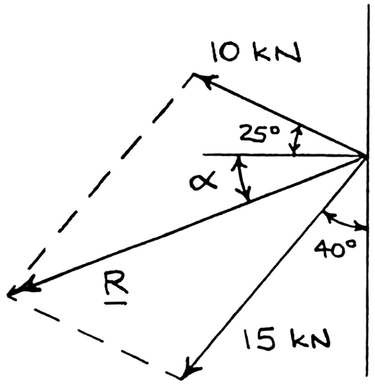


PROBLEM 2.3

Two structural members *B* and *C* are bolted to bracket *A*. Knowing that both members are in tension and that $P = 10$ kN and $Q = 15$ kN, determine graphically the magnitude and direction of the resultant force exerted on the bracket using (*a*) the parallelogram law, (*b*) the triangle rule.

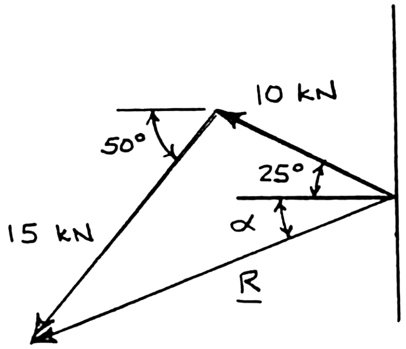
SOLUTION

(*a*) Parallelogram law:



10 kN
25°
α
40°
R
15 kN

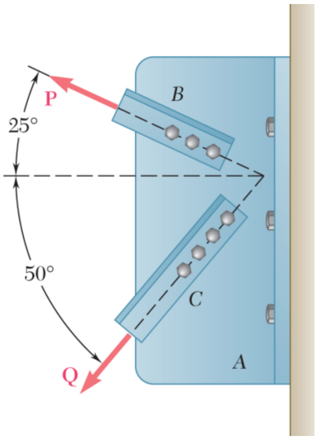
(*b*) Triangle rule:



10 kN
50°
25°
α
15 kN
R

We measure: $R = 20.1$ kN, $\alpha = 21.2°$

R = 20.1 kN ∡ 21.2° ◀

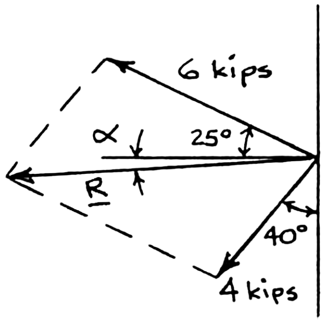


PROBLEM 2.4

Two structural members *B* and *C* are bolted to bracket *A*. Knowing that both members are in tension and that $P = 6$ kips and $Q = 4$ kips, determine graphically the magnitude and direction of the resultant force exerted on the bracket using (*a*) the parallelogram law, (*b*) the triangle rule.

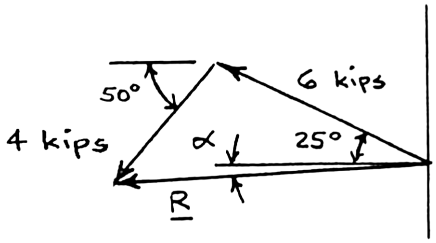
SOLUTION

(*a*) Parallelogram law:



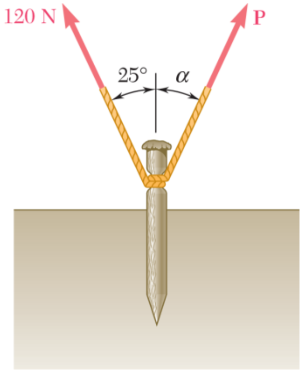
6 kips
α
25°
R
40°
4 kips

(*b*) Triangle rule:



50°
6 kips
4 kips
α
25°
R

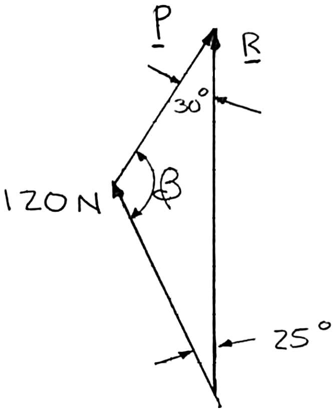
We measure: $R = 8.03$ kips, $\alpha = 3.8°$ $\mathbf{R} = 8.03$ kips ⦣ 3.8° ◀



PROBLEM 2.5

A stake is being pulled out of the ground by means of two ropes as shown. Knowing that $\alpha = 30°$, determine by trigonometry (*a*) the magnitude of the force **P** so that the resultant force exerted on the stake is vertical, (*b*) the corresponding magnitude of the resultant.

SOLUTION



Using the triangle rule and the law of sines:

(*a*)

$$\frac{120\text{ N}}{\sin 30°} = \frac{P}{\sin 25°}$$

$P = 101.4\text{ N}$ ◀

(*b*)

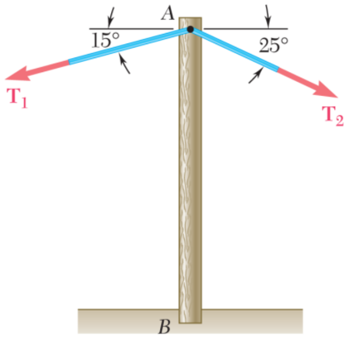
$$30° + \beta + 25° = 180°$$

$$\beta = 180° - 25° - 30°$$

$$= 125°$$

$$\frac{120\text{ N}}{\sin 30°} = \frac{R}{\sin 125°}$$

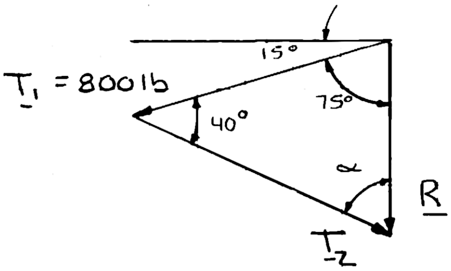
$R = 196.6\text{ N}$ ◀



PROBLEM 2.6

A telephone cable is clamped at *A* to the pole *AB*. Knowing that the tension in the left-hand portion of the cable is $T_1 = 800$ lb, determine by trigonometry (*a*) the required tension T_2 in the right-hand portion if the resultant **R** of the forces exerted by the cable at *A* is to be vertical, (*b*) the corresponding magnitude of **R**.

SOLUTION



Using the triangle rule and the law of sines:

(*a*) $$75° + 40° + \alpha = 180°$$

$$\alpha = 180° - 75° - 40°$$

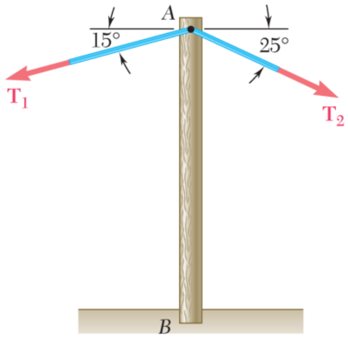
$$= 65°$$

$$\frac{800\text{ lb}}{\sin 65°} = \frac{T_2}{\sin 75°}$$

$T_2 = 853$ lb ◀

(*b*) $$\frac{800\text{ lb}}{\sin 65°} = \frac{R}{\sin 40°}$$

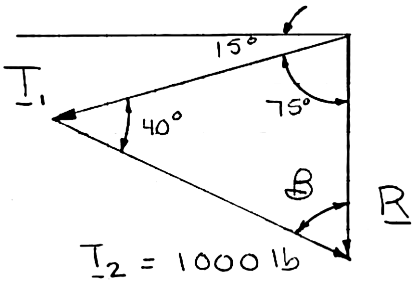
$R = 567$ lb ◀



PROBLEM 2.7

A telephone cable is clamped at A to the pole AB. Knowing that the tension in the right-hand portion of the cable is $T_2 = 1000$ lb, determine by trigonometry (*a*) the required tension T_1 in the left-hand portion if the resultant **R** of the forces exerted by the cable at A is to be vertical, (*b*) the corresponding magnitude of **R**.

SOLUTION



Using the triangle rule and the law of sines:

(*a*)

$$75° + 40° + \beta = 180°$$

$$\beta = 180° - 75° - 40° = 65°$$

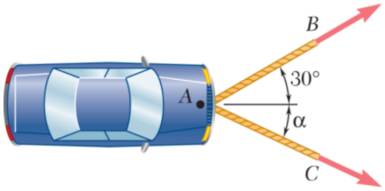
$$\frac{1000 \text{ lb}}{\sin 75°} = \frac{T_1}{\sin 65°}$$

$T_1 = 938$ lb ◀

(*b*)

$$\frac{1000 \text{ lb}}{\sin 75°} = \frac{R}{\sin 40°}$$

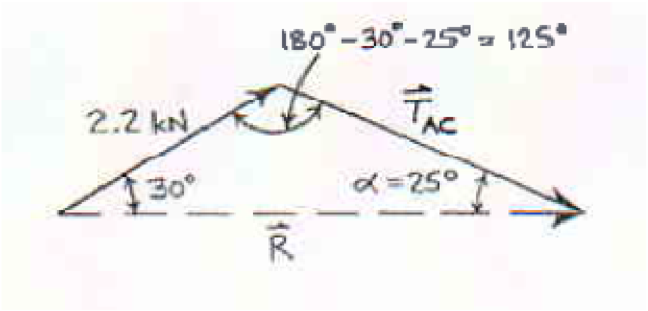
$R = 665$ lb ◀



PROBLEM 2.8

A disabled automobile is pulled by means of two ropes as shown. The tension in rope *AB* is 2.2 kN, and the angle *α* is 25°. Knowing that the resultant of the two forces applied at *A* is directed along the axis of the automobile, determine by trigonometry (*a*) the tension in rope *AC*, (*b*) the magnitude of the resultant of the two forces applied at *A*.

SOLUTION



Using the law of sines:

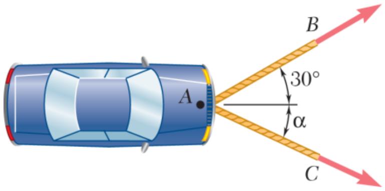
$$\frac{T_{AC}}{\sin 30^\circ} = \frac{R}{\sin 125^\circ} = \frac{2.2 \text{ kN}}{\sin 25^\circ}$$

$$T_{AC} = 2.603 \text{ kN}$$

$$R = 4.264 \text{ kN}$$

(*a*) $T_{AC} = 2.60 \text{ kN}$ ◀

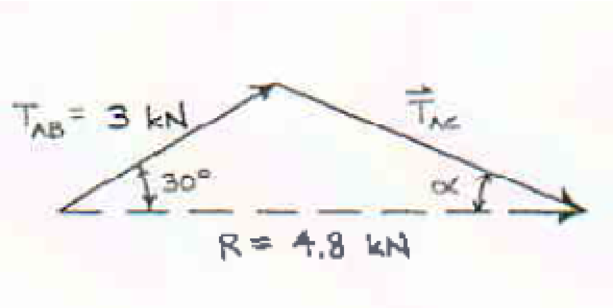
(*b*) $R = 4.26 \text{ kN}$ ◀



PROBLEM 2.9

A disabled automobile is pulled by means of two ropes as shown. Knowing that the tension in rope *AB* is 3 kN, determine by trigonometry the tension in rope *AC* and the value of α so that the resultant force exerted at *A* is a 4.8-kN force directed along the axis of the automobile.

SOLUTION



Using the law of cosines:

$$T_{AC}^2 = (3\text{ kN})^2 + (4.8\text{ kN})^2 - 2(3\text{ kN})(4.8\text{ kN})\cos 30°$$

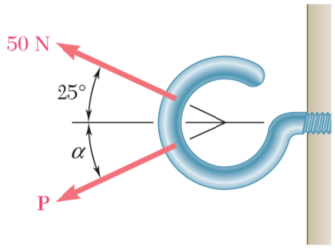
$$T_{AC} = 2.6643\text{ kN}$$

Using the law of sines:

$$\frac{\sin\alpha}{3\text{ kN}} = \frac{\sin 30°}{2.6643\text{ kN}}$$

$$\alpha = 34.3°$$

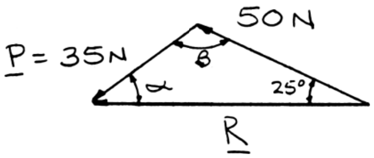
$$\mathbf{T}_{AC} = 2.66\text{ kN} \searrow 34.3° \blacktriangleleft$$



PROBLEM 2.10

Two forces are applied as shown to a hook support. Knowing that the magnitude of **P** is 35 N, determine by trigonometry (*a*) the required angle α if the resultant **R** of the two forces applied to the support is to be horizontal, (*b*) the corresponding magnitude of **R**.

SOLUTION



Using the triangle rule and law of sines:

(*a*)

$$\frac{\sin\alpha}{50\text{ N}} = \frac{\sin 25^\circ}{35\text{ N}}$$

$$\sin\alpha = 0.60374$$

$$\alpha = 37.138^\circ$$

$\alpha = 37.1^\circ$ ◀

(*b*)

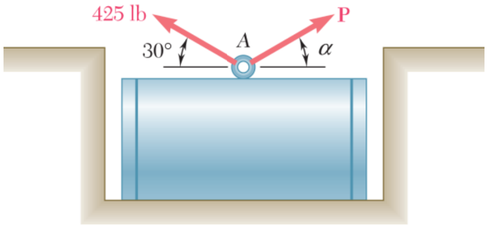
$$\alpha + \beta + 25^\circ = 180^\circ$$

$$\beta = 180^\circ - 25^\circ - 37.138^\circ$$

$$= 117.862^\circ$$

$$\frac{R}{\sin 117.862^\circ} = \frac{35\text{ N}}{\sin 25^\circ}$$

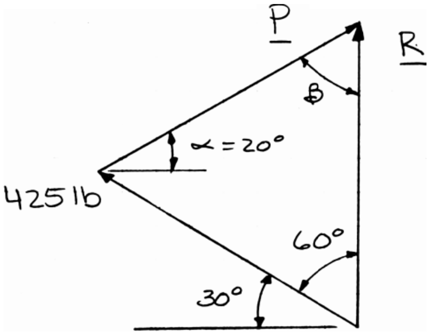
$R = 73.2$ N ◀



PROBLEM 2.11

A steel tank is to be positioned in an excavation. Knowing that $\alpha = 20°$, determine by trigonometry (*a*) the required magnitude of the force **P** if the resultant **R** of the two forces applied at *A* is to be vertical, (*b*) the corresponding magnitude of **R**.

SOLUTION

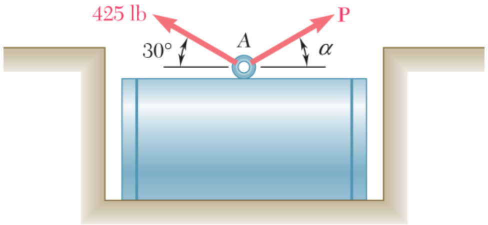


Using the triangle rule and the law of sines:

(*a*)
$$\beta + 50° + 60° = 180°$$
$$\beta = 180° - 50° - 60°$$
$$= 70°$$

$$\frac{425 \text{ lb}}{\sin 70°} = \frac{P}{\sin 60°} \qquad P = 392 \text{ lb} \blacktriangleleft$$

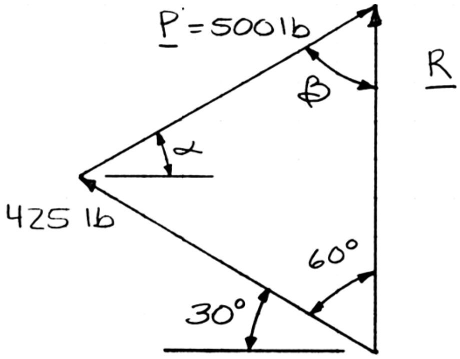
(*b*)
$$\frac{425 \text{ lb}}{\sin 70°} = \frac{R}{\sin 50°} \qquad R = 346 \text{ lb} \blacktriangleleft$$



PROBLEM 2.12

A steel tank is to be positioned in an excavation. Knowing that the magnitude of **P** is 500 lb, determine by trigonometry (*a*) the required angle α if the resultant **R** of the two forces applied at *A* is to be vertical, (*b*) the corresponding magnitude of **R**.

SOLUTION



Using the triangle rule and the law of sines:

(*a*)

$$(\alpha + 30°) + 60° + \beta = 180°$$

$$\beta = 180° - (\alpha + 30°) - 60°$$

$$\beta = 90° - \alpha$$

$$\frac{\sin(90° - \alpha)}{425 \text{ lb}} = \frac{\sin 60°}{500 \text{ lb}}$$

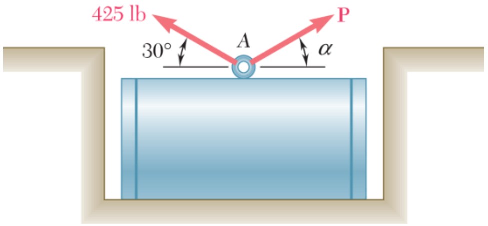
$$90° - \alpha = 47.402°$$

$\alpha = 42.6°$ ◀

(*b*)

$$\frac{R}{\sin(42.598° + 30°)} = \frac{500 \text{ lb}}{\sin 60°}$$

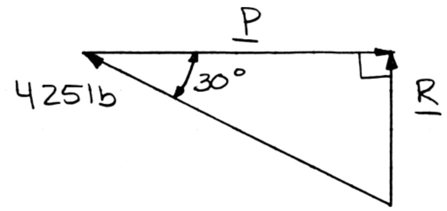
$R = 551$ lb ◀



PROBLEM 2.13

A steel tank is to be positioned in an excavation. Determine by trigonometry (*a*) the magnitude and direction of the smallest force **P** for which the resultant **R** of the two forces applied at *A* is vertical, (*b*) the corresponding magnitude of **R**.

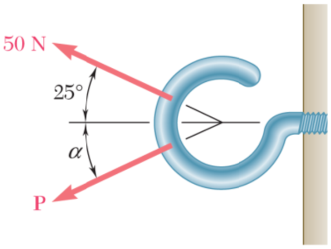
SOLUTION



The smallest force *P* will be perpendicular to *R*.

(*a*) $P = (425 \text{ lb})\cos 30°$ $\mathbf{P} = 368 \text{ lb}$ →

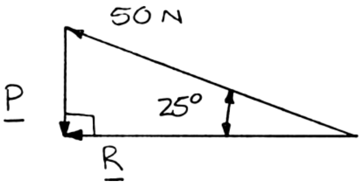
(*b*) $R = (425 \text{ lb})\sin 30°$ $R = 213 \text{ lb}$



PROBLEM 2.14

For the hook support of Prob. 2.10, determine by trigonometry (*a*) the magnitude and direction of the smallest force **P** for which the resultant **R** of the two forces applied to the support is horizontal, (*b*) the corresponding magnitude of **R**.

SOLUTION



The smallest force *P* will be perpendicular to *R*.

(*a*) $P = (50\text{ N})\sin 25°$ $\mathbf{P} = 21.1\text{ N}\downarrow$ ◀

(*b*) $R = (50\text{ N})\cos 25°$ $R = 45.3\text{ N}$ ◀

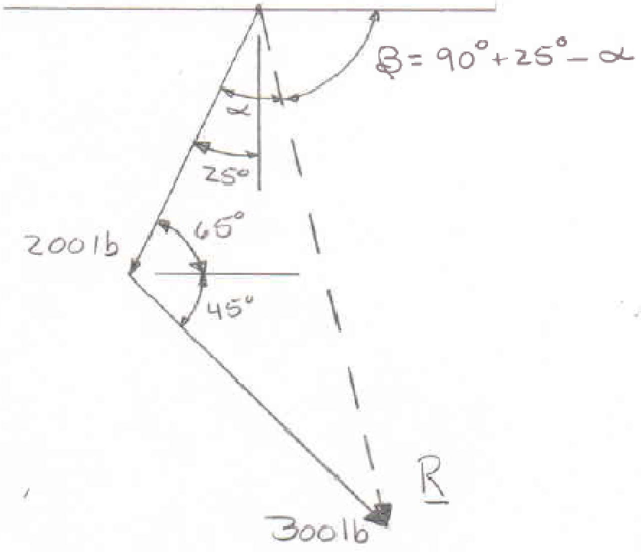
200 lb

PROBLEM 2.15

For the hook support shown, determine by trigonometry the magnitude and direction of the resultant of the two forces applied to the support.

SOLUTION



ß = 90°+25°− α
α
25°
65°
200 lb
45°
R
300 lb

Using the law of cosines:

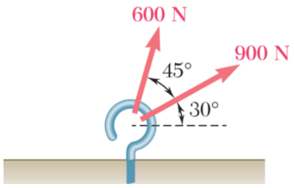
$$R^2 = (200 \text{ lb})^2 + (300 \text{ lb})^2$$
$$-2(200 \text{ lb})(300 \text{ lb})\cos(45^\circ + 65^\circ)$$
$$R = 413.57 \text{ lb}$$

Using the law of sines:

$$\frac{\sin\alpha}{300 \text{ lb}} = \frac{\sin(45^\circ + 65^\circ)}{413.57 \text{ lb}}$$
$$\alpha = 42.972^\circ$$

$$\beta = 90^\circ + 25^\circ - 42.972^\circ$$

R = 414 lb ⟍ 72.0° ◀



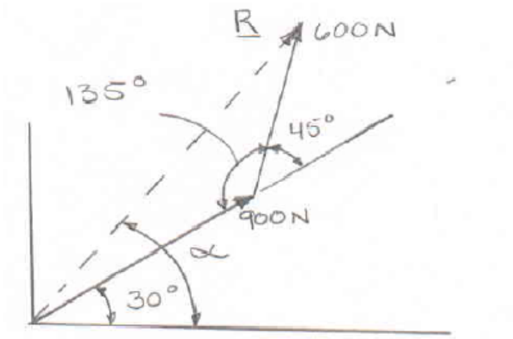
PROBLEM 2.16

Solve Prob. 2.1 by trigonometry.

PROBLEM 2.1

Two forces are applied as shown to a hook. Determine graphically the magnitude and direction of their resultant using (*a*) the parallelogram law, (*b*) the triangle rule.

SOLUTION



Using the law of cosines:

$$R^2 = (900\,\text{N})^2 + (600\,\text{N})^2 - 2(900\,\text{N})(600\,\text{N})\cos(135°)$$

$$R = 1390.57\text{N}$$

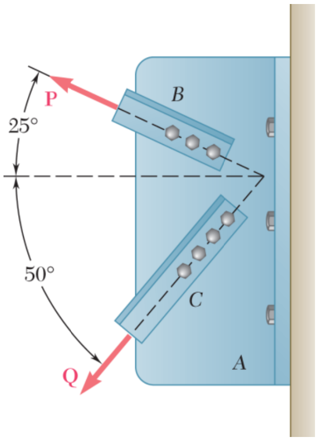
Using the law of sines:

$$\frac{\sin(\alpha - 30^\circ)}{600\text{N}} = \frac{\sin(135°)}{1390.57\text{N}}$$

$$\alpha - 30^\circ = 17.7642°$$

$$\alpha = 47.764^\circ$$

$\mathbf{R} = 1391\text{N}$ ∠ 47.8° ◀



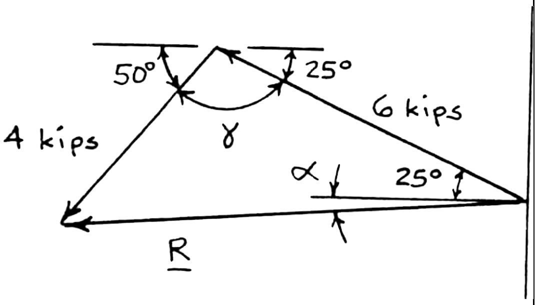
PROBLEM 2.17

Solve Problem 2.4 by trigonometry.

PROBLEM 2.4 Two structural members *B* and *C* are bolted to bracket *A*. Knowing that both members are in tension and that $P = 6$ kips and $Q = 4$ kips, determine graphically the magnitude and direction of the resultant force exerted on the bracket using (*a*) the parallelogram law, (*b*) the triangle rule.

SOLUTION

Using the force triangle and the laws of cosines and sines:



We have: $\gamma = 180° - (50° + 25°)$

$= 105°$

Then $R^2 = (4\text{ kips})^2 + (6\text{ kips})^2 - 2(4\text{ kips})(6\text{ kips})\cos 105°$

$= 64.423\text{ kips}^2$

$R = 8.0264\text{ kips}$

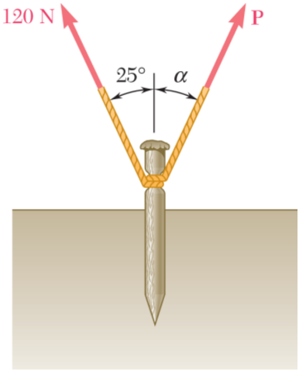
And $$\frac{4\text{ kips}}{\sin(25° + \alpha)} = \frac{8.0264\text{ kips}}{\sin 105°}$$

$\sin(25° + \alpha) = 0.48137$

$25° + \alpha = 28.775°$

$\alpha = 3.775°$

$\mathbf{R} = 8.03\text{ kips}$ ⦨ 3.8° ◀

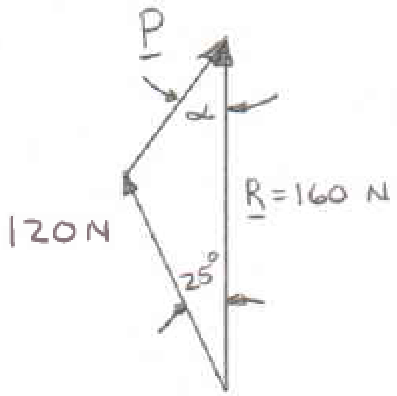


PROBLEM 2.18

For the stake of Prob. 2.5, knowing that the tension in one rope is 120 N, determine by trigonometry the magnitude and direction of the force **P** so that the resultant is a vertical force of 160 N.

PROBLEM 2.5 A stake is being pulled out of the ground by means of two ropes as shown. Knowing that $\alpha = 30°$, determine by trigonometry (*a*) the magnitude of the force **P** so that the resultant force exerted on the stake is vertical, (*b*) the corresponding magnitude of the resultant.

SOLUTION

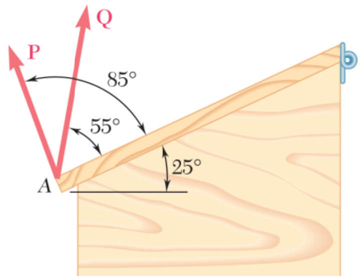


Using the laws of cosines and sines:

$$P^2 = (120\text{ N})^2 + (160\text{ N})^2 - 2(120\text{ N})(160\text{ N})\cos 25°$$
$$P = 72.096\text{ N}$$

And
$$\frac{\sin\alpha}{120\text{ N}} = \frac{\sin 25°}{72.096\text{ N}}$$
$$\sin\alpha = 0.70343$$
$$\alpha = 44.703°$$

$\mathbf{P} = 72.1\text{ N} \angle 44.7°$ ◀

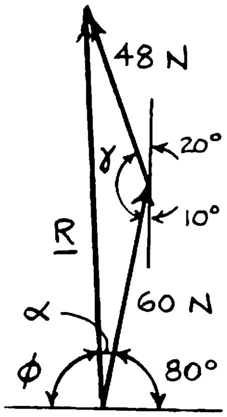


PROBLEM 2.19

Two forces **P** and **Q** are applied to the lid of a storage bin as shown. Knowing that P = 48 N and Q = 60 N, determine by trigonometry the magnitude and direction of the resultant of the two forces.

SOLUTION

Using the force triangle and the laws of cosines and sines:



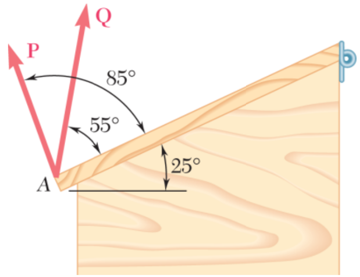
We have
$$\gamma = 180° - (20° + 10°)$$
$$= 150°$$

Then
$$R^2 = (48 \text{ N})^2 + (60 \text{ N})^2$$
$$-2(48 \text{ N})(60 \text{ N})\cos 150°$$
$$R = 104.366 \text{ N}$$

and
$$\frac{48 \text{ N}}{\sin\alpha} = \frac{104.366 \text{ N}}{\sin 150°}$$
$$\sin\alpha = 0.22996$$
$$\alpha = 13.2947°$$

Hence:
$$\phi = 180° - \alpha - 80°$$
$$= 180° - 13.2947° - 80°$$
$$= 86.705°$$

R = 104.4 N ⦣ 86.7° ◀

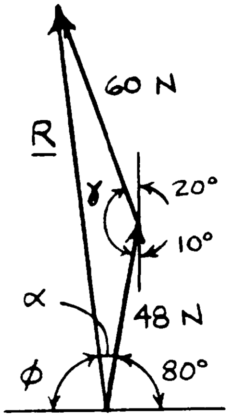


PROBLEM 2.20

Two forces **P** and **Q** are applied to the lid of a storage bin as shown. Knowing that $P = 60$ N and $Q = 48$ N, determine by trigonometry the magnitude and direction of the resultant of the two forces.

SOLUTION

Using the force triangle and the laws of cosines and sines:



We have
$$\gamma = 180° - (20° + 10°)$$
$$= 150°$$

Then
$$R^2 = (60\text{ N})^2 + (48\text{ N})^2 - 2(60\text{ N})(48\text{ N})\cos 150°$$
$$R = 104.366\text{ N}$$

and
$$\frac{60\text{ N}}{\sin\alpha} = \frac{104.366\text{ N}}{\sin 150°}$$
$$\sin\alpha = 0.28745$$
$$\alpha = 16.7054°$$

Hence:
$$\phi = 180° - \alpha - 180°$$
$$= 180° - 16.7054° - 80°$$
$$= 83.295°$$

$\mathbf{R} = 104.4$ N ⦪ 83.3° ◀

PROBLEM 2.34

Determine the resultant of the three forces of Problem 2.22.

PROBLEM 2.22 Determine the *x* and *y* components of each of the forces shown.

SOLUTION

Components of the forces were determined in Problem 2.22:

Force	*x* Comp. (N)	*y* Comp. (N)
800 lb	+640	+480
424 lb	–224	–360
408 lb	+192	–360
	$R_x = +608$	$R_y = -240$

$$\mathbf{R} = R_x\mathbf{i} + R_y\mathbf{j}$$

$$= (608 \text{ lb})\mathbf{i} + (-240 \text{ lb})\mathbf{j}$$

$$\tan\alpha = \frac{R_y}{R_x}$$

$$= \frac{240}{608}$$

$$\alpha = 21.541°$$

$$R = \frac{240 \text{ N}}{\sin(21.541°)}$$

$$= 653.65 \text{ N}$$

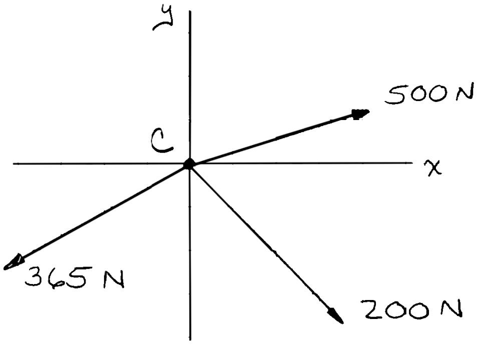
PROBLEM 2.36

Knowing that the tension in rope *AC* is 365 N, determine the resultant of the three forces exerted at point *C* of post *BC*.

SOLUTION

Determine force components:



y
500 N
C
x
365 N
200 N

Cable force *AC*:

$$F_x = -(365\text{ N})\frac{960}{1460} = -240\text{ N}$$

$$F_y = -(365\text{ N})\frac{1100}{1460} = -275\text{ N}$$

500-N Force:

$$F_x = (500\text{ N})\frac{24}{25} = 480\text{ N}$$

$$F_y = (500\text{ N})\frac{7}{25} = 140\text{ N}$$

200-N Force:

$$F_x = (200\text{ N})\frac{4}{5} = 160\text{ N}$$

$$F_y = -(200\text{ N})\frac{3}{5} = -120\text{ N}$$

and

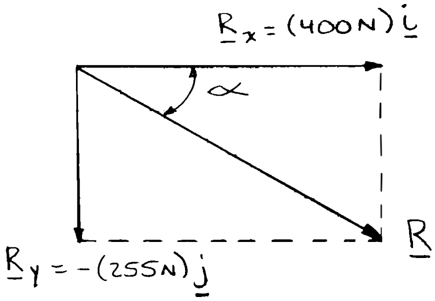
$$R_x = \Sigma F_x = -240\text{ N} + 480\text{ N} + 160\text{ N} = 400\text{ N}$$

$$R_y = \Sigma F_y = -275\text{ N} + 140\text{ N} - 120\text{ N} = -255\text{ N}$$

$$R = \sqrt{R_x^2 + R_y^2}$$

$$= \sqrt{(400\text{ N})^2 + (-255\text{ N})^2}$$

$$= 474.37\text{ N}$$



$R_x = (400\text{ N})\,\underline{i}$
α

Then

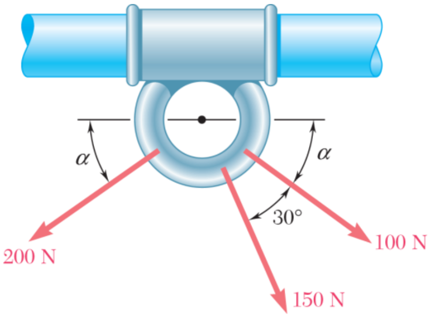
$$R_x = \Sigma F_x = 168.953 \text{ lb}$$
$$R_y = \Sigma F_y = 110.676 \text{ lb}$$

and

$$R = \sqrt{(168.953 \text{ lb})^2 + (110.676 \text{ lb})^2}$$
$$= 201.976 \text{ lb}$$

$$\tan\alpha = \frac{110.676}{168.953}$$
$$\tan\alpha = 0.65507$$
$$\alpha = 33.228°$$

$\mathbf{R} = 202 \text{ lb} \measuredangle 33.2°$ ◀



PROBLEM 2.39

For the collar of Problem 2.35, determine (*a*) the required value of α if the resultant of the three forces shown is to be vertical, (*b*) the corresponding magnitude of the resultant.

SOLUTION

$$R_x = \Sigma F_x$$

$$= (100\text{ N})\cos\alpha + (150\text{ N})\cos(\alpha + 30°) - (200\text{ N})\cos\alpha$$

$$R_x = -(100\text{ N})\cos\alpha + (150\text{ N})\cos(\alpha + 30°) \qquad (1)$$

$$R_y = \Sigma F_y$$

$$= -(100\text{ N})\sin\alpha - (150\text{ N})\sin(\alpha + 30°) - (200\text{ N})\sin\alpha$$

$$R_y = -(300\text{ N})\sin\alpha - (150\text{ N})\sin(\alpha + 30°) \qquad (2)$$

(*a*) For **R** to be vertical, we must have $R_x = 0$. We make $R_x = 0$ in Eq. (1):

$$-100\cos\alpha + 150\cos(\alpha + 30°) = 0$$

$$-100\cos\alpha + 150(\cos\alpha\cos 30° - \sin\alpha\sin 30°) = 0$$

$$29.904\cos\alpha = 75\sin\alpha$$

$$\tan\alpha = \frac{29.904}{75}$$

$$= 0.39872$$

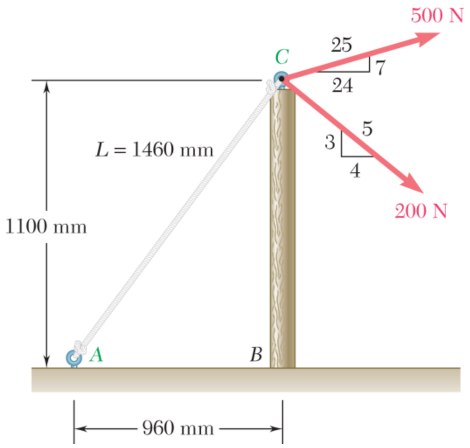
$$\alpha = 21.738° \qquad \alpha = 21.7° \blacktriangleleft$$

(*b*) Substituting for α in Eq. (2):

$$R_y = -300\sin 21.738° - 150\sin 51.738°$$

$$= -228.89\text{ N}$$

$$R = |R_y| = 228.89\text{ N} \qquad R = 229\text{ N} \blacktriangleleft$$



PROBLEM 2.40

For the post of Prob. 2.36, determine (*a*) the required tension in rope *AC* if the resultant of the three forces exerted at point *C* is to be horizontal, (*b*) the corresponding magnitude of the resultant.

SOLUTION

$$R_x = \Sigma F_x = -\frac{960}{1460}T_{AC} + \frac{24}{25}(500\text{ N}) + \frac{4}{5}(200\text{ N})$$

$$R_x = -\frac{48}{73}T_{AC} + 640\text{ N} \qquad (1)$$

$$R_y = \Sigma F_y = -\frac{1100}{1460}T_{AC} + \frac{7}{25}(500\text{ N}) - \frac{3}{5}(200\text{ N})$$

$$R_y = -\frac{55}{73}T_{AC} + 20\text{ N} \qquad (2)$$

(*a*) For **R** to be horizontal, we must have $R_y = 0$.

Set $R_y = 0$ in Eq. (2): $-\frac{55}{73}T_{AC} + 20\text{ N} = 0$

$$T_{AC} = 26.545\text{ N}$$

$T_{AC} = 26.5\text{ N}$ ◀

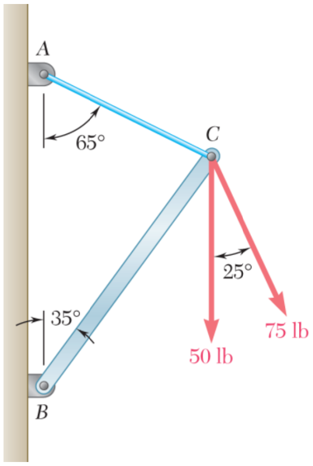
(*b*) Substituting for T_{AC} into Eq. (1) gives

$$R_x = -\frac{48}{73}(26.545\text{ N}) + 640\text{ N}$$

$$R_x = 622.55\text{ N}$$

$$R = R_x = 623\text{ N}$$

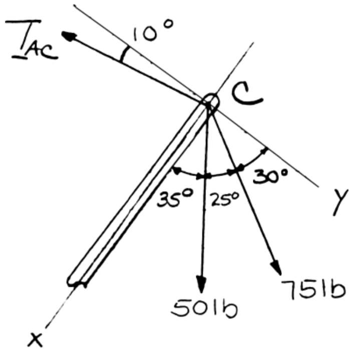
$R = 623\text{ N}$ ◀



PROBLEM 2.41

Determine (*a*) the required tension in cable *AC*, knowing that the resultant of the three forces exerted at Point *C* of boom *BC* must be directed along *BC*, (*b*) the corresponding magnitude of the resultant.

SOLUTION



Using the *x* and *y* axes shown:

$$R_x = \Sigma F_x = T_{AC}\sin 10° + (50\text{ lb})\cos 35° + (75\text{ lb})\cos 60°$$

$$= T_{AC}\sin 10° + 78.458\text{ lb} \qquad (1)$$

$$R_y = \Sigma F_y = (50\text{ lb})\sin 35° + (75\text{ lb})\sin 60° - T_{AC}\cos 10°$$

$$R_y = 93.631\text{ lb} - T_{AC}\cos 10° \qquad (2)$$

(*a*) Set $R_y = 0$ in Eq. (2):

$$93.631\text{ lb} - T_{AC}\cos 10° = 0$$

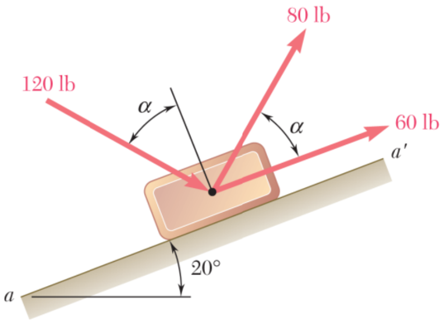
$$T_{AC} = 95.075\text{ lb} \qquad T_{AC} = 95.1\text{ lb} \blacktriangleleft$$

(*b*) Substituting for T_{AC} in Eq. (1):

$$R_x = (95.075\text{ lb})\sin 10° + 78.458\text{ lb}$$

$$= 94.968\text{ lb}$$

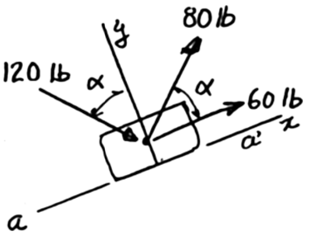
$$R = R_x \qquad R = 95.0\text{ lb} \blacktriangleleft$$



PROBLEM 2.42

For the block of Problems 2.37 and 2.38, determine (*a*) the required value of α if the resultant of the three forces shown is to be parallel to the incline, (*b*) the corresponding magnitude of the resultant.

SOLUTION



Select the x axis to be along $a\,a'$.

Then

$$R_x = \Sigma F_x = (60\text{ lb}) + (80\text{ lb})\cos\alpha + (120\text{ lb})\sin\alpha \qquad (1)$$

and

$$R_y = \Sigma F_y = (80\text{ lb})\sin\alpha - (120\text{ lb})\cos\alpha \qquad (2)$$

(*a*) Set $R_y = 0$ in Eq. (2).

$$(80\text{ lb})\sin\alpha - (120\text{ lb})\cos\alpha = 0$$

Dividing each term by $\cos\alpha$ gives:

$$(80\text{ lb})\tan\alpha = 120\text{ lb}$$

$$\tan\alpha = \frac{120\text{ lb}}{80\text{ lb}}$$

$$\alpha = 56.310^\circ \qquad \alpha = 56.3^\circ \blacktriangleleft$$

(*b*) Substituting for α in Eq. (1) gives:

$$R_x = 60\text{ lb} + (80\text{ lb})\cos 56.31^\circ + (120\text{ lb})\sin 56.31^\circ = 204.22\text{ lb} \qquad R_x = 204\text{ lb} \blacktriangleleft$$

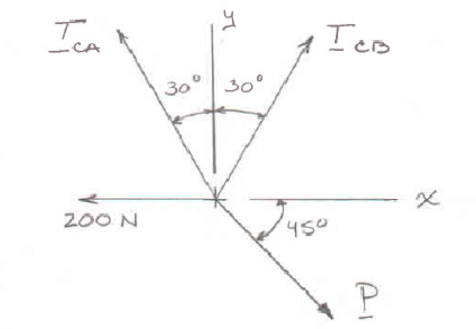
PROBLEM 2.49

Two cables are tied together at *C* and are loaded as shown. Knowing that *P* = 300 N, determine the tension in cables *AC* and *BC*.

SOLUTION

Free-Body Diagram



$\xrightarrow{+} \Sigma F_x = 0 \qquad -T_{CA}\sin 30^\circ + T_{CB}\sin 30^\circ - P\cos 45^\circ - 200\text{N} = 0$

For $P = 200\text{N}$ we have,

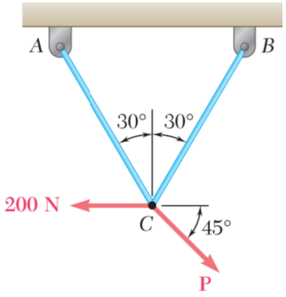
$$-0.5T_{CA} + 0.5T_{CB} + 212.13 - 200 = 0 \quad (1)$$

$+\uparrow \Sigma F_y = 0 \qquad T_{CA}\cos 30^\circ - T_{CB}\cos 30^\circ - P\sin 45^\circ = 0$

$$0.86603T_{CA} + 0.86603T_{CB} - 212.13 = 0 \quad (2)$$

Solving equations (1) and (2) simultaneously gives, $T_{CA} = 134.6\text{ N}$ ◀

$T_{CB} = 110.4\text{ N}$ ◀

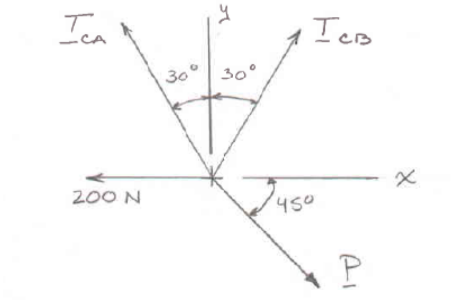


PROBLEM 2.50

Two cables are tied together at *C* and are loaded as shown. Determine the range of values of **P** for which both cables remain taut.

SOLUTION

Free-Body Diagram



$\xrightarrow{+} \Sigma F_x = 0 \qquad -T_{CA}\sin 30^\circ + T_{CB}\sin 30^\circ - P\cos 45^\circ - 200\text{N} = 0$

For $T_{CA} = 0$ we have,

$$0.5T_{CB} + 0.70711P - 200 = 0 \quad (1)$$

$+\uparrow \Sigma F_y = 0 \qquad T_{CA}\cos 30^\circ - T_{CB}\cos 30^\circ - P\sin 45^\circ = 0$; again setting $T_{CA} = 0$ yields,

$$0.86603T_{CB} - 0.70711P = 0 \quad (2)$$

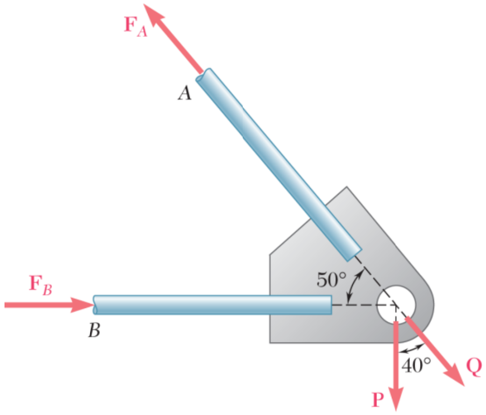
Adding equations (1) and (2) gives, $1.36603T_{CB} = 200$ hence $T_{CB} = 146.410\text{N}$ and $P = 179.315\text{N}$

Substituting for $T_{CB} = 0$ into the equilibrium equations and solving simultaneously gives,

$$-0.5T_{CA} + 0.70711P - 200 = 0$$
$$0.86603T_{CA} - 0.70711P = 0$$

And $T_{CA} = 546.40\text{N}$, $P = 669.20\text{N}$ Thus for both cables to remain taut, load *P* must be within the range of 179.315 N and 669.20 N.

179.3 N < *P* < 669 N ◀

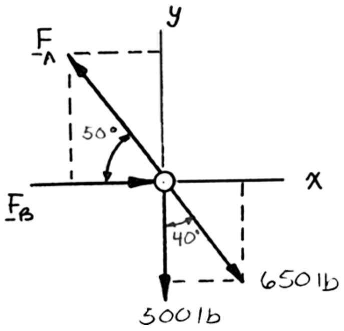


PROBLEM 2.51

Two forces **P** and **Q** are applied as shown to an aircraft connection. Knowing that the connection is in equilibrium and that $P = 500$ lb and $Q = 650$ lb, determine the magnitudes of the forces exerted on the rods *A* and *B*.

SOLUTION

Free-Body Diagram



Resolving the forces into *x*- and *y*-directions:

$$\mathbf{R} = \mathbf{P} + \mathbf{Q} + \mathbf{F}_A + \mathbf{F}_B = 0$$

Substituting components:

$$\begin{aligned}\mathbf{R} &= -(500\text{ lb})\mathbf{j} + [(650\text{ lb})\cos 50°]\mathbf{i}\\ &\quad -[(650\text{ lb})\sin 50°]\mathbf{j}\\ &\quad + F_B\mathbf{i} - (F_A\cos 50°)\mathbf{i} + (F_A\sin 50°)\mathbf{j} = 0\end{aligned}$$

In the *y*-direction (one unknown force):

$$-500\text{ lb} - (650\text{ lb})\sin 50° + F_A\sin 50° = 0$$

Thus,

$$F_A = \frac{500\text{ lb} + (650\text{ lb})\sin 50°}{\sin 50°}$$

$$= 1302.70\text{ lb}$$

$F_A = 1303$ lb ◀

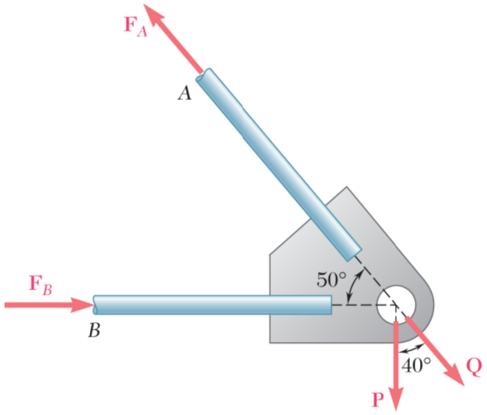
In the *x*-direction:

$$(650\text{ lb})\cos 50° + F_B - F_A\cos 50° = 0$$

Thus,

$$\begin{aligned}F_B &= F_A\cos 50° - (650\text{ lb})\cos 50°\\ &= (1302.70\text{ lb})\cos 50° - (650\text{ lb})\cos 50°\\ &= 419.55\text{ lb}\end{aligned}$$

$F_B = 420$ lb ◀

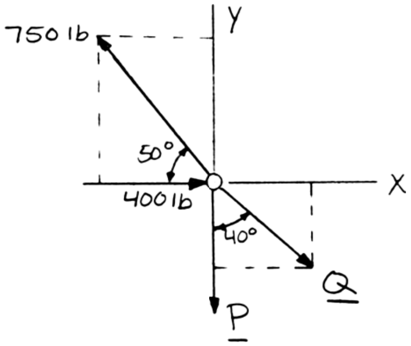


PROBLEM 2.52

Two forces **P** and **Q** are applied as shown to an aircraft connection. Knowing that the connection is in equilibrium and that the magnitudes of the forces exerted on rods *A* and *B* are $F_A = 750$ lb and $F_B = 400$ lb, determine the magnitudes of **P** and **Q**.

SOLUTION

Free-Body Diagram



Resolving the forces into *x*- and *y*-directions:

$$\mathbf{R} = \mathbf{P} + \mathbf{Q} + \mathbf{F}_A + \mathbf{F}_B = 0$$

Substituting components:
$$\mathbf{R} = -P\mathbf{j} + Q\cos 50°\mathbf{i} - Q\sin 50°\mathbf{j} - [(750\text{ lb})\cos 50°]\mathbf{i} + [(750\text{ lb})\sin 50°]\mathbf{j} + (400\text{ lb})\mathbf{i}$$

In the *x*-direction (one unknown force):

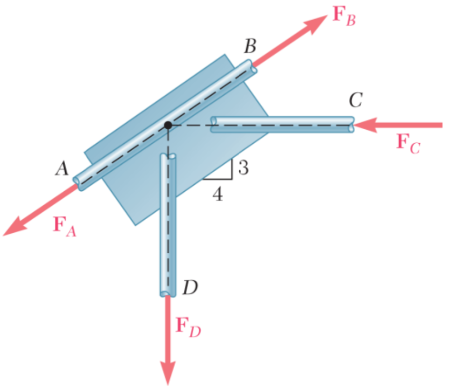
$$Q\cos 50° - [(750\text{ lb})\cos 50°] + 400\text{ lb} = 0$$

$$Q = \frac{(750\text{ lb})\cos 50° - 400\text{ lb}}{\cos 50°} = 127.710\text{ lb}$$

In the *y*-direction:
$$-P - Q\sin 50° + (750\text{ lb})\sin 50° = 0$$

$$P = -Q\sin 50° + (750\text{ lb})\sin 50° = -(127.710\text{ lb})\sin 50° + (750\text{ lb})\sin 50° = 476.70\text{ lb}$$

$P = 477$ lb; $Q = 127.7$ lb ◀

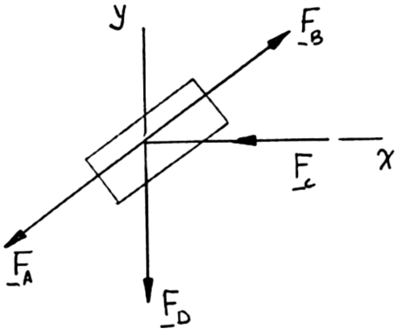


PROBLEM 2.53

A welded connection is in equilibrium under the action of the four forces shown. Knowing that $F_A = 8$ kN and $F_B = 16$ kN, determine the magnitudes of the other two forces.

SOLUTION

Free-Body Diagram of Connection



$$\Sigma F_x = 0: \quad \frac{3}{5}F_B - F_C - \frac{3}{5}F_A = 0$$

With $F_A = 8$ kN

$F_B = 16$ kN

$$F_C = \frac{4}{5}(16 \text{ kN}) - \frac{4}{5}(8 \text{ kN})$$

$F_C = 6.40$ kN ◀

$$\Sigma F_y = 0: \quad -F_D + \frac{3}{5}F_B - \frac{3}{5}F_A = 0$$

With F_A and F_B as above: $F_D = \frac{3}{5}(16 \text{ kN}) - \frac{3}{5}(8 \text{ kN})$

$F_D = 4.80$ kN ◀

$\underline{F}_A$
$\underline{F}_D$

$$\Sigma F_y = 0: \quad -F_D - \frac{3}{5}F_A + \frac{3}{5}F_B = 0$$

or

$$F_B = F_D + \frac{3}{5}F_A$$

With

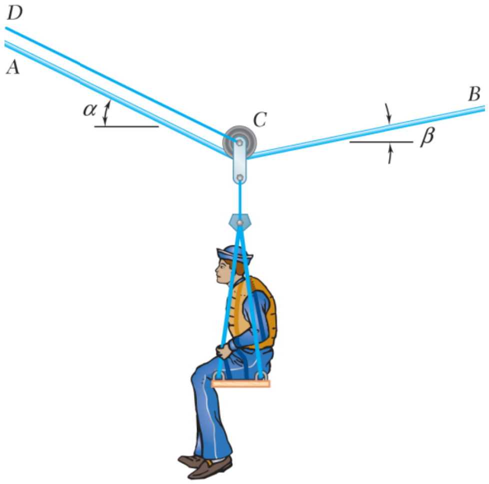
$$F_A = 5\text{ kN}, \quad F_D = 8\text{ kN}$$

$$F_B = \frac{5}{3}\left[6\text{ kN} + \frac{3}{5}(5\text{ kN})\right] \qquad F_B = 15.00\text{ kN} \blacktriangleleft$$

$$\Sigma F_x = 0: \quad -F_C + \frac{4}{5}F_B - \frac{4}{5}F_A = 0$$

$$F_C = \frac{4}{5}(F_B - F_A)$$

$$= \frac{4}{5}(15\text{ kN} - 5\text{ kN}) \qquad F_C = 8.00\text{ kN} \blacktriangleleft$$

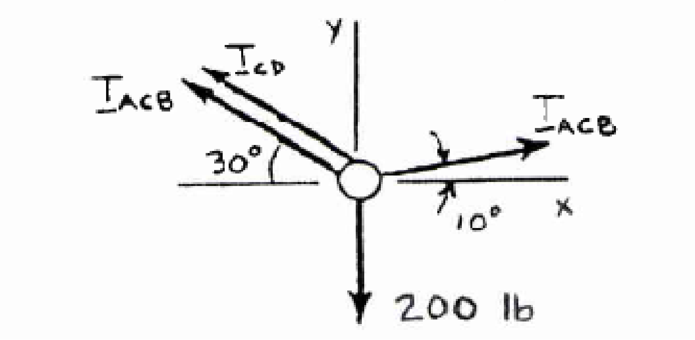


PROBLEM 2.55

A sailor is being rescued using a boatswain's chair that is suspended from a pulley that can roll freely on the support cable *ACB* and is pulled at a constant speed by cable *CD*. Knowing that $\alpha = 30°$ and $\beta = 10°$ and that the combined weight of the boatswain's chair and the sailor is 200 lb, determine the tension (*a*) in the support cable *ACB*, (*b*) in the traction cable *CD*.

SOLUTION

Free-Body Diagram



$$\overset{+}{\rightarrow} \Sigma F_x = 0: \quad T_{ACB} \cos 10° - T_{ACB} \cos 30° - T_{CD} \cos 30° = 0$$

$$T_{CD} = 0.137158 T_{ACB} \qquad (1)$$

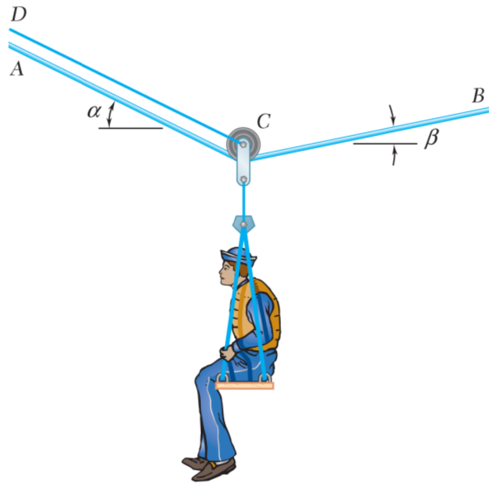
$$+\!\uparrow \Sigma F_y = 0: \quad T_{ACB} \sin 10° + T_{ACB} \sin 30° + T_{CD} \sin 30° - 200 = 0$$

$$0.67365 T_{ACB} + 0.5 T_{CD} = 200 \qquad (2)$$

(*a*) Substitute (1) into (2): $0.67365 T_{ACB} + 0.5(0.137158 T_{ACB}) = 200$

$T_{ACB} = 269.46 \text{ lb}$ $\qquad T_{ACB} = 269 \text{ lb}$ ◀

(*b*) From (1): $T_{CD} = 0.137158(269.46 \text{ lb})$ $\qquad T_{CD} = 37.0 \text{ lb}$ ◀

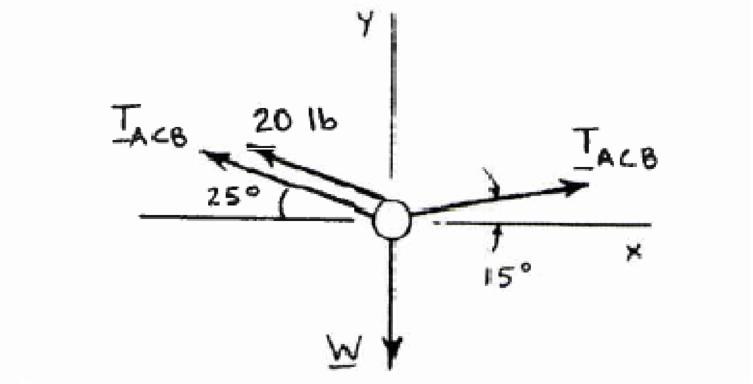


PROBLEM 2.56

A sailor is being rescued using a boatswain's chair that is suspended from a pulley that can roll freely on the support cable *ACB* and is pulled at a constant speed by cable *CD*. Knowing that $\alpha = 25°$ and $\beta = 15°$ and that the tension in cable *CD* is 20 lb, determine (*a*) the combined weight of the boatswain's chair and the sailor, (*b*) the tension in the support cable *ACB*.

SOLUTION

Free-Body Diagram



$$\xrightarrow{+} \Sigma F_x = 0: \quad T_{ACB}\cos 15° - T_{ACB}\cos 25° - (20\text{ lb})\cos 25° = 0$$

$$T_{ACB} = 304.04\text{ lb}$$

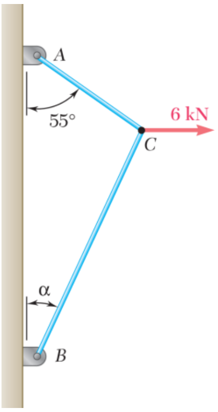
$$+\!\uparrow \Sigma F_y = 0: \quad (304.04\text{ lb})\sin 15° + (304.04\text{ lb})\sin 25°$$

$$+(20\text{ lb})\sin 25° - W = 0$$

$$W = 215.64\text{ lb}$$

(*a*) $W = 216\text{ lb}$ ◀

(*b*) $T_{ACB} = 304\text{ lb}$ ◀

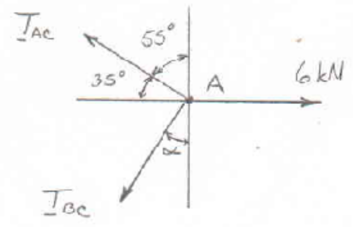


PROBLEM 2.57

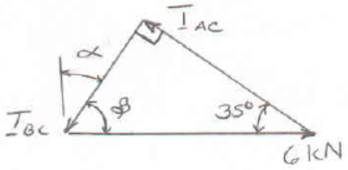
For the cables of prob. 2.44, find the value of α for which the tension is as small as possible (*a*) in cable *bc*, (*b*) in both cables simultaneously. In each case determine the tension in each cable.

SOLUTION

Free-Body Diagram



Force Triangle



(*a*) For a minimum tension in cable *BC,* set angle between cables to 90 degrees.

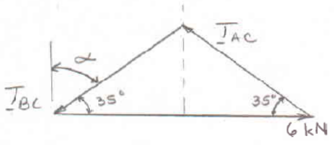
By inspection, $\alpha = 35.0^\circ$ ◀

$T_{AC} = (6\text{ kN})\cos 35^\circ$ $T_{AC} = 4.91\text{ kN}$ ◀

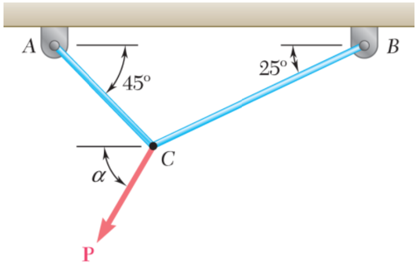
$T_{BC} = (6\text{ kN})\sin 35^\circ$ $T_{BC} = 3.44\text{ kN}$ ◀

(*b*) For equal tension in both cables, the force triangle will be an isosceles.

Therefore, by inspection, $\alpha = 55.0^\circ$ ◀



$$T_{AC} = T_{BC} = (1/2)\frac{6\text{ kN}}{\cos 35^\circ}$$ $T_{AC} = T_{BC} = 3.66\text{ kN}$ ◀

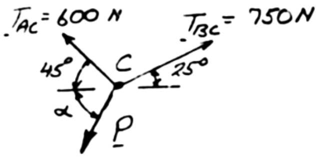


PROBLEM 2.58

For the cables of Problem 2.46, it is known that the maximum allowable tension is 600 N in cable *AC* and 750 N in cable *BC*. Determine (*a*) the maximum force **P** that can be applied at *C*, (*b*) the corresponding value of *α*.

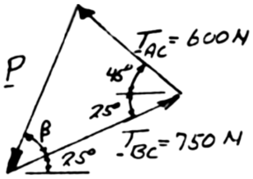
SOLUTION

Free-Body Diagram



T_{AC} = 600 N
T_{BC} = 750N
45°
C
25°
α
P

Force Triangle



P
T_{AC} = 600N
45°
25°
β
25°
T_{BC} = 750 N

(*a*) Law of cosines

$$P^2 = (600)^2 + (750)^2 - 2(600)(750)\cos(25° + 45°)$$

$$P = 784.02 \text{ N}$$

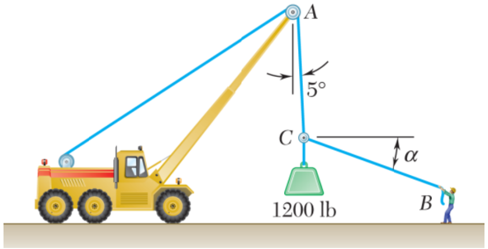
$$P = 784 \text{ N} \blacktriangleleft$$

(*b*) Law of sines

$$\frac{\sin\beta}{600 \text{ N}} = \frac{\sin(25° + 45°)}{784.02 \text{ N}}$$

$$\beta = 46.0° \qquad \therefore \quad \alpha = 46.0° + 25°$$

$$\alpha = 71.0° \blacktriangleleft$$



A
5°
C
α
1200 lb

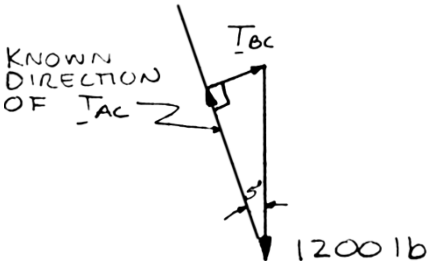
5°
C
α
T_{BC}
1200 lb

Force Triangle

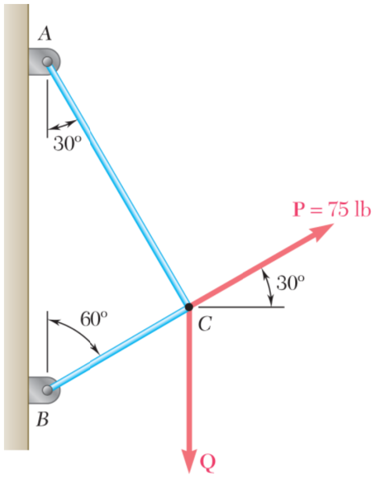


T_{BC}
KNOWN DIRECTION OF T_{AC}
5°
1200 lb

To be smallest, T_{BC} must be perpendicular to the direction of T_{AC}.

(*a*) Thus, $\alpha = 5.00°$ $\alpha = 5.00°$ ◀

(*b*) $T_{BC} = (1200 \text{ lb})\sin 5°$ $T_{BC} = 104.6 \text{ lb}$ ◀

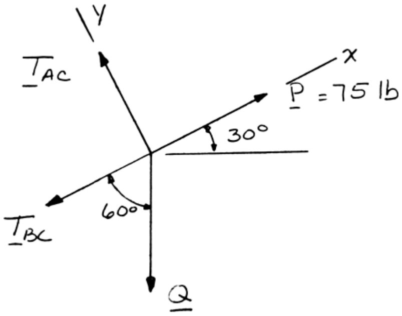


PROBLEM 2.60

Two cables tied together at C are loaded as shown. Determine the range of values of Q for which the tension will not exceed 60 lb in either cable.

SOLUTION

Free-Body Diagram



$$\Sigma F_x = 0: \quad -T_{BC} - Q\cos 60° + 75 \text{ lb} = 0$$

$$T_{BC} = 75 \text{ lb} - Q\cos 60° \qquad (1)$$

$$\Sigma F_y = 0: \quad T_{AC} - Q\sin 60° = 0$$

$$T_{AC} = Q\sin 60° \qquad (2)$$

Requirement: $T_{AC} = 60$ lb:

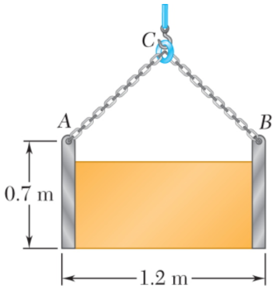
From Eq. (2): $Q\sin 60° = 60$ lb

$$Q = 69.3 \text{ lb}$$

Requirement: $T_{BC} = 60$ lb:

From Eq. (1): $75 \text{ lb} - Q\cos 60° = 60$ lb

$$Q = 30.0 \text{ lb} \quad 30.0 \text{ lb} \le Q \le 69.3 \text{ lb}$$ ◀

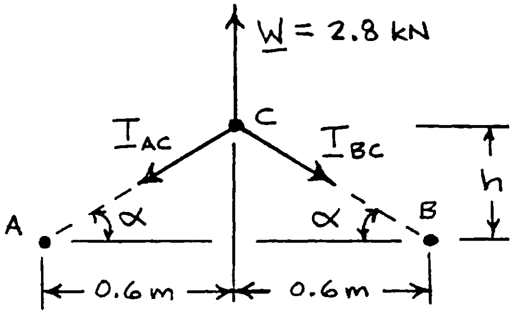


PROBLEM 2.61

A movable bin and its contents have a combined weight of 2.8 kN. Determine the shortest chain sling *ACB* that can be used to lift the loaded bin if the tension in the chain is not to exceed 5 kN.

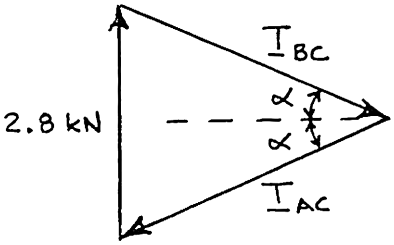
SOLUTION

Free-Body Diagram



$$\tan\alpha = \frac{h}{0.6\text{ m}} \qquad (1)$$

Isosceles Force Triangle



Law of sines: $\sin\alpha = \dfrac{\frac{1}{2}(2.8\text{ kN})}{T_{AC}}$

$$T_{AC} = 5\text{ kN}$$

$$\sin\alpha = \frac{\frac{1}{2}(2.8\text{ kN})}{5\text{ kN}}$$

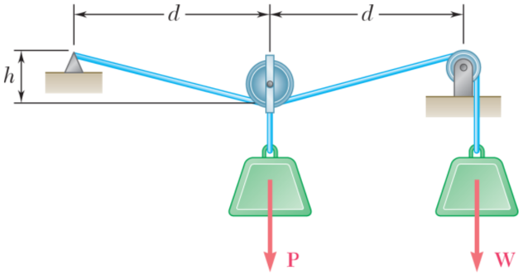
$$\alpha = 16.2602°$$

From Eq. (1): $\tan 16.2602° = \dfrac{h}{0.6\text{ m}} \qquad \therefore \quad h = 0.175000\text{ m}$

Half-length of chain $= AC = \sqrt{(0.6\text{ m})^2 + (0.175\text{ m})^2}$

$= 0.625\text{ m}$

Total length: $= 2\times 0.625\text{ m}$ $\qquad$ 1.250 m ◀

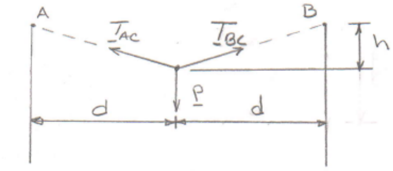


PROBLEM 2.62

For $W = 800$ N, $P = 200$ N, and $d = 600$ mm, determine the value of h consistent with equilibrium.

SOLUTION

Free-Body Diagram



$$T_{AC} = T_{BC} = 800 \text{ N}$$

$$AC = BC = \sqrt{(h^2 + d^2)}$$

$$\Sigma F_y = 0: \quad 2(800 \text{ N})\frac{h}{\sqrt{h^2 + d^2}} - P = 0$$

$$800 = \frac{P}{2}\sqrt{1 + \left(\frac{d}{h}\right)^2}$$

Data: $P = 200$ N, $d = 600$ mm and solving for h

$$800 \text{ N} = \frac{200 \text{ N}}{2}\sqrt{1 + \left(\frac{600 \text{ mm}}{h}\right)^2}$$

$h = 75.6$ mm ◀

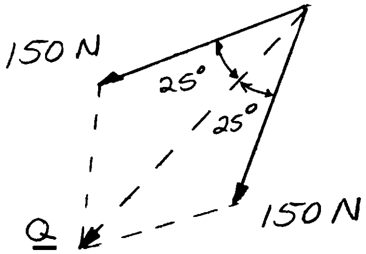
PROBLEM 2.65

Three forces are applied to a bracket as shown. The directions of the two 150-N forces may vary, but the angle between these forces is always 50°. Determine the range of values of α for which the magnitude of the resultant of the forces acting at A is less than 600 N.

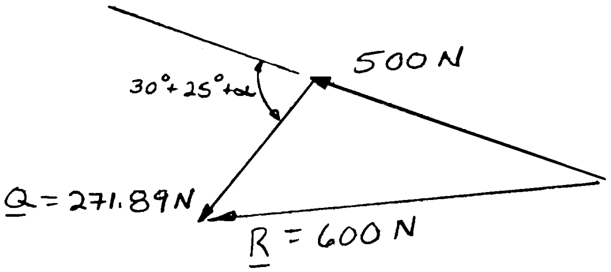
SOLUTION

Combine the two 150-N forces into a resultant force Q:



$$Q = 2(150\text{ N})\cos 25°$$
$$= 271.89\text{ N}$$

Equivalent loading at A:



Using the law of cosines:

$$(600\text{ N})^2 = (500\text{ N})^2 + (271.89\text{ N})^2 + 2(500\text{ N})(271.89\text{ N})\cos(55° + \alpha)$$
$$\cos(55° + \alpha) = 0.132685$$

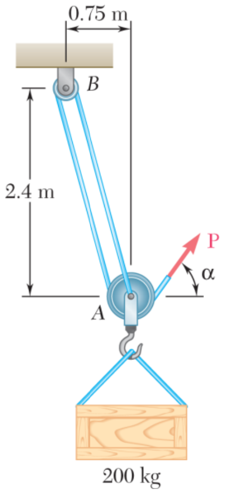
Two values for α: $55° + \alpha = 82.375$

$$\alpha = 27.4°$$

$$55° + \alpha = -82.375°$$
$$55° + \alpha = 360° - 82.375°$$

or $\alpha = 222.6°$

For $R < 600$ lb: $27.4° < \alpha < 222.6°$ ◀

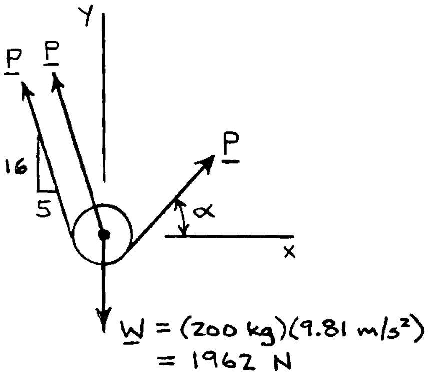


PROBLEM 2.66

A 200-kg crate is to be supported by the rope-and-pulley arrangement shown. Determine the magnitude and direction of the force **P** that must be exerted on the free end of the rope to maintain equilibrium. (*Hint:* The tension in the rope is the same on each side of a simple pulley. This can be proved by the methods of Ch. 4.)

SOLUTION

Free-Body Diagram: Pulley *A*



$$\xrightarrow{+} \Sigma F_x = 0: \quad -2P\left(\frac{5}{\sqrt{281}}\right) + P\cos\alpha = 0$$

$$\cos\alpha = 0.59655$$

$$\alpha = \pm 53.377^\circ$$

For $\alpha = +53.377^\circ$:

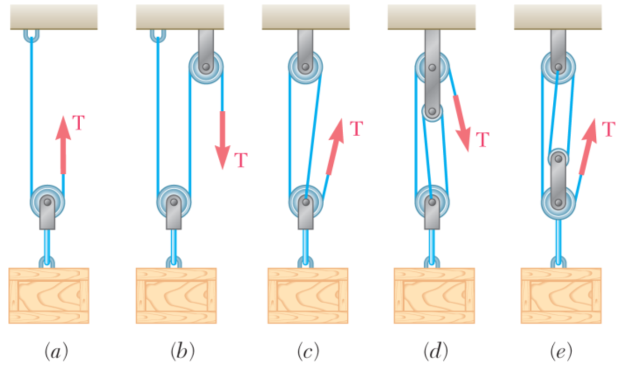
$$+\uparrow \Sigma F_y = 0: \quad 2P\left(\frac{16}{\sqrt{281}}\right) + P\sin 53.377^\circ - 1962\text{ N} = 0$$

$$\mathbf{P} = 724\text{ N} \measuredangle 53.4^\circ \blacktriangleleft$$

For $\alpha = -53.377^\circ$:

$$+\uparrow \Sigma F_y = 0: \quad 2P\left(\frac{16}{\sqrt{281}}\right) + P\sin(-53.377^\circ) - 1962\text{ N} = 0$$

$$\mathbf{P} = 1773 \searrow 53.4^\circ \blacktriangleleft$$



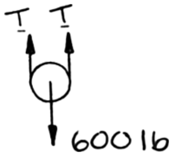
PROBLEM 2.67

A 600-lb crate is supported by several rope-and-pulley arrangements as shown. Determine for each arrangement the tension in the rope. (See the hint for Problem 2.66.)

SOLUTION

Free-Body Diagram of Pulley

(*a*)

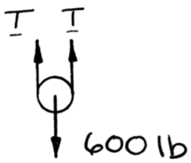


$$+\uparrow \Sigma F_y = 0: \quad 2T - (600 \text{ lb}) = 0$$

$$T = \frac{1}{2}(600 \text{ lb})$$

$$T = 300 \text{ lb} \blacktriangleleft$$

(*b*)



$$+\uparrow \Sigma F_y = 0: \quad 2T - (600 \text{ lb}) = 0$$

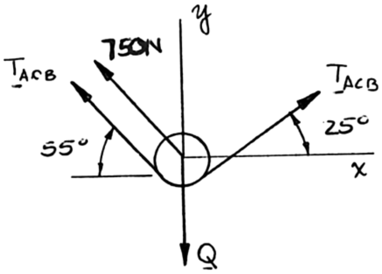
PROBLEM 2.69

A load **Q** is applied to the pulley C, which can roll on the cable ACB. The pulley is held in the position shown by a second cable CAD, which passes over the pulley A and supports a load **P**. Knowing that $P = 750$ N, determine (a) the tension in cable ACB, (b) the magnitude of load **Q**.

SOLUTION

Free-Body Diagram: Pulley *C*



(a) $\xrightarrow{+} \Sigma F_x = 0{:}\quad T_{ACB}(\cos 25° - \cos 55°) - (750\text{ N})\cos 55° = 0$

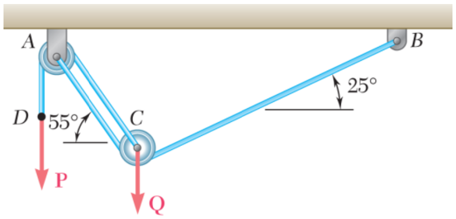
Hence: $T_{ACB} = 1292.88$ N

$T_{ACB} = 1293$ N ◀

(b) $+\!\uparrow \Sigma F_y = 0{:}\quad T_{ACB}(\sin 25° + \sin 55°) + (750\text{ N})\sin 55° - Q = 0$

$(1292.88\text{ N})(\sin 25° + \sin 55°) + (750\text{ N})\sin 55° - Q = 0$

or $Q = 2219.8$ N $\quad Q = 2220$ N ◀

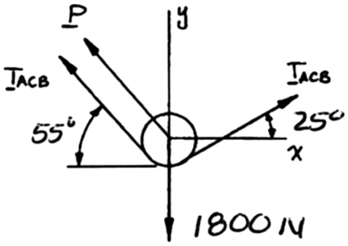


PROBLEM 2.70

An 1800-N load **Q** is applied to the pulley *C*, which can roll on the cable *ACB*. The pulley is held in the position shown by a second cable *CAD*, which passes over the pulley *A* and supports a load **P**. Determine (*a*) the tension in cable *ACB*, (*b*) the magnitude of load **P**.

SOLUTION

Free-Body Diagram: Pulley *C*



$$\xrightarrow{+} \Sigma F_x = 0: \quad T_{ACB}(\cos 25° - \cos 55°) - P\cos 55° = 0$$

or
$$P = 0.58010 T_{ACB} \quad (1)$$

$$+\!\uparrow \Sigma F_y = 0: \quad T_{ACB}(\sin 25° + \sin 55°) + P\sin 55° - 1800\text{ N} = 0$$

or
$$1.24177 T_{ACB} + 0.81915 P = 1800\text{ N} \quad (2)$$

(*a*) Substitute Equation (1) into Equation (2):

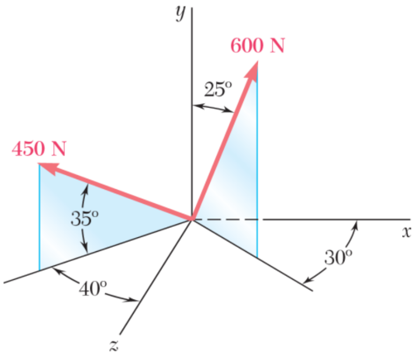
$$1.24177 T_{ACB} + 0.81915(0.58010 T_{ACB}) = 1800\text{ N}$$

Hence: $T_{ACB} = 1048.37\text{ N}$

$T_{ACB} = 1048\text{ N}$ ◀

(*b*) Using (1), $P = 0.58010(1048.37\text{ N}) = 608.16\text{ N}$

$P = 608\text{ N}$ ◀



PROBLEM 2.71

Determine (*a*) the *x*, *y*, and *z* components of the 600-N force, (*b*) the angles θ_x, θ_y, and θ_z that the force forms with the coordinate axes.

SOLUTION

(*a*)

$$F_x = (600\text{ N})\sin 25^\circ \cos 30^\circ$$

$$F_x = 219.60\text{ N} \qquad F_x = 220\text{ N} \blacktriangleleft$$

$$F_y = (600\text{ N})\cos 25^\circ$$

$$F_y = 543.78\text{ N} \qquad F_y = 544\text{ N} \blacktriangleleft$$

$$F_z = (380.36\text{ N})\sin 25^\circ \sin 30^\circ$$

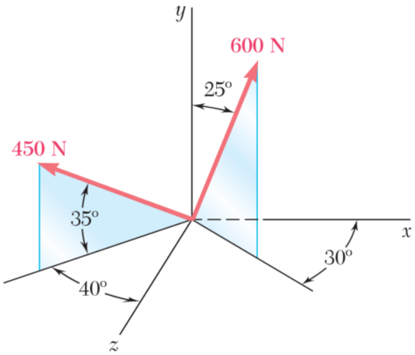
$$F_z = 126.785\text{ N} \qquad F_z = 126.8\text{ N} \blacktriangleleft$$

(*b*)

$$\cos\theta_x = \frac{F_x}{F} = \frac{219.60\text{ N}}{600\text{ N}} \qquad \theta_x = 68.5^\circ \blacktriangleleft$$

$$\cos\theta_y = \frac{F_y}{F} = \frac{543.78\text{ N}}{600\text{ N}} \qquad \theta_y = 25.0^\circ \blacktriangleleft$$

$$\cos\theta_z = \frac{F_z}{F} = \frac{126.785\text{ N}}{600\text{ N}} \qquad \theta_z = 77.8^\circ \blacktriangleleft$$



PROBLEM 2.72

Determine (*a*) the *x*, *y*, and *z* components of the 450-N force, (*b*) the angles θ_x, θ_y, and θ_z that the force forms with the coordinate axes.

SOLUTION

(*a*)

$$F_x = -(450\text{ N})\cos 35°\sin 40°$$

$$F_x = -236.94\text{ N} \qquad F_x = -237\text{ N} \blacktriangleleft$$

$$F_y = (450\text{ N})\sin\ 35°$$

$$F_y = 258.11\text{ N} \qquad F_y = 258\text{ N} \blacktriangleleft$$

$$F_z = (450\text{ N})\cos 35°\cos 40°$$

$$F_z = 282.38\text{ N} \qquad F_z = 282\text{ N} \blacktriangleleft$$

(*b*)

$$\cos\theta_x = \frac{F_x}{F} = \frac{-236.94\text{ N}}{450\text{ N}} \qquad \theta_x = 121.8° \blacktriangleleft$$

$$\cos\theta_y = \frac{F_y}{F} = \frac{258.11\text{ N}}{450\text{ N}} \qquad \theta_y = 55.0° \blacktriangleleft$$

$$\cos\theta_z = \frac{F_z}{F} = \frac{282.38\text{ N}}{450\text{ N}} \qquad \theta_z = 51.1° \blacktriangleleft$$

Note: From the given data, we could have computed directly

$\theta_y = 90° - 35° = 55°$, which checks with the answer obtained.

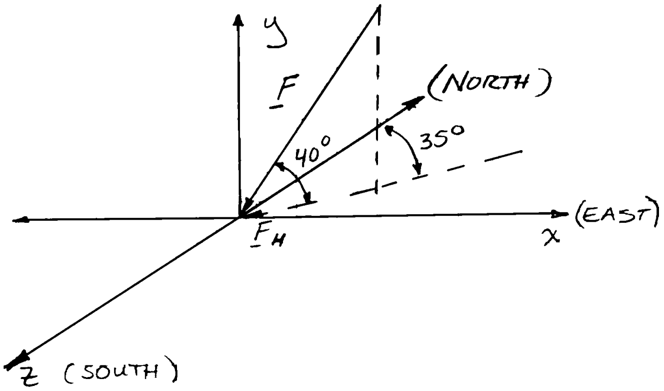
PROBLEM 2.73

A gun is aimed at a point *A* located 35° east of north. Knowing that the barrel of the gun forms an angle of 40° with the horizontal and that the maximum recoil force is 400 N, determine (*a*) the *x*, *y*, and *z* components of that force, (*b*) the values of the angles θ_x, θ_y, and θ_z defining the direction of the recoil force. (Assume that the *x*, *y*, and *z* axes are directed, respectively, east, up, and south.)

SOLUTION

Recoil force $F = 400 \text{ N}$

$$\therefore \quad F_H = (400 \text{ N})\cos 40° = 306.42 \text{ N}$$



(*a*)

$$F_x = -F_H \sin 35° = -(306.42 \text{ N})\sin 35° = -175.755 \text{ N}$$

$F_x = -175.8 \text{ N}$ ◀

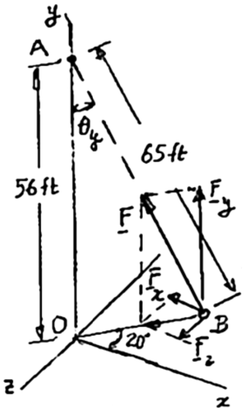
PROBLEM 2.77

Cable AB is 65 ft long, and the tension in that cable is 3900 lb. Determine (a) the x, y, and z components of the force exerted by the cable on the anchor B, (b) the angles θ_x, θ_y, and θ_z defining the direction of that force.

SOLUTION



From triangle AOB:

$$\cos\theta_y = \frac{56\text{ ft}}{65\text{ ft}}$$

$$= 0.86154$$

$$\theta_y = 30.51°$$

(a)

$$F_x = -F\sin\theta_y\cos 20°$$

$$= -(3900\text{ lb})\sin 30.51°\cos 20°$$

$F_x = -1861$ lb ◀

$$F_y = +F\cos\theta_y = (3900\text{ lb})(0.86154)$$

$F_y = +3360$ lb ◀

$$F_z = +(3900\text{ lb})\sin 30.51°\sin 20°$$

$F_z = +677$ lb ◀

(b)

$$\cos\theta_x = \frac{F_x}{F} = -\frac{1861\text{ lb}}{3900\text{ lb}} = -0.4771$$

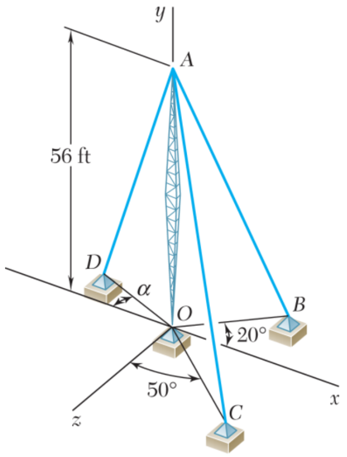
$\theta_x = 118.5°$ ◀

From above: $\theta_y = 30.51°$

$\theta_y = 30.5°$ ◀

$$\cos\theta_z = \frac{F_z}{F} = +\frac{677\text{ lb}}{3900\text{ lb}} = +0.1736$$

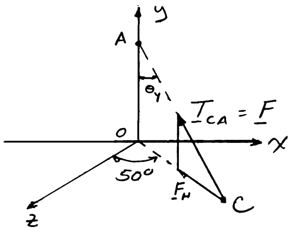
$\theta_z = 80.0°$ ◀



PROBLEM 2.78

Cable *AC* is 70 ft long, and the tension in that cable is 5250 lb. Determine (*a*) the *x*, *y*, and *z* components of the force exerted by the cable on the anchor *C*, (*b*) the angles θ_x, θ_y, and θ_z defining the direction of that force.

SOLUTION



In triangle *AOB*:

$$AC = 70\text{ ft}$$
$$OA = 56\text{ ft}$$
$$F = 5250\text{ lb}$$

$$\cos\theta_y = \frac{56\text{ ft}}{70\text{ ft}}$$
$$\theta_y = 36.870°$$
$$F_H = F\sin\theta_y$$
$$= (5250\text{ lb})\sin 36.870°$$
$$= 3150.0\text{ lb}$$

(*a*) $F_x = -F_H\sin 50° = -(3150.0\text{ lb})\sin 50° = -2413.0\text{ lb}$

$F_x = -2410\text{ lb}$ ◀

$F_y = +F\cos\theta_y = +(5250\text{ lb})\cos 36.870° = +4200.0\text{ lb}$

$F_y = +4200\text{ lb}$ ◀

$F_z = -F_H\cos 50° = -3150\cos 50° = -2024.8\text{ lb}$ $\quad F_z = -2025\text{ lb}$ ◀

(*b*) $\cos\theta_x = \dfrac{F_x}{F} = \dfrac{-2413.0\text{ lb}}{5250\text{ lb}}$ $\quad \theta_x = 117.4°$ ◀

From above: $\theta_y = 36.870°$ $\quad \theta_y = 36.9°$ ◀

$\theta_z = \dfrac{F_z}{F} = \dfrac{-2024.8\text{ lb}}{5250\text{ lb}}$ $\quad \theta_z = 112.7°$ ◀

PROBLEM 2.79

Determine the magnitude and direction of the force **F** = (240 N)**i** – (270 N)**j** + (680 N)**k**.

SOLUTION

$$F = \sqrt{F_x^2 + F_y^2 + F_z^2}$$

$$F = \sqrt{(240\text{ N})^2 + (-270\text{ N})^2 + (-680\text{ N})^2}$$

$F = 770\text{ N}$ ◀

$$\cos\theta_x = \frac{F_x}{F} = \frac{240\text{ N}}{770\text{ N}}$$

$\theta_x = 71.8°$ ◀

$$\cos\theta_y = \frac{F_y}{F} = \frac{-270\text{ N}}{770\text{ N}}$$

$\theta_y = 110.5°$ ◀

$$\cos\theta_y = \frac{F_z}{F} = \frac{680\text{ N}}{770\text{ N}}$$

$\theta_z = 28.0°$ ◀

PROBLEM 2.80

Determine the magnitude and direction of the force **F** = (320 N)**i** + (400 N)**j** − (250 N)**k**.

SOLUTION

$$F = \sqrt{F_x^2 + F_y^2 + F_z^2}$$

$$F = \sqrt{(320\text{ N})^2 + (400\text{ N})^2 + (-250\text{ N})^2}$$

$F = 570\text{ N}$ ◀

$$\cos\theta_x = \frac{F_x}{F} = \frac{320\text{ N}}{570\text{ N}}$$

$\theta_x = 55.8°$ ◀

$$\cos\theta_y = \frac{F_y}{F} = \frac{400\text{ N}}{570\text{ N}}$$

$\theta_y = 45.4°$ ◀

$$\cos\theta_y = \frac{F_z}{F} = \frac{-250\text{ N}}{570\text{ N}}$$

$\theta_z = 116.0°$ ◀

PROBLEM 2.81

A force acts at the origin of a coordinate system in a direction defined by the angles $\theta_x = 69.3°$ and $\theta_z = 57.9°$. Knowing that the y component of the force is –174.0 lb, determine (*a*) the angle θ_y, (*b*) the other components and the magnitude of the force.

SOLUTION

$$\cos^2\theta_x + \cos^2\theta_y + \cos^2\theta_z = 1$$

$$\cos^2(69.3°) + \cos^2\theta_y + \cos^2(57.9°) = 1$$

$$\cos\theta_y = \pm 0.7699$$

(*a*) Since $F_y < 0,$ we choose $\cos\theta_y = -0.7699$ $\therefore\ \theta_y = 140.3°$ ◀

(*b*)

$$F_y = F\cos\theta_y$$

$$-174.0\text{ lb} = F(-0.7699)$$

$$F = 226.0\text{ lb}$$ $F = 226\text{ lb}$ ◀

$$F_x = F\cos\theta_x = (226.0\text{ lb})\cos 69.3°$$ $F_x = 79.9\text{ lb}$ ◀

$$F_z = F\cos\theta_z = (226.0\text{ lb})\cos 57.9°$$ $F_z = 120.1\text{ lb}$ ◀

PROBLEM 2.82

A force acts at the origin of a coordinate system in a direction defined by the angles $\theta_x = 70.9°$ and $\theta_y = 144.9°$. Knowing that the z component of the force is -52.0 lb, determine (*a*) the angle θ_z, (*b*) the other components and the magnitude of the force.

SOLUTION

$$\cos^2\theta_x + \cos^2\theta_y + \cos^2\theta_z = 1$$

$$\cos^2 70.9^\circ + \cos^2 144.9^\circ + \cos^2\theta_z{}^\circ = 1$$

$$\cos\theta_z = \pm 0.47282$$

(*a*) Since $F_z < 0$, we choose $\cos\theta_z = -0.47282$ $\therefore\ \theta_z = 118.2^\circ$ ◀

(*b*)

$$F_z = F\cos\theta_z$$

$$-52.0\ lb = F(-0.47282)$$

$$F = 110.0 \text{ lb}$$

$F = 110.0$ lb ◀

$$F_x = F\cos\theta_x = (110.0 \text{ lb})\cos 70.9^\circ$$

$F_x = 36.0$ lb ◀

$$F_y = F\cos\theta_y = (110.0 \text{ lb})\cos 144.9^\circ$$

$F_y = -90.0$ lb ◀

PROBLEM 2.83

A force **F** of magnitude 210 N acts at the origin of a coordinate system. Knowing that $F_x = 80$ N, $\theta_z = 151.2°$, and $F_y < 0$, determine (*a*) the components F_y and F_z, (*b*) the angles θ_x and θ_y.

SOLUTION

(*a*)

$$F_z = F\cos\theta_z = (210\text{ N})\cos 151.2°$$

$$= -184.024\text{ N} \qquad F_z = -184.0\text{ N} \blacktriangleleft$$

Then: $$F^2 = F_x^2 + F_y^2 + F_z^2$$

So: $$(210\text{ N})^2 = (80\text{ N})^2 + (F_y)^2 + (184.024\text{ N})^2$$

Hence: $$F_y = -\sqrt{(210\text{ N})^2 - (80\text{ N})^2 - (184.024\text{ N})^2}$$

$$= -61.929\text{ N} \qquad F_y = -62.0\text{ lb} \blacktriangleleft$$

(*b*)

$$\cos\theta_x = \frac{F_x}{F} = \frac{80\text{ N}}{210\text{ N}} = 0.38095 \qquad \theta_x = 67.6° \blacktriangleleft$$

$$\cos\theta_y = \frac{F_y}{F} = \frac{61.929\text{ N}}{210\text{ N}} = -0.29490$$

$$\theta_y = 107.2° \blacktriangleleft$$

PROBLEM 2.84

A force **F** of magnitude 1200 N acts at the origin of a coordinate system. Knowing that $\theta_x = 65°$, $\theta_y = 40°$, and $F_z > 0$, determine (*a*) the components of the force, (*b*) the angle θ_z.

SOLUTION

$$\cos^2\theta_x + \cos^2\theta_y + \cos^2\theta_z = 1$$

$$\cos^2 65^\circ + \cos^2 40^\circ + \cos^2\theta_z{}^\circ = 1$$

$$\cos\theta_z = \pm 0.48432$$

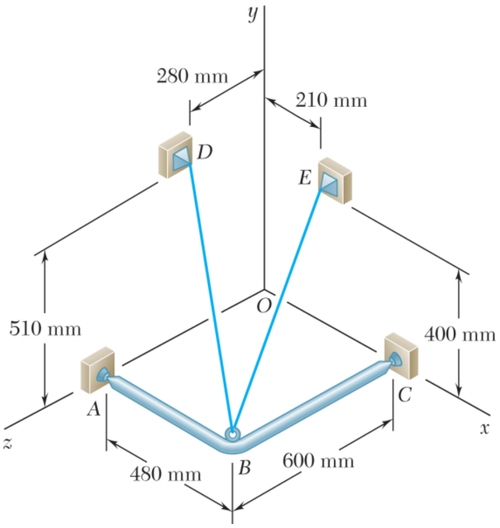
(*b*) Since $F_z > 0$, we choose $\cos\theta_z = 0.48432$, or $\theta_z = 61.032^\circ$ $\quad\therefore\ \theta_z = 61.0°$ ◀

(*a*) $F = 1200\text{ N}$

$$F_x = F\cos\theta_x = (1200\text{ N})\cos 65^\circ \qquad F_x = 507\text{ N}$$ ◀

$$F_y = F\cos\theta_y = (1200\text{ N})\cos 40^\circ \qquad F_y = 919\text{ N}$$ ◀

$$F_z = F\cos\theta_z = (1200\text{ N})\cos 61.032^\circ \qquad F_z = 582\text{ N}$$ ◀



PROBLEM 2.85

A frame *ABC* is supported in part by cable *DBE* that passes through a frictionless ring at *B*. Knowing that the tension in the cable is 385 N, determine the components of the force exerted by the cable on the support at *D*.

SOLUTION

$$\overrightarrow{DB} = (480 \text{ mm})\mathbf{i} - (510 \text{ mm})\mathbf{j} + (320 \text{ mm})\mathbf{k}$$

$$DB = \sqrt{(480 \text{ mm})^2 + (510 \text{ mm}^2) + (320 \text{ mm})^2}$$

$$= 770 \text{ mm}$$

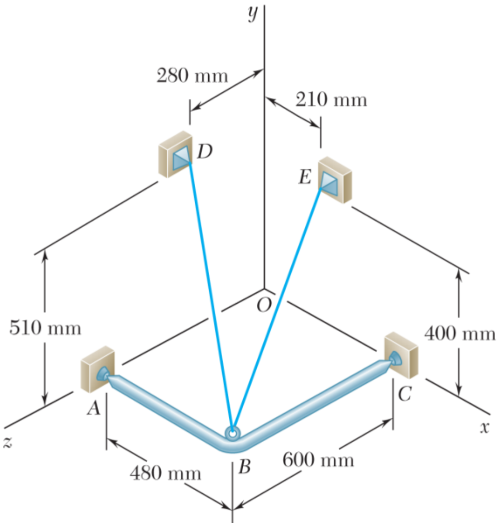
$$\mathbf{F} = F\boldsymbol{\lambda}_{DB}$$

$$= F\frac{\overrightarrow{DB}}{DB}$$

$$= \frac{385 \text{ N}}{770 \text{ mm}}[(480 \text{ mm})\mathbf{i} - (510 \text{ mm})\mathbf{j} + (320 \text{ mm})\mathbf{k}]$$

$$= (240 \text{ N})\mathbf{i} - (255 \text{ N})\mathbf{j} + (160 \text{ N})\mathbf{k}$$

$$F_x = +240 \text{ N}, \quad F_y = -255 \text{ N}, \quad F_z = +160.0 \text{ N} \blacktriangleleft$$



PROBLEM 2.86

For the frame and cable of Problem 2.85, determine the components of the force exerted by the cable on the support at *E*.

PROBLEM 2.85 A frame *ABC* is supported in part by cable *DBE* that passes through a frictionless ring at *B*. Knowing that the tension in the cable is 385 N, determine the components of the force exerted by the cable on the support at *D*.

SOLUTION

$$\overrightarrow{EB} = (270\text{ mm})\mathbf{i} - (400\text{ mm})\mathbf{j} + (600\text{ mm})\mathbf{k}$$

$$EB = \sqrt{(270\text{ mm})^2 + (400\text{ mm})^2 + (600\text{ mm})^2}$$

$$= 770\text{ mm}$$

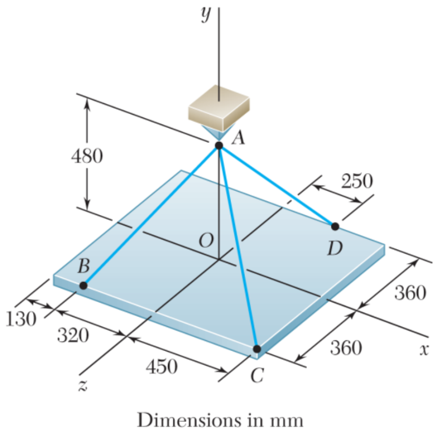
$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = (1.5\text{ kips})\frac{-46.765\mathbf{i} + 55.8\mathbf{j} - 45\mathbf{k}}{85.590}$$

$(T_{AC})_x = -0.820\text{ kips}$ ◀

$(T_{AC})_y = +0.978\text{ kips}$ ◀

$(T_{AC})_z = -0.789\text{ kips}$ ◀



PROBLEM 2.89

A rectangular plate is supported by three cables as shown. Knowing that the tension in cable *AB* is 408 N, determine the components of the force exerted on the plate at *B*.

SOLUTION

We have:

$$\overrightarrow{BA} = +(320\text{ mm})\mathbf{i} + (480\text{ mm})\mathbf{j} - (360\text{ mm})\mathbf{k} \qquad BA = 680\text{ mm}$$

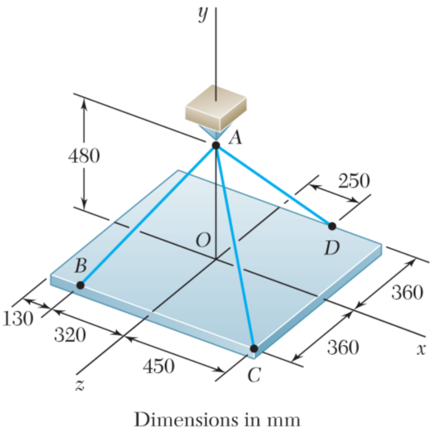
Thus:

$$\mathrm{F}_B = T_{BA}\boldsymbol{\lambda}_{BA} = T_{BA}\frac{\overrightarrow{BA}}{BA} = T_{BA}\left(\frac{8}{17}\mathbf{i} + \frac{12}{17}\mathbf{j} - \frac{9}{17}\mathbf{k}\right)$$

$$\left(\frac{8}{17}T_{BA}\right)\mathbf{i} + \left(\frac{12}{17}T_{BA}\right)\mathbf{j} - \left(\frac{9}{17}T_{BA}\right)\mathbf{k} = 0$$

Setting $T_{BA} = 408\text{ N}$ yields,

$$F_x = +192.0\text{ N},\quad F_y = +288\text{ N},\quad F_z = -216\text{ N} \blacktriangleleft$$



PROBLEM 2.90

A rectangular plate is supported by three cables as shown. Knowing that the tension in cable *AD* is 429 N, determine the components of the force exerted on the plate at *D*.

SOLUTION

We have:

$$\overrightarrow{DA} = -(250\text{ mm})\mathbf{i} + (480\text{ mm})\mathbf{j} + (360\text{ mm})\mathbf{k} \quad DA = 650\text{ mm}$$

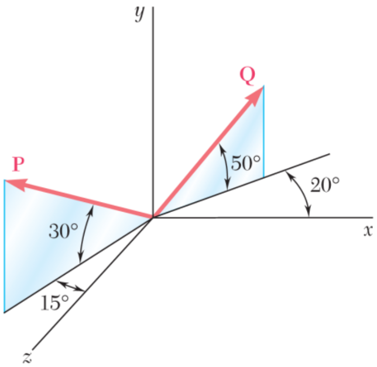
Thus:

$$\mathrm{F}_D = T_{DA}\boldsymbol{\lambda}_{DA} = T_{DA}\frac{\overrightarrow{DA}}{DA} = T_{DA}\left(-\frac{5}{13}\mathbf{i} + \frac{48}{65}\mathbf{j} + \frac{36}{65}\mathbf{k}\right)$$

$$-\left(\frac{5}{13}T_{DA}\right)\mathbf{i} + \left(\frac{48}{65}T_{DA}\right)\mathbf{j} + \left(\frac{36}{65}T_{DA}\right)\mathbf{k} = 0$$

Setting $T_{DA} = 429\text{ N}$ yields,

$$F_x = -165.0\text{ N}, \quad F_y = +317\text{ N}, \quad F_z = +238\text{ N} \blacktriangleleft$$



PROBLEM 2.91

Find the magnitude and direction of the resultant of the two forces shown knowing that $P = 300$ N and $Q = 400$ N.

SOLUTION

$$\begin{aligned}\mathbf{P} &= (300\text{ N})[-\cos 30^\circ \sin 15^\circ \mathbf{i} + \sin 30^\circ \mathbf{j} + \cos 30^\circ \cos 15^\circ \mathbf{k}] \\ &= -(67.243\text{ N})\mathbf{i} + (150\text{ N})\mathbf{j} + (250.95\text{ N})\mathbf{k} \\ \mathbf{Q} &= (400\text{ N})[\cos 50^\circ \cos 20^\circ \mathbf{i} + \sin 50^\circ \mathbf{j} - \cos 50^\circ \sin 20^\circ \mathbf{k}] \\ &= (400\text{ N})[0.60402\mathbf{i} + 0.76604\mathbf{j} - 0.21985] \\ &= (241.61\text{ N})\mathbf{i} + (306.42\text{ N})\mathbf{j} - (87.939\text{ N})\mathbf{k} \\ \mathbf{R} &= \mathbf{P} + \mathbf{Q} \\ &= (174.367\text{ N})\mathbf{i} + (456.42\text{ N})\mathbf{j} + (163.011\text{ N})\mathbf{k} \\ R &= \sqrt{(174.367\text{ N})^2 + (456.42\text{ N})^2 + (163.011\text{ N})^2} \\ &= 515.07\text{ N}\end{aligned}$$

$R = 515$ N ◀

$$\cos\theta_x = \frac{R_x}{R} = \frac{174.367\text{ N}}{515.07\text{ N}} = 0.33853$$

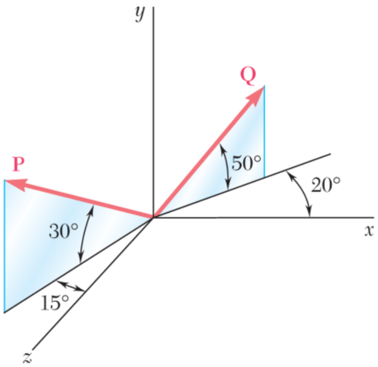
$\theta_x = 70.2°$ ◀

$$\cos\theta_y = \frac{R_y}{R} = \frac{456.42\text{ N}}{515.07\text{ N}} = 0.88613$$

$\theta_y = 27.6°$ ◀

$$\cos\theta_z = \frac{R_z}{R} = \frac{163.011\text{ N}}{515.07\text{ N}} = 0.31648$$

$\theta_z = 71.5°$ ◀



PROBLEM 2.92

Find the magnitude and direction of the resultant of the two forces shown knowing that $P = 400$ N and $Q = 300$ N.

SOLUTION

$$\mathbf{P} = (400\text{ N})[-\cos 30°\sin 15°\mathbf{i} + \sin 30°\mathbf{j} + \cos 30°\cos 15°\mathbf{k}]$$

$$= -(89.678\text{ N})\mathbf{i} + (200\text{ N})\mathbf{j} + (334.61\text{ N})\mathbf{k}$$

$$\mathbf{Q} = (300\text{ N})[\cos 50°\cos 20°\mathbf{i} + \sin 50°\mathbf{j} - \cos 50°\sin 20°\mathbf{k}]$$

$$= (181.21\text{ N})\mathbf{i} + (229.81\text{ N})\mathbf{j} - (65.954\text{ N})\mathbf{k}$$

$$\mathbf{R} = \mathbf{P} + \mathbf{Q}$$

$$= (91.532\text{ N})\mathbf{i} + (429.81\text{ N})\mathbf{j} + (268.66\text{ N})\mathbf{k}$$

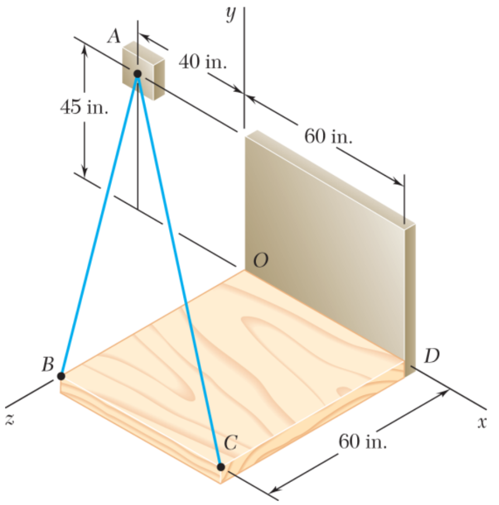
$$R = \sqrt{(91.532\text{ N})^2 + (429.81\text{ N})^2 + (268.66\text{ N})^2}$$

$$= 515.07\text{ N} \qquad R = 515\text{ N} ◀$$

$$\cos\theta_x = \frac{R_x}{R} = \frac{91.532\text{ N}}{515.07\text{ N}} = 0.177708 \qquad \theta_x = 79.8° ◀$$

$$\cos\theta_y = \frac{R_y}{R} = \frac{429.81\text{ N}}{515.07\text{ N}} = 0.83447 \qquad \theta_y = 33.4° ◀$$

$$\cos\theta_z = \frac{R_z}{R} = \frac{268.66\text{ N}}{515.07\text{ N}} = 0.52160 \qquad \theta_z = 58.6° ◀$$



PROBLEM 2.93

Knowing that the tension is 425 lb in cable *AB* and 510 lb in cable *AC*, determine the magnitude and direction of the resultant of the forces exerted at *A* by the two cables.

SOLUTION

$$\overrightarrow{AB} = (40\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}$$

$$AB = \sqrt{(40\text{ in.})^2 + (45\text{ in.})^2 + (60\text{ in.})^2} = 85\text{ in.}$$

$$\overrightarrow{AC} = (100\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}$$

$$AC = \sqrt{(100\text{ in.})^2 + (45\text{ in.})^2 + (60\text{ in.})^2} = 125\text{ in.}$$

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = (425\text{ lb})\left[\frac{(40\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}}{85\text{ in.}}\right]$$

$$\mathbf{T}_{AB} = (200\text{ lb})\mathbf{i} - (225\text{ lb})\mathbf{j} + (300\text{ lb})\mathbf{k}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = (510\text{ lb})\left[\frac{(100\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}}{125\text{ in.}}\right]$$

$$\mathbf{T}_{AC} = (408\text{ lb})\mathbf{i} - (183.6\text{ lb})\mathbf{j} + (244.8\text{ lb})\mathbf{k}$$

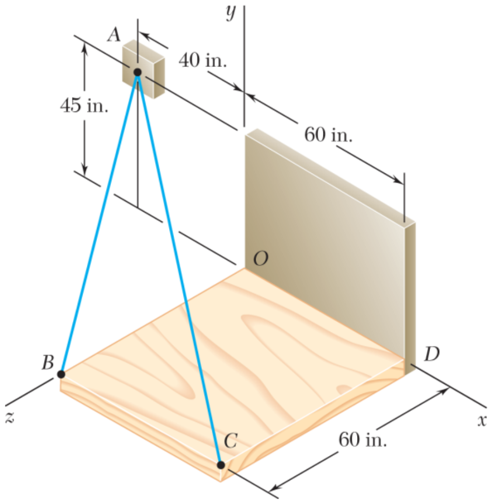
$$\mathbf{R} = \mathbf{T}_{AB} + \mathbf{T}_{AC} = (608)\mathbf{i} - (408.6\text{ lb})\mathbf{j} + (544.8\text{ lb})\mathbf{k}$$

Then: $R = 912.92\text{ lb}$ $\qquad R = 913\text{ lb}$ ◀

and $\cos\theta_x = \dfrac{608\text{ lb}}{912.92\text{ lb}} = 0.66599$ $\qquad \theta_x = 48.2°$ ◀

$\cos\theta_y = \dfrac{408.6\text{ lb}}{912.92\text{ lb}} = -0.44757$ $\qquad \theta_y = 116.6°$ ◀

$\cos\theta_z = \dfrac{544.8\text{ lb}}{912.92\text{ lb}} = 0.59677$ $\qquad \theta_z = 53.4°$ ◀



PROBLEM 2.94

Knowing that the tension is 510 lb in cable *AB* and 425 lb in cable *AC*, determine the magnitude and direction of the resultant of the forces exerted at *A* by the two cables.

SOLUTION

$$\overrightarrow{AB} = (40\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}$$

$$AB = \sqrt{(40\text{ in.})^2 + (45\text{ in.})^2 + (60\text{ in.})^2} = 85\text{ in.}$$

$$\overrightarrow{AC} = (100\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}$$

$$AC = \sqrt{(100\text{ in.})^2 + (45\text{ in.})^2 + (60\text{ in.})^2} = 125\text{ in.}$$

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = (510\text{ lb})\left[\frac{(40\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}}{85\text{ in.}}\right]$$

$$\mathbf{T}_{AB} = (240\text{ lb})\mathbf{i} - (270\text{ lb})\mathbf{j} + (360\text{ lb})\mathbf{k}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = (425\text{ lb})\left[\frac{(100\text{ in.})\mathbf{i} - (45\text{ in.})\mathbf{j} + (60\text{ in.})\mathbf{k}}{125\text{ in.}}\right]$$

$$\mathbf{T}_{AC} = (340\text{ lb})\mathbf{i} - (153\text{ lb})\mathbf{j} + (204\text{ lb})\mathbf{k}$$

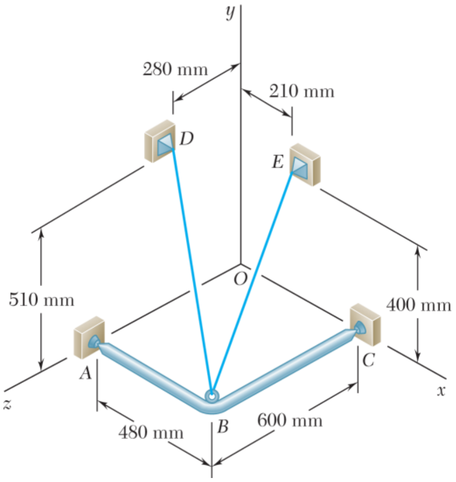
$$\mathbf{R} = \mathbf{T}_{AB} + \mathbf{T}_{AC} = (580\text{ lb})\mathbf{i} - (423\text{ lb})\mathbf{j} + (564\text{ lb})\mathbf{k}$$

Then: $R = 912.92\text{ lb}$ $\qquad R = 913\text{ lb}$ ◀

and $\cos\theta_x = \dfrac{580\text{ lb}}{912.92\text{ lb}} = 0.63532$ $\qquad \theta_x = 50.6°$ ◀

$\cos\theta_y = \dfrac{-423\text{ lb}}{912.92\text{ lb}} = -0.46335$ $\qquad \theta_y = 117.6°$ ◀

$\cos\theta_z = \dfrac{564\text{ lb}}{912.92\text{ lb}} = 0.61780$ $\qquad \theta_z = 51.8°$ ◀



PROBLEM 2.95

For the frame of Problem 2.85, determine the magnitude and direction of the resultant of the forces exerted by the cable at *B* knowing that the tension in the cable is 385 N.

PROBLEM 2.85 A frame *ABC* is supported in part by cable *DBE* that passes through a frictionless ring at *B*. Knowing that the tension in the cable is 385 N, determine the components of the force exerted by the cable on the support at *D*.

SOLUTION

$$\overrightarrow{BD} = -(480\text{ mm})\mathbf{i} + (510\text{ mm})\mathbf{j} - (320\text{ mm})\mathbf{k}$$

$$BD = \sqrt{(480\text{ mm})^2 + (510\text{ mm})^2 + (320\text{ mm})^2} = 770\text{ mm}$$

$$\mathbf{F}_{BD} = T_{BD}\boldsymbol{\lambda}_{BD} = T_{BD}\frac{\overrightarrow{BD}}{BD}$$

$$= \frac{(385\text{ N})}{(770\text{ mm})}[-(480\text{ mm})\mathbf{i} + (510\text{ mm})\mathbf{j} - (320\text{ mm})\mathbf{k}]$$

$$= -(240\text{ N})\mathbf{i} + (255\text{ N})\mathbf{j} - (160\text{ N})\mathbf{k}$$

$$\overrightarrow{BE} = -(270\text{ mm})\mathbf{i} + (400\text{ mm})\mathbf{j} - (600\text{ mm})\mathbf{k}$$

$$BE = \sqrt{(270\text{ mm})^2 + (400\text{ mm})^2 + (600\text{ mm})^2} = 770\text{ mm}$$

$$\mathbf{F}_{BE} = T_{BE}\boldsymbol{\lambda}_{BE} = T_{BE}\frac{\overrightarrow{BE}}{BE}$$

$$= \frac{(385\text{ N})}{(770\text{ mm})}[-(270\text{ mm})\mathbf{i} + (400\text{ mm})\mathbf{j} - (600\text{ mm})\mathbf{k}]$$

$$= -(135\text{ N})\mathbf{i} + (200\text{ N})\mathbf{j} - (300\text{ N})\mathbf{k}$$

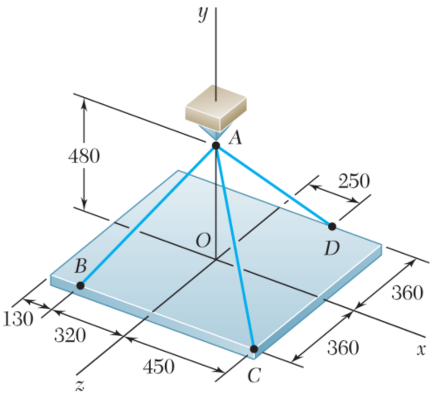
$$\mathbf{R} = \mathbf{F}_{BD} + \mathbf{F}_{BE} = -(375\text{ N})\mathbf{i} + (455\text{ N})\mathbf{j} - (460\text{ N})\mathbf{k}$$

$$R = \sqrt{(375\text{ N})^2 + (455\text{ N})^2 + (460\text{ N})^2} = 747.83\text{ N} \qquad R = 748\text{ N} \blacktriangleleft$$

$$\cos\theta_x = \frac{-375\text{ N}}{747.83\text{ N}} \qquad \theta_x = 120.1° \blacktriangleleft$$

$$\cos\theta_y = \frac{455\text{ N}}{747.83\text{ N}} \qquad \theta_y = 52.5° \blacktriangleleft$$

$$\cos\theta_z = \frac{-460\text{ N}}{747.83\text{ N}} \qquad \theta_z = 128.0° \blacktriangleleft$$



Dimensions in mm

PROBLEM 2.96

For the plate of Prob. 2.89, determine the tensions in cables *AB* and *AD* knowing that the tension in cable *AC* is 54 N and that the resultant of the forces exerted by the three cables at *A* must be vertical.

SOLUTION

We have:

$$\overrightarrow{AB} = -(320\text{ mm})\mathbf{i} - (480\text{ mm})\mathbf{j} + (360\text{ mm})\mathbf{k} \qquad AB = 680\text{ mm}$$

$$\overrightarrow{AC} = (450\text{ mm})\mathbf{i} - (480\text{ mm})\mathbf{j} + (360\text{ mm})\mathbf{k} \qquad AC = 750\text{ mm}$$

$$\overrightarrow{AD} = (250\text{ mm})\mathbf{i} - (480\text{ mm})\mathbf{j} - (360\text{ mm})\mathbf{k} \qquad AD = 650\text{ mm}$$

Thus:

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = \frac{T_{AB}}{680}(-320\mathbf{i} - 480\mathbf{j} + 360\mathbf{k})$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = \frac{54}{750}(450\mathbf{i} - 480\mathbf{j} + 360\mathbf{k})$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD} = \frac{T_{AD}}{650}(250\mathbf{i} - 480\mathbf{j} - 360\mathbf{k})$$

Substituting into the Eq. $\mathbf{R} = \Sigma\mathbf{F}$ and factoring $\mathbf{i}, \mathbf{j}, \mathbf{k}$:

$$\begin{aligned}\mathbf{R} = &\left(-\frac{320}{680}T_{AB} + 32.40 + \frac{250}{650}T_{AD}\right)\mathbf{i}\\ &+\left(-\frac{480}{680}T_{AB} - 34.560 - \frac{480}{650}T_{AD}\right)\mathbf{j}\\ &+\left(\frac{360}{680}T_{AB} + 25.920 - \frac{360}{650}T_{AD}\right)\mathbf{k}\end{aligned}$$

PROBLEM 2.96 (Continued)

Since **R** is vertical, the coefficients of **i** and **k** are zero:

$$\mathbf{i}: \qquad -\frac{320}{680}T_{AB} + 32.40 + \frac{250}{650}T_{AD} = 0 \qquad (1)$$

$$\mathbf{k}: \qquad \frac{360}{680}T_{AB} + 25.920 - \frac{360}{650}T_{AD} = 0 \qquad (2)$$

Multiply (1) by 3.6 and (2) by 2.5 then add:

$$-\frac{252}{680}T_{AB} + 181.440 = 0$$

$$T_{AB} = 489.60 \text{ N}$$

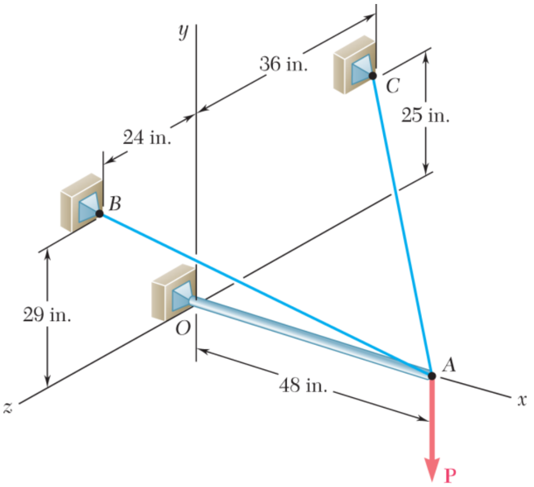
$T_{AB} = 490$ N ◀

Substitute into (2) and solve for T_{AD}:

$$\frac{360}{680}(489.60 \text{ N}) + 25.920 - \frac{360}{650}T_{AD} = 0$$

$$T_{AD} = 514.80 \text{ N}$$

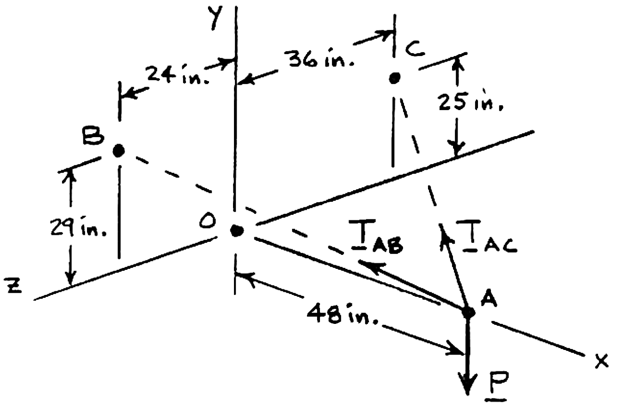
$T_{AD} = 515$ N ◀



PROBLEM 2.97

The boom *OA* carries a load **P** and is supported by two cables as shown. Knowing that the tension in cable *AB* is 183 lb and that the resultant of the load **P** and of the forces exerted at *A* by the two cables must be directed along *OA*, determine the tension in cable *AC*.

SOLUTION



Cable *AB*: $T_{AB} = 183\text{ lb}$

$$\mathbf{T}_{AB} = T_{AB}\lambda_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = (183\text{ lb})\frac{(-48\text{ in.})\mathbf{i} + (29\text{ in.})\mathbf{j} + (24\text{ in.})\mathbf{k}}{61\text{ in.}}$$

$$\mathbf{T}_{AB} = -(144\text{ lb})\mathbf{i} + (87\text{ lb})\mathbf{j} + (72\text{ lb})\mathbf{k}$$

Cable *AC*:

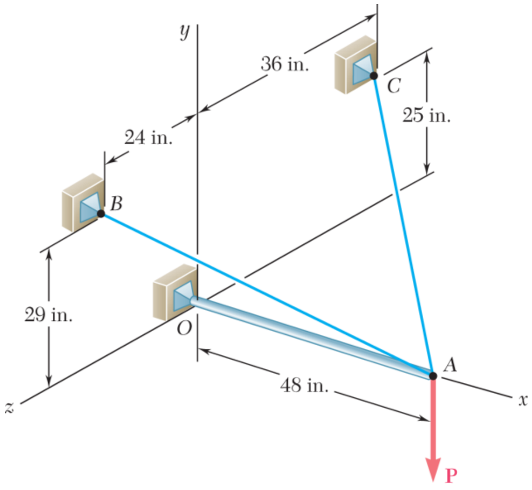
$$\mathbf{T}_{AC} = T_{AC}\lambda_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = T_{AC}\frac{(-48\text{ in.})\mathbf{i} + (25\text{ in.})\mathbf{j} + (-36\text{ in.})\mathbf{k}}{65\text{ in.}}$$

$$\mathbf{T}_{AC} = -\frac{48}{65}T_{AC}\mathbf{i} + \frac{25}{65}T_{AC}\mathbf{j} - \frac{36}{65}T_{AC}\mathbf{k}$$

Load *P*: $\mathbf{P} = P\,\mathbf{j}$

For resultant to be directed along *OA*, i.e., *x*-axis

$$R_z = 0: \quad \Sigma F_z = (72\text{ lb}) - \frac{36}{65}T'_{AC} = 0 \qquad T_{AC} = 130.0\text{ lb} \blacktriangleleft$$



PROBLEM 2.98

For the boom and loading of Problem. 2.97, determine the magnitude of the load **P**.

PROBLEM 2.97 The boom *OA* carries a load **P** and is supported by two cables as shown. Knowing that the tension in cable *AB* is 183 lb and that the resultant of the load **P** and of the forces exerted at *A* by the two cables must be directed along *OA*, determine the tension in cable *AC*.

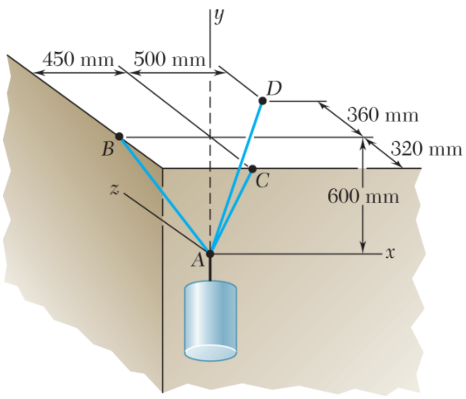
SOLUTION

See Problem 2.97. Since resultant must be directed along *OA*, i.e., the *x*-axis, we write

$$R_y = 0: \quad \Sigma F_y = (87\text{ lb}) + \frac{25}{65}T_{AC} - P = 0$$

$T_{AC} = 130.0\text{ lb}$ from Problem 2.97.

Then $$(87\text{ lb}) + \frac{25}{65}(130.0\text{ lb}) - P = 0$$ $P = 137.0\text{ lb}$ ◀

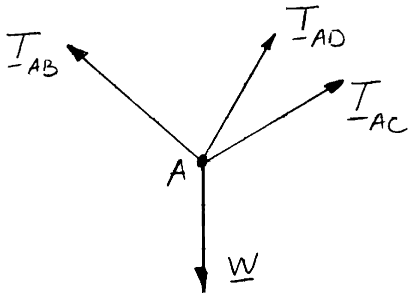


PROBLEM 2.99

A container is supported by three cables that are attached to a ceiling as shown. Determine the weight W of the container, knowing that the tension in cable AB is 6 kN.

SOLUTION

Free-Body Diagram at A:



The forces applied at A are: $\mathbf{T}_{AB}, \mathbf{T}_{AC}, \mathbf{T}_{AD}$, and $\mathbf{W}$

where $\mathbf{W} = W\mathbf{j}$. To express the other forces in terms of the unit vectors **i**, **j**, **k**, we write

$$\overrightarrow{AB} = -(450\text{ mm})\mathbf{i} + (600\text{ mm})\mathbf{j} \qquad AB = 750\text{ mm}$$

$$\overrightarrow{AC} = +(600\text{ mm})\mathbf{j} - (320\text{ mm})\mathbf{k} \qquad AC = 680\text{ mm}$$

$$\overrightarrow{AD} = +(500\text{ mm})\mathbf{i} + (600\text{ mm})\mathbf{j} + (360\text{ mm})\mathbf{k} \qquad AD = 860\text{ mm}$$

and

$$\mathbf{T}_{AB} = \boldsymbol{\lambda}_{AB}T_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = T_{AB}\frac{(-450\text{ mm})\mathbf{i} + (600\text{ mm})\mathbf{j}}{750\text{ mm}}$$

$$= \left(-\frac{45}{75}\mathbf{i} + \frac{60}{75}\mathbf{j}\right)T_{AB}$$

$$\mathbf{T}_{AC} = \boldsymbol{\lambda}_{AC}T_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = T_{AC}\frac{(600\text{ mm})\mathbf{i} - (320\text{ mm})\mathbf{j}}{680\text{ mm}}$$

$$= \left(\frac{60}{68}\mathbf{j} - \frac{32}{68}\mathbf{k}\right)T_{AC}$$

$$\mathbf{T}_{AD} = \boldsymbol{\lambda}_{AD}T_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD} = T_{AD}\frac{(500\text{ mm})\mathbf{i} + (600\text{ mm})\mathbf{j} + (360\text{ mm})\mathbf{k}}{860\text{ mm}}$$

$$= \left(\frac{50}{86}\mathbf{i} + \frac{60}{86}\mathbf{j} + \frac{36}{86}\mathbf{k}\right)T_{AD}$$

PROBLEM 2.99 (Continued)

Equilibrium condition: $\Sigma F = 0: \quad \therefore \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} + \mathbf{W} = 0$

Substituting the expressions obtained for $\mathbf{T}_{AB}, \mathbf{T}_{AC}$, and $\mathbf{T}_{AD}$; factoring **i**, **j**, and **k**; and equating each of the coefficients to zero gives the following equations:

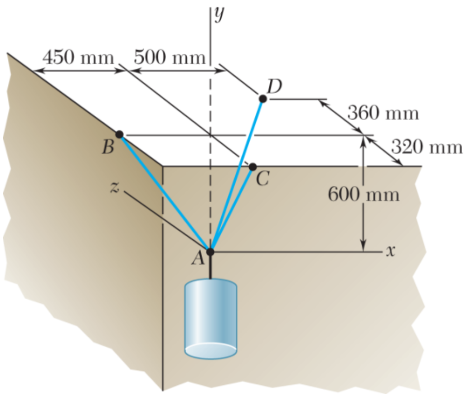
From **i**: $$-\frac{45}{75}T_{AB} + \frac{50}{86}T_{AD} = 0 \qquad (1)$$

From **j**: $$\frac{60}{75}T_{AB} + \frac{60}{68}T_{AC} + \frac{60}{86}T_{AD} - W = 0 \qquad (2)$$

From **k**: $$-\frac{32}{68}T_{AC} + \frac{36}{86}T_{AD} = 0 \qquad (3)$$

Setting $T_{AB} = 6\text{ kN}$ in (1) and (2), and solving the resulting set of equations gives

$$T_{AC} = 6.1920\text{ kN}$$
$$T_{AC} = 5.5080\text{ kN} \qquad W = 13.98\text{ kN} \blacktriangleleft$$



PROBLEM 2.100

A container is supported by three cables that are attached to a ceiling as shown. Determine the weight *W* of the container, knowing that the tension in cable *AD* is 4.3 kN.

SOLUTION

See Problem 2.99 for the figure and analysis leading to the following set of linear algebraic equations:

$$-\frac{45}{75}T_{AB}+\frac{50}{86}T_{AD}=0 \qquad (1)$$

$$\frac{60}{75}T_{AB}+\frac{60}{68}T_{AC}+\frac{60}{86}T_{AD}-W=0 \qquad (2)$$

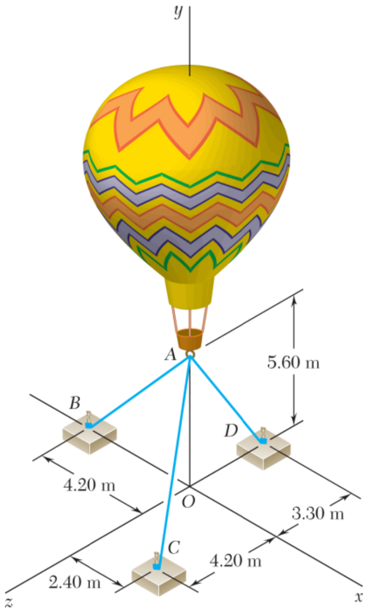
$$-\frac{32}{68}T_{AC}+\frac{36}{86}T_{AD}=0 \qquad (3)$$

Setting $T_{AD}=4.3\text{ kN}$ into the above equations gives

$$T_{AB}=4.1667\text{ kN}$$

$$T_{AC}=3.8250\text{ kN}$$

$$W=9.71\text{ kN} \blacktriangleleft$$

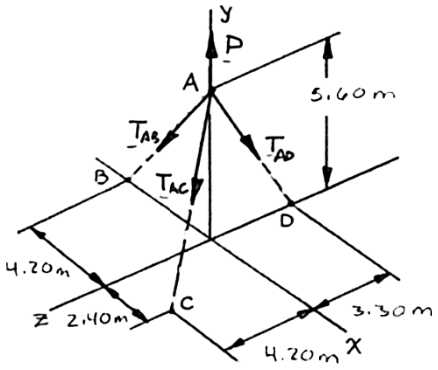


PROBLEM 2.101

Three cables are used to tether a balloon as shown. Determine the vertical force **P** exerted by the balloon at *A* knowing that the tension in cable *AD* is 481 N.

SOLUTION

FREE-BODY DIAGRAM AT *A*



The forces applied at *A* are: $\mathbf{T}_{AB}, \mathbf{T}_{AC}, \mathbf{T}_{AD},$ and $\mathbf{P}$

where $\mathbf{P} = P\mathbf{j}$. To express the other forces in terms of the unit vectors **i**, **j**, **k**, we write

$$\overrightarrow{AB} = -(4.20 \text{ m})\mathbf{i} - (5.60 \text{ m})\mathbf{j} \qquad AB = 7.00 \text{ m}$$

$$\overrightarrow{AC} = (2.40 \text{ m})\mathbf{i} - (5.60 \text{ m})\mathbf{j} + (4.20 \text{ m})\mathbf{k} \qquad AC = 7.40 \text{ m}$$

$$\overrightarrow{AD} = -(5.60 \text{ m})\mathbf{j} - (3.30 \text{ m})\mathbf{k} \qquad AD = 6.50 \text{ m}$$

and

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = (-0.6\mathbf{i} - 0.8\mathbf{j})T_{AB}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = (0.32432\mathbf{i} - 0.75676\mathbf{j} + 0.56757\mathbf{k})T_{AC}$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD} = (-0.86154\mathbf{j} - 0.50769\mathbf{k})T_{AD}$$

PROBLEM 2.101 (Continued)

Equilibrium condition: $\Sigma F = 0$: $\mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} + P\mathbf{j} = 0$

Substituting the expressions obtained for $\mathbf{T}_{AB}$, $\mathbf{T}_{AC}$, and $\mathbf{T}_{AD}$ and factoring **i**, **j**, and **k**:

$$(-0.6T_{AB} + 0.32432T_{AC})\mathbf{i} + (-0.8T_{AB} - 0.75676T_{AC} - 0.86154T_{AD} + P)\mathbf{j}$$
$$+ (0.56757T_{AC} - 0.50769T_{AD})\mathbf{k} = 0$$

Equating to zero the coefficients of **i**, **j**, **k**:

$$-0.6T_{AB} + 0.32432T_{AC} = 0 \tag{1}$$

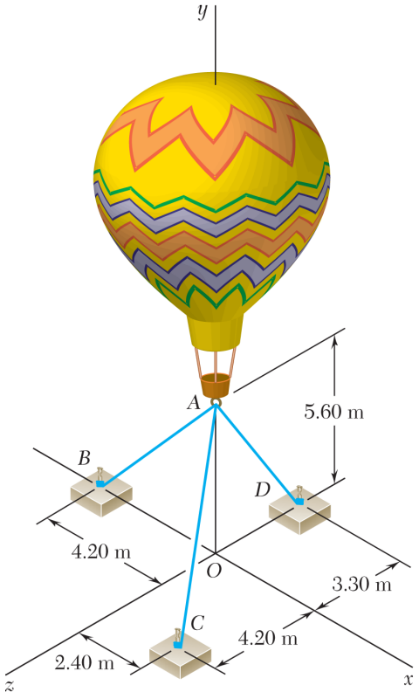
$$-0.8T_{AB} - 0.75676T_{AC} - 0.86154T_{AD} + P = 0 \tag{2}$$

$$0.56757T_{AC} - 0.50769T_{AD} = 0 \tag{3}$$

Setting $T_{AD} = 481\text{ N}$ in (2) and (3), and solving the resulting set of equations gives

$$T_{AC} = 430.26\text{ N}$$
$$T_{AD} = 232.57\text{ N}$$

$\mathbf{P} = 926\text{ N}\uparrow$ ◀



PROBLEM 2.102

Three cables are used to tether a balloon as shown. Knowing that the balloon exerts an 800-N vertical force at *A*, determine the tension in each cable.

SOLUTION

See Problem 2.101 for the figure and analysis leading to the linear algebraic Equations (1), (2), and (3).

$$-0.6T_{AB} + 0.32432T_{AC} = 0 \tag{1}$$

$$-0.8T_{AB} - 0.75676T_{AC} - 0.86154T_{AD} + P = 0 \tag{2}$$

$$0.56757T_{AC} - 0.50769T_{AD} = 0 \tag{3}$$

From Eq. (1): $T_{AB} = 0.54053T_{AC}$

From Eq. (3): $T_{AD} = 1.11795T_{AC}$

Substituting for T_{AB} and T_{AD} in terms of T_{AC} into Eq. (2) gives

$$-0.8(0.54053T_{AC}) - 0.75676T_{AC} - 0.86154(1.11795T_{AC}) + P = 0$$

$$2.1523T_{AC} = P; \quad P = 800 \text{ N}$$

$$T_{AC} = \frac{800 \text{ N}}{2.1523}$$

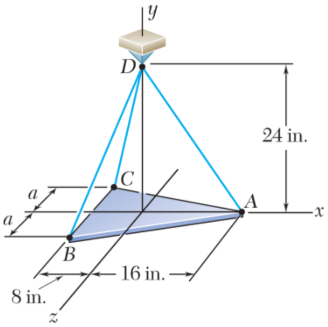
$$= 371.69 \text{ N}$$

Substituting into expressions for T_{AB} and T_{AD} gives

$$T_{AB} = 0.54053(371.69 \text{ N})$$

$$T_{AD} = 1.11795(371.69 \text{ N})$$

$$T_{AB} = 201 \text{ N}, \quad T_{AC} = 372 \text{ N}, \quad T_{AD} = 416 \text{ N} \blacktriangleleft$$



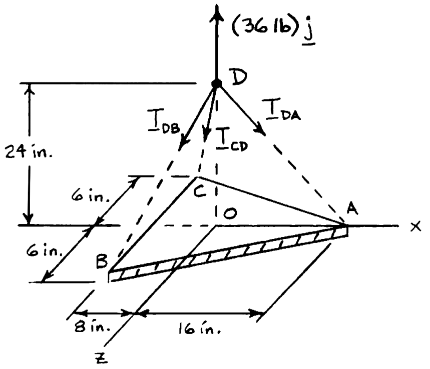
PROBLEM 2.103

A 36-lb triangular plate is supported by three wires as shown. Determine the tension in each wire, knowing that $a = 6$ in.

SOLUTION

By Symmetry $T_{DB} = T_{DC}$

Free-Body Diagram of Point *D*:



The forces applied at D are: $\mathbf{T}_{DB}, \mathbf{T}_{DC}, \mathbf{T}_{DA}$, and $\mathbf{P}$

where $\mathbf{P} = P\mathbf{j} = (36 \text{ lb})\mathbf{j}$. To express the other forces in terms of the unit vectors **i**, **j**, **k**, we write

$$\overrightarrow{DA} = (16 \text{ in.})\mathbf{i} - (24 \text{ in.})\mathbf{j} \qquad DA = 28.844 \text{ in.}$$

$$\overrightarrow{DB} = -(8 \text{ in.})\mathbf{i} - (24 \text{ in.})\mathbf{j} + (6 \text{ in.})\mathbf{k} \qquad DB = 26.0 \text{ in.}$$

$$\overrightarrow{DC} = -(8 \text{ in.})\mathbf{i} - (24 \text{ in.})\mathbf{j} - (6 \text{ in.})\mathbf{k} \qquad DC = 26.0 \text{ in.}$$

and

$$\mathbf{T}_{DA} = T_{DA}\boldsymbol{\lambda}_{DA} = T_{DA}\frac{\overrightarrow{DA}}{DA} = (0.55471\mathbf{i} - 0.83206\mathbf{j})T_{DA}$$

$$\mathbf{T}_{DB} = T_{DB}\boldsymbol{\lambda}_{DB} = T_{DB}\frac{\overrightarrow{DB}}{DB} = (-0.30769\mathbf{i} - 0.92308\mathbf{j} + 0.23077\mathbf{k})T_{DB}$$

$$\mathbf{T}_{DC} = T_{DC}\boldsymbol{\lambda}_{DC} = T_{DC}\frac{\overrightarrow{DC}}{DC} = (-0.30769\mathbf{i} - 0.92308\mathbf{j} - 0.23077\mathbf{k})T_{DC}$$

PROBLEM 2.103 (Continued)

Equilibrium condition: $\Sigma F = 0\colon\quad \mathbf{T}_{DA} + \mathbf{T}_{DB} + \mathbf{T}_{DC} + (36\text{ lb})\mathbf{j} = 0$

Substituting the expressions obtained for $\mathbf{T}_{DA}$, $\mathbf{T}_{DB}$, and $\mathbf{T}_{DC}$ and factoring **i**, **j**, and **k**:

$$(0.55471T_{DA} - 0.30769T_{DB} - 0.30769T_{DC})\mathbf{i} + (-0.83206T_{DA} - 0.92308T_{DB} - 0.92308T_{DC} + 36\text{ lb})\mathbf{j}$$
$$+ (0.23077T_{DB} - 0.23077T_{DC})\mathbf{k} = 0$$

Equating to zero the coefficients of **i**, **j**, **k**:

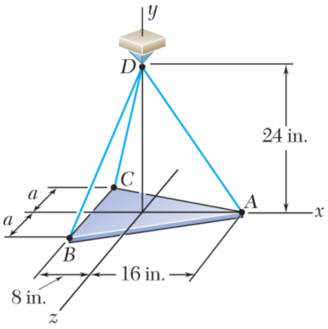
$$0.55471T_{DA} - 0.30769T_{DB} - 0.30769T_{DC} = 0 \qquad (1)$$

$$-0.83206T_{DA} - 0.92308T_{DB} - 0.92308T_{DC} + 36\text{ lb} = 0 \qquad (2)$$

$$0.23077T_{DB} - 0.23077T_{DC} = 0 \qquad (3)$$

Equation (3) confirms that $T_{DB} = T_{DC}$. Solving simultaneously gives,

$T_{DA} = 14.42\text{ lb};\qquad T_{DB} = T_{DC} = 13.00\text{ lb}$ ◀



PROBLEM 2.104

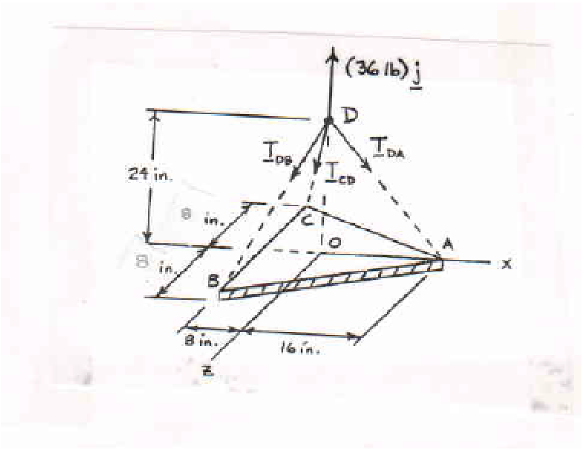
Solve Prob. 2.103, assuming that $a = 8$ in.

PROBLEM 2.103 A 36-lb triangular plate is supported by three wires as shown. Determine the tension in each wire, knowing that $a = 6$ in.

SOLUTION

By Symmetry $T_{DB} = T_{DC}$

Free-Body Diagram of Point *D*:



The forces applied at *D* are: $\mathbf{T}_{DB}, \mathbf{T}_{DC}, \mathbf{T}_{DA}$, and $\mathbf{P}$

where $\mathbf{P} = P\mathbf{j} = (36\text{ lb})\mathbf{j}$. To express the other forces in terms of the unit vectors **i**, **j**, **k**, we write

$$\overrightarrow{DA} = (16\text{ in.})\mathbf{i} - (24\text{ in.})\mathbf{j} \qquad DA = 28.844\text{ in.}$$

$$\overrightarrow{DB} = -(8\text{ in.})\mathbf{i} - (24\text{ in.})\mathbf{j} + (8\text{ in.})\mathbf{k} \qquad DB = 26.533\text{ in.}$$

$$\overrightarrow{DC} = -(8\text{ in.})\mathbf{i} - (24\text{ in.})\mathbf{j} - (8\text{ in.})\mathbf{k} \qquad DC = 26.533\text{ in.}$$

and

$$\mathbf{T}_{DA} = T_{DA}\boldsymbol{\lambda}_{DA} = T_{DA}\frac{\overrightarrow{DA}}{DA} = (0.55471\mathbf{i} - 0.83206\mathbf{j})T_{DA}$$

$$\mathbf{T}_{DB} = T_{DB}\boldsymbol{\lambda}_{DB} = T_{DB}\frac{\overrightarrow{DB}}{DB} = (-0.30151\mathbf{i} - 0.90453\mathbf{j} + 0.30151\mathbf{k})T_{DB}$$

$$\mathbf{T}_{DC} = T_{DC}\boldsymbol{\lambda}_{DC} = T_{DC}\frac{\overrightarrow{DC}}{DC} = (-0.30151\mathbf{i} - 0.90453\mathbf{j} - 0.30151\mathbf{k})T_{DC}$$

PROBLEM 2.104 (Continued)

Equilibrium condition: $\Sigma F = 0$: $\mathbf{T}_{DA} + \mathbf{T}_{DB} + \mathbf{T}_{DC} + (36 \text{ lb})\mathbf{j} = 0$

Substituting the expressions obtained for $\mathbf{T}_{DA}$, $\mathbf{T}_{DB}$, and $\mathbf{T}_{DC}$ and factoring **i**, **j**, and **k**:

$$(0.55471T_{DA} - 0.30151T_{DB} - 0.30151T_{DC})\mathbf{i} + (-0.83206T_{DA} - 0.90453T_{DB} - 0.90453T_{DC} + 36 \text{ lb})\mathbf{j}$$
$$+ (0.30151T_{DB} - 0.30151T_{DC})\mathbf{k} = 0$$

Equating to zero the coefficients of **i**, **j**, **k**:

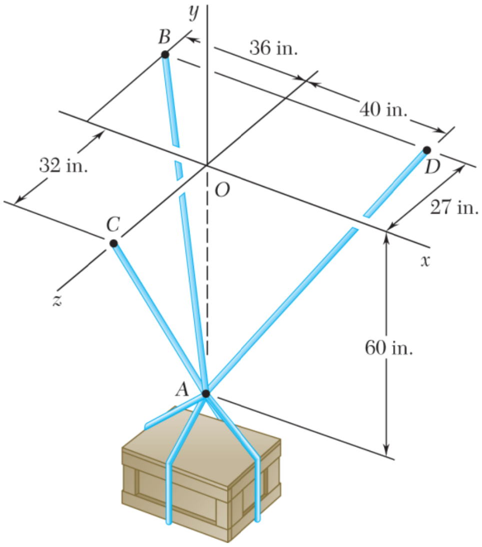
$$0.55471T_{DA} - 0.30151T_{DB} - 0.30151T_{DC} = 0 \quad (1)$$

$$-0.83206T_{DA} - 0.90453T_{DB} - 0.90453T_{DC} + 36 \text{ lb} = 0 \quad (2)$$

$$0.30151T_{DB} - 0.30151T_{DC} = 0 \quad (3)$$

Equation (3) confirms that $T_{DB} = T_{DC}$. Solving simultaneously gives,

$T_{DA} = 14.42$ lb; $T_{DB} = T_{DC} = 13.27$ lb ◀



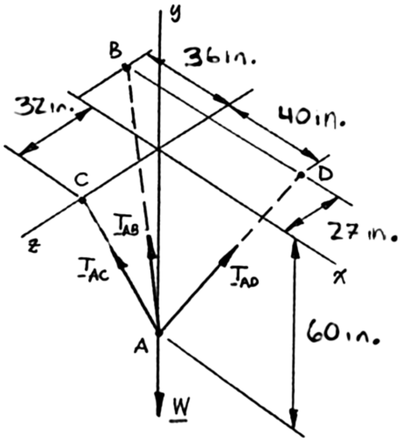
PROBLEM 2.105

A crate is supported by three cables as shown. Determine the weight of the crate knowing that the tension in cable AC is 544 lb.

Solution The forces applied at A are:

$$\mathbf{T}_{AB}, \mathbf{T}_{AC}, \mathbf{T}_{AD} \text{ and } \mathbf{W}$$

where $\mathbf{P} = P\mathbf{j}$. To express the other forces in terms of the unit vectors **i**, **j**, **k**, we write



$$\overrightarrow{AB} = -(36 \text{ in.})\mathbf{i} + (60 \text{ in.})\mathbf{j} - (27 \text{ in.})\mathbf{k}$$
$$AB = 75 \text{ in.}$$
$$\overrightarrow{AC} = (60 \text{ in.})\mathbf{j} + (32 \text{ in.})\mathbf{k}$$
$$AC = 68 \text{ in.}$$
$$\overrightarrow{AD} = (40 \text{ in.})\mathbf{i} + (60 \text{ in.})\mathbf{j} - (27 \text{ in.})\mathbf{k}$$
$$AD = 77 \text{ in.}$$

and

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB}$$
$$= (-0.48\mathbf{i} + 0.8\mathbf{j} - 0.36\mathbf{k})T_{AB}$$
$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC}$$
$$= (0.88235\mathbf{j} + 0.47059\mathbf{k})T_{AC}$$
$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD}$$
$$= (0.51948\mathbf{i} + 0.77922\mathbf{j} - 0.35065\mathbf{k})T_{AD}$$

Equilibrium Condition with $\mathbf{W} = -W\mathbf{j}$

$$\Sigma F = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} - W\mathbf{j} = 0$$

PROBLEM 2.105 (Continued)

Substituting the expressions obtained for $\mathbf{T}_{AB}$, $\mathbf{T}_{AC}$, and $\mathbf{T}_{AD}$ and factoring **i**, **j**, and **k**:

$$(-0.48T_{AB} + 0.51948T_{AD})\mathbf{i} + (0.8T_{AB} + 0.88235T_{AC} + 0.77922T_{AD} - W)\mathbf{j}$$
$$+(-0.36T_{AB} + 0.47059T_{AC} - 0.35065T_{AD})\mathbf{k} = 0$$

Equating to zero the coefficients of **i**, **j**, **k**:

$$-0.48T_{AB} + 0.51948T_{AD} = 0 \qquad (1)$$

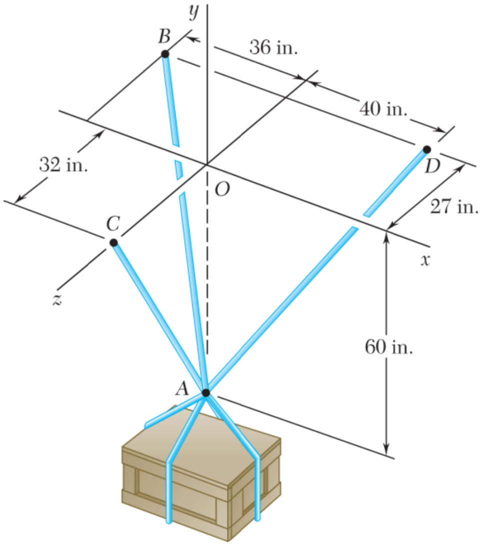
$$0.8T_{AB} + 0.88235T_{AC} + 0.77922T_{AD} - W = 0 \qquad (2)$$

$$-0.36T_{AB} + 0.47059T_{AC} - 0.35065T_{AD} = 0 \qquad (3)$$

Substituting $T_{AC} = 544\text{ lb}$ in Equations (1), (2), and (3) above, and solving the resulting set of equations using conventional algorithms, gives:

$$T_{AB} = 374.27\text{ lb}$$
$$T_{AD} = 345.82\text{ lb}$$

$W = 1049\text{ lb}$ ◀



PROBLEM 2.106

A 1600-lb crate is supported by three cables as shown. Determine the tension in each cable.

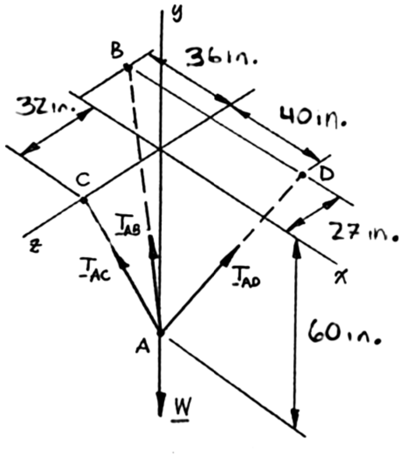
SOLUTION

The forces applied at A are:

$$\mathbf{T}_{AB}, \mathbf{T}_{AC}, \mathbf{T}_{AD} \text{ and } \mathbf{W}$$

where $\mathbf{P} = P\mathbf{j}$. To express the other forces in terms of the unit vectors **i**, **j**, **k**, we write

$$\overrightarrow{AB} = -(36 \text{ in.})\mathbf{i} + (60 \text{ in.})\mathbf{j} - (27 \text{ in.})\mathbf{k}$$
$$AB = 75 \text{ in.}$$
$$\overrightarrow{AC} = (60 \text{ in.})\mathbf{j} + (32 \text{ in.})\mathbf{k}$$
$$AC = 68 \text{ in.}$$
$$\overrightarrow{AD} = (40 \text{ in.})\mathbf{i} + (60 \text{ in.})\mathbf{j} - (27 \text{ in.})\mathbf{k}$$
$$AD = 77 \text{ in.}$$



and

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB}$$
$$= (-0.48\mathbf{i} + 0.8\mathbf{j} - 0.36\mathbf{k})T_{AB}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC}$$
$$= (0.88235\mathbf{j} + 0.47059\mathbf{k})T_{AC}$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD}$$
$$= (0.51948\mathbf{i} + 0.77922\mathbf{j} - 0.35065\mathbf{k})T_{AD}$$

Equilibrium Condition with $\mathbf{W} = -W\mathbf{j}$

$$\Sigma F = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} - W\mathbf{j} = 0$$

PROBLEM 2.106 (Continued)

Substituting the expressions obtained for $\mathbf{T}_{AB}$, $\mathbf{T}_{AC}$, and $\mathbf{T}_{AD}$ and factoring **i**, **j**, and **k**:

$$(-0.48T_{AB}+0.51948T_{AD})\mathbf{i}+(0.8T_{AB}+0.88235T_{AC}+0.77922T_{AD}-W)\mathbf{j}$$
$$+(-0.36T_{AB}+0.47059T_{AC}-0.35065T_{AD})\mathbf{k}=0$$

Equating to zero the coefficients of **i**, **j**, **k**:

$$-0.48T_{AB}+0.51948T_{AD}=0 \qquad (1)$$

$$0.8T_{AB}+0.88235T_{AC}+0.77922T_{AD}-W=0 \qquad (2)$$

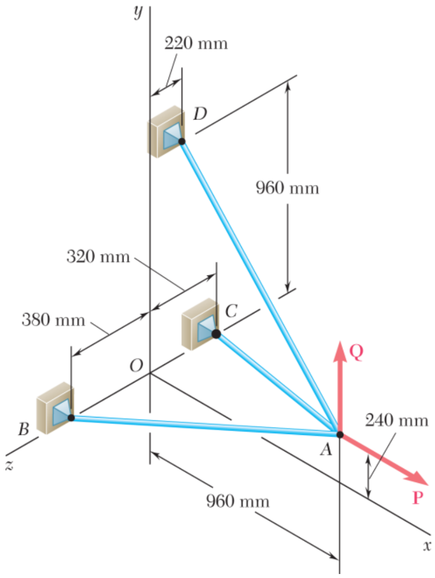
$$-0.36T_{AB}+0.47059T_{AC}-0.35065T_{AD}=0 \qquad (3)$$

Substituting $W=1600$ lb in Equations (1), (2), and (3) above, and solving the resulting set of equations using conventional algorithms gives,

$T_{AB} = 571$ lb ◀

$T_{AC} = 830$ lb ◀

$T_{AD} = 528$ lb ◀



PROBLEM 2.107

Three cables are connected at A, where the forces **P** and **Q** are applied as shown. Knowing that $Q = 0$, find the value of P for which the tension in cable AD is 305 N.

SOLUTION

$$\Sigma \mathbf{F}_A = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} + \mathbf{P} = 0 \quad \text{where} \quad \mathbf{P} = P\mathbf{i}$$

$$\overrightarrow{AB} = -(960 \text{ mm})\mathbf{i} - (240 \text{ mm})\mathbf{j} + (380 \text{ mm})\mathbf{k} \qquad AB = 1060 \text{ mm}$$

$$\overrightarrow{AC} = -(960 \text{ mm})\mathbf{i} - (240 \text{ mm})\mathbf{j} - (320 \text{ mm})\mathbf{k} \qquad AC = 1040 \text{ mm}$$

$$\overrightarrow{AD} = -(960 \text{ mm})\mathbf{i} + (720 \text{ mm})\mathbf{j} - (220 \text{ mm})\mathbf{k} \qquad AD = 1220 \text{ mm}$$

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = T_{AB}\left(-\frac{48}{53}\mathbf{i} - \frac{12}{53}\mathbf{j} + \frac{19}{53}\mathbf{k}\right)$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = T_{AC}\left(-\frac{12}{13}\mathbf{i} - \frac{3}{13}\mathbf{j} - \frac{4}{13}\mathbf{k}\right)$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = \frac{305 \text{ N}}{1220 \text{ mm}}[(-960 \text{ mm})\mathbf{i} + (720 \text{ mm})\mathbf{j} - (220 \text{ mm})\mathbf{k}]$$

$$= -(240 \text{ N})\mathbf{i} + (180 \text{ N})\mathbf{j} - (55 \text{ N})\mathbf{k}$$

Substituting into $\Sigma \mathbf{F}_A = 0$, factoring $\mathbf{i}, \mathbf{j}, \mathbf{k}$, and setting each coefficient equal to ϕ gives:

$$\mathbf{i}: \quad P = \frac{48}{53}T_{AB} + \frac{12}{13}T_{AC} + 240 \text{ N} \tag{1}$$

$$\mathbf{j}: \quad \frac{12}{53}T_{AB} + \frac{3}{13}T_{AC} = 180 \text{ N} \tag{2}$$

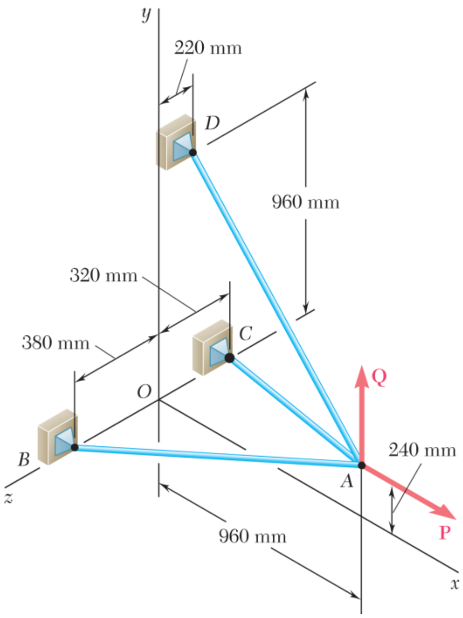
$$\mathbf{k}: \quad \frac{19}{53}T_{AB} - \frac{4}{13}T_{AC} = 55 \text{ N} \tag{3}$$

Solving the system of linear equations using conventional algorithms gives:

$$T_{AB} = 446.71 \text{ N}$$

$$T_{AC} = 341.71 \text{ N}$$

$P = 960$ N ◀



PROBLEM 2.108

Three cables are connected at A, where the forces **P** and **Q** are applied as shown. Knowing that $P = 1200$ N, determine the values of Q for which cable AD is taut.

SOLUTION

We assume that $T_{AD} = 0$ and write $\quad \Sigma \mathbf{F}_A = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + Q\mathbf{j} + (1200 \text{ N})\mathbf{i} = 0$

$$\overrightarrow{AB} = -(960 \text{ mm})\mathbf{i} - (240 \text{ mm})\mathbf{j} + (380 \text{ mm})\mathbf{k} \quad AB = 1060 \text{ mm}$$

$$\overrightarrow{AC} = -(960 \text{ mm})\mathbf{i} - (240 \text{ mm})\mathbf{j} - (320 \text{ mm})\mathbf{k} \quad AC = 1040 \text{ mm}$$

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = \left(-\frac{48}{53}\mathbf{i} - \frac{12}{53}\mathbf{j} + \frac{19}{53}\mathbf{k}\right)T_{AB}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = \left(-\frac{12}{13}\mathbf{i} - \frac{3}{13}\mathbf{j} - \frac{4}{13}\mathbf{k}\right)T_{AC}$$

Substituting into $\Sigma \mathbf{F}_A = 0$, factoring $\mathbf{i}, \mathbf{j}, \mathbf{k}$, and setting each coefficient equal to ϕ gives:

$$\mathbf{i}: \quad -\frac{48}{53}T_{AB} - \frac{12}{13}T_{AC} + 1200 \text{ N} = 0 \qquad (1)$$

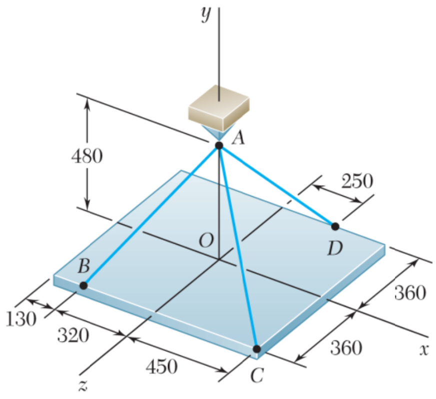
$$\mathbf{j}: \quad -\frac{12}{53}T_{AB} - \frac{3}{13}T_{AC} + Q = 0 \qquad (2)$$

$$\mathbf{k}: \quad \frac{19}{53}T_{AB} - \frac{4}{13}T_{AC} = 0 \qquad (3)$$

Solving the resulting system of linear equations using conventional algorithms gives:

$$T_{AB} = 605.71 \text{ N}$$
$$T_{AC} = 705.71 \text{ N}$$
$$Q = 300.00 \text{ N} \qquad 0 \le Q < 300 \text{ N} \blacktriangleleft$$

Note: This solution assumes that Q is directed upward as shown $(Q \ge 0)$, if negative values of Q are considered, cable AD remains taut, but AC becomes slack for $Q = -460$ N.



Dimensions in mm

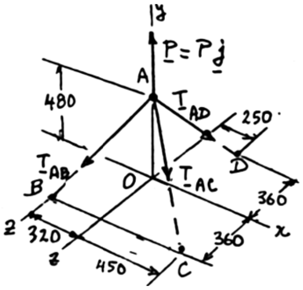
PROBLEM 2.109

A rectangular plate is supported by three cables as shown. Knowing that the tension in cable *AC* is 60 N, determine the weight of the plate.

SOLUTION

We note that the weight of the plate is equal in magnitude to the force **P** exerted by the support on Point *A*.

Free Body *A*:



Dimensions in mm

$$\Sigma F = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} + P\mathbf{j} = 0$$

We have:

$$\overrightarrow{AB} = -(320 \text{ mm})\mathbf{i} - (480 \text{ mm})\mathbf{j} + (360 \text{ mm})\mathbf{k} \qquad AB = 680 \text{ mm}$$

$$\overrightarrow{AC} = (450 \text{ mm})\mathbf{i} - (480 \text{ mm})\mathbf{j} + (360 \text{ mm})\mathbf{k} \qquad AC = 750 \text{ mm}$$

$$\overrightarrow{AD} = (250 \text{ mm})\mathbf{i} - (480 \text{ mm})\mathbf{j} - \left(360 \text{ mm}\right)\mathbf{k} \qquad AD = 650 \text{ mm}$$

Thus:

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = \left(-\frac{8}{17}\mathbf{i} - \frac{12}{17}\mathbf{j} + \frac{9}{17}\mathbf{k}\right)T_{AB}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = \left(0.6\mathbf{i} - 0.64\mathbf{j} + 0.48\mathbf{k}\right)T_{AC}$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD} = \left(\frac{5}{13}\mathbf{i} - \frac{9.6}{13}\mathbf{j} - \frac{7.2}{13}\mathbf{k}\right)T_{AD}$$

Substituting into the Eq. $\Sigma F = 0$ and factoring **i**, **j**, **k**:

$$\left(-\frac{8}{17}T_{AB} + 0.6T_{AC} + \frac{5}{13}T_{AD}\right)\mathbf{i}$$

$$+\left(-\frac{12}{17}T_{AB} - 0.64T_{AC} - \frac{9.6}{13}T_{AD} + P\right)\mathbf{j}$$

$$+\left(\frac{9}{17}T_{AB} + 0.48T_{AC} - \frac{7.2}{13}T_{AD}\right)\mathbf{k} = 0$$

PROBLEM 2.109 (Continued)

Setting the coefficient of **i**, **j**, **k** equal to zero:

$$\mathbf{i}: \quad -\frac{8}{17}T_{AB} + 0.6T_{AC} + \frac{5}{13}T_{AD} = 0 \tag{1}$$

$$\mathbf{j}: \quad -\frac{12}{7}T_{AB} - 0.64T_{AC} - \frac{9.6}{13}T_{AD} + P = 0 \tag{2}$$

$$\mathbf{k}: \quad \frac{9}{17}T_{AB} + 0.48T_{AC} - \frac{7.2}{13}T_{AD} = 0 \tag{3}$$

Making $T_{AC} = 60\text{ N}$ in (1) and (3):

$$-\frac{8}{17}T_{AB} + 36\text{ N} + \frac{5}{13}T_{AD} = 0 \tag{1$'$}$$

$$\frac{9}{17}T_{AB} + 28.8\text{ N} - \frac{7.2}{13}T_{AD} = 0 \tag{3$'$}$$

Multiply (1′) by 9, (3′) by 8, and add:

$$554.4\text{ N} - \frac{12.6}{13}T_{AD} = 0 \quad T_{AD} = 572.0\text{ N}$$

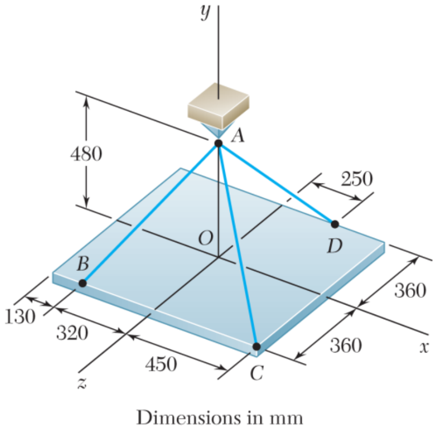
Substitute into (1′) and solve for T_{AB}:

$$T_{AB} = \frac{17}{8}\left(36 + \frac{5}{13} \times 572\right) \qquad T_{AB} = 544.0\text{ N}$$

Substitute for the tensions in Eq. (2) and solve for P:

$$P = \frac{12}{17}(544\text{ N}) + 0.64(60\text{ N}) + \frac{9.6}{13}(572\text{ N})$$
$$= 844.8\text{ N}$$

Weight of plate $= P = 845\text{ N}$ ◀



PROBLEM 2.110

A rectangular plate is supported by three cables as shown. Knowing that the tension in cable *AD* is 520 N, determine the weight of the plate.

SOLUTION

See Problem 2.109 for the figure and the analysis leading to the linear algebraic Equations (1), (2), and (3) below:

$$-\frac{8}{17}T_{AB}+0.6T_{AC}+\frac{5}{13}T_{AD}=0 \tag{1}$$

$$-\frac{12}{17}T_{AB}+0.64T_{AC}-\frac{9.6}{13}T_{AD}+P=0 \tag{2}$$

$$\frac{9}{17}T_{AB}+0.48T_{AC}-\frac{7.2}{13}T_{AD}=0 \tag{3}$$

Making $T_{AD}=520\text{ N}$ in Eqs. (1) and (3):

$$-\frac{8}{17}T_{AB}+0.6T_{AC}+200\text{ N}=0 \tag{1$'$}$$

$$\frac{9}{17}T_{AB}+0.48T_{AC}-288\text{ N}=0 \tag{3$'$}$$

Multiply (1′) by 9, (3′) by 8, and add:

$$9.24T_{AC}-504\text{ N}=0 \quad T_{AC}=54.5455\text{ N}$$

Substitute into (1′) and solve for T_{AB}:

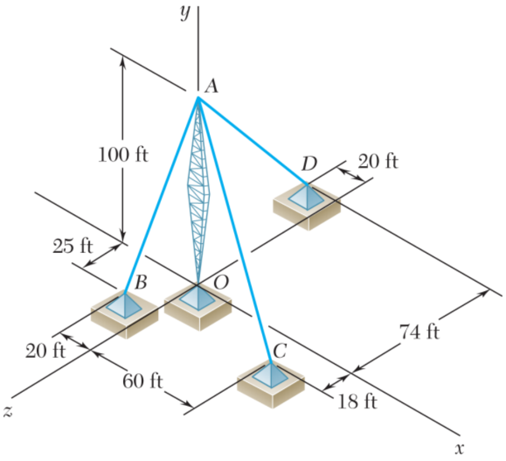
$$T_{AB}=\frac{17}{8}(0.6\times 54.5455+200) \quad T_{AB}=494.545\text{ N}$$

Substitute for the tensions in Eq. (2) and solve for *P*:

$$P=\frac{12}{17}(494.545\text{ N})+0.64(54.5455\text{ N})+\frac{9.6}{13}(520\text{ N})$$

$$=768.00\text{ N}$$

Weight of plate $=P=768\text{ N}$ ◀



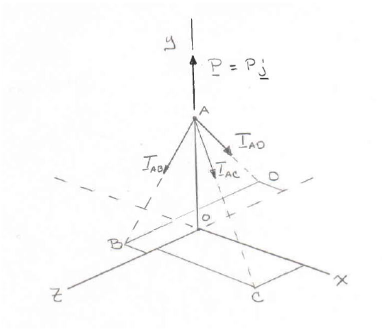
PROBLEM 2.111

A transmission tower is held by three guy wires attached to a pin at A and anchored by bolts at B, C, and D. If the tension in wire AB is 840 lb, determine the vertical force $\mathbf{P}$ exerted by the tower on the pin at A.

SOLUTION

$$\Sigma \mathbf{F} = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} + P\mathbf{j} = 0$$

Free-Body Diagram at *A*:



$$\overrightarrow{AB} = -20\mathbf{i} - 100\mathbf{j} + 25\mathbf{k} \qquad AB = 105 \text{ ft}$$

$$\overrightarrow{AC} = 60\mathbf{i} - 100\mathbf{j} + 18\mathbf{k} \qquad AC = 118 \text{ ft}$$

$$\overrightarrow{AD} = -20\mathbf{i} - 100\mathbf{j} - 74\mathbf{k} \qquad AD = 126 \text{ ft}$$

We write

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB}$$

$$= \left(-\frac{4}{21}\mathbf{i} - \frac{20}{21}\mathbf{j} + \frac{5}{21}\mathbf{k}\right)T_{AB}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC}$$

$$= \left(\frac{30}{59}\mathbf{i} - \frac{50}{59}\mathbf{j} + \frac{9}{59}\mathbf{k}\right)T_{AC}$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD}$$

$$= \left(-\frac{10}{63}\mathbf{i} - \frac{50}{63}\mathbf{j} - \frac{37}{63}\mathbf{k}\right)T_{AD}$$

Substituting into the Eq. $\Sigma \mathbf{F} = 0$ and factoring $\mathbf{i}$, $\mathbf{j}$, $\mathbf{k}$:

PROBLEM 2.111 (Continued)

$$\left(-\frac{4}{21}T_{AB}+\frac{30}{59}T_{AC}-\frac{10}{63}T_{AD}\right)\mathbf{i}$$
$$+\left(-\frac{20}{21}T_{AB}-\frac{50}{59}T_{AC}-\frac{50}{63}T_{AD}+P\right)\mathbf{j}$$
$$+\left(\frac{5}{21}T_{AB}+\frac{9}{59}T_{AC}-\frac{37}{63}T_{AD}\right)\mathbf{k}=0$$

Setting the coefficients of $\mathbf{i}$, $\mathbf{j}$, $\mathbf{k}$, equal to zero:

$$\mathbf{i}: \quad -\frac{4}{21}T_{AB}+\frac{30}{59}T_{AC}-\frac{10}{63}T_{AD}=0 \tag{1}$$

$$\mathbf{j}: \quad -\frac{20}{21}T_{AB}-\frac{50}{59}T_{AC}-\frac{50}{63}T_{AD}+P=0 \tag{2}$$

$$\mathbf{k}: \quad \frac{5}{21}T_{AB}+\frac{9}{59}T_{AC}-\frac{37}{63}T_{AD}=0 \tag{3}$$

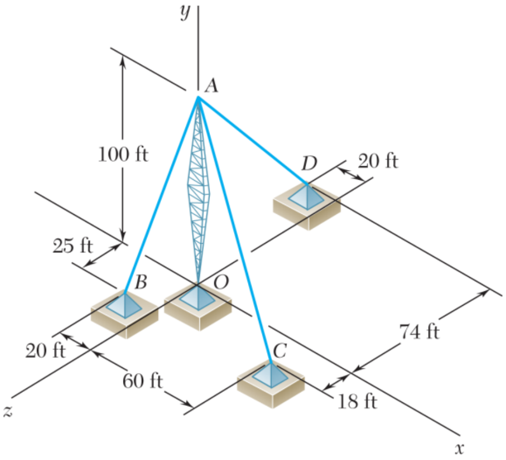
Set $T_{AB}=840$ lb in Eqs. (1) – (3):

$$-160\text{ lb}+\frac{30}{59}T_{AC}-\frac{10}{63}T_{AD}=0 \tag{1$'$}$$

$$-800\text{ lb}-\frac{50}{59}T_{AC}-\frac{50}{63}T_{AD}+P=0 \tag{2$'$}$$

$$200\text{ lb}+\frac{9}{59}T_{AC}-\frac{37}{63}T_{AD}=0 \tag{3$'$}$$

Solving, $T_{AC}=458.12$ lb $\quad T_{AD}=459.53$ lb $\quad P=1552.94$ lb $\qquad P=1553$ lb ◀



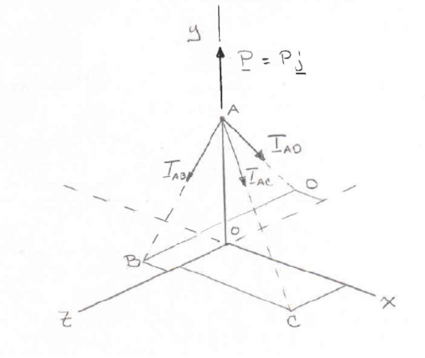
PROBLEM 2.112

A transmission tower is held by three guy wires attached to a pin at *A* and anchored by bolts at *B*, *C*, and *D*. If the tension in wire *AC* is 590 lb, determine the vertical force **P** exerted by the tower on the pin at *A*.

SOLUTION

$$\Sigma \mathbf{F} = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} + P\mathbf{j} = 0$$

Free-Body Diagram at *A*:



$$\overrightarrow{AB} = -20\mathbf{i} - 100\mathbf{j} + 25\mathbf{k} \qquad AB = 105 \text{ ft}$$

$$\overrightarrow{AC} = 60\mathbf{i} - 100\mathbf{j} + 18\mathbf{k} \qquad AC = 118 \text{ ft}$$

$$\overrightarrow{AD} = -20\mathbf{i} - 100\mathbf{j} - 74\mathbf{k} \qquad AD = 126 \text{ ft}$$

We write

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB}$$

$$= \left(-\frac{4}{21}\mathbf{i} - \frac{20}{21}\mathbf{j} + \frac{5}{21}\mathbf{k}\right)T_{AB}$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC}$$

$$= \left(\frac{30}{59}\mathbf{i} - \frac{50}{59}\mathbf{j} + \frac{9}{59}\mathbf{k}\right)T_{AC}$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD}$$

$$= \left(-\frac{10}{63}\mathbf{i} - \frac{50}{63}\mathbf{j} - \frac{37}{63}\mathbf{k}\right)T_{AD}$$

Substituting into the Eq. $\Sigma \mathbf{F} = 0$ and factoring $\mathbf{i}$, $\mathbf{j}$, $\mathbf{k}$:

PROBLEM 2.112 (Continued)

$$\left(-\frac{4}{21}T_{AB}+\frac{30}{59}T_{AC}-\frac{10}{63}T_{AD}\right)\mathbf{i}$$
$$+\left(-\frac{20}{21}T_{AB}-\frac{50}{59}T_{AC}-\frac{50}{63}T_{AD}+P\right)\mathbf{j}$$
$$+\left(\frac{5}{21}T_{AB}+\frac{9}{59}T_{AC}-\frac{37}{63}T_{AD}\right)\mathbf{k}=0$$

Setting the coefficients of **i**, **j**, **k**, equal to zero:

$$\mathbf{i}: \quad -\frac{4}{21}T_{AB}+\frac{30}{59}T_{AC}-\frac{10}{63}T_{AD}=0 \qquad (1)$$

$$\mathbf{j}: \quad -\frac{20}{21}T_{AB}-\frac{50}{59}T_{AC}-\frac{50}{63}T_{AD}+P=0 \qquad (2)$$

$$\mathbf{k}: \quad \frac{5}{21}T_{AB}+\frac{9}{59}T_{AC}-\frac{37}{63}T_{AD}=0 \qquad (3)$$

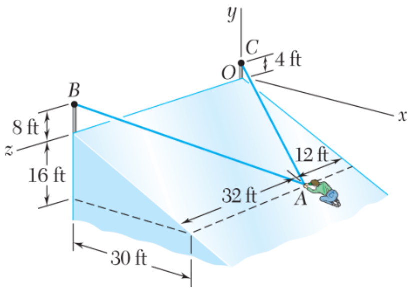
Set $T_{AC}=590$ lb in Eqs. (1) – (3):

$$-\frac{4}{21}T_{AB}+300\text{ lb}-\frac{10}{63}T_{AD}=0 \qquad (1')$$

$$-\frac{20}{21}T_{AB}-500\text{ lb}-\frac{50}{63}T_{AD}+P=0 \qquad (2')$$

$$\frac{5}{21}T_{AB}+90\text{ lb}-\frac{37}{63}T_{AD}=0 \qquad (3')$$

Solving, $T_{AB}=1081.82$ lb $\quad T_{AD}=591.82$ lb $\quad$ $P=2000$ lb ◀

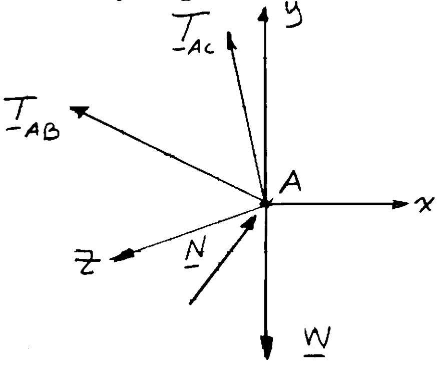


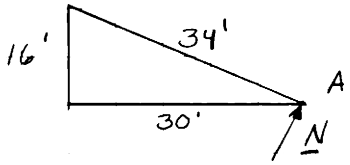
PROBLEM 2.113

In trying to move across a slippery icy surface, a 175-lb man uses two ropes *AB* and *AC*. Knowing that the force exerted on the man by the icy surface is perpendicular to that surface, determine the tension in each rope.

SOLUTION

Free-Body Diagram at *A*





$$\mathbf{N} = N\left(\frac{16}{34}\mathbf{i} + \frac{30}{34}\mathbf{j}\right)$$

and $\mathbf{W} = W\,\mathbf{j} = -(175\text{ lb})\mathbf{j}$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = T_{AC}\frac{(-30\text{ ft})\mathbf{i} + (20\text{ ft})\mathbf{j} - (12\text{ ft})\mathbf{k}}{38\text{ ft}}$$

$$= T_{AC}\left(-\frac{15}{19}\mathbf{i} + \frac{10}{19}\mathbf{j} - \frac{6}{19}\mathbf{k}\right)$$

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = T_{AB}\frac{(-30\text{ ft})\mathbf{i} + (24\text{ ft})\mathbf{j} + (32\text{ ft})\mathbf{k}}{50\text{ ft}}$$

$$= T_{AB}\left(-\frac{15}{25}\mathbf{i} + \frac{12}{25}\mathbf{j} + \frac{16}{25}\mathbf{k}\right)$$

Equilibrium condition: $\Sigma\mathbf{F} = 0$

$$\mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{N} + \mathbf{W} = 0$$

PROBLEM 2.113 (Continued)

Substituting the expressions obtained for $\mathbf{T}_{AB}, \mathbf{T}_{AC}, \mathbf{N},$ and **W**; factoring **i**, **j**, and **k**; and equating each of the coefficients to zero gives the following equations:

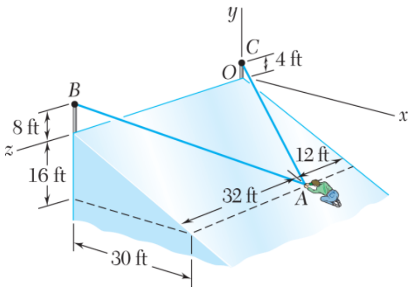
From **i**:
$$-\frac{15}{25}T_{AB} - \frac{15}{19}T_{AC} + \frac{16}{34}N = 0 \tag{1}$$

From **j**:
$$\frac{12}{25}T_{AB} + \frac{10}{19}T_{AC} + \frac{30}{34}N - (175\text{ lb}) = 0 \tag{2}$$

From **k**:
$$\frac{16}{25}T_{AB} - \frac{6}{19}T_{AC} = 0 \tag{3}$$

Solving the resulting set of equations gives:

$T_{AB} = 30.8$ lb; $T_{AC} = 62.5$ lb ◀



PROBLEM 2.114

Solve Problem 2.113, assuming that a friend is helping the man at *A* by pulling on him with a force $\mathbf{P} = -(45\text{ lb})\mathbf{k}$.

PROBLEM 2.113 In trying to move across a slippery icy surface, a 175-lb man uses two ropes *AB* and *AC*. Knowing that the force exerted on the man by the icy surface is perpendicular to that surface, determine the tension in each rope.

SOLUTION

Refer to Problem 2.113 for the figure and analysis leading to the following set of equations, Equation (3) being modified to include the additional force $\mathbf{P} = (-45\text{ lb})\mathbf{k}$.

$$-\frac{15}{25}T_{AB} - \frac{15}{19}T_{AC} + \frac{16}{34}N = 0 \qquad (1)$$

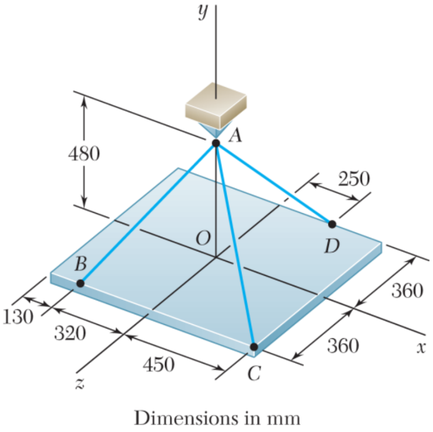
$$\frac{12}{25}T_{AB} + \frac{10}{19}T_{AC} + \frac{30}{34}N - (175\text{ lb}) = 0 \qquad (2)$$

$$\frac{16}{25}T_{AB} - \frac{6}{19}T_{AC} - (45\text{ lb}) = 0 \qquad (3)$$

Solving the resulting set of equations simultaneously gives:

$T_{AB} = 81.3$ lb ◀

$T_{AC} = 22.2$ lb ◀



PROBLEM 2.115

For the rectangular plate of Problems 2.109 and 2.110, determine the tension in each of the three cables knowing that the weight of the plate is 792 N.

SOLUTION

See Problem 2.109 for the figure and the analysis leading to the linear algebraic Equations (1), (2), and (3) below. Setting $P = 792\text{ N}$ gives:

$$-\frac{8}{17}T_{AB} + 0.6T_{AC} + \frac{5}{13}T_{AD} = 0 \qquad (1)$$

$$-\frac{12}{17}T_{AB} - 0.64T_{AC} - \frac{9.6}{13}T_{AD} + 792\text{ N} = 0 \qquad (2)$$

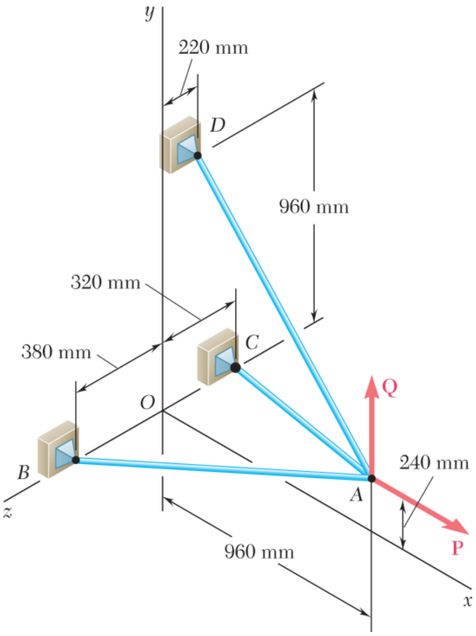
$$\frac{9}{17}T_{AB} + 0.48T_{AC} - \frac{7.2}{13}T_{AD} = 0 \qquad (3)$$

Solving Equations (1), (2), and (3) by conventional algorithms gives

$T_{AB} = 510.00\text{ N}$ $\qquad T_{AB} = 510\text{ N}$ ◀

$T_{AC} = 56.250\text{ N}$ $\qquad T_{AC} = 56.2\text{ N}$ ◀

$T_{AD} = 536.25\text{ N}$ $\qquad T_{AD} = 536\text{ N}$ ◀



PROBLEM 2.116

For the cable system of Problems 2.107 and 2.108, determine the tension in each cable knowing that $P = 2880$ N and $Q = 0$.

SOLUTION

$$\Sigma \mathbf{F}_A = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} + \mathbf{P} + \mathbf{Q} = 0$$

Where $\mathbf{P} = P\mathbf{i}$ and $\mathbf{Q} = Q\mathbf{j}$

$$\overrightarrow{AB} = -(960 \text{ mm})\mathbf{i} - (240 \text{ mm})\mathbf{j} + (380 \text{ mm})\mathbf{k} \quad AB = 1060 \text{ mm}$$

$$\overrightarrow{AC} = -(960 \text{ mm})\mathbf{i} - (240 \text{ mm})\mathbf{j} - (320 \text{ mm})\mathbf{k} \quad AC = 1040 \text{ mm}$$

$$\overrightarrow{AD} = -(960 \text{ mm})\mathbf{i} + (720 \text{ mm})\mathbf{j} - (220 \text{ mm})\mathbf{k} \quad AD = 1220 \text{ mm}$$

$$\mathbf{T}_{AB} = T_{AB}\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB} = T_{AB}\left(-\frac{48}{53}\mathbf{i} - \frac{12}{53}\mathbf{j} + \frac{19}{53}\mathbf{k}\right)$$

$$\mathbf{T}_{AC} = T_{AC}\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = T_{AC}\left(-\frac{12}{13}\mathbf{i} - \frac{3}{13}\mathbf{j} - \frac{4}{13}\mathbf{k}\right)$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD} = T_{AD}\left(-\frac{48}{61}\mathbf{i} + \frac{36}{61}\mathbf{j} - \frac{11}{61}\mathbf{k}\right)$$

Substituting into $\Sigma \mathbf{F}_A = 0$, setting $P = (2880 \text{ N})\mathbf{i}$ and $Q = 0$, and setting the coefficients of **i**, **j**, **k** equal to 0, we obtain the following three equilibrium equations:

$$\mathbf{i}: \quad -\frac{48}{53}T_{AB} - \frac{12}{13}T_{AC} - \frac{48}{61}T_{AD} + 2880 \text{ N} = 0 \qquad (1)$$

$$\mathbf{j}: \quad -\frac{12}{53}T_{AB} - \frac{3}{13}T_{AC} + \frac{36}{61}T_{AD} = 0 \qquad (2)$$

$$\mathbf{k}: \quad \frac{19}{53}T_{AB} - \frac{4}{13}T_{AC} - \frac{11}{61}T_{AD} = 0 \qquad (3)$$

PROBLEM 2.116 (Continued)

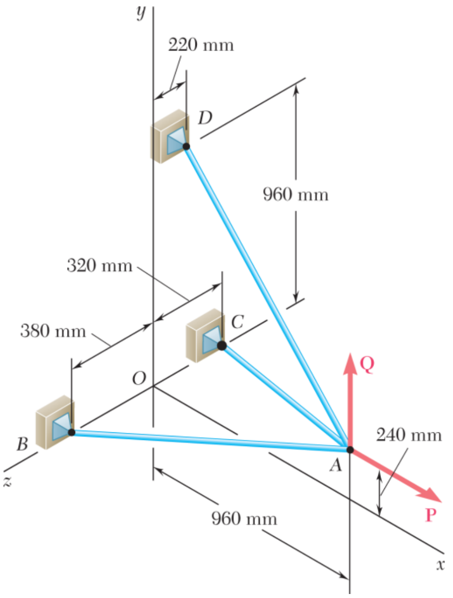
Solving the system of linear equations using conventional algorithms gives:

$$T_{AB} = 1340.14 \text{ N}$$
$$T_{AC} = 1025.12 \text{ N}$$
$$T_{AD} = 915.03 \text{ N}$$

$T_{AB} = 1340 \text{ N}$ ◀

$T_{AC} = 1025 \text{ N}$ ◀

$T_{AD} = 915 \text{ N}$ ◀



PROBLEM 2.117

For the cable system of Problems 2.107 and 2.108, determine the tension in each cable knowing that $P = 2880$ N and $Q = 576$ N.

SOLUTION

See Problem 2.116 for the analysis leading to the linear algebraic Equations (1), (2), and (3) below:

$$-\frac{48}{53}T_{AB} - \frac{12}{13}T_{AC} - \frac{48}{61}T_{AD} + P = 0 \tag{1}$$

$$-\frac{12}{53}T_{AB} - \frac{3}{13}T_{AC} + \frac{36}{61}T_{AD} + Q = 0 \tag{2}$$

$$\frac{19}{53}T_{AB} - \frac{4}{13}T_{AC} - \frac{11}{61}T_{AD} = 0 \tag{3}$$

Setting $P = 2880$ N and $Q = 576$ N gives:

$$-\frac{48}{53}T_{AB} - \frac{12}{13}T_{AC} - \frac{48}{61}T_{AD} + 2880\text{ N} = 0 \tag{1$'$}$$

$$-\frac{12}{53}T_{AB} - \frac{3}{13}T_{AC} + \frac{36}{61}T_{AD} + 576\text{ N} = 0 \tag{2$'$}$$

$$\frac{19}{53}T_{AB} - \frac{4}{13}T_{AC} - \frac{11}{61}T_{AD} = 0 \tag{3$'$}$$

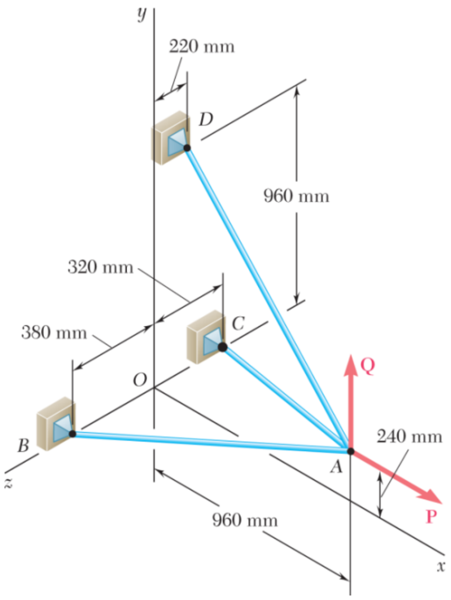
Solving the resulting set of equations using conventional algorithms gives:

$$T_{AB} = 1431.00\text{ N}$$
$$T_{AC} = 1560.00\text{ N}$$
$$T_{AD} = 183.010\text{ N}$$

$T_{AB} = 1431$ N ◀

$T_{AC} = 1560$ N ◀

$T_{AD} = 183.0$ N ◀



PROBLEM 2.118

For the cable system of Problems 2.107 and 2.108, determine the tension in each cable knowing that $P = 2880$ N and $Q = -576$ N. (**Q** is directed downward).

SOLUTION

See Problem 2.116 for the analysis leading to the linear algebraic Equations (1), (2), and (3) below:

$$-\frac{48}{53}T_{AB} - \frac{12}{13}T_{AC} - \frac{48}{61}T_{AD} + P = 0 \qquad (1)$$

$$-\frac{12}{53}T_{AB} - \frac{3}{13}T_{AC} + \frac{36}{61}T_{AD} + Q = 0 \qquad (2)$$

$$\frac{19}{53}T_{AB} - \frac{4}{13}T_{AC} - \frac{11}{61}T_{AD} = 0 \qquad (3)$$

Setting $P = 2880$ N and $Q = -576$ N gives:

$$-\frac{48}{53}T_{AB} - \frac{12}{13}T_{AC} - \frac{48}{61}T_{AD} + 2880\text{ N} = 0 \qquad (1')$$

$$-\frac{12}{53}T_{AB} - \frac{3}{13}T_{AC} + \frac{36}{61}T_{AD} - 576\text{ N} = 0 \qquad (2')$$

$$\frac{19}{53}T_{AB} - \frac{4}{13}T_{AC} - \frac{11}{61}T_{AD} = 0 \qquad (3')$$

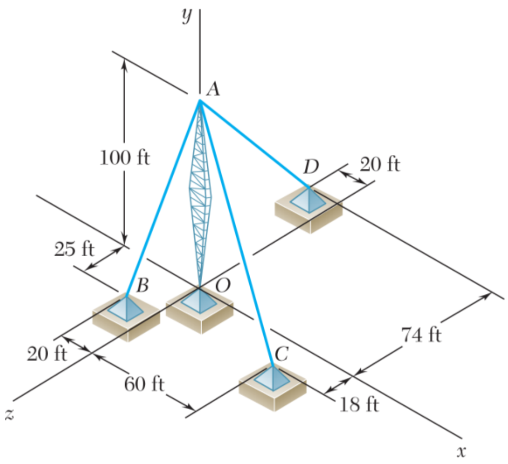
Solving the resulting set of equations using conventional algorithms gives:

$$T_{AB} = 1249.29\text{ N}$$
$$T_{AC} = 490.31\text{ N}$$
$$T_{AD} = 1646.97\text{ N}$$

$T_{AB} = 1249$ N ◀

$T_{AC} = 490$ N ◀

$T_{AD} = 1647$ N ◀



PROBLEM 2.119

For the transmission tower of Probs. 2.111 and 2.112, determine the tension in each guy wire knowing that the tower exerts on the pin at *A* an upward vertical force of 1800 lb.

PROBLEM 2.111 A transmission tower is held by three guy wires attached to a pin at *A* and anchored by bolts at *B*, *C*, and *D*. If the tension in wire *AB* is 840 lb, determine the vertical force **P** exerted by the tower on the pin at *A*.

SOLUTION

See Problem 2.111 for the figure and the analysis leading to the linear algebraic Equations (1), (2), and (3) below:

$$\mathbf{i}: \quad -\frac{4}{21}T_{AB}+\frac{30}{59}T_{AC}-\frac{10}{63}T_{AD}=0 \qquad (1)$$

$$\mathbf{j}: \quad -\frac{20}{21}T_{AB}-\frac{50}{59}T_{AC}-\frac{50}{63}T_{AD}+P=0 \qquad (2)$$

$$\mathbf{k}: \quad \frac{5}{21}T_{AB}+\frac{9}{59}T_{AC}-\frac{37}{63}T_{AD}=0 \qquad (3)$$

Substituting for $P = 1800$ lb in Equations (1), (2), and (3) above and solving the resulting set of equations using conventional algorithms gives:

$$-\frac{4}{21}T_{AB}+\frac{30}{59}T_{AC}-\frac{10}{63}T_{AD}=0 \qquad (1')$$

$$-\frac{20}{21}T_{AB}-\frac{50}{59}T_{AC}-\frac{50}{63}T_{AD}+1800\text{ lb}=0 \qquad (2')$$

$$\frac{5}{21}T_{AB}+\frac{9}{59}T_{AC}-\frac{37}{63}T_{AD}=0 \qquad (3')$$

$$T_{AB} = 973.64\text{ lb}$$
$$T_{AC} = 531.00\text{ lb}$$
$$T_{AD} = 532.64\text{ lb}$$

$T_{AB} = 974$ lb ◀

$T_{AC} = 531$ lb ◀

$T_{AD} = 533$ lb ◀

$W = (-180 \text{ lb})j$

The forces applied at *D* are:

$$\mathbf{T}_{DA}, \mathbf{T}_{DB}, \mathbf{T}_{DC} \text{ and } \mathbf{W}$$

where $\mathbf{W} = -180.0 \text{ lb}\mathbf{j}$. To express the other forces in terms of the unit vectors **i**, **j**, **k**, we write

$$\overrightarrow{DA} = (18 \text{ in.})\mathbf{j} + (22 \text{ in.})\mathbf{k}$$
$$DA = 28.425 \text{ in.}$$
$$\overrightarrow{DB} = -(24 \text{ in.})\mathbf{i} + (18 \text{ in.})\mathbf{j} - (16 \text{ in.})\mathbf{k}$$
$$DB = 34.0 \text{ in.}$$
$$\overrightarrow{DC} = (24 \text{ in.})\mathbf{i} + (18 \text{ in.})\mathbf{j} - (16 \text{ in.})\mathbf{k}$$
$$DC = 34.0 \text{ in.}$$

PROBLEM 2.120 (Continued)

and
$$\mathbf{T}_{DA} = T_{Da}\boldsymbol{\lambda}_{DA} = T_{Da}\frac{\overrightarrow{DA}}{DA}$$
$$= (0.63324\mathbf{j} + 0.77397\mathbf{k})T_{DA}$$
$$\mathbf{T}_{DB} = T_{DB}\boldsymbol{\lambda}_{DB} = T_{DB}\frac{\overrightarrow{DB}}{DB}$$
$$= (-0.70588\mathbf{i} + 0.52941\mathbf{j} - 0.47059\mathbf{k})T_{DB}$$
$$\mathbf{T}_{DC} = T_{DC}\boldsymbol{\lambda}_{DC} = T_{DC}\frac{\overrightarrow{DC}}{DC}$$
$$= (0.70588\mathbf{i} + 0.52941\mathbf{j} - 0.47059\mathbf{k})T_{DC}$$

Equilibrium Condition with $\mathbf{W} = -W\mathbf{j}$

$$\Sigma F = 0: \quad \mathbf{T}_{DA} + \mathbf{T}_{DB} + \mathbf{T}_{DC} - W\mathbf{j} = 0$$

Substituting the expressions obtained for $\mathbf{T}_{DA}, \mathbf{T}_{DB}$, and $\mathbf{T}_{DC}$ and factoring **i**, **j**, and **k**:

$$(-0.70588T_{DB} + 0.70588T_{DC})\mathbf{i}$$
$$(0.63324T_{DA} + 0.52941T_{DB} + 0.52941T_{DC} - W)\mathbf{j}$$
$$(0.77397T_{DA} - 0.47059T_{DB} - 0.47059T_{DC})\mathbf{k}$$

Equating to zero the coefficients of **i**, **j**, **k**:

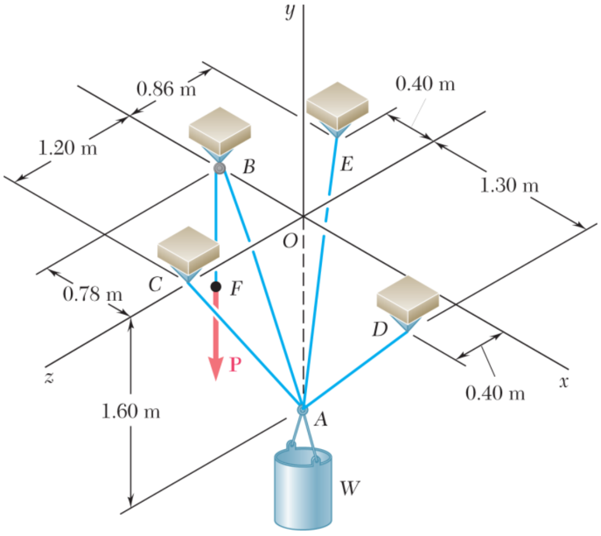
$$-0.70588T_{DB} + 0.70588T_{DC} = 0 \tag{1}$$
$$0.63324T_{DA} + 0.52941T_{DB} + 0.52941T_{DC} - W = 0 \tag{2}$$
$$0.77397T_{DA} - 0.47059T_{DB} - 0.47059T_{DC} = 0 \tag{3}$$

Substituting $W = 180$ lb in Equations (1), (2), and (3) above, and solving the resulting set of equations using conventional algorithms gives,

$T_{DA} = 119.7$ lb ◀

$T_{DB} = 98.4$ lb ◀

$T_{DC} = 98.4$ lb ◀



PROBLEM 2.121

A container of weight W is suspended from ring A, to which cables AC and AE are attached. A force **P** is applied to the end F of a third cable that passes over a pulley at B and through ring A and that is attached to a support at D. Knowing that $W = 1000$ N, determine the magnitude of P. (*Hint:* The tension is the same in all portions of cable $FBAD$.)

SOLUTION

The (vector) force in each cable can be written as the product of the (scalar) force and the unit vector along the cable. That is, with

$$\overrightarrow{AB} = -(0.78\text{ m})\mathbf{i} + (1.6\text{ m})\mathbf{j} + (0\text{ m})\mathbf{k}$$

$$AB = \sqrt{(-0.78\text{ m})^2 + (1.6\text{ m})^2 + (0)^2}$$

$$= 1.78\text{ m}$$

$$\mathbf{T}_{AB} = T\boldsymbol{\lambda}_{AB} = T_{AB}\frac{\overrightarrow{AB}}{AB}$$

$$= \frac{T_{AB}}{1.78\text{ m}}[-(0.78\text{ m})\mathbf{i} + (1.6\text{ m})\mathbf{j} + (0\text{ m})\mathbf{k}]$$

$$\mathbf{T}_{AB} = T_{AB}(-0.4382\mathbf{i} + 0.8989\mathbf{j} + 0\mathbf{k})$$

and

$$\overrightarrow{AC} = (0)\mathbf{i} + (1.6\text{ m})\mathbf{j} + (1.2\text{ m})\mathbf{k}$$

$$AC = \sqrt{(0\text{ m})^2 + (1.6\text{ m})^2 + (1.2\text{ m})^2} = 2\text{ m}$$

$$\mathbf{T}_{AC} = T\boldsymbol{\lambda}_{AC} = T_{AC}\frac{\overrightarrow{AC}}{AC} = \frac{T_{AC}}{2\text{ m}}[(0)\mathbf{i} + (1.6\text{ m})\mathbf{j} + (1.2\text{ m})\mathbf{k}]$$

$$\mathbf{T}_{AC} = T_{AC}(0.8\mathbf{j} + 0.6\mathbf{k})$$

and

$$\overrightarrow{AD} = (1.3\text{ m})\mathbf{i} + (1.6\text{ m})\mathbf{j} + (0.4\text{ m})\mathbf{k}$$

$$AD = \sqrt{(1.3\text{ m})^2 + (1.6\text{ m})^2 + (0.4\text{ m})^2} = 2.1\text{ m}$$

$$\mathbf{T}_{AD} = T\boldsymbol{\lambda}_{AD} = T_{AD}\frac{\overrightarrow{AD}}{AD} = \frac{T_{AD}}{2.1\text{ m}}[(1.3\text{ m})\mathbf{i} + (1.6\text{ m})\mathbf{j} + (0.4\text{ m})\mathbf{k}]$$

$$\mathbf{T}_{AD} = T_{AD}(0.6190\mathbf{i} + 0.7619\mathbf{j} + 0.1905\mathbf{k})$$

PROBLEM 2.121 (Continued)

Finally,

$$\overrightarrow{AE} = -(0.4 \text{ m})\mathbf{i} + (1.6 \text{ m})\mathbf{j} - (0.86 \text{ m})\mathbf{k}$$

$$AE = \sqrt{(-0.4 \text{ m})^2 + (1.6 \text{ m})^2 + (-0.86 \text{ m})^2} = 1.86 \text{ m}$$

$$\mathbf{T}_{AE} = T\boldsymbol{\lambda}_{AE} = T_{AE}\frac{\overrightarrow{AE}}{AE}$$

$$= \frac{T_{AE}}{1.86 \text{ m}}[-(0.4 \text{ m})\mathbf{i} + (1.6 \text{ m})\mathbf{j} - (0.86 \text{ m})\mathbf{k}]$$

$$\mathbf{T}_{AE} = T_{AE}(-0.2151\mathbf{i} + 0.8602\mathbf{j} - 0.4624\mathbf{k})$$

With the weight of the container $\mathbf{W} = -W\mathbf{j}$, at A we have:

$$\Sigma\mathbf{F} = 0: \quad \mathbf{T}_{AB} + \mathbf{T}_{AC} + \mathbf{T}_{AD} - W\mathbf{j} = 0$$

Equating the factors of **i**, **j**, and **k** to zero, we obtain the following linear algebraic equations:

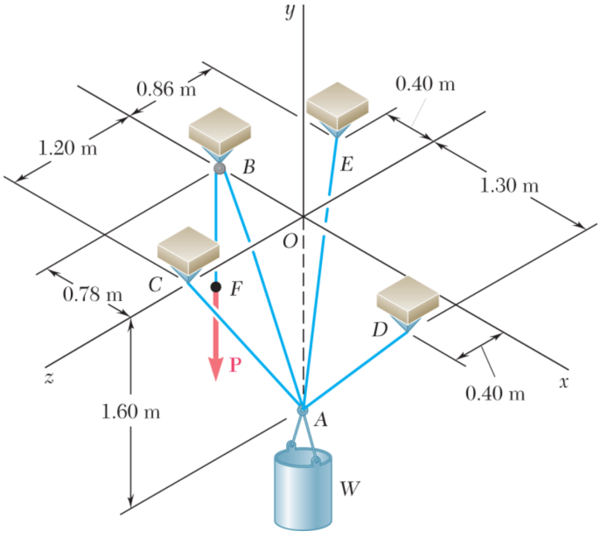
$$-0.4382T_{AB} + 0.6190T_{AD} - 0.2151T_{AE} = 0 \qquad (1)$$

$$0.8989T_{AB} + 0.8T_{AC} + 0.7619T_{AD} + 0.8602T_{AE} - W = 0 \qquad (2)$$

$$0.6T_{AC} + 0.1905T_{AD} - 0.4624T_{AE} = 0 \qquad (3)$$

Knowing that $W = 1000$ N and that because of the pulley system at $B\,T_{AB} = T_{AD} = P$, where P is the externally applied (unknown) force, we can solve the system of linear Equations (1), (2) and (3) uniquely for P.

$P = 378$ N ◀



PROBLEM 2.122

Knowing that the tension in cable *AC* of the system described in Problem 2.121 is 150 N, determine (*a*) the magnitude of the force **P**, (*b*) the weight *W* of the container.

PROBLEM 2.121 A container of weight *W* is suspended from ring *A*, to which cables *AC* and *AE* are attached. A force **P** is applied to the end *F* of a third cable that passes over a pulley at *B* and through ring *A* and that is attached to a support at *D*. Knowing that $W = 1000$ N, determine the magnitude of *P*. (*Hint:* The tension is the same in all portions of cable *FBAD*.)

SOLUTION

Here, as in Problem 2.121, the support of the container consists of the four cables *AE*, *AC*, *AD*, and *AB*, with the condition that the force in cables *AB* and *AD* is equal to the externally applied force *P*. Thus, with the condition

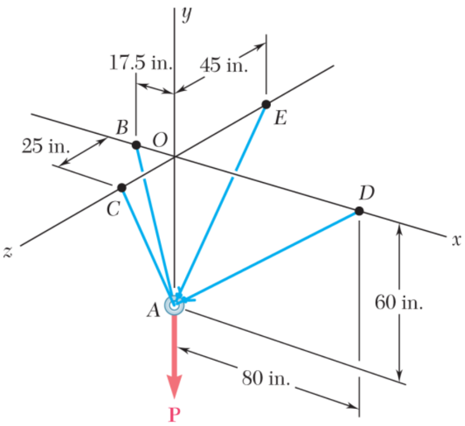
$$T_{AB} = T_{AD} = P$$

and using the linear algebraic equations of Problem 2.131 with $T_{AC} = 150$ N, we obtain

(*a*) $P = 454$ N ◀

(*b*) $W = 1202$ N ◀

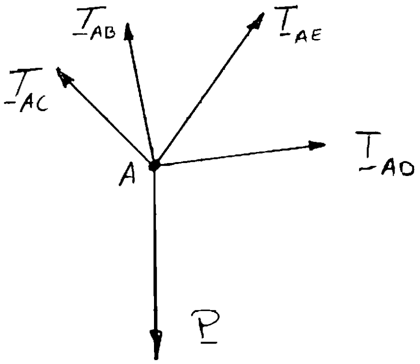
PROBLEM 2.123



Cable *BAC* passes through a frictionless ring *A* and is attached to fixed supports at *B* and *C*, while cables *AD* and *AE* are both tied to the ring and are attached, respectively, to supports at *D* and *E*. Knowing that a 200-lb vertical load **P** is applied to ring *A*, determine the tension in each of the three cables.

SOLUTION

Free Body Diagram at *A*:



Since T_{BAC} = tension in cable *BAC*, it follows that

$$T_{AB} = T_{AC} = T_{BAC}$$

$$\mathbf{T}_{AB} = T_{BAC}\boldsymbol{\lambda}_{AB} = T_{BAC}\frac{(-17.5\text{ in.})\mathbf{i} + (60\text{ in.})\mathbf{j}}{62.5\text{ in.}} = T_{BAC}\left(\frac{-17.5}{62.5}\mathbf{i} + \frac{60}{62.5}\mathbf{j}\right)$$

$$\mathbf{T}_{AC} = T_{BAC}\boldsymbol{\lambda}_{AC} = T_{BAC}\frac{(60\text{ in.})\mathbf{i} + (25\text{ in.})\mathbf{k}}{65\text{ in.}} = T_{BAC}\left(\frac{60}{65}\mathbf{j} + \frac{25}{65}\mathbf{k}\right)$$

$$\mathbf{T}_{AD} = T_{AD}\boldsymbol{\lambda}_{AD} = T_{AD}\frac{(80\text{ in.})\mathbf{i} + (60\text{ in.})\mathbf{j}}{100\text{ in.}} = T_{AD}\left(\frac{4}{5}\mathbf{i} + \frac{3}{5}\mathbf{j}\right)$$

$$\mathbf{T}_{AE} = T_{AE}\boldsymbol{\lambda}_{AE} = T_{AE}\frac{(60\text{ in.})\mathbf{j} - (45\text{ in.})\mathbf{k}}{75\text{ in.}} = T_{AE}\left(\frac{4}{5}\mathbf{j} - \frac{3}{5}\mathbf{k}\right)$$

PROBLEM 2.123 (Continued)

Substituting into $\Sigma \mathbf{F}_A = 0$, setting $\mathbf{P} = (-200 \text{ lb})\mathbf{j}$, and setting the coefficients of **i**, **j**, **k** equal to ϕ, we obtain the following three equilibrium equations:

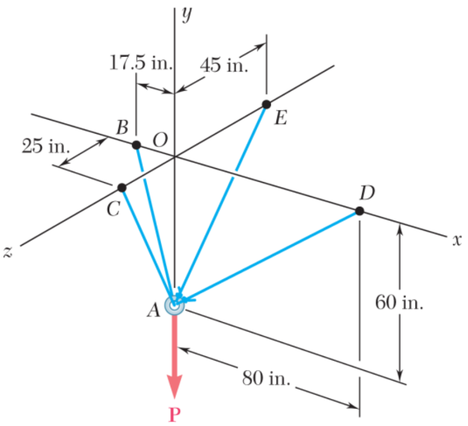
From **i**: $-\dfrac{17.5}{62.5}T_{BAC} + \dfrac{4}{5}T_{AD} = 0$ (1)

From **j**: $\left(\dfrac{60}{62.5} + \dfrac{60}{65}\right)T_{BAC} + \dfrac{3}{5}T_{AD} + \dfrac{4}{5}T_{AE} - 200 \text{ lb} = 0$ (2)

From **k**: $\dfrac{25}{65}T_{BAC} - \dfrac{3}{5}T_{AE} = 0$ (3)

Solving the system of linear equations using conventional algorithms gives:

$T_{BAC} = 76.7 \text{ lb};\ T_{AD} = 26.9 \text{ lb};\ T_{AE} = 49.2 \text{ lb}$ ◀



PROBLEM 2.124

Knowing that the tension in cable *AE* of Prob. 2.123 is 75 lb, determine (*a*) the magnitude of the load **P**, (*b*) the tension in cables *BAC* and *AD*.

PROBLEM 2.123 Cable *BAC* passes through a frictionless ring *A* and is attached to fixed supports at *B* and *C*, while cables *AD* and *AE* are both tied to the ring and are attached, respectively, to supports at *D* and *E*. Knowing that a 200-lb vertical load **P** is applied to ring *A*, determine the tension in each of the three cables.

SOLUTION

Refer to the solution to Problem 2.123 for the figure and analysis leading to the following set of equilibrium equations, Equation (2) being modified to include $P\mathbf{j}$ as an unknown quantity:

$$-\frac{17.5}{62.5}T_{BAC}+\frac{4}{5}T_{AD}=0 \tag{1}$$

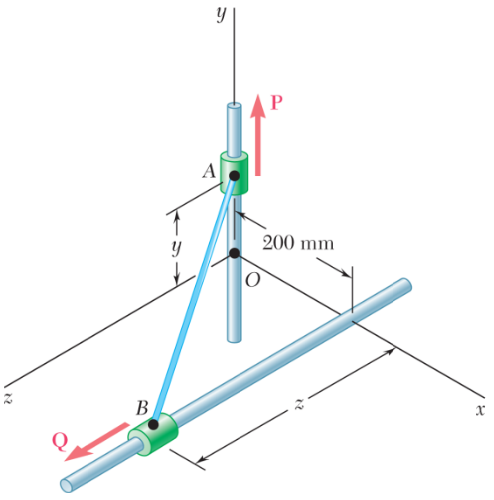
$$\left(\frac{60}{62.5}+\frac{60}{65}\right)T_{BAC}+\frac{3}{5}T_{AD}+\frac{4}{5}T_{AE}-P=0 \tag{2}$$

$$\frac{25}{65}T_{BAC}-\frac{3}{5}T_{AE}=0 \tag{3}$$

Substituting for $T_{AE}=75\text{ lb}$ and solving simultaneously gives:

(*a*) $P=305\text{ lb}$ ◀

(*b*) $T_{BAC}=117.0\text{ lb};\ T_{AD}=40.9\text{ lb}$ ◀



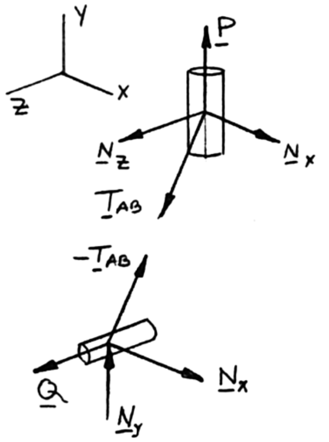
PROBLEM 2.125

Collars A and B are connected by a 525-mm-long wire and can slide freely on frictionless rods. If a force $\mathbf{P} = (341\ \text{N})\mathbf{j}$ is applied to collar A, determine (a) the tension in the wire when $y = 155$ mm, (b) the magnitude of the force $\mathbf{Q}$ required to maintain the equilibrium of the system.

SOLUTION

For both Problems 2.125 and 2.126:

Free-Body Diagrams of Collars:



$$(AB)^2 = x^2 + y^2 + z^2$$

Here $$(0.525\ \text{m})^2 = (0.20\ \text{m})^2 + y^2 + z^2$$

or $$y^2 + z^2 = 0.23563\ \text{m}^2$$

Thus, when y given, z is determined,

Now $$\boldsymbol{\lambda}_{AB} = \frac{\overrightarrow{AB}}{AB}$$
$$= \frac{1}{0.525\ \text{m}}(0.20\mathbf{i} - y\mathbf{j} + z\mathbf{k})\text{m}$$
$$= 0.38095\mathbf{i} - 1.90476y\mathbf{j} + 1.90476z\mathbf{k}$$

Where y and z are in units of meters, m.

From the F.B. Diagram of collar A: $\quad \Sigma\mathbf{F} = 0\text{:} \quad N_x\mathbf{i} + N_z\mathbf{k} + P\mathbf{j} + T_{AB}\lambda_{AB} = 0$

Setting the **j** coefficient to zero gives $\quad P - (1.90476y)T_{AB} = 0$

With $$P = 341\ \text{N}$$
$$T_{AB} = \frac{341\ \text{N}}{1.90476y}$$

Now, from the free body diagram of collar B: $\quad \Sigma\mathbf{F} = 0\text{:} \quad N_x\mathbf{i} + N_y\mathbf{j} + Q\mathbf{k} - T_{AB}\boldsymbol{\lambda}_{AB} = 0$

Setting the **k** coefficient to zero gives $\quad Q - T_{AB}(1.90476z) = 0$

And using the above result for T_{AB}, we have $\quad Q = T_{AB}z = \dfrac{341\ \text{N}}{(1.90476)y}(1.90476z) = \dfrac{(341\ \text{N})(z)}{y}$

PROBLEM 2.125 (Continued)

Then from the specifications of the problem, $y = 155\text{ mm} = 0.155\text{ m}$

$$z^2 = 0.23563\text{ m}^2 - (0.155\text{ m})^2$$

$$z = 0.46\text{ m}$$

and

(*a*)

$$T_{AB} = \frac{341\text{ N}}{0.155(1.90476)}$$

$$= 1155.00\text{ N}$$

or $T_{AB} = 1155\text{ N}$ ◀

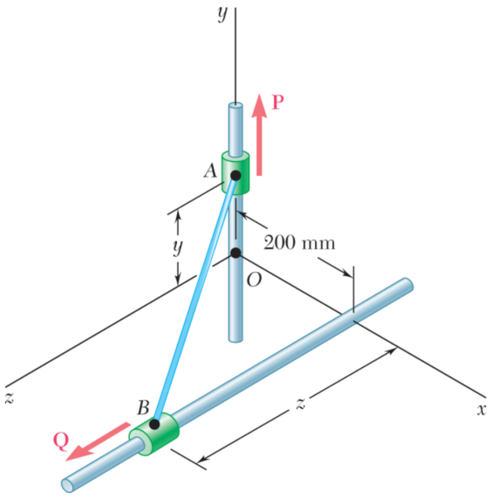
and

(*b*)

$$Q = \frac{341\text{ N}(0.46\text{ m})(0.866)}{(0.155\text{ m})}$$

$$= (1012.00\text{ N})$$

or $Q = 1012\text{ N}$ ◀



PROBLEM 2.126

Solve Problem 2.125 assuming that $y = 275$ mm.

PROBLEM 2.125 Collars *A* and *B* are connected by a 525-mm-long wire and can slide freely on frictionless rods. If a force $\mathbf{P} = (341\text{ N})\mathbf{j}$ is applied to collar *A*, determine (*a*) the tension in the wire when $y = 155$ mm, (*b*) the magnitude of the force **Q** required to maintain the equilibrium of the system.

SOLUTION

From the analysis of Problem 2.125, particularly the results:

$$y^2 + z^2 = 0.23563\text{ m}^2$$

$$T_{AB} = \frac{341\text{ N}}{1.90476y}$$

$$Q = \frac{341\text{ N}}{y}z$$

With $y = 275\text{ mm} = 0.275\text{ m}$, we obtain:

$$z^2 = 0.23563\text{ m}^2 - (0.275\text{ m})^2$$

$$z = 0.40\text{ m}$$

and

(*a*) $$T_{AB} = \frac{341\text{ N}}{(1.90476)(0.275\text{ m})} = 651.00$$

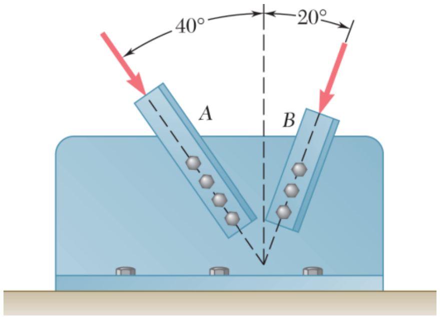
or $$T_{AB} = 651\text{ N} \blacktriangleleft$$

and

(*b*) $$Q = \frac{341\text{ N}(0.40\text{ m})}{(0.275\text{ m})}$$

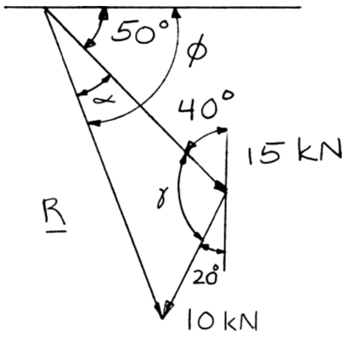
or $$Q = 496\text{ N} \blacktriangleleft$$

PROBLEM 2.127



Two structural members *A* and *B* are bolted to a bracket as shown. Knowing that both members are in compression and that the force is 15 kN in member *A* and 10 kN in member *B*, determine by trigonometry the magnitude and direction of the resultant of the forces applied to the bracket by members *A* and *B*.

SOLUTION



Using the force triangle and the laws of cosines and sines,

we have $\gamma = 180° - (40° + 20°)$

$= 120°$

Then $R^2 = (15\text{ kN})^2 + (10\text{ kN})^2 - 2(15\text{ kN})(10\text{ kN})\cos 120°$

$= 475\text{ kN}^2$

$R = 21.794\text{ kN}$

and $\dfrac{10\text{ kN}}{\sin\alpha} = \dfrac{21.794\text{ kN}}{\sin 120°}$

$\sin\alpha = \left(\dfrac{10\text{ kN}}{21.794\text{ kN}}\right)\sin 120°$

$= 0.39737$

$\alpha = 23.414$

Hence: $\phi = \alpha + 50° = 73.414$

R = 21.8 kN ⦫ 73.4° ◀

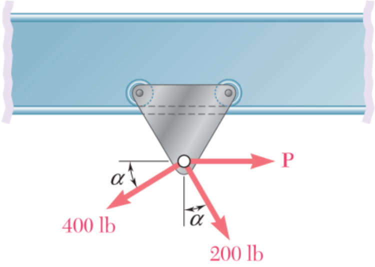
$F_y = -200\text{ lb}\dfrac{30\text{ in.}}{50.0\text{ in.}}$ $\quad F_y = -120.0\text{ lb}$ ◀



PROBLEM 2.129

A hoist trolley is subjected to the three forces shown. Knowing that $\alpha = 40°$, determine (*a*) the required magnitude of the force **P** if the resultant of the three forces is to be vertical, (*b*) the corresponding magnitude of the resultant.

SOLUTION

$$R_x = \xrightarrow{+} \Sigma F_x = P + (200 \text{ lb})\sin 40° - (400 \text{ lb})\cos 40°$$

$$R_x = P - 177.860 \text{ lb} \qquad (1)$$

$$R_y = +\!\downarrow \Sigma F_y = (200 \text{ lb})\cos 40° + (400 \text{ lb})\sin 40°$$

$$R_y = 410.32 \text{ lb} \qquad (2)$$

(*a*) For **R** to be vertical, we must have $R_x = 0$.

Set $R_x = 0$ in Eq. (1)

$$0 = P - 177.860 \text{ lb}$$

$$P = 177.860 \text{ lb}$$

$P = 177.9$ lb ◀

(*b*) Since **R** is to be vertical:

$$R = R_y = 410 \text{ lb}$$

$R = 410$ lb ◀

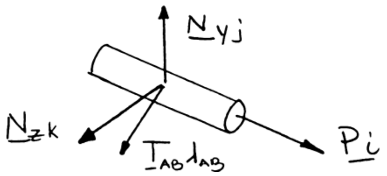
PROBLEM 2.137

Collars *A* and *B* are connected by a 25-in.-long wire and can slide freely on frictionless rods. If a 60-lb force **Q** is applied to collar *B* as shown, determine (*a*) the tension in the wire when $x = 9$ in., (*b*) the corresponding magnitude of the force **P** required to maintain the equilibrium of the system.

SOLUTION

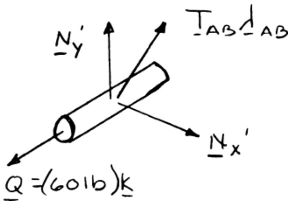
Free-Body Diagrams of Collars:

***A*:**



$\underline{N}_y \underline{j}$
$\underline{N}_z k$
$\underline{T}_{AB} \underline{\lambda}_{AB}$
$P \underline{i}$

***B*:**



$\underline{N}_y'$
$\underline{T}_{AB} \underline{\lambda}_{AB}$
$\underline{N}_x'$
$\underline{Q} = (60 \text{ lb})\underline{k}$

$$\boldsymbol{\lambda}_{AB} = \frac{\overrightarrow{AB}}{AB} = \frac{-x\mathbf{i} - (20 \text{ in.})\mathbf{j} + z\mathbf{k}}{25 \text{ in.}}$$

Collar *A*: $\Sigma\mathbf{F} = 0\text{:} \quad P\mathbf{i} + N_y\mathbf{j} + N_z\mathbf{k} + T_{AB}\boldsymbol{\lambda}_{AB} = 0$

Substitute for $\boldsymbol{\lambda}_{AB}$ and set coefficient of **i** equal to zero:

$$P - \frac{T_{AB}x}{25 \text{ in.}} = 0 \qquad (1)$$

Collar *B*: $\Sigma\mathbf{F} = 0\text{:} \quad (60 \text{ lb})\mathbf{k} + N_x'\mathbf{i} + N_y'\mathbf{j} - T_{AB}\boldsymbol{\lambda}_{AB} = 0$

Substitute for $\boldsymbol{\lambda}_{AB}$ and set coefficient of **k** equal to zero:

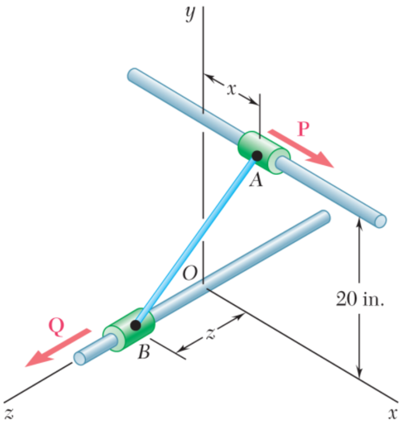
$$60 \text{ lb} - \frac{T_{AB}z}{25 \text{ in.}} = 0 \qquad (2)$$

(*a*) $x = 9$ in. $\quad (9 \text{ in.})^2 + (20 \text{ in.})^2 + z^2 = (25 \text{ in.})^2$

$$z = 12 \text{ in.}$$

From Eq. (2): $\dfrac{60 \text{ lb} - T_{AB}(12 \text{ in.})}{25 \text{ in.}}$ $\qquad T_{AB} = 125.0 \text{ lb}$ ◀

(*b*) From Eq. (1): $P = \dfrac{(125.0 \text{ lb})(9 \text{ in.})}{25 \text{ in.}}$ $\qquad P = 45.0 \text{ lb}$ ◀



PROBLEM 2.138

Collars A and B are connected by a 25-in.-long wire and can slide freely on frictionless rods. Determine the distances x and z for which the equilibrium of the system is maintained when $P = 120$ lb and $Q = 60$ lb.

SOLUTION

See Problem 2.137 for the diagrams and analysis leading to Equations (1) and (2) below:

$$P = \frac{T_{AB}x}{25 \text{ in.}} = 0 \tag{1}$$

$$60 \text{ lb} - \frac{T_{AB}z}{25 \text{ in.}} = 0 \tag{2}$$

For $P = 120$ lb, Eq. (1) yields $T_{AB}x = (25 \text{ in.})(20 \text{ lb})$ (1′)

From Eq. (2): $T_{AB}z = (25 \text{ in.})(60 \text{ lb})$ (2′)

Dividing Eq. (1′) by (2′), $\dfrac{x}{z} = 2$ (3)

Now write $x^2 + z^2 + (20 \text{ in.})^2 = (25 \text{ in.})^2$ (4)

Solving (3) and (4) simultaneously,

$$4z^2 + z^2 + 400 = 625$$

$$z^2 = 45$$

$$z = 6.7082 \text{ in.}$$

From Eq. (3): $x = 2z = 2(6.7082 \text{ in.})$

$$= 13.4164 \text{ in.}$$

$x = 13.42$ in., $z = 6.71$ in. ◀

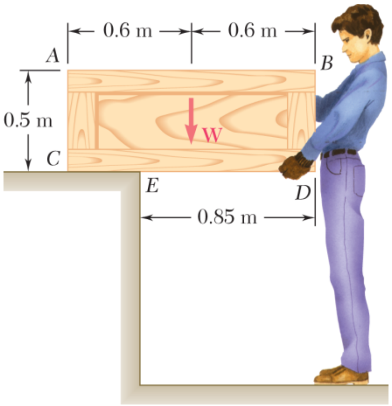
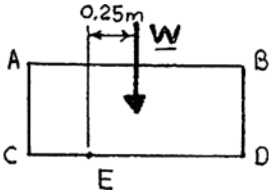
CHAPTER 3



PROBLEM 3.1

A crate of mass 80 kg is held in the position shown. Determine (*a*) the moment produced by the weight **W** of the crate about *E*, (*b*) the smallest force applied at *B* that creates a moment of equal magnitude and opposite sense about *E*.

SOLUTION

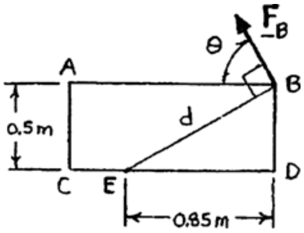


(*a*) By definition, $W = mg = 80\text{ kg}(9.81\text{ m/s}^2) = 784.8\text{ N}$

We have $\Sigma M_E\!: \quad M_E = (784.8\text{ N})(0.25\text{ m})$

$$\mathbf{M}_E = 196.2\text{ N}\cdot\text{m} \circlearrowright \blacktriangleleft$$

(*b*) For the force at *B* to be the smallest, resulting in a moment ($\mathbf{M}_E$) about *E*, the line of action of force $\mathbf{F}_B$ must be perpendicular to the line connecting *E* to *B*. The sense of $\mathbf{F}_B$ must be such that the force produces a counterclockwise moment about *E*.



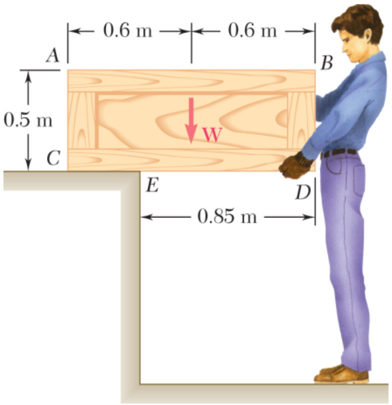
Note: $d = \sqrt{(0.85\text{ m})^2 + (0.5\text{ m})^2} = 0.98615\text{ m}$

We have $\Sigma M_E\!: \quad 196.2\text{ N}\cdot\text{m} = F_B(0.98615\text{ m})$

$$F_B = 198.954\text{ N}$$

and $\theta = \tan^{-1}\left(\dfrac{0.85\text{ m}}{0.5\text{ m}}\right) = 59.534^\circ$

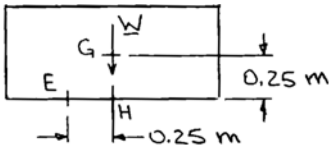
or $$\mathbf{F}_B = 199.0\text{ N} \measuredangle 59.5^\circ \blacktriangleleft$$



PROBLEM 3.2

A crate of mass 80 kg is held in the position shown. Determine (*a*) the moment produced by the weight **W** of the crate about *E*, (*b*) the smallest force applied at *A* that creates a moment of equal magnitude and opposite sense about *E*, (*c*) the magnitude, sense, and point of application on the bottom of the crate of the smallest vertical force that creates a moment of equal magnitude and opposite sense about *E*.

SOLUTION

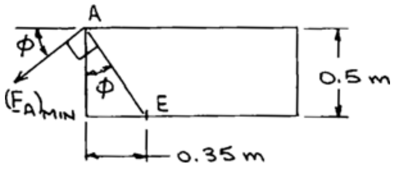


First note. . .

$$W = mg = (80\text{ kg})(9.81\text{ m/s}^2) = 784.8\text{ N}$$

(*a*) We have $M_E = r_{H/E}W = (0.25\text{ m})(784.8\text{ N}) = 196.2\text{ N}\cdot\text{m}$ or $\mathbf{M}_E = 196.2\text{ N}\cdot\text{m} \circlearrowright$ ◀

(*b*)



For $\mathbf{F}_A$ to be minimum, it must be perpendicular to the line joining Points *A* and *E*. Then with $\mathbf{F}_A$ directed as shown, we have $(-M_E) = r_{A/E}(F_A)_{\min}$.

Where $r_{A/E} = \sqrt{(0.35\text{ m})^2 + (0.5\text{ m})^2} = 0.61033\text{ m}$

then $196.2\text{ N}\cdot\text{m} = (0.61033\text{ m})(F_A)_{\min}$

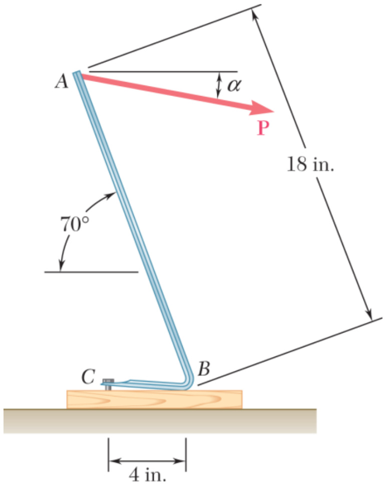
or $(F_A)_{\min} = 321\text{ N}$

Also $\tan\phi = \dfrac{0.35\text{ m}}{0.5\text{ m}}$ or $\phi = 35.0^\circ$ $(\mathbf{F}_A)_{\min} = 321\text{ N} \measuredangle 35.0^\circ$ ◀

(*c*) For $\mathbf{F}_{vertical}$ to be minimum, the perpendicular distance from its line of action to Point *E* must be maximum. Thus, apply $(\mathbf{F}_{vertical})_{\min}$ at Point *D*, and then

$$(-M_E) = r_{D/E}(F_{vertical})_{\min}$$

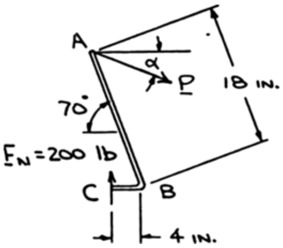
$$196.2\text{ N}\cdot\text{m} = (0.85\text{ m})(F_{vertical})_{\min}$$ or $(\mathbf{F}_{vertical})_{\min} = 231\text{ N}\uparrow$ at Point *D* ◀



PROBLEM 3.3

It is known that a vertical force of 200 lb is required to remove the nail at *C* from the board. As the nail first starts moving, determine (*a*) the moment about *B* of the force exerted on the nail, (*b*) the magnitude of the force **P** that creates the same moment about *B* if $\alpha = 10°$, (*c*) the smallest force **P** that creates the same moment about *B*.

SOLUTION

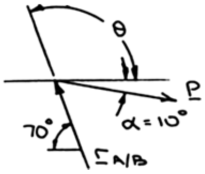


(*a*) We have $M_B = r_{C/B}F_N$

$$= (4\text{ in.})(200\text{ lb})$$

$$= 800\text{ lb}\cdot\text{in.}$$

or $M_B = 800\text{ lb}\cdot\text{in.}$ ↻ ◀



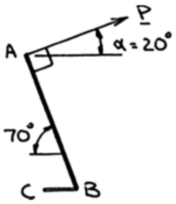
(*b*) By definition, $M_B = r_{A/B}P\sin\theta$

$$\theta = 10° + (180° - 70°)$$

$$= 120°$$

Then $800\text{ lb}\cdot\text{in.} = (18\text{ in.})\times P\sin 120°$

or $P = 51.3$ lb ◀



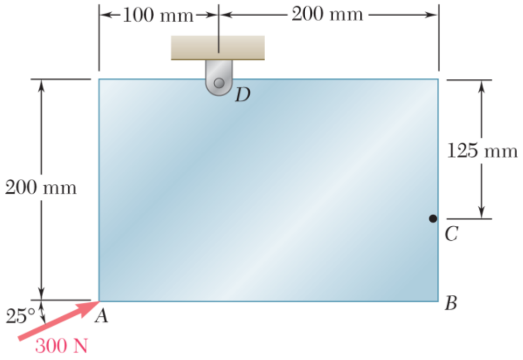
(*c*) For **P** to be minimum, it must be perpendicular to the line joining Points *A* and *B*. Thus, **P** must be directed as shown.

Thus $M_B = dP_{\min}$

$$d = r_{A/B}$$

or $800\text{ lb}\cdot\text{in.} = (18\text{ in.})P_{\min}$

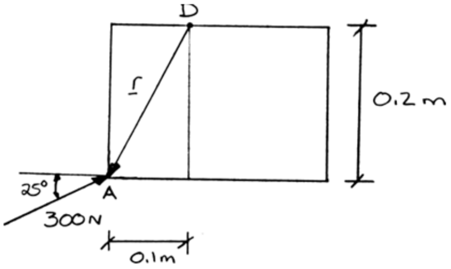
or $P_{\min} = 44.4$ lb $\mathbf{P}_{\min} = 44.4$ lb ∠ 20° ◀



PROBLEM 3.4

A 300-N force is applied at *A* as shown. Determine (*a*) the moment of the 300-N force about *D*, (*b*) the smallest force applied at *B* that creates the same moment about *D*.

SOLUTION



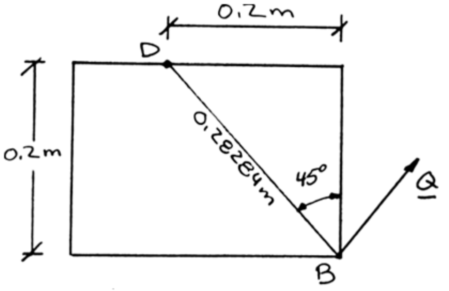
(*a*) $F_x = (300\text{ N})\cos 25°$

$= 271.89\text{ N}$

$F_y = (300\text{ N})\sin 25°$

$= 126.785\text{ N}$

$\mathbf{F} = (271.89\text{ N})\mathbf{i} + (126.785\text{ N})\mathbf{j}$



$$\mathbf{r} = \overrightarrow{DA} = -(0.1\text{ m})\mathbf{i} - (0.2\text{ m})\mathbf{j}$$

$$\mathbf{M}_D = \mathbf{r} \times \mathbf{F}$$

$$\mathbf{M}_D = [-(0.1\text{ m})\mathbf{i} - (0.2\text{ m})\mathbf{j}] \times [(271.89\text{ N})\mathbf{i} + (126.785\text{ N})\mathbf{j}]$$

$$= -(12.6785\text{ N}\cdot\text{m})\mathbf{k} + (54.378\text{ N}\cdot\text{m})\mathbf{k}$$

$$= (41.700\text{ N}\cdot\text{m})\mathbf{k}$$

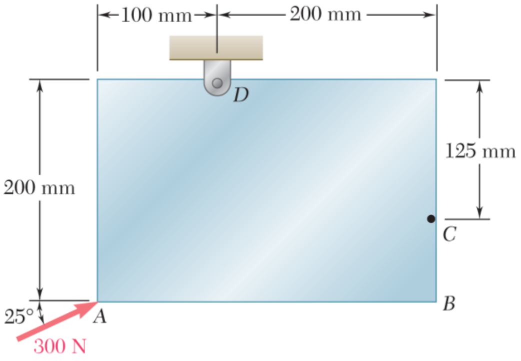
$\mathbf{M}_D = 41.7\text{ N}\cdot\text{m}$ ↺ ◀

(*b*) The smallest force *Q* at *B* must be perpendicular to $\overrightarrow{DB}$ at 45°

$$\mathbf{M}_D = Q(\overrightarrow{DB})$$

$$41.700\text{ N}\cdot\text{m} = Q(0.28284\text{ m})$$

$Q = 147.4\text{ N}$ 45.0° ◀



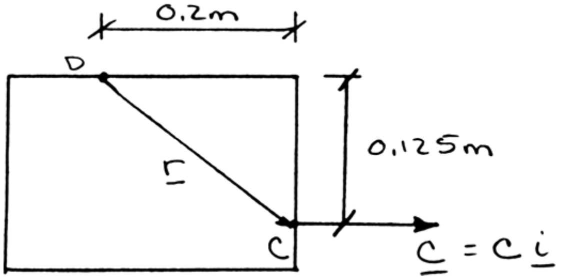
PROBLEM 3.5

A 300-N force is applied at *A* as shown. Determine (*a*) the moment of the 300-N force about *D*, (*b*) the magnitude and sense of the horizontal force applied at *C* that creates the same moment about *D*, (*c*) the smallest force applied at *C* that creates the same moment about *D*.

SOLUTION

(*a*) See Problem 3.3 for the figure and analysis leading to the determination of $\mathbf{M}_D$

$\mathbf{M}_D = 41.7\text{ N}\cdot\text{m} \circlearrowleft$ ◀



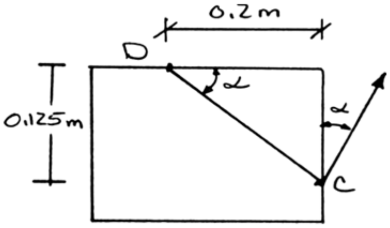
(*b*) Since **C** is horizontal $\mathbf{C} = C\mathbf{i}$

$$\mathbf{r} = \overrightarrow{DC} = (0.2\text{ m})\mathbf{i} - (0.125\text{ m})\mathbf{j}$$
$$\mathbf{M}_D = \mathbf{r} \times C\mathbf{i} = C(0.125\text{ m})\mathbf{k}$$
$$41.7\text{ N}\cdot\text{m} = (0.125\text{ m})(C)$$
$$C = 333.60\text{ N}$$

$C = 334\text{ N}$ ◀

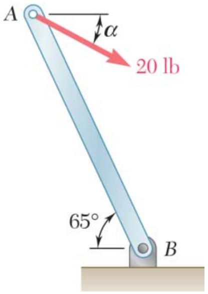
(*c*) The smallest force *C* must be perpendicular to *DC*; thus, it forms α with the vertical

$$\tan\alpha = \frac{0.125\text{ m}}{0.2\text{ m}}$$
$$\alpha = 32.0°$$
$$\mathbf{M}_D = C(DC); \quad DC = \sqrt{(0.2\text{ m})^2 + (0.125\text{ m})^2}$$
$$= 0.23585\text{ m}$$



$$41.70\text{ N}\cdot\text{m} = C(0.23585\text{ m})$$

$\mathbf{C} = 176.8\text{ N} \measuredangle 58.0°$ ◀

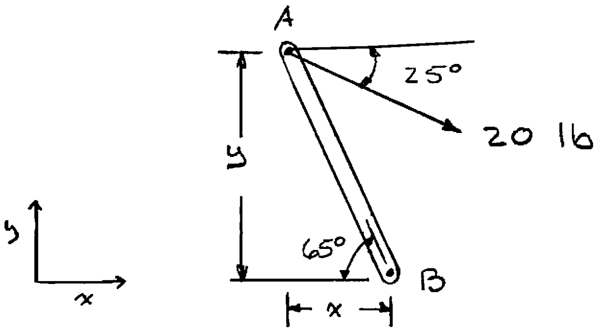


PROBLEM 3.6

A 20-lb force is applied to the control rod *AB* as shown. Knowing that the length of the rod is 9 in. and that $\alpha = 25°$, determine the moment of the force about Point *B* by resolving the force into horizontal and vertical components.

SOLUTION

Free-Body Diagram of Rod *AB*:



$$x = (9\text{ in.})\cos 65° = 3.8036\text{ in.}$$

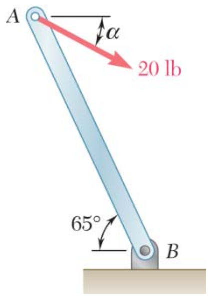
$$y = (9\text{ in.})\sin 65° = 8.1568\text{ in.}$$

$$\begin{aligned}\mathbf{F} &= F_x\mathbf{i} + F_y\mathbf{j}\\ &= (20\text{ lb}\cos 25°)\mathbf{i} + (-20\text{ lb}\sin 25°)\mathbf{j}\\ &= (18.1262\text{ lb})\mathbf{i} - (8.4524\text{ lb})\mathbf{j}\end{aligned}$$

$$\mathbf{r}_{A/B} = \overrightarrow{BA} = (-3.8036\text{ in.})\mathbf{i} + (8.1568\text{ in.})\mathbf{j}$$

$$\begin{aligned}\mathbf{M}_B &= \mathbf{r}_{A/B} \times \mathbf{F}\\ &= (-3.8036\mathbf{i} + 8.1568\mathbf{j}) \times (18.1262\mathbf{i} - 8.4524\mathbf{j})\\ &= 32.150\mathbf{k} - 147.852\mathbf{k}\\ &= -115.702\text{ lb-in.}\end{aligned}$$

$\mathbf{M}_B = 115.7$ lb-in. $\curvearrowright$ ◀

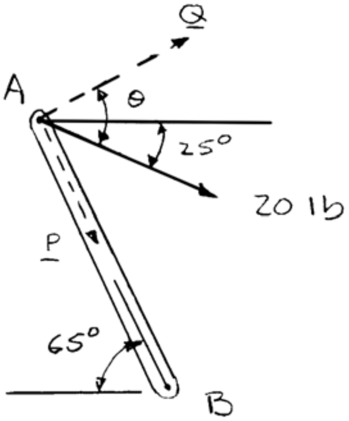


PROBLEM 3.7

A 20-lb force is applied to the control rod *AB* as shown. Knowing that the length of the rod is 9 in. and that $\alpha = 25°$, determine the moment of the force about Point *B* by resolving the force into components along *AB* and in a direction perpendicular to *AB*.

SOLUTION

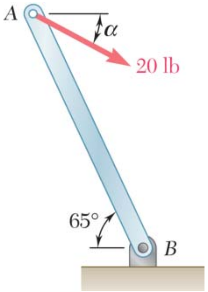
Free-Body Diagram of Rod *AB*:



$$\theta = 90° - (65° - 25°)$$
$$= 50°$$

$$Q = (20\text{ lb})\cos 50°$$
$$= 12.8558\text{ lb}$$
$$M_B = Q(9\text{ in.})$$
$$= (12.8558\text{ lb})(9\text{ in.})$$
$$= 115.702\text{ lb-in.}$$

$\mathbf{M}_B = 115.7\text{ lb-in.} \circlearrowright$ ◀

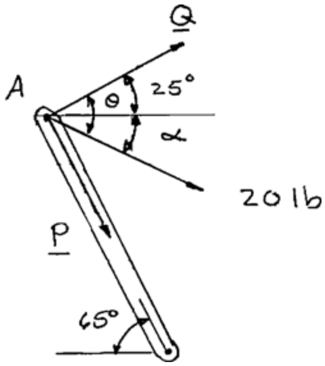


PROBLEM 3.8

A 20-lb force is applied to the control rod *AB* as shown. Knowing that the length of the rod is 9 in. and that the moment of the force about *B* is 120 lb · in. clockwise, determine the value of *α*.

SOLUTION

Free-Body Diagram of Rod *AB*:



$$\alpha = \theta - 25°$$

$$Q = (20 \text{ lb})\cos\theta$$

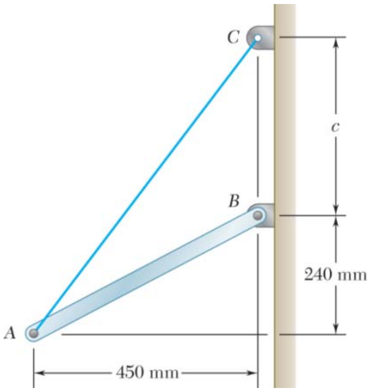
and $$M_B = (Q)(9 \text{ in.})$$

Therefore, $$120 \text{ lb-in.} = (20 \text{ lb})(\cos\theta)(9 \text{ in.})$$

$$\cos\theta = \frac{120 \text{ lb-in.}}{180 \text{ lb-in.}}$$

or $$\theta = 48.190°$$

Therefore, $$\alpha = 48.190° - 25°$$ $\alpha = 23.2°$ ◀



PROBLEM 3.9

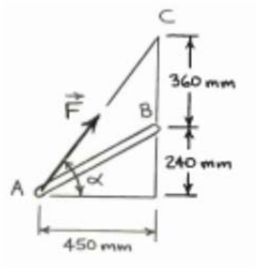
Rod *AB* is held in place by the cord *AC*. Knowing that the tension in the cord is 1350 N and that $c = 360$ mm, determine the moment about *B* of the force exerted by the cord at point *A* by resolving that force into horizontal and vertical components applied (*a*) at point *A*, (*b*) at point *C*.

SOLUTION

Free-Body Diagram of Rod *AB*:

$$(a)\quad F = 1350\ \text{N} \qquad AC = \sqrt{(450)^2 + (600)^2} = 750\ \text{mm}$$

$$\cos\alpha = \frac{450}{750} = 0.6 \qquad \sin\alpha = \frac{600}{750} = 0.8$$



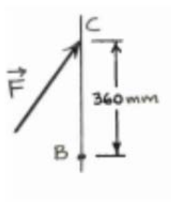
$$\begin{aligned}\vec{\mathbf{F}} &= F\cos\alpha\mathbf{i} + F\sin\alpha\mathbf{j}\\ &= (1350\ \text{N})0.6\mathbf{i} + (1350\ \text{N})0.8\mathbf{j}\\ &= (810\ \text{N})\mathbf{i} + (1080\text{N})\mathbf{j}\end{aligned}$$

$$\vec{\mathbf{r}}_{A/B} = -(0.45\ \text{m})\mathbf{i} - (0.24\ \text{m})\mathbf{j}$$

$$\begin{aligned}\vec{\mathbf{M}}_B &= \vec{\mathbf{r}}_{A/B} \times \vec{\mathbf{F}} = (-0.45\mathbf{i} - 0.24\mathbf{j}) \times (810\mathbf{i} + 1080\mathbf{j})\\ &= -486\mathbf{k} + 194.4\mathbf{k}\\ &= -(291.6\ \text{N}\cdot\text{m})\mathbf{k}\end{aligned}$$

$\mathbf{M}_B = 292\ \text{N}\cdot\text{m}$ ↻ ◀

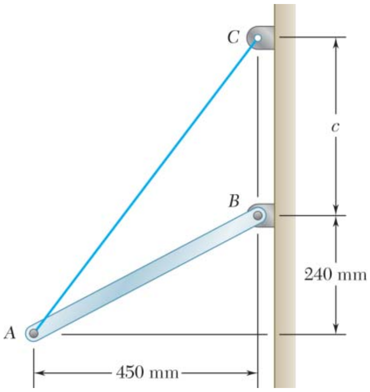
(*b*) $\mathbf{F} = (810\ \text{N})\mathbf{i} + (1080\ \text{N})\mathbf{j}$



$$\mathbf{r}_{C/B} = (0.36\ \text{m})\mathbf{j}$$

$$\begin{aligned}\mathbf{M}_B &= \mathbf{r}_{C/B} \times \mathbf{F} = 0.36\mathbf{j} \times (810\mathbf{i} + 1080\mathbf{j})\\ &= -(291.6\ \text{N}\cdot\text{m})\mathbf{k}\end{aligned}$$

$\mathbf{M}_B = 292\ \text{N}\cdot\text{m}$ ↻ ◀



PROBLEM 3.10

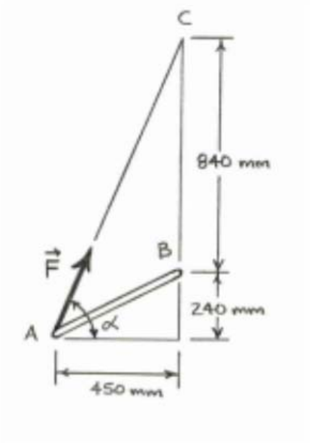
Rod *AB* is held in place by the cord *AC*. Knowing that $c = 840$ mm and that the moment about *B* of the force exerted by the cord at point *A* is 756 N·m, determine the tension in the cord.

SOLUTION

Free-Body Diagram of Rod *AB*:

$$\mathbf{M}_B = -(756\ \text{N}\cdot\text{m})\mathbf{k} \qquad AC = \sqrt{(450)^2 + (1080)^2} = 1170\ \text{mm}$$

$$\cos\alpha = \frac{450}{1170} \qquad \sin\alpha = \frac{1080}{1170}$$



$$\vec{\mathbf{F}} = F\cos\alpha\mathbf{i} + F\sin\alpha\mathbf{j}$$

$$= \frac{450}{1170}F\mathbf{i} + \frac{1080}{1170}F\mathbf{j}$$

$$\vec{\mathbf{r}}_{A/B} = -(0.45\ \text{m})\mathbf{i} - (0.24\ \text{m})\mathbf{j}$$

$$\overrightarrow{\mathbf{M}}_B = \vec{\mathbf{r}}_{A/B} \times \vec{\mathbf{F}} = (-0.45\mathbf{i} - 0.24\mathbf{j}) \times (450\mathbf{i} + 1080\mathbf{j})\frac{F}{1170}$$

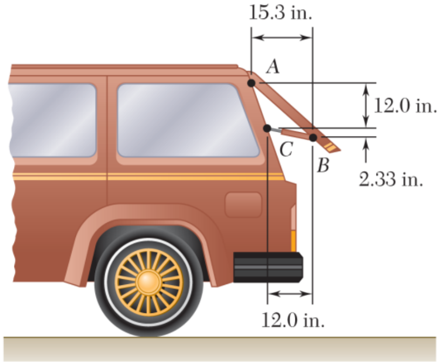
$$= (-486\mathbf{k} + 108\mathbf{k})\frac{F}{1170}$$

$$= \left(-\frac{378}{1170}F\right)\mathbf{k}$$

Substituting for M_B:

$$-756 = -\frac{378}{1170}F$$

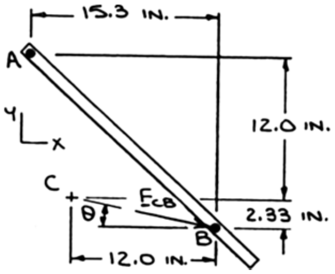
$F = 2340$ N ◀



PROBLEM 3.11

The tailgate of a car is supported by the hydraulic lift *BC*. If the lift exerts a 125-lb force directed along its centerline on the ball and socket at *B*, determine the moment of the force about *A*.

SOLUTION



First note
$$d_{CB} = \sqrt{(12.0\text{ in.})^2 + (2.33\text{ in.})^2}$$
$$= 12.2241\text{ in.}$$

Then
$$\cos\theta = \frac{12.0\text{ in.}}{12.2241\text{ in.}}$$
$$\sin\theta = \frac{2.33\text{ in.}}{12.2241\text{ in.}}$$

and
$$\mathbf{F}_{CB} = F_{CB}\cos\theta\,\mathbf{i} - F_{CB}\sin\theta\,\mathbf{j}$$
$$= \frac{125\text{ lb}}{12.2241\text{ in.}}[(12.0\text{ in.})\,\mathbf{i} - (2.33\text{ in.})\,\mathbf{j}]$$

Now
$$\mathbf{M}_A = \mathbf{r}_{B/A} \times \mathbf{F}_{CB}$$

where
$$\mathbf{r}_{B/A} = (15.3\text{ in.})\,\mathbf{i} - (12.0\text{ in.} + 2.33\text{ in.})\,\mathbf{j}$$
$$= (15.3\text{ in.})\,\mathbf{i} - (14.33\text{ in.})\,\mathbf{j}$$

Then
$$\mathbf{M}_A = [(15.3\text{ in.})\mathbf{i} - (14.33\text{ in.})\mathbf{j}] \times \frac{125\text{ lb}}{12.2241\text{ in.}}(12.0\mathbf{i} - 2.33\mathbf{j})$$
$$= (1393.87\text{ lb}\cdot\text{in.})\mathbf{k}$$
$$= (116.156\text{ lb}\cdot\text{ft})\mathbf{k}$$

or $\mathbf{M}_A = 116.2\text{ lb}\cdot\text{ft}$ ↻ ◀

$\mathbf{M}_C = 61.6\text{ N}\cdot\text{m} \circlearrowleft$ ◀

PROBLEM 3.15

Form the vector products **B** × **C** and **B′** × **C**, where $B = B'$, and use the results obtained to prove the identity

$$\sin\alpha\cos\beta = \frac{1}{2}\sin(\alpha+\beta) + \frac{1}{2}\sin(\alpha-\beta).$$

SOLUTION

Note:

$$\mathbf{B} = B(\cos\beta\,\mathbf{i} + \sin\beta\,\mathbf{j})$$
$$\mathbf{B}' = B(\cos\beta\,\mathbf{i} - \sin\beta\,\mathbf{j})$$
$$\mathbf{C} = C(\cos\alpha\,\mathbf{i} + \sin\alpha\,\mathbf{j})$$

By definition,

$$|\mathbf{B}\times\mathbf{C}| = BC\sin(\alpha-\beta) \quad (1)$$

$$|\mathbf{B}'\times\mathbf{C}| = BC\sin(\alpha+\beta) \quad (2)$$

Now

$$\mathbf{B}\times\mathbf{C} = B(\cos\beta\mathbf{i} + \sin\beta\mathbf{j}) \times C(\cos\alpha\mathbf{i} + \sin\alpha\mathbf{j})$$
$$= BC(\cos\beta\sin\alpha - \sin\beta\cos\alpha)\mathbf{k} \quad (3)$$

and

$$\mathbf{B}'\times\mathbf{C} = B(\cos\beta\mathbf{i} - \sin\beta\mathbf{j}) \times C(\cos\alpha\mathbf{i} + \sin\alpha\mathbf{j})$$
$$= BC(\cos\beta\sin\alpha + \sin\beta\cos\alpha)\mathbf{k} \quad (4)$$

Equating the magnitudes of $\mathbf{B}\times\mathbf{C}$ from Equations (1) and (3) yields:

$$BC\sin(\alpha-\beta) = BC(\cos\beta\sin\alpha - \sin\beta\cos\alpha) \quad (5)$$

Similarly, equating the magnitudes of $\mathbf{B}'\times\mathbf{C}$ from Equations (2) and (4) yields:

$$BC\sin(\alpha+\beta) = BC(\cos\beta\sin\alpha + \sin\beta\cos\alpha) \quad (6)$$

Adding Equations (5) and (6) gives:

$$\sin(\alpha-\beta) + \sin(\alpha+\beta) = 2\cos\beta\sin\alpha$$

$$\text{or} \quad \sin\alpha\cos\beta = \frac{1}{2}\sin(\alpha+\beta) + \frac{1}{2}\sin(\alpha-\beta) \blacktriangleleft$$

PROBLEM 3.16

The vectors **P** and **Q** are two adjacent sides of a parallelogram. Determine the area of the parallelogram when (*a*) **P** = –8**i** + 4**j** – 4**k** and **Q** = 3**i** + 3**j** + 6**k**, (*b*) **P** = 7**i** – 6**j** – 3**k** and **Q** = –3**i** + 6**j** – 2**k**

SOLUTION

(*a*) We have $A = |\mathbf{P}\times\mathbf{Q}|$

where $\mathbf{P} = -8\mathbf{i} + 4\mathbf{j} - 4\mathbf{k}$

$\mathbf{Q} = 3\mathbf{i} + 3\mathbf{j} + 6\mathbf{k}$

Then
$$\mathbf{P}\times\mathbf{Q} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -8 & 4 & -4 \\ 3 & 3 & 6 \end{vmatrix}$$

$$= [(24+12)\mathbf{i} + (-12+48)\mathbf{j} + (-24-12)\mathbf{k}]$$
$$= (36)\mathbf{i} + (36)\mathbf{j} + (-36)\mathbf{k}$$

$$A = \sqrt{(36)^2 + (36)^2 + (-36)^2}$$

or $A = 62.4$ ◀

(*b*) We have $A = |\mathbf{P}\times\mathbf{Q}|$

where $\mathbf{P} = 7\mathbf{i} - 6\mathbf{j} - 3\mathbf{k}$

$\mathbf{Q} = -3\mathbf{i} + 6\mathbf{j} - 2\mathbf{k}$

Then
$$\mathbf{P}\times\mathbf{Q} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 7 & -6 & -3 \\ -3 & 6 & -2 \end{vmatrix}$$

$$= [(12+18)\mathbf{i} + (9+14)\mathbf{j} + (42-18)\mathbf{k}]$$
$$= (30)\mathbf{i} + (23)\mathbf{j} + (24)\mathbf{k}$$

$$A = \sqrt{(30)^2 + (23)^2 + (24)^2}$$

or $A = 44.8$ ◀

PROBLEM 3.17

A plane contains the vectors **A** and **B**. Determine the unit vector normal to the plane when **A** and **B** are equal to, respectively, (*a*) 2**i** + 3**j** – 6**k** and 5**i** – 8**j** – 6**k**,

(*b*) 4**i** – 4**j** + 3**k** and –3**i** + 7**j** – 5**k**.

SOLUTION

(*a*) We have
$$\boldsymbol{\lambda} = \frac{\mathbf{A}\times\mathbf{B}}{|\mathbf{A}\times\mathbf{B}|}$$

where
$$\mathbf{A} = 2\mathbf{i} + 3\mathbf{j} - 6\mathbf{k}$$
$$\mathbf{B} = 5\mathbf{i} - 8\mathbf{j} - 6\mathbf{k}$$

Then
$$\mathbf{A}\times\mathbf{B} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 2 & 3 & -6 \\ 5 & -8 & -6 \end{vmatrix}$$
$$= (-18-15)\mathbf{i} + (-30+12)\mathbf{j} + (-16-15)\mathbf{k}$$
$$= (-33\mathbf{i} - 18\mathbf{j} - 31\mathbf{k})$$

and
$$|\mathbf{A}\times\mathbf{B}| = \sqrt{(-33)^2 + (-18)^2 + (-31)^2} = \sqrt{2374}$$

$$\boldsymbol{\lambda} = \frac{(-33\mathbf{i} - 18\mathbf{j} - 31\mathbf{k})}{\sqrt{2374}} \qquad \text{or} \quad \boldsymbol{\lambda} = -0.677\mathbf{i} - 0.369\mathbf{j} - 0.636\mathbf{k} \ ◀$$

(*b*) We have
$$\boldsymbol{\lambda} = \frac{\mathbf{A}\times\mathbf{B}}{|\mathbf{A}\times\mathbf{B}|}$$

where
$$\mathbf{A} = 4\mathbf{i} - 4\mathbf{j} + 3\mathbf{k}$$
$$\mathbf{B} = -3\mathbf{i} + 7\mathbf{j} - 5\mathbf{k}$$

Then
$$\mathbf{A}\times\mathbf{B} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 4 & -4 & 3 \\ -3 & 7 & -5 \end{vmatrix}$$
$$= (20-21)\mathbf{i} + (-9+20)\mathbf{j} + (28-12)\mathbf{k}$$
$$= (-\mathbf{i} + 11\mathbf{j} + 16\mathbf{k})$$

and
$$|\mathbf{A}\times\mathbf{B}| = \sqrt{(-1) + (11)^2 + (16)^2} = \sqrt{378}$$

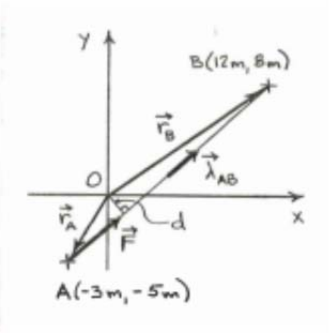
$$\boldsymbol{\lambda} = \frac{(-\mathbf{i} + 11\mathbf{j} + 16\mathbf{k})}{\sqrt{378}} \qquad \text{or} \quad \boldsymbol{\lambda} = -0.0514\mathbf{i} + 0.566\mathbf{j} + 0.823\mathbf{k} \ ◀$$

PROBLEM 3.18

A line passes through the points (12 m, 8 m) and (–3 m, –5 m). Determine the perpendicular distance *d* from the line to the origin *O* of the system of coordinates.

SOLUTION

$$d_{AB} = \sqrt{[12\text{ m} - (-3\text{ m})]^2 + [8\text{ m} - (-5\text{ m})]^2}$$
$$= \sqrt{394}\text{ m}$$



Assume that a force **F**, or magnitude *F*(N), acts at Point *A* and is directed from *A* to *B*.

Then
$$\mathbf{F} = F\boldsymbol{\lambda}_{AB}$$

where
$$\boldsymbol{\lambda}_{AB} = \frac{\mathbf{r}_B - \mathbf{r}_A}{d_{AB}}$$
$$= \frac{1}{\sqrt{394}}(15\mathbf{i} + 13\mathbf{j})$$

By definition,
$$\mathbf{M}_O = |\mathbf{r}_A \times \mathbf{F}| = dF$$

where
$$\mathbf{r}_A = (-3\text{ m})\mathbf{i} + (-5\text{ m})\mathbf{j}$$

Then
$$\mathbf{M}_O = [(-3\text{ m})\mathbf{i} + (-5\text{ m})\mathbf{j}] \times \frac{F}{\sqrt{394}\text{m}}[(15\text{ m})\mathbf{i} + (13\text{ m})\mathbf{j}]$$
$$= \frac{F}{\sqrt{394}}[-39\mathbf{k} + 75\mathbf{k}]\text{ N}\cdot\text{m}$$
$$= \left(\frac{36}{\sqrt{394}}F\right)\mathbf{k}\text{ N}\cdot\text{m}$$

Finally,
$$\left(\frac{36}{\sqrt{394}}F\right) = d(F)$$
$$d = \frac{36}{\sqrt{394}}\text{ m}$$

$d = 1.184$ m ◀

PROBLEM 3.19

Determine the moment about the origin O of the force $\mathbf{F} = 4\mathbf{i} - 3\mathbf{j} + 5\mathbf{k}$ that acts at a Point A. Assume that the position vector of A is (*a*) $\mathbf{r} = 2\mathbf{i} + 3\mathbf{j} - 4\mathbf{k}$, (*b*) $\mathbf{r} = -8\mathbf{i} + 6\mathbf{j} - 10\mathbf{k}$, (c) $\mathbf{r} = 8\mathbf{i} - 6\mathbf{j} + 5\mathbf{k}$.

SOLUTION

$$\mathbf{M}_O = \mathbf{r} \times \mathbf{F}$$

(*a*)
$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 2 & 3 & -4 \\ 4 & -3 & 5 \end{vmatrix}$$

$$= (15-12)\mathbf{i} + (-16-10)\mathbf{j} + (-6-12)\mathbf{k} \qquad \mathbf{M}_O = 3\mathbf{i} - 26\mathbf{j} - 18\mathbf{k} \blacktriangleleft$$

(*b*)
$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -8 & 6 & -10 \\ 4 & -3 & 5 \end{vmatrix}$$

$$= (30-30)\mathbf{i} + (-40+40)\mathbf{j} + (24-24)\mathbf{k} \qquad \mathbf{M}_O = 0 \blacktriangleleft$$

(*c*)
$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 8 & -6 & 5 \\ 4 & -3 & 5 \end{vmatrix}$$

$$= (-30+15)\mathbf{i} + (20-40)\mathbf{j} + (-24+24)\mathbf{k} \qquad \mathbf{M}_O = -15\mathbf{i} - 20\mathbf{j} \blacktriangleleft$$

Note: The answer to Part (*b*) could have been anticipated since the elements of the last two rows of the determinant are proportional.

PROBLEM 3.20

Determine the moment about the origin *O* of the force **F** = 2**i** + 3**j** – 4**k** that acts at a Point *A*. Assume that the position vector of *A* is (*a*) **r** = 3**i** – 6**j** + 5**k**, (*b*) **r** = **i** – 4**j** – 2**k**, (*c*) **r** = 4**i** + 6**j** – 8**k**.

SOLUTION

$$\mathbf{M}_O = \mathbf{r} \times \mathbf{F}$$

(*a*)

$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 3 & -6 & 5 \\ 2 & 3 & -4 \end{vmatrix}$$

$$= (24 - 15)\mathbf{i} + (10 + 12)\mathbf{j} + (9 + 12)\mathbf{k} \qquad \mathbf{M}_O = 9\mathbf{i} + 22\mathbf{j} + 21\mathbf{k} \blacktriangleleft$$

(*b*)

$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 1 & -4 & -2 \\ 2 & 3 & -4 \end{vmatrix}$$

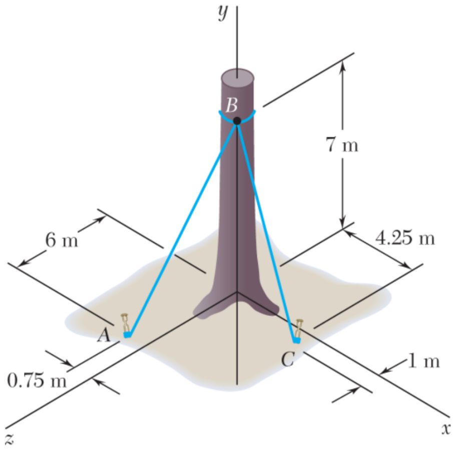
$$= (16 + 6)\mathbf{i} + (-4 + 4)\mathbf{j} + (3 + 8)\mathbf{k} \qquad \mathbf{M}_O = 22\mathbf{i} + 11\mathbf{k} \blacktriangleleft$$

(*c*)

$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 4 & 6 & -8 \\ 2 & 3 & -4 \end{vmatrix}$$

$$= (-24 + 24)\mathbf{i} + (-16 + 16)\mathbf{j} + (12 - 12)\mathbf{k} \qquad \mathbf{M}_O = 0 \blacktriangleleft$$

Note: The answer to Part (*c*) could have been anticipated since the elements of the last two rows of the determinant are proportional.



PROBLEM 3.21

Before the trunk of a large tree is felled, cables *AB* and *BC* are attached as shown. Knowing that the tensions in cables *AB* and *BC* are 555 N and 660 N, respectively, determine the moment about *O* of the resultant force exerted on the tree by the cables at *B*.

SOLUTION

$$d_{BA} = \sqrt{(-0.75\text{ m})^2 + (-7\text{ m})^2 + (6\text{ m})^2} = 9.25\text{ m}$$

$$d_{BC} = \sqrt{(4.25\text{ m})^2 + (-7\text{ m})^2 + (1\text{ m})^2} = 8.25\text{ m}$$

Have

$$\mathbf{T}_{BA} = T_{BA}\frac{\overrightarrow{BA}}{d_{BA}} = \frac{555\text{ N}}{9.25\text{ m}}(-0.75\text{ m}\,\mathbf{i} - 7\text{ m}\,\mathbf{j} + 6\text{ m}\,\mathbf{k})$$

$$\mathbf{T}_{BA} = -(45\text{ N})\mathbf{i} - (420\text{ N})\mathbf{j} + (360\text{ N})\mathbf{k}$$

$$\mathbf{T}_{BC} = T_{BC}\frac{\overrightarrow{BC}}{d_{BC}} = \frac{660\text{ N}}{8.25\text{ m}}(4.25\text{ m}\,\mathbf{i} - 7\text{ m}\,\mathbf{j} + \mathbf{k})$$

$$\mathbf{T}_{BC} = (340\text{ N})\mathbf{i} - (540\text{ N})\mathbf{j} + (80\text{ N})\mathbf{k}$$

$$\mathbf{R} = \mathbf{T}_{BA} + \mathbf{T}_{BC}$$

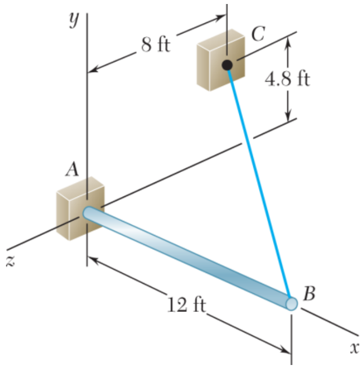
$$\therefore\ \mathbf{R} = (295\text{ N})\mathbf{i} - (980\text{ N})\mathbf{j} + (440\text{ N})\mathbf{k}$$

$$\mathbf{M}_O = \mathbf{r}_{B/O} \times \mathbf{R} \quad \text{where } \mathbf{r}_{B/O} = (7\text{ m})\mathbf{j}$$

$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 7 & 0 \\ 295 & -980 & 440 \end{vmatrix} \text{N}\cdot\text{m}$$

$$= (3080\text{ N}\cdot\text{m})\mathbf{i} - (2065\text{ N}\cdot\text{m})\mathbf{k}$$

$$\mathbf{M}_O = (3080\text{ N}\cdot\text{m})\mathbf{i} - (2070\text{ N}\cdot\text{m})\mathbf{k} \blacktriangleleft$$



PROBLEM 3.22

The 12-ft boom *AB* has a fixed end *A*. A steel cable is stretched from the free end *B* of the boom to a point *C* located on the vertical wall. If the tension in the cable is 380 lb, determine the moment about *A* of the force exerted by the cable at *B*.

SOLUTION

First note

$$d_{BC} = \sqrt{(-12)^2 + (4.8)^2 + (-8)^2}$$
$$= 15.2 \text{ ft}$$

Then

$$\mathbf{T}_{BC} = \frac{380 \text{ lb}}{15.2}(-12\mathbf{i} + 4.8\mathbf{j} - 8\mathbf{k})$$

We have

$$\mathbf{M}_A = \mathbf{r}_{B/A} \times \mathbf{T}_{BC}$$

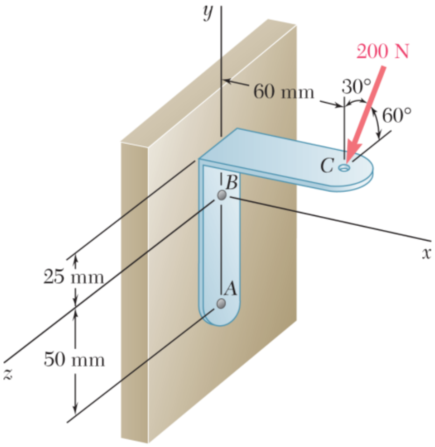
where

$$\mathbf{r}_{B/A} = (12 \text{ ft})\mathbf{i}$$

Then

$$\mathbf{M}_A = (12 \text{ ft})\mathbf{i} \times \frac{380 \text{ lb}}{15.2}(-12\mathbf{i} + 4.8\mathbf{j} - 8\mathbf{k})$$

or $\mathbf{M}_A = (2400 \text{ lb}\cdot\text{ft})\mathbf{j} + (1440 \text{ lb}\cdot\text{ft})\mathbf{k}$ ◀



PROBLEM 3.23

A 200-N force is applied as shown to the bracket *ABC*. Determine the moment of the force about *A*.

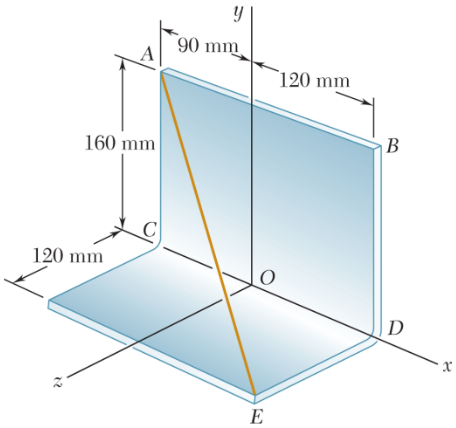
SOLUTION

We have
$$\mathbf{M}_A = \mathbf{r}_{C/A} \times \mathbf{F}_C$$

where
$$\mathbf{r}_{C/A} = (0.06\text{ m})\mathbf{i} + (0.075\text{ m})\mathbf{j}$$
$$\mathbf{F}_C = -(200\text{ N})\cos 30°\mathbf{j} + (200\text{ N})\sin 30°\mathbf{k}$$

Then
$$\mathbf{M}_A = 200\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.06 & 0.075 & 0 \\ 0 & -\cos 30° & \sin 30° \end{vmatrix}$$
$$= 200[(0.075\sin 30°)\mathbf{i} - (0.06\sin 30°)\mathbf{j} - (0.06\cos 30°)\mathbf{k}]$$

or $\mathbf{M}_A = (7.50\text{ N}\cdot\text{m})\mathbf{i} - (6.00\text{ N}\cdot\text{m})\mathbf{j} - (10.39\text{ N}\cdot\text{m})\mathbf{k}$ ◀



PROBLEM 3.24

The wire *AE* is stretched between the corners *A* and *E* of a bent plate. Knowing that the tension in the wire is 435 N, determine the moment about *O* of the force exerted by the wire (*a*) on corner *A*, (*b*) on corner *E*.

SOLUTION

$$\overrightarrow{AE} = (0.21\text{ m})\mathbf{i} - (0.16\text{ m})\mathbf{j} + (0.12\text{ m})\mathbf{k}$$

$$AE = \sqrt{(0.21\text{ m})^2 + (-0.16\text{ m})^2 + (0.12\text{ m})^2} = 0.29\text{ m}$$

(*a*)
$$\mathbf{F}_A = F_A \boldsymbol{\lambda}_{AE} = F\frac{\overrightarrow{AE}}{AE}$$

$$= (435\text{ N})\frac{0.21\mathbf{i} - 0.16\mathbf{j} + 0.12\mathbf{k}}{0.29}$$

$$= (315\text{ N})\mathbf{i} - (240\text{ N})\mathbf{j} + (180\text{ N})\mathbf{k}$$

$$\mathbf{r}_{A/O} = -(0.09\text{ m})\mathbf{i} + (0.16\text{ m})\mathbf{j}$$

$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -0.09 & 0.16 & 0 \\ 315 & -240 & 180 \end{vmatrix}$$

$$= 28.8\mathbf{i} + 16.20\mathbf{j} + (21.6 - 50.4)\mathbf{k} \qquad \mathbf{M}_O = (28.8\text{ N}\cdot\text{m})\mathbf{i} + (16.20\text{ N}\cdot\text{m})\mathbf{j} - (28.8\text{ N}\cdot\text{m})\mathbf{k} \blacktriangleleft$$

(*b*)
$$\mathbf{F}_E = -\mathbf{F}_A = -(315\text{ N})\mathbf{i} + (240\text{ N})\mathbf{j} - (180\text{ N})\mathbf{k}$$

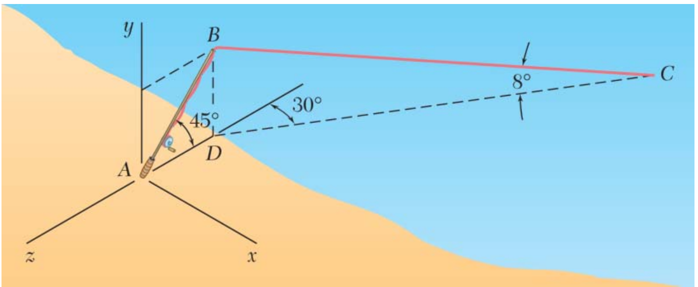
$$\mathbf{r}_{E/O} = (0.12\text{ m})\mathbf{i} + (0.12\text{ m})\mathbf{k}$$

$$\mathbf{M}_O = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.12 & 0 & 0.12 \\ -315 & 240 & -180 \end{vmatrix}$$

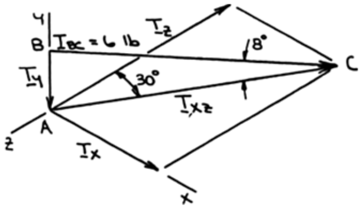
$$= -28.8\mathbf{i} + (-37.8 + 21.6)\mathbf{j} + 28.8\mathbf{k} \qquad \mathbf{M}_O = -(28.8\text{ N}\cdot\text{m})\mathbf{i} - (16.20\text{ N}\cdot\text{m})\mathbf{j} + (28.8\text{ N}\cdot\text{m})\mathbf{k} \blacktriangleleft$$

PROBLEM 3.25

A 6-ft-long fishing rod *AB* is securely anchored in the sand of a beach. After a fish takes the bait, the resulting force in the line is 6 lb. Determine the moment about *A* of the force exerted by the line at *B*.



SOLUTION



We have
$$T_{xz} = (6\text{ lb})\cos 8° = 5.9416\text{ lb}$$

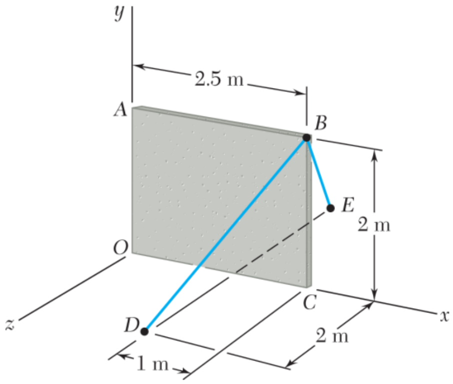
Then
$$T_x = T_{xz}\sin 30° = 2.9708\text{ lb}$$
$$T_y = T_{BC}\sin 8° = -0.83504\text{ lb}$$
$$T_z = T_{xz}\cos 30° = -5.1456\text{ lb}$$

Now
$$\mathbf{M}_A = \mathbf{r}_{B/A} \times \mathbf{T}_{BC}$$

where
$$\mathbf{r}_{B/A} = (6\sin 45°)\mathbf{j} - (6\cos 45°)\mathbf{k}$$
$$= \frac{6\text{ ft}}{\sqrt{2}}(\mathbf{j} - \mathbf{k})$$

Then
$$\mathbf{M}_A = \frac{6}{\sqrt{2}}\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 1 & -1 \\ 2.9708 & -0.83504 & -5.1456 \end{vmatrix}$$
$$= \frac{6}{\sqrt{2}}(-5.1456 - 0.83504)\mathbf{i} - \frac{6}{\sqrt{2}}(2.9708)\mathbf{j} - \frac{6}{\sqrt{2}}(2.9708)\mathbf{k}$$

or
$$\mathbf{M}_A = -(25.4\text{ lb}\cdot\text{ft})\mathbf{i} - (12.60\text{ lb}\cdot\text{ft})\mathbf{j} - (12.60\text{ lb}\cdot\text{ft})\mathbf{k}$$ ◀



PROBLEM 3.26

A precast concrete wall section is temporarily held by two cables as shown. Knowing that the tension in cable *BD* is 900 N, determine the moment about Point *O* of the force exerted by the cable at *B*.

SOLUTION

$$\mathbf{F} = F\frac{\overrightarrow{BD}}{BD} \quad \text{where} \quad F = 900\text{ N}$$

$$\overrightarrow{BD} = -(1\text{ m})\mathbf{i} - (2\text{ m})\mathbf{j} + (2\text{ m})\mathbf{k}$$

$$BD = \sqrt{(-1\text{ m})^2 + (-2\text{ m})^2 + (2\text{ m})^2}$$

$$= 3\text{ m}$$

$$\mathbf{F} = (900\text{ N})\frac{-\mathbf{i} - 2\mathbf{j} + 2\mathbf{k}}{3}$$

$$= -(300\text{ N})\mathbf{i} - (600\text{ N})\mathbf{j} + (600\text{ N})\mathbf{k}$$

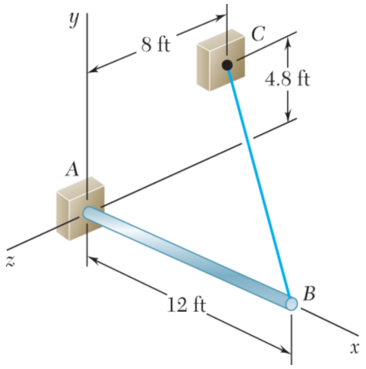
$$\mathbf{r}_{B/O} = (2.5\text{ m})\mathbf{i} + (2\text{ m})\mathbf{j}$$

$$\mathbf{M}_O = \mathbf{r}_{B/O} \times \mathbf{F}$$

$$= \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 2.5 & 2 & 0 \\ -300 & -600 & 600 \end{vmatrix}$$

$$= 1200\mathbf{i} - 1500\mathbf{j} + (-1500 + 600)\mathbf{k}$$

$$\mathbf{M}_O = (1200\text{ N}\cdot\text{m})\mathbf{i} - (1500\text{ N}\cdot\text{m})\mathbf{j} - (900\text{ N}\cdot\text{m})\mathbf{k} \quad ◀$$



PROBLEM 3.27

In Prob. 3.22, determine the perpendicular distance from point *A* to cable *BC*.

PROBLEM 3.22 The 12-ft boom *AB* has a fixed end *A*. A steel cable is stretched from the free end *B* of the boom to a point *C* located on the vertical wall. If the tension in the cable is 380 lb, determine the moment about *A* of the force exerted by the cable at *B*.

SOLUTION

From the solution to problem 3.22

$$M_A = \sqrt{(2400)^2 + (1440)^2}$$
$$= 2798.9 \text{ lb} \cdot \text{ft}$$

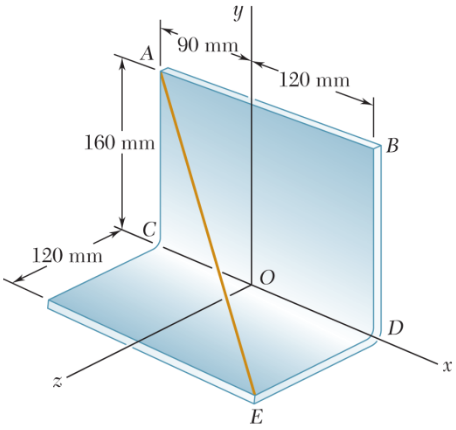
But

$$M_A = F_B \times d$$

$$d = \frac{M_A}{F_B}$$

$$d = \frac{2798.9 \text{ lb} \cdot \text{ft}}{380 \text{ lb}}$$

or $d = 7.37$ ft ◀



PROBLEM 3.28

In Prob. 3.24, determine the perpendicular distance from point *O* to wire *AE*.

PROBLEM 3.24 The wire *AE* is stretched between the corners *A* and *E* of a bent plate. Knowing that the tension in the wire is 435 N, determine the moment about *O* of the force exerted by the wire (*a*) on corner *A*, (*b*) on corner *E*.

SOLUTION

From the solution to Prob. 3.24

$$\mathbf{M}_O = (28.8\ \text{N}\cdot\text{m})\mathbf{i} + (16.20\ \text{N}\cdot\text{m})\mathbf{j} - (28.8\ \text{N}\cdot\text{m})\mathbf{k}$$

$$M_O = \sqrt{(28.8)^2 + (16.20)^2 + (28.8)^2}$$

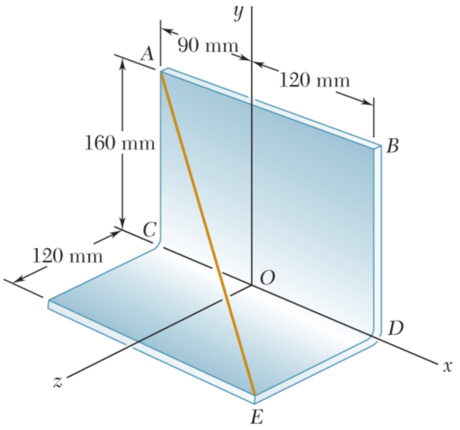
$$= 43.8329\ \text{N}\cdot\text{m}$$

But $M_O = F_A d$ or $d = \dfrac{M_O}{F_A}$

$$d = \frac{43.8329\ \text{N}\cdot\text{m}}{435\ \text{N}}$$

$$= 0.100765\ \text{m}$$

$$d = 100.8\ \text{mm}\ \blacktriangleleft$$



PROBLEM 3.29

In Prob. 3.24, determine the perpendicular distance from point *B* to wire *AE*.

PROBLEM 3.24 The wire *AE* is stretched between the corners *A* and *E* of a bent plate. Knowing that the tension in the wire is 435 N, determine the moment about *O* of the force exerted by the wire (*a*) on corner *A*, (*b*) on corner *E*.

SOLUTION

From the solution to Prob. 3.24

$$\mathbf{F}_A = (315\text{ N})\mathbf{i} - (240\text{ N})\mathbf{j} + (180\text{ N})\mathbf{k}$$

$$\mathbf{r}_{A/B} = -(0.210\text{ m})\mathbf{i}$$

$$\mathbf{M}_B = \mathbf{r}_{A/B} \times \mathbf{F}_A = -0.21\mathbf{i} \times (315\mathbf{i} - 240\mathbf{j} + 180\mathbf{k})$$

$$= 50.4\mathbf{k} + 37.8\mathbf{j}$$

$$M_B = \sqrt{(50.4)^2 + (37.8)^2}$$

$$= 63.0\text{ N}\cdot\text{m}$$

$$M_B = F_A d \qquad \text{or} \qquad d = \frac{M_B}{F_A}$$

$$d = \frac{63.0\text{ N}\cdot\text{m}}{435\text{ N}}$$

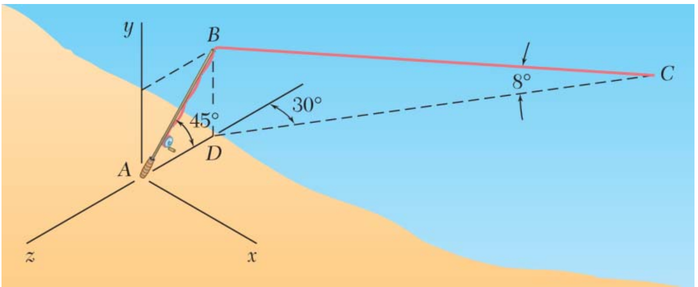
$$= 0.144829\text{ m}$$

$d = 144.8$ mm ◀

PROBLEM 3.30

In Prob. 3.25, determine the perpendicular distance from point *A* to a line drawn through points *B* and *C*.

PROBLEM 3.25 A 6-ft-long fishing rod *AB* is securely anchored in the sand of a beach. After a fish takes the bait, the resulting force in the line is 6 lb. Determine the moment about *A* of the force exerted by the line at *B*.



SOLUTION

From the solution to Prob. 3.25:

$$\mathbf{M}_A = -(25.4\ \text{lb}\cdot\text{ft})\mathbf{i} - (12.60\ \text{lb}\cdot\text{ft})\mathbf{j} - (12.60\ \text{lb}\cdot\text{ft})\mathbf{k}$$

$$M_A = \sqrt{(-25.4)^2 + (-12.60)^2 + (-12.60)^2}$$

$$= 31.027\ \text{lb}\cdot\text{ft}$$

$$M_A = T_{BC}d \qquad \text{or} \qquad d = \frac{M_A}{T_{BC}}$$

$$= \frac{31.027\ \text{lb}\cdot\text{ft}}{6\ \text{lb}}$$

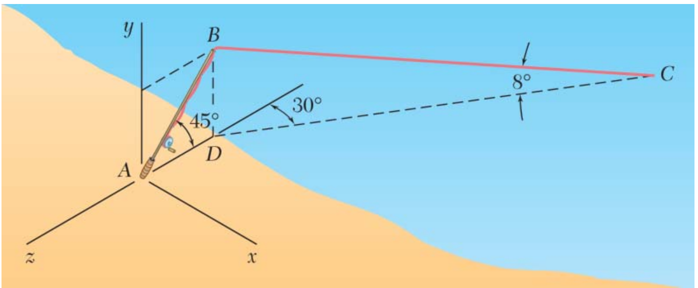
$$= 5.1712\ \text{ft}$$

$d = 5.17$ ft ◀

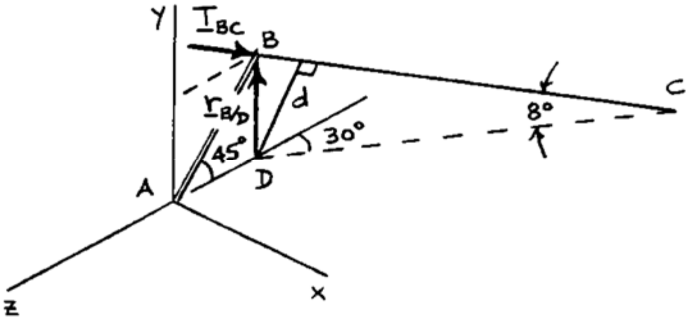
PROBLEM 3.31

In Prob. 3.25, determine the perpendicular distance from point *D* to a line drawn through points *B* and *C*.

PROBLEM 3.25 A 6-ft-long fishing rod *AB* is securely anchored in the sand of a beach. After a fish takes the bait, the resulting force in the line is 6 lb. Determine the moment about *A* of the force exerted by the line at *B*.



SOLUTION



$\overline{AB} = 6$ ft

$T_{BC} = 6$ lb

We have $|\mathbf{M}_D| = T_{BC}d$

where d = perpendicular distance from *D* to line *BC*.

$$\mathbf{M}_D = \mathbf{r}_{B/D} \times \mathbf{T}_{BC} \qquad \mathbf{r}_{B/D} = (6\sin 45°\text{ ft})\mathbf{j} = (4.2426\text{ ft})$$

$$\mathbf{T}_{BC}: \quad (T_{BC})_x = (6\text{ lb})\cos 8° \sin 30° = 2.9708\text{ lb}$$

$$(T_{BC})_y = -(6\text{ lb})\sin 8° = -0.83504\text{ lb}$$

$$(T_{BC})_z = -(6\text{ lb})\cos 8° \cos 30° = -5.1456\text{ lb}$$

$$\mathbf{T}_{BC} = (2.9708\text{ lb})\mathbf{i} - (0.83504\text{ lb})\mathbf{j} - (5.1456\text{ lb})\mathbf{k}$$

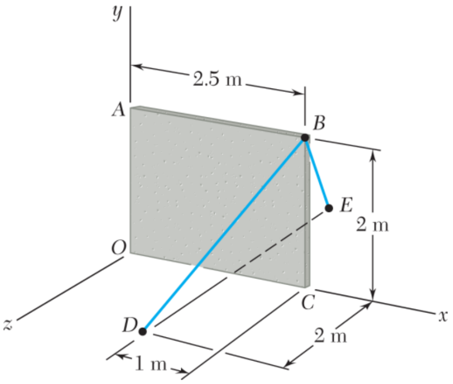
$$\mathbf{M}_D = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 4.2426 & 0 \\ 2.9708 & -0.83504 & -5.1456 \end{vmatrix}$$

$$= -(21.831\text{ lb}\cdot\text{ft})\mathbf{i} - (12.6039\text{ lb}\cdot\text{ft})$$

$$|M_D| = \sqrt{(-21.831)^2 + (-12.6039)^2} = 25.208\text{ lb}\cdot\text{ft}$$

$$25.208\text{ lb}\cdot\text{ft} = (6\text{ lb})d$$

$d = 4.20$ ft ◀



PROBLEM 3.32

In Prob. 3.26, determine the perpendicular distance from point *O* to cable *BD*.

PROBLEM 3.26 A precast concrete wall section is temporarily held by two cables as shown. Knowing that the tension in cable *BD* is 900 N, determine the moment about Point *O* of the force exerted by the cable at *B*.

SOLUTION

From the solution to Prob. 3.26 we have

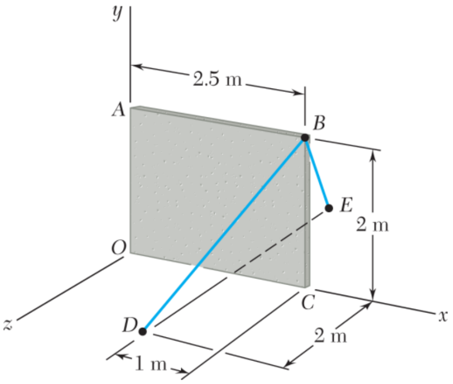
$$\mathbf{M}_O = (1200\ \text{N}\cdot\text{m})\mathbf{i} - (1500\ \text{N}\cdot\text{m})\mathbf{j} - (900\ \text{N}\cdot\text{m})\mathbf{k}$$

$$M_O = \sqrt{(1200)^2 + (-1500)^2 + (-900)^2} = 2121.3\ \text{N}\cdot\text{m}$$

$$M_O = Fd \qquad d = \frac{M_O}{F}$$

$$= \frac{2121.3\ \text{N}\cdot\text{m}}{900\ \text{N}}$$

$d = 2.36$ m ◀



PROBLEM 3.33

In Prob. 3.26, determine the perpendicular distance from point *C* to cable *BD*.

PROBLEM 3.26 A precast concrete wall section is temporarily held by two cables as shown. Knowing that the tension in cable *BD* is 900 N, determine the moment about Point *O* of the force exerted by the cable at *B*.

SOLUTION

From the solution to Prob. 3.26 we have

$$\mathbf{F} = -(300\text{ N})\mathbf{i} - (600\text{ N})\mathbf{j} + (600\text{ N})\mathbf{k}$$

$$\mathbf{r}_{B/C} = (2\text{ m})\mathbf{j}$$

$$\mathbf{M}_C = \mathbf{r}_{B/C} \times \mathbf{F} = (2\text{ m})\mathbf{j} \times (-300\text{ N}\mathbf{i} - 600\text{ N}\mathbf{j} + 600\text{ N}\mathbf{k})$$

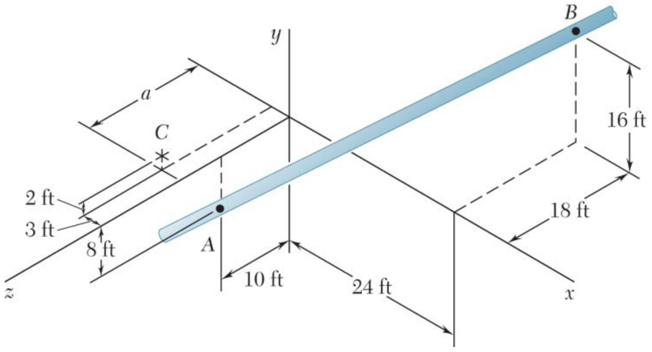
$$= (600\text{ N}\cdot\text{m})\mathbf{k} + (1200\text{ N}\cdot\text{m})\mathbf{i}$$

$$M_C = \sqrt{(600)^2 + (1200)^2} = 1341.64\text{ N}\cdot\text{m}$$

$$M_C = Fd \qquad d = \frac{M_C}{F}$$

$$= \frac{1341.64\text{ N}\cdot\text{m}}{900\text{ N}}$$

$d = 1.491$ m ◀



PROBLEM 3.34

Determine the value of a that minimizes the perpendicular distance from Point C to a section of pipeline that passes through Points A and B.

SOLUTION

Assuming a force **F** acts along AB,

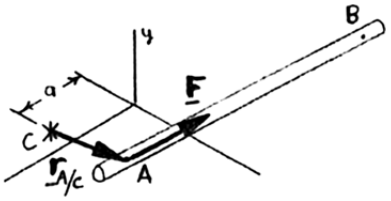
$$|\mathbf{M}_C| = |\mathbf{r}_{A/C} \times \mathbf{F}| = F(d)$$

where $d =$ perpendicular distance from C to line AB

$$\mathbf{F} = \boldsymbol{\lambda}_{AB} F$$

$$= \frac{(24\text{ ft})\,\mathbf{i} + (24\text{ ft})\,\mathbf{j} - (28\text{ ft})\,\mathbf{k}}{\sqrt{(24)^2 + (24)^2 + (28)^2}\text{ ft}} F$$

$$= \frac{F}{11}(6)\,\mathbf{i} + (6)\,\mathbf{j} - (7)\,\mathbf{k}$$



$$\mathbf{r}_{A/C} = (3\text{ ft})\mathbf{i} - (10\text{ ft})\mathbf{j} - (a - 10\text{ ft})\mathbf{k}$$

$$\mathbf{M}_C = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 3 & -10 & 10a \\ 6 & 6 & -7 \end{vmatrix} \frac{F}{11}$$

$$= [(10 + 6a)\mathbf{i} + (81 - 6a)\mathbf{j} + 78\,\mathbf{k}]\frac{F}{11}$$

Since $|\mathbf{M}_C| = \sqrt{|\mathbf{r}_{A/C} \times \mathbf{F}^2|}$ or $|\mathbf{r}_{A/C} \times \mathbf{F}^2| = (dF)^2$

$$\frac{1}{121}(10 + 6a)^2 + (81 - 6a)^2 + (78)^2 = d^2$$

Setting $\frac{d}{da}(d^2) = 0$ to find a to minimize d:

$$\frac{1}{121}[2(6)(10 + 6a) + 2(-6)(81 - 6a)] = 0$$

Solving $a = 5.92$ ft

or $a = 5.92$ ft ◀

PROBLEM 3.35

Given the vectors **P** = 2**i** + 3**j** – **k**, **Q** = 5**i** – 4**j** + 3**k**, and **S** = –3**i** + 2**j** – 5**k**, compute the scalar products **P** · **Q**, **P** · **S**, and **Q** · **S**.

SOLUTION

$$\begin{aligned}\mathbf{P}\cdot\mathbf{Q} &= (2\mathbf{i}+3\mathbf{j}-\mathbf{k})\cdot(5\mathbf{i}-4\mathbf{j}+3\mathbf{k})\\ &= (2)(5)+(3)(-4)+(-1)(3)\\ &= 10-12-3\end{aligned}$$

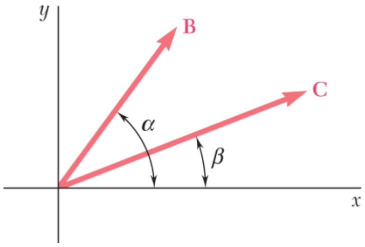
$$\mathbf{P}\cdot\mathbf{Q} = -5 \blacktriangleleft$$

$$\begin{aligned}\mathbf{P}\cdot\mathbf{S} &= (2\mathbf{i}+3\mathbf{j}-\mathbf{k})\cdot(-3\mathbf{i}+2\mathbf{j}-5\mathbf{k})\\ &= (2)(-3)+(3)(2)+(-1)(-5)\\ &= -6+6+5\end{aligned}$$

$$\mathbf{P}\cdot\mathbf{S} = +5 \blacktriangleleft$$

$$\begin{aligned}\mathbf{Q}\cdot\mathbf{S} &= (5\mathbf{i}-4\mathbf{j}+3\mathbf{k})\cdot(-3\mathbf{i}+2\mathbf{j}-5\mathbf{k})\\ &= (5)(-3)+(-4)(2)+(3)(-5)\\ &= -15-8-15\end{aligned}$$

$$\mathbf{Q}\cdot\mathbf{S} = -38 \blacktriangleleft$$

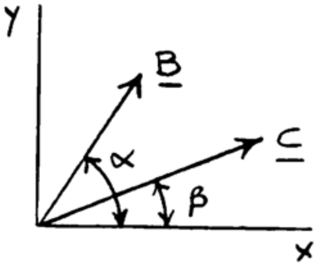


PROBLEM 3.36

Form the scalar product **B** · **C** and use the result obtained to prove the identity

$$\cos(\alpha-\beta) = \cos\alpha\cos\beta + \sin\alpha\sin\beta\,.$$

SOLUTION



$$\mathbf{B} = B\cos\alpha\,\mathbf{i} + B\sin\alpha\,\mathbf{j} \qquad (1)$$

$$\mathbf{C} = C\cos\beta\,\mathbf{i} + C\sin\beta\,\mathbf{j} \qquad (2)$$

By definition:

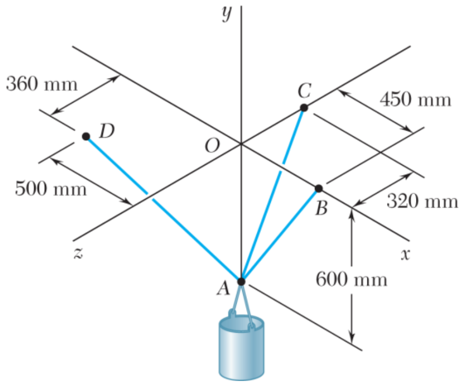
$$\mathbf{B}\cdot\mathbf{C} = BC\cos(\alpha-\beta) \qquad (3)$$

From (1) and (2):

$$\begin{aligned}\mathbf{B}\cdot\mathbf{C} &= (B\cos\alpha\,\mathbf{i} + B\sin\alpha\,\mathbf{j})\cdot(C\cos\beta\,\mathbf{i} + C\sin\beta\,\mathbf{j})\\ &= BC(\cos\alpha\cos\beta + \sin\alpha\sin\beta) \qquad (4)\end{aligned}$$

Equating the right-hand members of (3) and (4),

$$\cos(\alpha-\beta) = \cos\alpha\cos\beta + \sin\alpha\sin\beta \quad ◀$$



PROBLEM 3.37

Three cables are used to support a container as shown. Determine the angle formed by cables *AB* and *AD*.

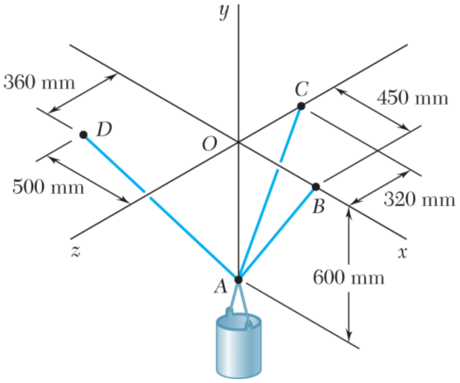
SOLUTION

First note:
$$AB = \sqrt{(450\text{ mm})^2 + (600\text{ mm})^2}$$
$$= 750\text{ mm}$$
$$AD = \sqrt{(-500\text{ mm})^2 + (600\text{ mm})^2 + (360\text{ mm})^2}$$
$$= 860\text{ mm}$$

and
$$\overrightarrow{AB} = (450\text{ mm})\mathbf{i} + (600\text{ mm})\mathbf{j}$$
$$\overrightarrow{AD} = (-500\text{ mm})\mathbf{i} + (600\text{ mm})\mathbf{j} + (360\text{ mm})\mathbf{k}$$

By definition,
$$\overrightarrow{AB} \cdot \overrightarrow{AD} = (AB)(AD)\cos\theta$$
$$(450\mathbf{i} + 600\mathbf{j}) \cdot (-500\mathbf{i} - 600\mathbf{j} + 360\mathbf{k}) = (750)(860)\cos\theta$$
$$(450)(-500) + (600)(600) + (0)(360) = (750)(860)\cos\theta$$

or
$$\cos\theta = 0.20930 \qquad \theta = 77.9° \blacktriangleleft$$



PROBLEM 3.38

Three cables are used to support a container as shown. Determine the angle formed by cables AC and AD.

SOLUTION

First note:

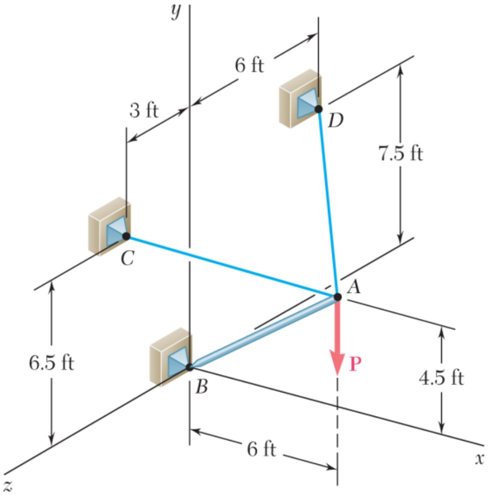
$$AC = \sqrt{(600 \text{ mm})^2 + (-320 \text{ mm})^2}$$
$$= 680 \text{ mm}$$
$$AD = \sqrt{(-500 \text{ mm})^2 + (600 \text{ mm})^2 + (360 \text{ mm})^2}$$
$$= 860 \text{ mm}$$

and

$$\overrightarrow{AC} = (600 \text{ mm})\mathbf{j} + (-320 \text{ mm})\mathbf{k}$$
$$\overrightarrow{AD} = (-500 \text{ mm})\mathbf{i} + (600 \text{ mm})\mathbf{j} + (360 \text{ mm})\mathbf{k}$$

By definition,

$$\overrightarrow{AC} \cdot \overrightarrow{AD} = (AC)(AD)\cos\theta$$
$$(600\mathbf{j} - 320\mathbf{k}) \cdot (-500\mathbf{i} + 600\mathbf{j} + 360\mathbf{k}) = (680)(860)\cos\theta$$
$$0(-500) + (600)(600) + (-320)(360) = (680)(860)\cos\theta$$
$$\cos\theta = 0.41860 \qquad \theta = 65.3° \blacktriangleleft$$



PROBLEM 3.39

Knowing that the tension in cable *AC* is 280 lb, determine (*a*) the angle between cable *AC* and the boom *AB*, (*b*) the projection on *AB* of the force exerted by cable *AC* at point *A*.

SOLUTION

(*a*) First note $AC = \sqrt{(-6)^2 + (2)^2 + (3)^2}$

$= 7.00$ ft

$AB = \sqrt{(-6)^2 + (-4.5)^2 + (0)^2}$

$= 7.50$ ft

and $\overrightarrow{AC} = -(6\text{ ft})\mathbf{i} + (2\text{ ft})\mathbf{j} + (3\text{ ft})\mathbf{k}$

$\overrightarrow{AB} = -(6\text{ ft})\mathbf{i} - (4.5\text{ ft})\mathbf{j}$

By definition $\overrightarrow{AC} \cdot \overrightarrow{AB} = (AC)(AB)\cos\theta$

or $(-6\mathbf{i} + 2\mathbf{j} + 3\mathbf{k}) \cdot (-6\mathbf{i} - 4.5\mathbf{j}) = (7.00)(7.50) \times \cos\theta$

or $(-6)(-6) + (2)(-4.5) + (3)(0) = 52.50\cos\theta$

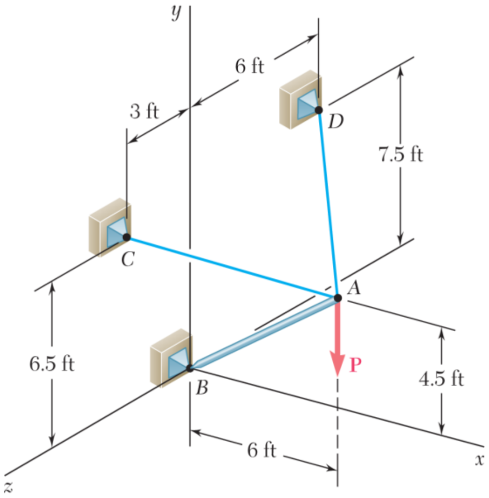
or $\cos\theta = 0.51429$ or $\theta = 59.0°$ ◀

(*b*) We have $(T_{AC})_{AB} = \mathbf{T}_{AC} \cdot \boldsymbol{\lambda}_{AB}$

$= T_{AC}\cos\theta$

$= (280\text{ lb})(0.51429)$

or $(T_{AC})_{AB} = 144.0$ lb ◀



PROBLEM 3.40

Knowing that the tension in cable *AD* is 180 lb, determine (*a*) the angle between cable *AD* and the boom *AB*, (*b*) the projection on *AB* of the force exerted by cable *AD* at point *A*.

SOLUTION

(*a*) First note

$$AD = \sqrt{(-6)^2 + (3)^2 + (-6)^2}$$
$$= 9.00 \text{ ft}$$
$$AB = \sqrt{(-6)^2 + (-4.5)^2 + (0)^2}$$
$$= 7.50 \text{ ft}$$

and

$$\overrightarrow{AD} = -(6 \text{ ft})\mathbf{i} + (3 \text{ ft})\mathbf{j} - (6 \text{ ft})\mathbf{k}$$
$$\overrightarrow{AB} = -(6 \text{ ft})\mathbf{i} - (4.5 \text{ ft})\mathbf{j}$$

By definition,

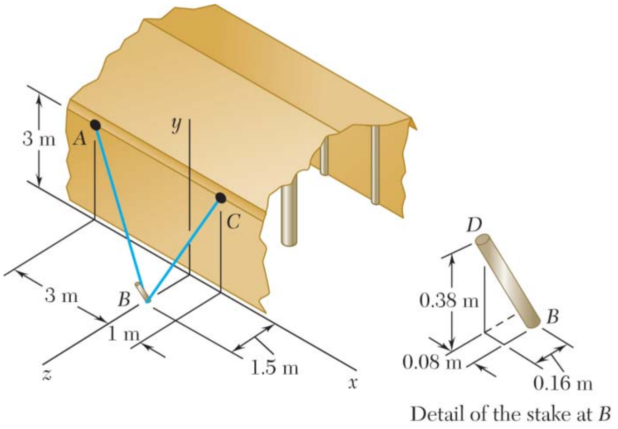
$$\overrightarrow{AD} \cdot \overrightarrow{AB} = (AD)(AB)\cos\theta$$
$$(-6\mathbf{i} + 3\mathbf{j} - 6\mathbf{k}) \cdot (-6\mathbf{i} - 4.5\mathbf{j}) = (9.00)(7.50)\cos\theta$$
$$(-6)(-6) + (3)(-4.5) + (-6)(0) = 67.50\cos\theta$$
$$\cos\theta = \frac{1}{3}$$

$\theta = 70.5°$ ◀

(*b*)

$$(T_{AD})_{AB} = \mathbf{T}_{AD} \cdot \boldsymbol{\lambda}_{AB}$$
$$= T_{AD}\cos\theta$$
$$= (180 \text{ lb})\left(\frac{1}{3}\right)$$

$(T_{AD})_{AB} = 60.0 \text{ lb}$ ◀



PROBLEM 3.41

Ropes *AB* and *BC* are two of the ropes used to support a tent. The two ropes are attached to a stake at *B*. If the tension in rope *AB* is 540 N, determine (*a*) the angle between rope *AB* and the stake, (*b*) the projection on the stake of the force exerted by rope *AB* at Point *B*.

SOLUTION

First note:

$$BA = \sqrt{(-3)^2 + (3)^2 + (-1.5)^2} = 4.5 \text{ m}$$

$$BD = \sqrt{(-0.08)^2 + (0.38)^2 + (0.16)^2} = 0.42 \text{ m}$$

Then

$$\mathbf{T}_{BA} = \frac{T_{BA}}{4.5}(-3\mathbf{i} + 3\mathbf{j} - 1.5\mathbf{k})$$

$$= \frac{T_{BA}}{3}(-2\mathbf{i} + 2\mathbf{j} - \mathbf{k})$$

$$\boldsymbol{\lambda}_{BD} = \frac{\overrightarrow{BD}}{BD} = \frac{1}{0.42}(-0.08\mathbf{i} + 0.38\mathbf{j} + 0.16\mathbf{k})$$

$$= \frac{1}{21}(-4\mathbf{i} + 19\mathbf{j} + 8\mathbf{k})$$

(*a*) We have

$$\mathbf{T}_{BA} \cdot \boldsymbol{\lambda}_{BD} = T_{BA} \cos\theta$$

or

$$\frac{T_{BA}}{3}(-2\mathbf{i} + 2\mathbf{j} - \mathbf{k}) \cdot \frac{1}{21}(-4\mathbf{i} + 19\mathbf{j} + 8\mathbf{k}) = T_{BA} \cos\theta$$

or

$$\cos\theta = \frac{1}{63}[(-2)(-4) + (2)(19) + (-1)(8)]$$

$$= 0.60317$$

or $\theta = 52.9°$ ◀

(*b*) We have

$$(T_{BA})_{BD} = \mathbf{T}_{BA} \cdot \boldsymbol{\lambda}_{BD}$$

$$= T_{BA} \cos\theta$$

$$= (540 \text{ N})(0.60317)$$

or $(T_{BA})_{BD} = 326 \text{ N}$ ◀

Ropes *AB* and *BC* are two of the ropes used to support a tent. The two ropes are attached to a stake at *B*. If the tension in rope *BC* is 490 N, determine (*a*) the angle between rope *BC* and the stake, (*b*) the projection on the stake of the force exerted by rope *BC* at Point *B*.

SOLUTION

First note:

$$BC = \sqrt{(1)^2 + (3)^2 + (-1.5)^2} = 3.5 \text{ m}$$

$$BD = \sqrt{(-0.08)^2 + (0.38)^2 + (0.16)^2} = 0.42 \text{ m}$$

$$\mathbf{T}_{BC} = \frac{T_{BC}}{3.5}(\mathbf{i} + 3\mathbf{j} - 1.5\mathbf{k})$$

$$= \frac{T_{BC}}{7}(2\mathbf{i} + 6\mathbf{j} - 3\mathbf{k})$$

$$\lambda_{BD} = \frac{\overrightarrow{BD}}{BD} = \frac{1}{0.42}(-0.08\mathbf{i} + 0.38\mathbf{j} + 0.16\mathbf{k})$$

$$= \frac{1}{21}(-4\mathbf{i} + 19\mathbf{j} + 8\mathbf{k})$$

(*a*)

$$\mathbf{T}_{BC} \cdot \lambda_{BD} = T_{BC} \cos\theta$$

$$\frac{T_{BC}}{7}(2\mathbf{i} + 6\mathbf{j} - 3\mathbf{k}) \cdot \frac{1}{21}(-4\mathbf{i} + 19\mathbf{j} + 8\mathbf{k}) = T_{BC} \cos\theta$$

$$\cos\theta = \frac{1}{147}[(2)(-4) + (6)(19) + (-3)(8)]$$

$$= 0.55782$$

$$\theta = 56.1° \blacktriangleleft$$

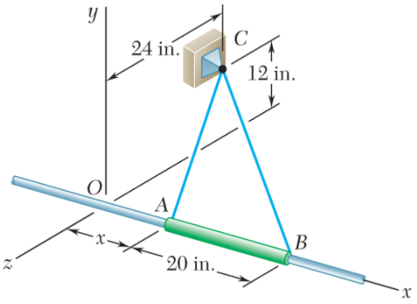
(*b*)

$$(T_{BC})_{BD} = \mathbf{T}_{BC} \cdot \lambda_{BD}$$

$$= T_{BC} \cos\theta$$

$$= (490 \text{ N})(0.55782)$$

$$(T_{BC})_{BD} = 273 \text{ N} \blacktriangleleft$$



PROBLEM 3.43

The 20-in. tube AB can slide along a horizontal rod. The ends A and B of the tube are connected by elastic cords to the fixed point C. For the position corresponding to $x = 11$ in., determine the angle formed by the two cords (*a*) using Eq. (3.32), (*b*) applying the law of cosines to triangle ABC.

SOLUTION

(*a*) Using Eq. (3.32):

$$\overline{CA} = 11\mathbf{i} - 12\mathbf{j} + 24\mathbf{k}$$

$$CA = \sqrt{(11)^2 + (-12)^2 + (24)^2} = 29 \text{ in.}$$

$$\overline{CB} = 31\mathbf{i} - 12\mathbf{j} + 24\mathbf{k}$$

$$CB = \sqrt{(31)^2 + (-12)^2 + (24)^2} = 41 \text{ in.}$$

$$\begin{aligned}\cos\theta &= \frac{\overline{CA}\cdot\overline{CB}}{(CA)(CB)} \\ &= \frac{(11\mathbf{i} - 12\mathbf{j} + 24\mathbf{k})\cdot(31\mathbf{i} - 12\mathbf{j} + 24\mathbf{k})}{(29)(41)} \\ &= \frac{(11)(31) + (-12)(-12) + (24)(24)}{(29)(41)} \\ &= 0.89235\end{aligned}$$

$\theta = 26.8°$ ◀

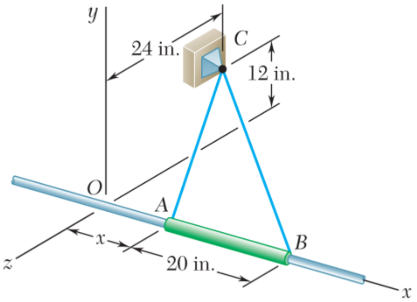
(*b*) Law of cosines:

$$(AB)^2 = (CA)^2 + (CB)^2 - 2(CA)(CB)\cos\theta$$

$$(20)^2 = (29)^2 + (41)^2 - 2(29)(41)\cos\theta$$

$$\cos\theta = 0.89235$$

$\theta = 26.8°$ ◀



PROBLEM 3.44

Solve Prob. 3.43 for the position corresponding to $x = 4$ in.

PROBLEM 3.43 The 20-in. tube *AB* can slide along a horizontal rod. The ends *A* and *B* of the tube are connected by elastic cords to the fixed point *C*. For the position corresponding to $x = 11$ in., determine the angle formed by the two cords (*a*) using Eq. (3.32), (*b*) applying the law of cosines to triangle *ABC*.

SOLUTION

(*a*) Using Eq. (3.32):

$$\overrightarrow{CA} = 4\mathbf{i} - 12\mathbf{j} + 24\mathbf{k}$$

$$CA = \sqrt{(4)^2 + (-12)^2 + (24)^2} = 27.129 \text{ in.}$$

$$\overrightarrow{CB} = 24\mathbf{i} - 12\mathbf{j} + 24\mathbf{k}$$

$$CB = \sqrt{(24)^2 + (-12)^2 + (24)^2} = 36 \text{ in.}$$

$$\cos\theta = \frac{\overrightarrow{CA} \cdot \overrightarrow{CB}}{(CA)(CB)}$$

$$= \frac{(4\mathbf{i} - 12\mathbf{j} + 24\mathbf{k}) \cdot (24\mathbf{i} - 12\mathbf{j} + 24\mathbf{k})}{(27.129)(36)}$$

$$= 0.83551 \qquad \theta = 33.3° \blacktriangleleft$$

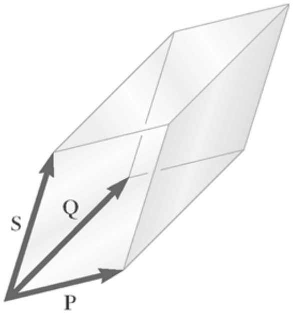
(*b*) Law of cosines:

$$(AB)^2 = (CA)^2 + (CB)^2 - 2(CA)(CB)\cos\theta$$

$$(20)^2 = (27.129)^2 + (36)^2 - 2(27.129)(36)\cos\theta$$

$$\cos\theta = 0.83551$$

$$\theta = 33.3° \blacktriangleleft$$



PROBLEM 3.45

Determine the volume of the parallelepiped of Fig. 3.25 when (*a*) **P** = 4**i** − 3**j** + 2**k**, **Q** = −2**i** − 5**j** + **k**, and **S** = 7**i** + **j** − **k**, (*b*) **P** = 5**i** − **j** + 6**k**, **Q** = 2**i** + 3**j** + **k**, and **S** = −3**i** − 2**j** + 4**k**.

SOLUTION

Volume of a parallelepiped is found using the mixed triple product.

(*a*)

$$\text{Vol.} = \mathbf{P}\cdot(\mathbf{Q}\times\mathbf{S})$$

$$= \begin{vmatrix} 4 & -3 & 2 \\ -2 & -5 & 1 \\ 7 & 1 & -1 \end{vmatrix} \text{in.}^3$$

$$= (20-21-4+70+6-4)$$

$$= 67$$

or Volume = 67.0 ◀

(*b*)

$$\text{Vol.} = \mathbf{P}\cdot(\mathbf{Q}\times\mathbf{S})$$

$$= \begin{vmatrix} 5 & -1 & 6 \\ 2 & 3 & 1 \\ -3 & -2 & 4 \end{vmatrix} \text{in.}^3$$

$$= (60+3-24+54+8+10)$$

$$= 111$$

or Volume = 111.0 ◀

PROBLEM 3.46

Given the vectors $\mathbf{P} = 3\mathbf{i} - \mathbf{j} + \mathbf{k}$, $\mathbf{Q} = 4\mathbf{i} + Q_y\mathbf{j} - 2\mathbf{k}$, and $\mathbf{S} = 2\mathbf{i} - 2\mathbf{j} + 2\mathbf{k}$, determine the value of Q_y for which the three vectors are coplanar.

SOLUTION

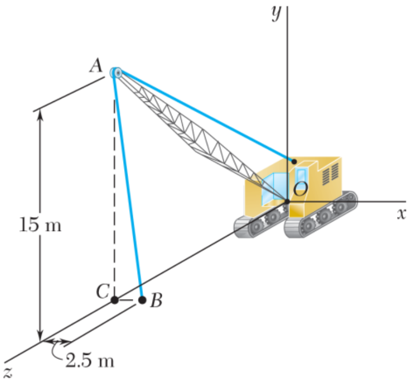
If **P**, **Q**, and **S** are coplanar, then **P** must be perpendicular to $(\mathbf{Q} \times \mathbf{S})$.

$$\mathbf{P} \cdot (\mathbf{Q} \times \mathbf{S}) = 0$$

(or, the volume of a parallelepiped defined by **P**, **Q**, and **S** is zero).

Then
$$\begin{vmatrix} 3 & -1 & 1 \\ 4 & Q_y & -2 \\ 2 & -2 & 2 \end{vmatrix} = 0$$

or
$$6Q_y + 4 - 8 - 2Q_y + 8 - 12 = 0 \qquad Q_y = 2 \blacktriangleleft$$



PROBLEM 3.47

A crane is oriented so that the end of the 25-m boom *AO* lies in the *yz* plane. At the instant shown, the tension in cable *AB* is 4 kN. Determine the moment about each of the coordinate axes of the force exerted on *A* by cable *AB*.

SOLUTION

$$\begin{aligned} OC &= \sqrt{(OA)^2 - (AC)^2} \\ &= \sqrt{(25\text{ m})^2 - (15\text{ m})^2} \\ &= 20\text{ m} \end{aligned}$$

$$\mathbf{r}_A = (15\text{ m})\mathbf{j} + (20\text{ m})\mathbf{k}$$

$$AB = \sqrt{(2.5\text{ m})^2 + (15\text{ m})^2} = 15.2069\text{ m}$$

$$\begin{aligned} \mathbf{P} &= P\frac{\overline{AB}}{AB} \\ &= (4\text{ kN})\frac{2.5\mathbf{i} - 15\mathbf{j}}{15.2069} \\ &= (0.65760\text{ kN})\mathbf{i} - (3.9456\text{ kN})\mathbf{j} \end{aligned}$$

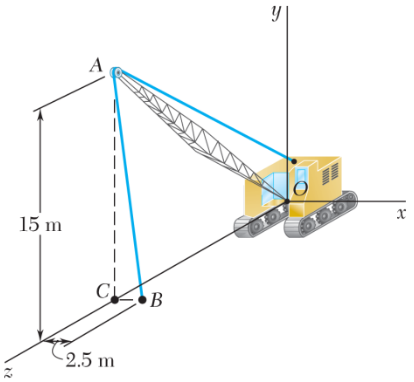
Using Eq. (3.11):

$$\mathbf{M}_O = \mathbf{r}_A \times \mathbf{P} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 15 & 20 \\ 0.65760 & 3.9456 & 0 \end{vmatrix}$$

$$\mathbf{M}_O = (78.912\text{ kN}\cdot\text{m})\mathbf{i} + (13.1520\text{ kN}\cdot\text{m})\mathbf{j} - (9.8640\text{ kN}\cdot\text{m})\mathbf{k}$$

But $\mathbf{M}_O = M_x\mathbf{i} + M_y\mathbf{j} + M_z\mathbf{k}$

Therefore, $M_x = 78.9\text{ kN}\cdot\text{m},\ M_y = 13.15\text{ kN}\cdot\text{m},\ M_z = -9.86\text{ kN}\cdot\text{m}$ ◀



PROBLEM 3.48

The 25-m crane boom *AO* lies in the *yz* plane. Determine the maximum permissible tension in cable *AB* if the absolute value of moments about the coordinate axes of the force exerted on *A* by cable *AB* must be

$$|M_x| \le 60 \text{ kN·m}, \ |M_y| \le 12 \text{ kN·m}, \ |M_z| \le 8 \text{ kN·m}$$

$$OC = \sqrt{(OA)^2 - (AC)^2}$$
$$= \sqrt{(25 \text{ m})^2 - (15 \text{ m})^2}$$
$$= 20 \text{ m}$$

$$\mathbf{r}_A = (15 \text{ m})\mathbf{j} + (20 \text{ m})\mathbf{k}$$

$$AB = \sqrt{(2.5 \text{ m})^2 + (15 \text{ m})^2} = 15.2069 \text{ m}$$

$$\mathbf{P} = P\frac{\overrightarrow{AB}}{AB}$$
$$= (P)\frac{2.5\mathbf{i} - 15\mathbf{j}}{15.2069}$$
$$= (0.164399P \text{ kN})\mathbf{i} - (0.98639P \text{ kN})\mathbf{j}$$

Using Eq. (3.11):

$$\mathbf{M}_O = \mathbf{r}_A \times \mathbf{P} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 15 & 20 \\ 0.163499P & -0.98639P & 0 \end{vmatrix}$$

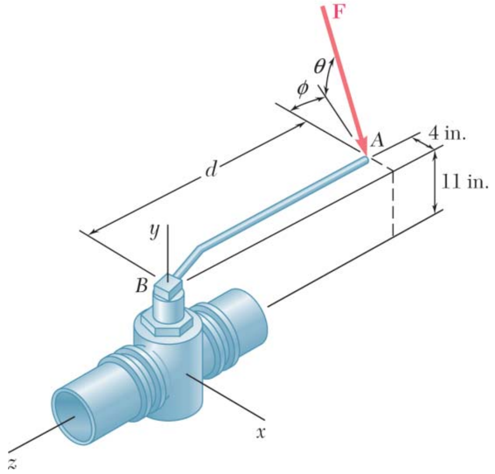
$$\mathbf{M}_O = (19.7278P)\mathbf{i} + (3.2700P)\mathbf{j} - (2.4525P)\mathbf{k}$$

$M_x < 60 \text{ kN} \cdot \text{m}$: $\quad 19.7278P < 60 \quad P \le 3.04 \text{ kN}$

But $\quad M_y < 12 \text{ kN} \cdot \text{m}$: $\quad 3.270P < 12 \quad P \le 3.67 \text{ kN}$

$M_z < 8 \text{ kN} \cdot \text{m}$: $\quad 2.4525P < 8 \quad P \le 3.15 \text{ kN}$

Therefore, the maximum permissible tension is $P = 3.04 \text{ kN}$ ◀



PROBLEM 3.49

To loosen a frozen valve, a force **F** of magnitude 70 lb is applied to the handle of the valve. Knowing that $\theta = 25°$, $M_x = -61\text{ lb}\cdot\text{ft}$, and $M_z = -43\text{ lb}\cdot\text{ft}$, determine ϕ and d.

SOLUTION

We have $\Sigma\mathbf{M}_O: \quad \mathbf{r}_{A/O} \times \mathbf{F} = \mathbf{M}_O$

where $\mathbf{r}_{A/O} = -(4\text{ in.})\mathbf{i} + (11\text{ in.})\mathbf{j} - (d)\mathbf{k}$

$$\mathbf{F} = F(\cos\theta\cos\phi\mathbf{i} - \sin\theta\mathbf{j} + \cos\theta\sin\phi\mathbf{k})$$

For $F = 70\text{ lb}, \quad \theta = 25°$

$$\mathbf{F} = (70\text{ lb})[(0.90631\cos\phi)\mathbf{i} - 0.42262\mathbf{j} + (0.90631\sin\phi)\mathbf{k}]$$

$$\mathbf{M}_O = (70\text{ lb})\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -4 & 11 & -d \\ -0.90631\cos\phi & -0.42262 & 0.90631\sin\phi \end{vmatrix}\text{ in.}$$

$$= (70\text{ lb})[(9.9694\sin\phi - 0.42262d)\mathbf{i} + (-0.90631d\cos\phi + 3.6252\sin\phi)\mathbf{j}$$
$$+ (1.69048 - 9.9694\cos\phi)\mathbf{k}]\text{ in.}$$

and

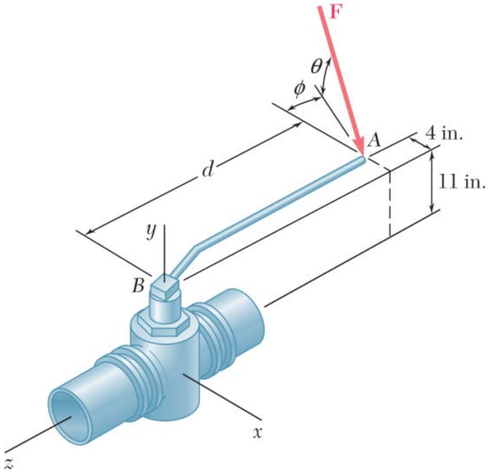
$$M_x = (70\text{ lb})(9.9694\sin\phi - 0.42262d)\text{ in.} = -(61\text{ lb}\cdot\text{ft})(12\text{ in./ft}) \qquad (1)$$

$$M_y = (70\text{ lb})(-0.90631d\cos\phi + 3.6252\sin\phi)\text{ in.} \qquad (2)$$

$$M_z = (70\text{ lb})(1.69048 - 9.9694\cos\phi)\text{ in.} = -43\text{ lb}\cdot\text{ft}(12\text{ in./ft}) \qquad (3)$$

From Equation (3): $\phi = \cos^{-1}\left(\dfrac{634.33}{697.86}\right) = 24.636°$ or $\phi = 24.6°$ ◀

From Equation (1): $d = \left(\dfrac{1022.90}{29.583}\right) = 34.577\text{ in.}$ or $d = 34.6\text{ in.}$ ◀



PROBLEM 3.50

When a force **F** is applied to the handle of the valve shown, its moments about the x and z axes are, respectively, $M_x = -77\ \text{lb}\cdot\text{ft}$ and $M_z = -81\ \text{lb}\cdot\text{ft}$. For $d = 27$ in., determine the moment M_y of **F** about the y axis.

SOLUTION

We have $$\Sigma \mathbf{M}_O:\quad \mathbf{r}_{A/O}\times\mathbf{F} = \mathbf{M}_O$$

Where $$\mathbf{r}_{A/O} = -(4\text{ in.})\mathbf{i} + (11\text{ in.})\mathbf{j} - (27\text{ in.})\mathbf{k}$$

$$\mathbf{F} = F(\cos\theta\cos\phi\mathbf{i} - \sin\theta\mathbf{j} + \cos\theta\sin\phi\mathbf{k})$$

$$\mathbf{M}_O = F\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -4 & 11 & -27 \\ \cos\theta\cos\phi & -\sin\theta & \cos\theta\sin\phi \end{vmatrix}\ \text{lb}\cdot\text{in.}$$

$$\begin{aligned}&= F[(11\cos\theta\sin\phi - 27\sin\theta)\mathbf{i}\\ &\quad + (-27\cos\theta\cos\phi + 4\cos\theta\sin\phi)\mathbf{j}\\ &\quad + (4\sin\theta - 11\cos\theta\cos\phi)\mathbf{k}](\text{lb}\cdot\text{in.})\end{aligned}$$

and $$M_x = F(11\cos\theta\sin\phi - 27\sin\theta)(\text{lb}\cdot\text{in.}) \qquad (1)$$

$$M_y = F(-27\cos\theta\cos\phi + 4\cos\theta\sin\phi)\ (\text{lb}\cdot\text{in.}) \qquad (2)$$

$$M_z = F(4\sin\theta - 11\cos\theta\cos\phi)\ (\text{lb}\cdot\text{in.}) \qquad (3)$$

Now, Equation (1) $$\cos\theta\sin\phi = \frac{1}{11}\left(\frac{M_x}{F} + 27\sin\theta\right) \qquad (4)$$

and Equation (3) $$\cos\theta\cos\phi = \frac{1}{11}\left(4\sin\theta - \frac{M_z}{F}\right) \qquad (5)$$

Substituting Equations (4) and (5) into Equation (2),

$$M_y = F\left\{-27\left[\frac{1}{11}\left(4\sin\theta - \frac{M_z}{F}\right)\right] + 4\left[\frac{1}{11}\left(\frac{M_x}{F} + 27\sin\theta\right)\right]\right\}$$

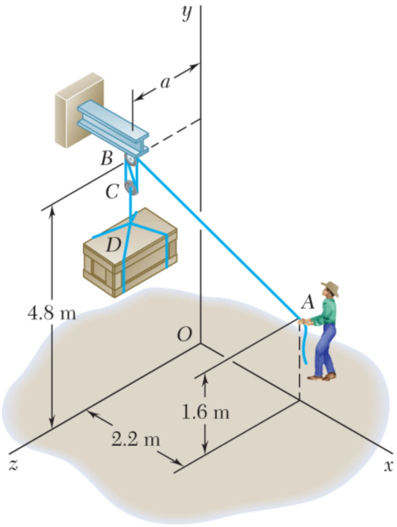
or $$M_y = \frac{1}{11}(27M_z + 4M_x)$$

PROBLEM 3.50 (Continued)

Noting that the ratios $\frac{27}{11}$ and $\frac{4}{11}$ are the ratios of lengths, have

$$M_y = \frac{27}{11}(-81\text{ lb}\cdot\text{ft}) + \frac{4}{11}(-77\text{ lb}\cdot\text{ft})$$
$$= 226.82\text{ lb}\cdot\text{ft}$$

or $M_y = -227\text{ lb}\cdot\text{ft}$ ◀



PROBLEM 3.51

To lift a heavy crate, a man uses a block and tackle attached to the bottom of an I-beam at hook *B*. Knowing that the moments about the *y* and the *z* axes of the force exerted at *B* by portion *AB* of the rope are, respectively, 120 N · m and –460 N · m, determine the distance *a*.

SOLUTION

First note

$$\overrightarrow{BA} = (2.2\text{ m})\mathbf{i} - (3.2\text{ m})\mathbf{j} - (a\text{ m})\mathbf{k}$$

Now

$$\mathbf{M}_D = \mathbf{r}_{A/D} \times \mathbf{T}_{BA}$$

where

$$\mathbf{r}_{A/D} = (2.2\text{ m})\mathbf{i} + (1.6\text{ m})\mathbf{j}$$

$$\mathbf{T}_{BA} = \frac{T_{BA}}{d_{BA}}(2.2\mathbf{i} - 3.2\mathbf{j} - a\mathbf{k})\ (\text{N})$$

Then

$$\mathbf{M}_D = \frac{T_{BA}}{d_{BA}}\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 2.2 & 1.6 & 0 \\ 2.2 & -3.2 & -a \end{vmatrix}$$

$$= \frac{T_{BA}}{d_{BA}}\{-1.6a\,\mathbf{i} + 2.2a\,\mathbf{j} + [(2.2)(-3.2) - (1.6)(2.2)]\mathbf{k}\}$$

Thus

$$M_y = 2.2\frac{T_{BA}}{d_{BA}}a \qquad (\text{N}\cdot\text{m})$$

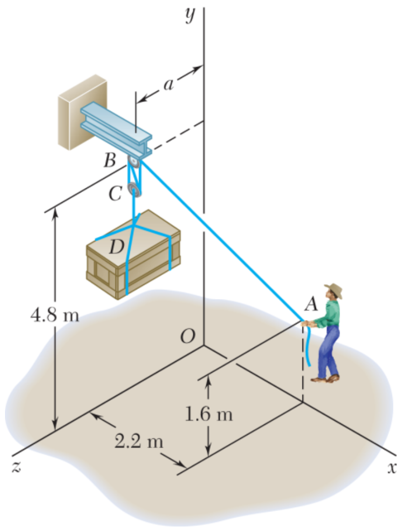
$$M_z = -10.56\frac{T_{BA}}{d_{BA}} \qquad (\text{N}\cdot\text{m})$$

Then forming the ratio

$$\frac{M_y}{M_z}$$

$$\frac{120\text{ N}\cdot\text{m}}{-460\text{ N}\cdot\text{m}} = \frac{2.2\frac{T_{BA}}{d_{BA}}\ (\text{N}\cdot\text{m})}{-10.56\frac{T_{BA}}{d_{BA}}\ (\text{N}\cdot\text{m})}$$

or $a = 1.252$ m ◀



PROBLEM 3.52

To lift a heavy crate, a man uses a block and tackle attached to the bottom of an I-beam at hook *B*. Knowing that the man applies a 195-N force to end *A* of the rope and that the moment of that force about the *y* axis is 132 N · m, determine the distance *a*.

SOLUTION

First note

$$d_{BA} = \sqrt{(2.2)^2 + (-3.2)^2 + (-a)^2}$$

$$= \sqrt{15.08 + a^2} \text{ m}$$

and

$$\mathbf{T}_{BA} = \frac{195 \text{ N}}{d_{BA}}(2.2\mathbf{i} - 3.2\mathbf{j} - a\,\mathbf{k})$$

Now

$$M_y = \mathbf{j} \cdot (\mathbf{r}_{A/D} \times \mathbf{T}_{BA})$$

where

$$\mathbf{r}_{A/0} = (2.2 \text{ m})\mathbf{i} + (1.6 \text{ m})\mathbf{j}$$

Then

$$M_y = \frac{195}{d_{BA}}\begin{vmatrix} 0 & 1 & 0 \\ 2.2 & 1.6 & 0 \\ 2.2 & -3.2 & -a \end{vmatrix}$$

$$= \frac{195}{d_{BA}}(2.2a) \text{ (N} \cdot \text{m)}$$

Substituting for M_y and d_{BA}

$$132 \text{ N} \cdot \text{m} = \frac{195}{\sqrt{15.08 + a^2}}(2.2a)$$

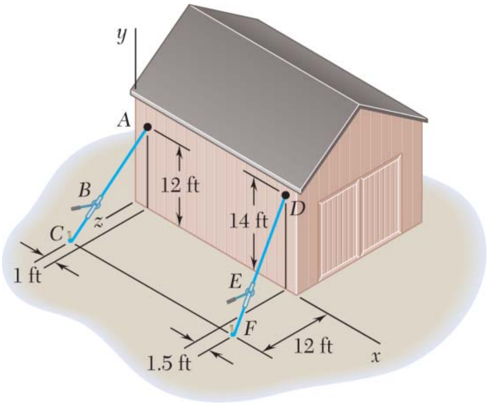
or

$$0.30769\sqrt{15.08 + a^2} = a$$

Squaring both sides of the equation

$$0.094675(15.08 + a^2) = a^2$$

or $a = 1.256$ m ◀

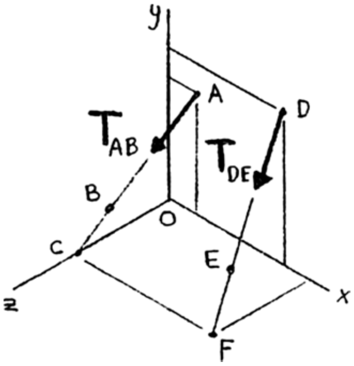


PROBLEM 3.53

A farmer uses cables and winch pullers B and E to plumb one side of a small barn. If it is known that the sum of the moments about the x-axis of the forces exerted by the cables on the barn at Points A and D is equal to 4728 lb · ft, determine the magnitude of $\mathbf{T}_{DE}$ when $T_{AB} = 255$ lb.

SOLUTION

The moment about the x-axis due to the two cable forces can be found using the z components of each force acting at their intersection with the xy plane (A and D). The x components of the forces are parallel to the x-axis, and the y components of the forces intersect the x-axis. Therefore, neither the x or y components produce a moment about the x-axis.



We have ΣM_x: $(T_{AB})_z(y_A) + (T_{DE})_z(y_D) = M_x$

where

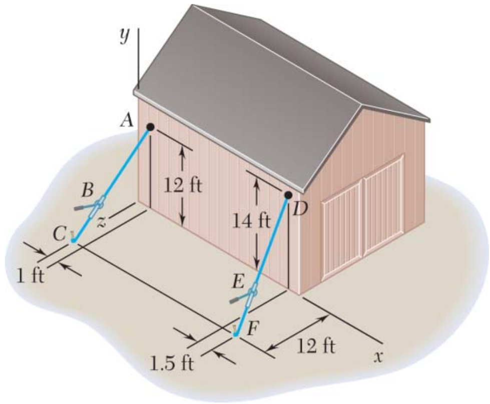
$$(T_{AB})_z = \mathbf{k}\cdot\mathbf{T}_{AB}$$
$$= \mathbf{k}\cdot(T_{AB}\lambda_{AB})$$
$$= \mathbf{k}\cdot\left[255\text{ lb}\left(\frac{-\mathbf{i}-12\mathbf{j}+12\mathbf{k}}{17}\right)\right]$$
$$= 180\text{ lb}$$

$$(T_{DE})_z = \mathbf{k}\cdot\mathbf{T}_{DE}$$
$$= \mathbf{k}\cdot(T_{DE}\lambda_{DE})$$
$$= \mathbf{k}\cdot\left[T_{DE}\left(\frac{1.5\mathbf{i}-14\mathbf{j}+12\mathbf{k}}{18.5}\right)\right]$$
$$= 0.64865T_{DE}$$

$$y_A = 12\text{ ft}$$
$$y_D = 14\text{ ft}$$
$$M_x = 4728\text{ lb}\cdot\text{ft}$$

$$(180\text{ lb})(12\text{ ft}) + (0.64865T_{DE})(14\text{ ft}) = 4728\text{ lb}\cdot\text{ft}$$

and $T_{DE} = 282.79$ lb or $T_{DE} = 283$ lb ◀



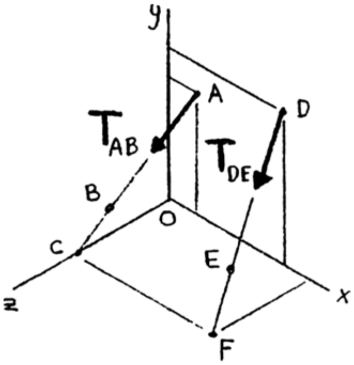
PROBLEM 3.54

Solve Problem 3.53 when the tension in cable *AB* is 306 lb.

PROBLEM 3.53 A farmer uses cables and winch pullers *B* and *E* to plumb one side of a small barn. If it is known that the sum of the moments about the *x*-axis of the forces exerted by the cables on the barn at Points *A* and *D* is equal to 4728 lb · ft, determine the magnitude of $\mathbf{T}_{DE}$ when $T_{AB} = 255$ lb.

SOLUTION

The moment about the *x*-axis due to the two cable forces can be found using the *z* components of each force acting at the intersection with the *xy* plane (*A* and *D*). The *x* components of the forces are parallel to the *x*-axis, and the *y* components of the forces intersect the *x*-axis. Therefore, neither the *x* or *y* components produce a moment about the *x*-axis.



We have ΣM_x: $(T_{AB})_z(y_A) + (T_{DE})_z(y_D) = M_x$

Where

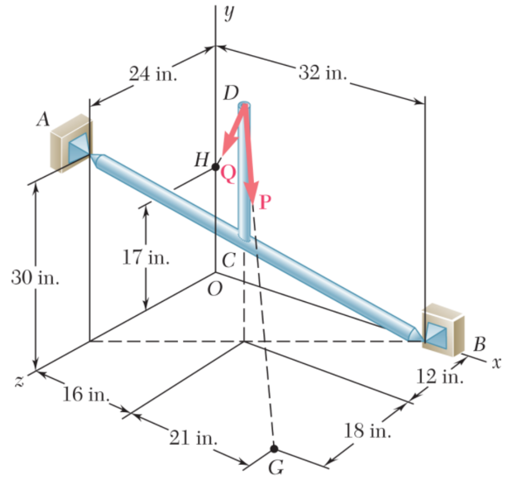
$$\begin{aligned}(T_{AB})_z &= \mathbf{k}\cdot\mathbf{T}_{AB}\\ &= \mathbf{k}\cdot(T_{AB}\boldsymbol{\lambda}_{AB})\\ &= \mathbf{k}\cdot\left[306\text{ lb}\left(\frac{-\mathbf{i}-12\mathbf{j}+12\mathbf{k}}{17}\right)\right]\\ &= 216\text{ lb}\end{aligned}$$

$$\begin{aligned}(T_{DE})_z &= \mathbf{k}\cdot\mathbf{T}_{DE}\\ &= \mathbf{k}\cdot(T_{DE}\boldsymbol{\lambda}_{DE})\\ &= \mathbf{k}\cdot\left[T_{DE}\left(\frac{1.5\mathbf{i}-14\mathbf{j}+12\mathbf{k}}{18.5}\right)\right]\\ &= 0.64865T_{DE}\end{aligned}$$

$$y_A = 12\text{ ft}$$
$$y_D = 14\text{ ft}$$
$$M_x = 4728\text{ lb}\cdot\text{ft}$$

$$(216\text{ lb})(12\text{ ft}) + (0.64865T_{DE})(14\text{ ft}) = 4728\text{ lb}\cdot\text{ft}$$

and $T_{DE} = 235.21$ lb or $T_{DE} = 235$ lb ◀



PROBLEM 3.55

The 23-in. vertical rod *CD* is welded to the midpoint *C* of the 50-in. rod *AB*. Determine the moment about *AB* of the 235-lb force **P**.

SOLUTION

$$\overline{AB} = (32\text{ in.})\mathbf{i} - (30\text{ in.})\mathbf{j} - (24\text{ in.})\mathbf{k}$$

$$AB = \sqrt{(32)^2 + (-30)^2 + (-24)^2} = 50\text{ in.}$$

$$\boldsymbol{\lambda}_{AB} = \frac{\overline{AB}}{AB} = 0.64\mathbf{i} - 0.60 - 0.48\mathbf{k}$$

We shall apply the force *P* at Point *G*:

$$\mathbf{r}_{G/B} = (5\text{ in.})\mathbf{i} + (30\text{ in.})\mathbf{k}$$

$$\overline{DG} = (21\text{ in.})\mathbf{i} - (38\text{ in.})\mathbf{j} + (18\text{ in.})\mathbf{k}$$

$$DG = \sqrt{(21)^2 + (-38)^2 + (18)^2} = 47\text{ in.}$$

$$\mathbf{P} = P\frac{\overline{DG}}{DG} = (235\text{ lb})\frac{21\mathbf{i} - 38\mathbf{j} + 18\mathbf{k}}{47}$$

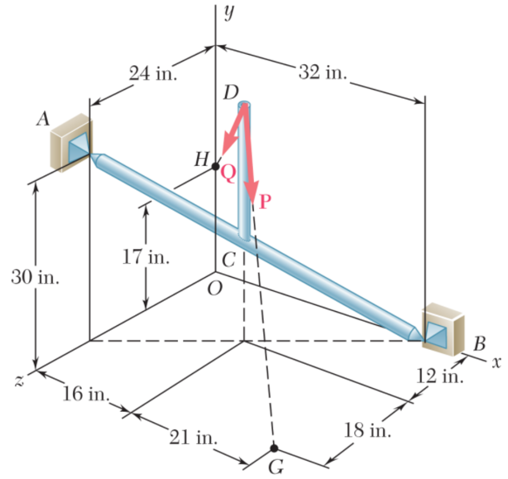
$$\mathbf{P} = (105\text{ lb})\mathbf{i} - (190\text{ lb})\mathbf{j} + (90\text{ lb})\mathbf{k}$$

The moment of **P** about *AB* is given by Eq. (3.46):

$$\mathbf{M}_{AB} = \boldsymbol{\lambda}_{AB} \cdot (\mathbf{r}_{G/B} \times P) = \begin{vmatrix} 0.64 & -0.60 & -0.48 \\ 5\text{ in.} & 0 & 30\text{ in.} \\ 105\text{ lb} & -190\text{ lb} & 90\text{ lb} \end{vmatrix}$$

$$\begin{aligned} \mathbf{M}_{AB} &= 0.64[0 - (30\text{ in.})(-190\text{ lb})] \\ &\quad - 0.60[(30\text{ in.})(105\text{ lb}) - (5\text{ in.})(90\text{ lb})] \\ &\quad - 0.48[(5\text{ in.})(-190\text{ lb}) - 0] \\ &= +2484\text{ lb}\cdot\text{in.} \end{aligned}$$

$$\mathbf{M}_{AB} = +207\text{ lb}\cdot\text{ft}$$ ◀



PROBLEM 3.56

The 23-in. vertical rod *CD* is welded to the midpoint *C* of the 50-in. rod *AB*. Determine the moment about *AB* of the 174-lb force **Q**.

SOLUTION

$$\overline{AB} = (32\text{ in.})\mathbf{i} - (30\text{ in.})\mathbf{j} - (24\text{ in.})\mathbf{k}$$

$$AB = \sqrt{(32)^2 + (-30)^2 + (-24)^2} = 50\text{ in.}$$

$$\boldsymbol{\lambda}_{AB} = \frac{\overline{AB}}{AB} = 0.64\mathbf{i} - 0.60\mathbf{j} - 0.48\mathbf{k}$$

We shall apply the force **Q** at Point *H*:

$$\mathbf{r}_{H/B} = -(32\text{ in.})\mathbf{i} + (17\text{ in.})\mathbf{j}$$

$$\overline{DH} = -(16\text{ in.})\mathbf{i} - (21\text{ in.})\mathbf{j} - (12\text{ in.})\mathbf{k}$$

$$DH = \sqrt{(16)^2 + (-21)^2 + (-12)^2} = 29\text{ in.}$$

$$\mathbf{Q} = \frac{\overline{DH}}{DH} = (174\text{ lb})\frac{-16\mathbf{i} - 21\mathbf{j} - 12\mathbf{k}}{29}$$

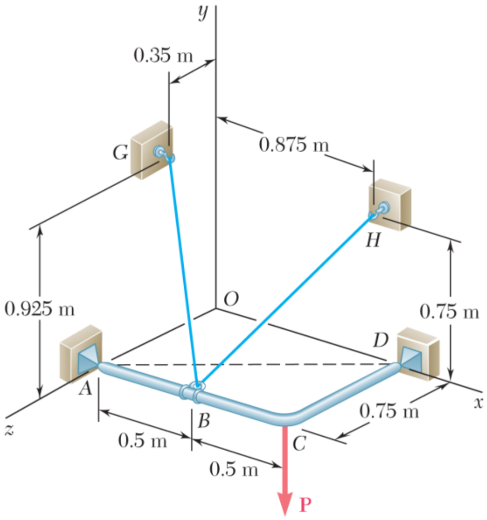
$$Q = -(96\text{ lb})\mathbf{i} - (126\text{ lb})\mathbf{j} - (72\text{ lb})\mathbf{k}$$

The moment of **Q** about *AB* is given by Eq. (3.46):

$$\mathbf{M}_{AB} = \boldsymbol{\lambda}_{AB} \cdot (\mathbf{r}_{H/B} \times \mathbf{Q}) = \begin{vmatrix} 0.64 & -0.60 & -0.48 \\ -32\text{ in.} & 17\text{ in.} & 0 \\ -96\text{ lb} & -126\text{ lb} & -72\text{ lb} \end{vmatrix}$$

$$\begin{aligned}\mathbf{M}_{AB} &= 0.64[(17\text{ in.})(-72\text{ lb}) - 0] \\ &\quad - 0.60[(0 - (-32\text{ in.})(-72\text{ lb})] \\ &\quad - 0.48[(-32\text{ in.})(-126\text{ lb}) - (17\text{ in.})(-96\text{ lb})] \\ &= -2119.7\text{ lb}\cdot\text{in.}\end{aligned}$$

$\mathbf{M}_{AB} = -176.6\text{ lb}\cdot\text{ft}$ ◀



PROBLEM 3.57

The frame *ACD* is hinged at *A* and *D* and is supported by a cable that passes through a ring at *B* and is attached to hooks at *G* and *H*. Knowing that the tension in the cable is 450 N, determine the moment about the diagonal *AD* of the force exerted on the frame by portion *BH* of the cable.

SOLUTION

$$M_{AD} = \boldsymbol{\lambda}_{AD} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}_{BH})$$

Where

$$\boldsymbol{\lambda}_{AD} = \frac{1}{5}(4\mathbf{i} - 3\mathbf{k})$$

$$\mathbf{r}_{B/A} = (0.5 \text{ m})\mathbf{i}$$

and

$$d_{BH} = \sqrt{(0.375)^2 + (0.75)^2 + (-0.75)^2}$$

$$= 1.125 \text{ m}$$

Then

$$\mathbf{T}_{BH} = \frac{450 \text{ N}}{1.125}(0.375\mathbf{i} + 0.75\mathbf{j} - 0.75\mathbf{k})$$

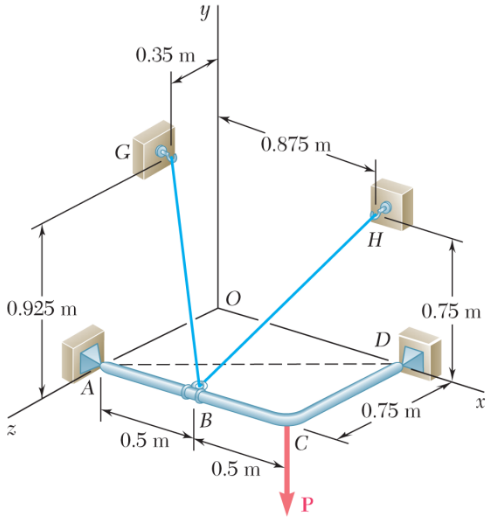
$$= (150 \text{ N})\mathbf{i} + (300 \text{ N})\mathbf{j} - (300 \text{ N})\mathbf{k}$$

Finally,

$$M_{AD} = \frac{1}{5}\begin{vmatrix} 4 & 0 & -3 \\ 0.5 & 0 & 0 \\ 150 & 300 & -300 \end{vmatrix}$$

$$= \frac{1}{5}[(-3)(0.5)(300)]$$

or $M_{AD} = -90.0 \text{ N}\cdot\text{m}$ ◀



PROBLEM 3.58

In Problem 3.57, determine the moment about the diagonal *AD* of the force exerted on the frame by portion *BG* of the cable.

PROBLEM 3.57 The frame *ACD* is hinged at *A* and *D* and is supported by a cable that passes through a ring at *B* and is attached to hooks at *G* and *H*. Knowing that the tension in the cable is 450 N, determine the moment about the diagonal *AD* of the force exerted on the frame by portion *BH* of the cable.

SOLUTION

$$M_{AD} = \boldsymbol{\lambda}_{AD} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}_{BG})$$

Where

$$\boldsymbol{\lambda}_{AD} = \frac{1}{5}(4\mathbf{i} - 3\mathbf{k})$$

$$\mathbf{r}_{B/A} = (0.5\text{ m})\mathbf{j}$$

and

$$BG = \sqrt{(-0.5)^2 + (0.925)^2 + (-0.4)^2}$$

$$= 1.125\text{ m}$$

Then

$$\mathbf{T}_{BG} = \frac{450\text{ N}}{1.125}(-0.5\mathbf{i} + 0.925\mathbf{j} - 0.4\mathbf{k})$$

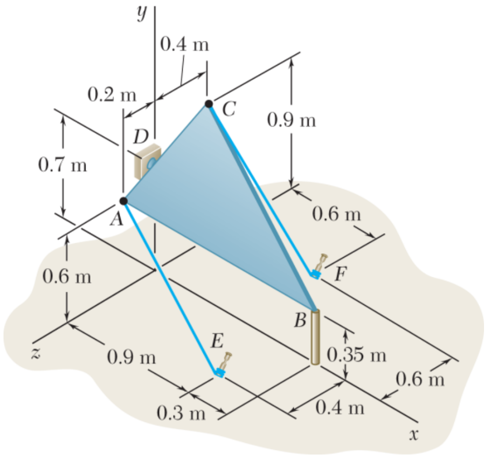
$$= -(200\text{ N})\mathbf{i} + (370\text{ N})\mathbf{j} - (160\text{ N})\mathbf{k}$$

Finally,

$$M_{AD} = \frac{1}{5}\begin{vmatrix} 4 & 0 & -3 \\ 0.5 & 0 & 0 \\ -200 & 370 & -160 \end{vmatrix}$$

$$= \frac{1}{5}[(-3)(0.5)(370)]$$

$M_{AD} = -111.0\text{ N}\cdot\text{m}$ ◀



PROBLEM 3.59

The triangular plate *ABC* is supported by ball-and-socket joints at *B* and *D* and is held in the position shown by cables *AE* and *CF*. If the force exerted by cable *AE* at *A* is 55 N, determine the moment of that force about the line joining Points *D* and *B*.

SOLUTION

First note:

$$\mathbf{T}_{AE} = T_{AE}\frac{\overrightarrow{AE}}{AE}$$

$$AE = \sqrt{(0.9)^2 + (-0.6)^2 + (0.2)^2} = 1.1 \text{ m}$$

Then

$$\mathbf{T}_{AE} = \frac{55 \text{ N}}{1.1}(0.9\mathbf{i} - 0.6\mathbf{j} + 0.2\mathbf{k})$$

$$= 5[(9 \text{ N})\mathbf{i} - (6 \text{ N})\mathbf{j} + (2 \text{ N})\mathbf{k}]$$

Also,

$$DB = \sqrt{(1.2)^2 + (-0.35)^2 + (0)^2}$$

$$= 1.25 \text{ m}$$

Then

$$\boldsymbol{\lambda}_{DB} = \frac{\overrightarrow{DB}}{DB}$$

$$= \frac{1}{1.25}(1.2\mathbf{i} - 0.35\mathbf{j})$$

$$= \frac{1}{25}(24\mathbf{i} - 7\mathbf{j})$$

Now

$$M_{DB} = \boldsymbol{\lambda}_{DB} \cdot (\mathbf{r}_{A/D} \times \mathbf{T}_{AE})$$

where

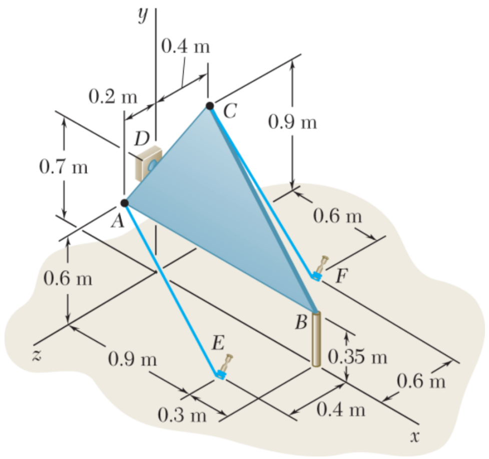
$$\mathbf{r}_{A/D} = -(0.1 \text{ m})\mathbf{j} + (0.2 \text{ m})\mathbf{k}$$

Then

$$M_{DB} = \frac{1}{25}(5)\begin{vmatrix} 24 & -7 & 0 \\ 0 & -0.1 & 0.2 \\ 9 & -6 & 2 \end{vmatrix}$$

$$= \frac{1}{5}(-4.8 - 12.6 + 28.8)$$

or $M_{DB} = 2.28 \text{ N}\cdot\text{m}$ ◀



PROBLEM 3.60

The triangular plate *ABC* is supported by ball-and-socket joints at *B* and *D* and is held in the position shown by cables *AE* and *CF*. If the force exerted by cable *CF* at *C* is 33 N, determine the moment of that force about the line joining Points *D* and *B*.

SOLUTION

First note:

$$\mathbf{T}_{CF} = T_{CF}\frac{\overrightarrow{CF}}{CF}$$

$$CF = \sqrt{(0.6)^2 + (-0.9)^2 + (-0.2)^2} = 1.1 \text{ m}$$

Then

$$\mathbf{T}_{CF} = \frac{33 \text{ N}}{1.1}(0.6\mathbf{i} - 0.9\mathbf{j} + 0.2\mathbf{k})$$

$$= 3[(6 \text{ N})\mathbf{i} - (9 \text{ N})\mathbf{j} - (2 \text{ N})\mathbf{k}]$$

Also,

$$DB = \sqrt{(1.2)^2 + (-0.35)^2 + (0)^2}$$

$$= 1.25 \text{ m}$$

Then

$$\boldsymbol{\lambda}_{DB} = \frac{\overrightarrow{DB}}{DB}$$

$$= \frac{1}{1.25}(1.2\mathbf{i} - 0.35\mathbf{j})$$

$$= \frac{1}{25}(24\mathbf{i} - 7\mathbf{j})$$

Now

$$M_{DB} = \boldsymbol{\lambda}_{DB} \cdot (\mathbf{r}_{C/D} \times \mathbf{T}_{CF})$$

where

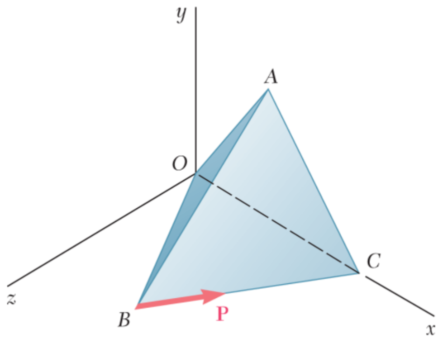
$$\mathbf{r}_{C/D} = (0.2 \text{ m})\mathbf{j} - (0.4 \text{ m})\mathbf{k}$$

Then

$$M_{DB} = \frac{1}{25}(3)\begin{vmatrix} 24 & -7 & 0 \\ 0 & 0.2 & -0.4 \\ 6 & -9 & -2 \end{vmatrix}$$

$$= \frac{3}{25}(-9.6 + 16.8 - 86.4)$$

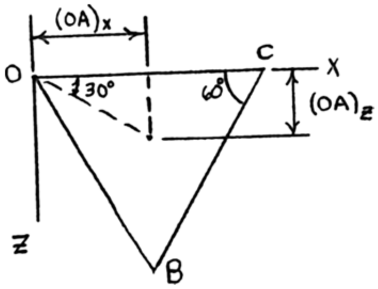
or $M_{DB} = -9.50 \text{ N} \cdot \text{m}$ ◀



PROBLEM 3.61

A regular tetrahedron has six edges of length a. A force **P** is directed as shown along edge BC. Determine the moment of **P** about edge OA.

SOLUTION



We have $$M_{OA} = \boldsymbol{\lambda}_{OA} \cdot (\mathbf{r}_{C/O} \times \mathbf{P})$$

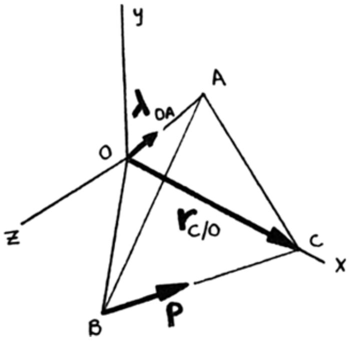
From triangle *OBC*: $$(OA)_x = \frac{a}{2}$$

$$(OA)_z = (OA)_x \tan 30° = \frac{a}{2}\left(\frac{1}{\sqrt{3}}\right) = \frac{a}{2\sqrt{3}}$$

Since $$(OA)^2 = (OA)_x^2 + (OA)_y^2 + (OA_z)^2$$

or $$a^2 = \left(\frac{a}{2}\right)^2 + (OA)_y^2 + \left(\frac{a}{2\sqrt{3}}\right)^2$$

$$(OA)_y = \sqrt{a^2 - \frac{a^2}{4} - \frac{a^2}{12}} = a\sqrt{\frac{2}{3}}$$



Then $$\mathbf{r}_{A/O} = \frac{a}{2}\mathbf{i} + a\sqrt{\frac{2}{3}}\,\mathbf{j} + \frac{a}{2\sqrt{3}}\mathbf{k}$$

and $$\boldsymbol{\lambda}_{OA} = \frac{1}{2}\mathbf{i} + \sqrt{\frac{2}{3}}\mathbf{j} + \frac{1}{2\sqrt{3}}\mathbf{k}$$

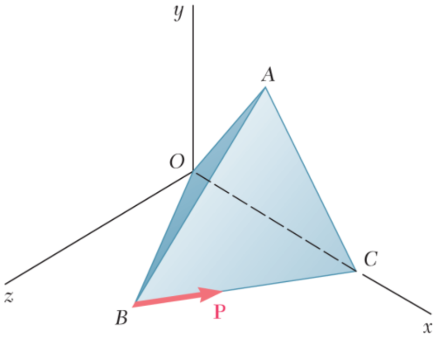
$$\mathbf{P} = \boldsymbol{\lambda}_{BC} P = \frac{(a \sin 30°)\mathbf{i} - (a \cos 30°)\mathbf{k}}{a}(P) = \frac{P}{2}(\mathbf{i} - \sqrt{3}\mathbf{k})$$

$$\mathbf{r}_{C/O} = a\mathbf{i}$$

$$M_{OA} = \begin{vmatrix} \frac{1}{2} & \sqrt{\frac{2}{3}} & \frac{1}{2\sqrt{3}} \\ 1 & 0 & 0 \\ 1 & 0 & -\sqrt{3} \end{vmatrix} (a)\left(\frac{P}{2}\right)$$

$$= \frac{aP}{2}\left(-\sqrt{\frac{2}{3}}\right)(1)(-\sqrt{3}) = \frac{aP}{\sqrt{2}}$$

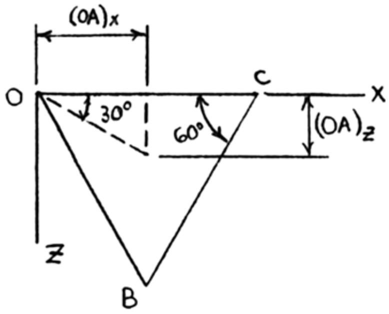
$$M_{OA} = \frac{aP}{\sqrt{2}} \blacktriangleleft$$



PROBLEM 3.62

A regular tetrahedron has six edges of length a. (a) Show that two opposite edges, such as OA and BC, are perpendicular to each other. (b) Use this property and the result obtained in Problem 3.61 to determine the perpendicular distance between edges OA and BC.

SOLUTION



(a) For edge OA to be perpendicular to edge BC,

$$\overrightarrow{OA} \cdot \overrightarrow{BC} = 0$$

From triangle OBC:

$$(OA)_x = \frac{a}{2}$$

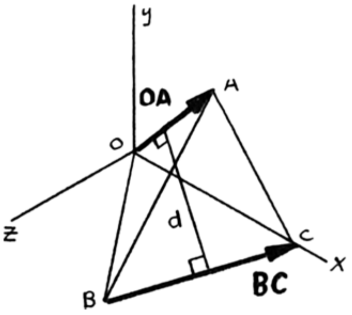
$$(OA)_z = (OA)_x \tan 30° = \frac{a}{2}\left(\frac{1}{\sqrt{3}}\right) = \frac{a}{2\sqrt{3}}$$

$$\overrightarrow{OA} = \left(\frac{a}{2}\right)\mathbf{i} + (OA)_y\,\mathbf{j} + \left(\frac{a}{2\sqrt{3}}\right)\mathbf{k}$$

and

$$\overrightarrow{BC} = (a\sin 30°)\mathbf{i} - (a\cos 30°)\mathbf{k}$$

$$= \frac{a}{2}\mathbf{i} - \frac{a\sqrt{3}}{2}\mathbf{k} = \frac{a}{2}(\mathbf{i} - \sqrt{3}\,\mathbf{k})$$



Then

$$\left[\frac{a}{2}\mathbf{i} + (OA)_y\,\mathbf{j} + \left(\frac{a}{2\sqrt{3}}\right)\mathbf{k}\right] \cdot (\mathbf{i} - \sqrt{3}\mathbf{k})\frac{a}{2} = 0$$

or

$$\frac{a^2}{4} + (OA)_y(0) - \frac{a^2}{4} = 0$$

$$\overrightarrow{OA} \cdot \overrightarrow{BC} = 0$$

so that $\overrightarrow{OA}$ is perpendicular to $\overrightarrow{BC}$. ◀

(b) We have $M_{OA} = Pd$, with P acting along BC and d the perpendicular distance from $\overrightarrow{OA}$ to $\overrightarrow{BC}$.

From the results of Problem 3.57,

$$M_{OA} = \frac{Pa}{\sqrt{2}}$$

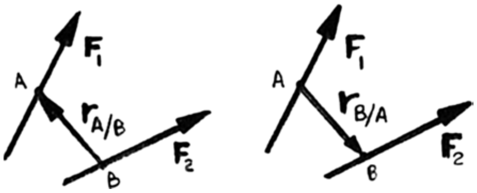
$$\frac{Pa}{\sqrt{2}} = Pd$$

or $d = \dfrac{a}{\sqrt{2}}$ ◀

PROBLEM 3.63

Two forces $\mathbf{F}_1$ and $\mathbf{F}_2$ in space have the same magnitude F. Prove that the moment of $\mathbf{F}_1$ about the line of action of $\mathbf{F}_2$ is equal to the moment of $\mathbf{F}_2$ about the line of action of $\mathbf{F}_1$.

SOLUTION



First note that $\mathbf{F}_1 = F_1\boldsymbol{\lambda}_1$ and $\mathbf{F}_2 = F_2\boldsymbol{\lambda}_2$

Let $M_1 =$ moment of $\mathbf{F}_2$ about the line of action of $\mathbf{F}_1$ and $M_2 =$ moment of $\mathbf{F}_1$ about the line of action of $\mathbf{F}_2$.

Now, by definition,

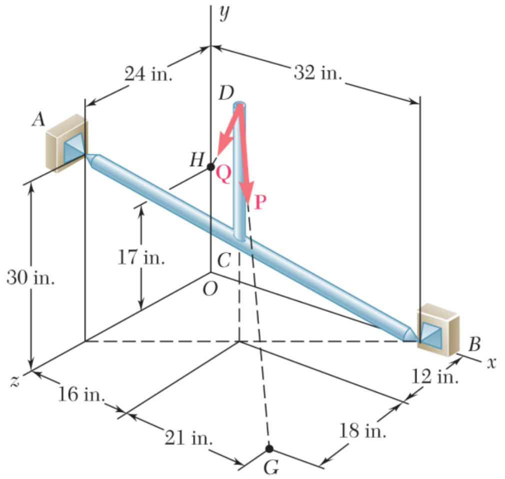
$$M_1 = \boldsymbol{\lambda}_1 \cdot (\mathbf{r}_{B/A} \times \mathbf{F}_2)$$
$$= \boldsymbol{\lambda}_1 \cdot (\mathbf{r}_{B/A} \times \boldsymbol{\lambda}_2)F_2$$
$$M_2 = \boldsymbol{\lambda}_2 \cdot (\mathbf{r}_{A/B} \times \mathbf{F}_1)$$
$$= \boldsymbol{\lambda}_2 \cdot (\mathbf{r}_{A/B} \times \boldsymbol{\lambda}_1)F_1$$

Since $F_1 = F_2 = F$ and $\mathbf{r}_{A/B} = -\mathbf{r}_{B/A}$

$$M_1 = \boldsymbol{\lambda}_1 \cdot (\mathbf{r}_{B/A} \times \boldsymbol{\lambda}_2)F$$
$$M_2 = \boldsymbol{\lambda}_2 \cdot (-\mathbf{r}_{B/A} \times \boldsymbol{\lambda}_1)F$$

Using Equation (3.39): $\boldsymbol{\lambda}_1 \cdot (\mathbf{r}_{B/A} \times \boldsymbol{\lambda}_2) = \boldsymbol{\lambda}_2 \cdot (-\mathbf{r}_{B/A} \times \boldsymbol{\lambda}_1)$

so that $M_2 = \boldsymbol{\lambda}_1 \cdot (\mathbf{r}_{B/A} \times \boldsymbol{\lambda}_2)F$ $\qquad M_{12} = M_{21}$ ◀



PROBLEM 3.64

In Prob. 3.55, determine the perpendicular distance between rod *AB* and the line of action of **P**.

PROBLEM 3.55 The 23-in. vertical rod *CD* is welded to the midpoint *C* of the 50-in. rod *AB*. Determine the moment about *AB* of the 235-lb force **P**.

SOLUTION

$$\overline{AB} = (32\text{ in.})\mathbf{i} - (30\text{ in.})\mathbf{j} - (24\text{ in.})\mathbf{k}$$

$$AB = \sqrt{(32)^2 + (-30)^2 + (-24)^2} = 50\text{ in.}$$

$$\boldsymbol{\lambda}_{AB} = \frac{\overline{AB}}{AB} = 0.64\mathbf{i} - 0.60\mathbf{j} - 0.48\mathbf{k}$$

$$\boldsymbol{\lambda}_P = \frac{\mathbf{P}}{P} = \frac{105\mathbf{i} - 190\mathbf{j} + 90\mathbf{k}}{235}$$

Angle θ between *AB* and **P**:

$$\begin{aligned}\cos\theta &= \boldsymbol{\lambda}_{AB} \cdot \boldsymbol{\lambda}_P \\ &= (0.64\mathbf{i} - 0.60\mathbf{j} - 0.48\mathbf{k}) \cdot \frac{105\mathbf{i} - 190\mathbf{j} + 90\mathbf{k}}{235} \\ &= 0.58723\end{aligned}$$

$$\therefore \quad \theta = 54.039°$$

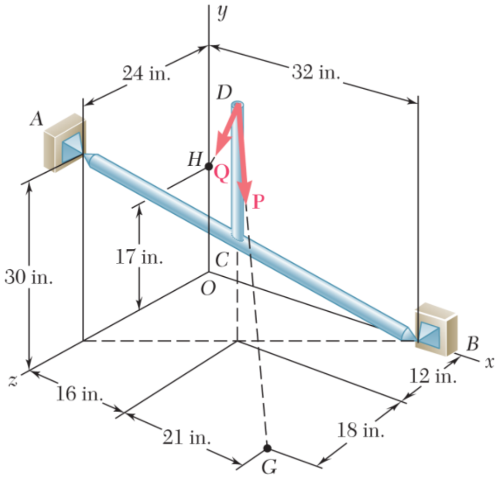
The moment of **P** about *AB* may be obtained by multiplying the projection of **P** on a plane perpendicular to *AB* by the perpendicular distance *d* from *AB* to **P**:

$$\mathbf{M}_{AB} = (P\sin\theta)d$$

From the solution to Prob. 3.55: $\mathbf{M}_{AB} = 207\text{ lb}\cdot\text{ft} = 2484\text{ lb}\cdot\text{in.}$

We have $\quad 2484\text{ lb}\cdot\text{in.} = (235\text{ lb})(\sin 54.039)d$

$$d = 13.06\text{ in.} \blacktriangleleft$$



PROBLEM 3.65

In Prob. 3.56, determine the perpendicular distance between rod *AB* and the line of action of **Q**.

PROBLEM 3.56 The 23-in. vertical rod *CD* is welded to the midpoint *C* of the 50-in. rod *AB*. Determine the moment about *AB* of the 174-lb force **Q**.

SOLUTION

$$\overline{AB} = (32\text{ in.})\mathbf{i} - (30\text{ in.})\mathbf{j} - (24\text{ in.})\mathbf{k}$$

$$AB = \sqrt{(32)^2 + (-30)^2 + (-24)^2} = 50\text{ in.}$$

$$\boldsymbol{\lambda}_{AB} = \frac{\overline{AB}}{AB} = 0.64\mathbf{i} - 0.60\mathbf{j} - 0.48\mathbf{k}$$

$$\boldsymbol{\lambda}_{Q} = \frac{\mathbf{Q}}{Q} = \frac{-96\mathbf{i} - 126\mathbf{j} - 72\mathbf{k}}{174}$$

Angle θ between *AB* and **Q**:

$$\begin{aligned}\cos\theta &= \boldsymbol{\lambda}_{AB} \cdot \boldsymbol{\lambda}_{Q} \\ &= (0.64\mathbf{i} - 0.60\mathbf{j} - 0.48\mathbf{k}) \cdot \frac{(-96\mathbf{i} - 126\mathbf{j} - 72\mathbf{k})}{174} \\ &= 0.28000 \\ \therefore\quad \theta &= 73.740^\circ\end{aligned}$$

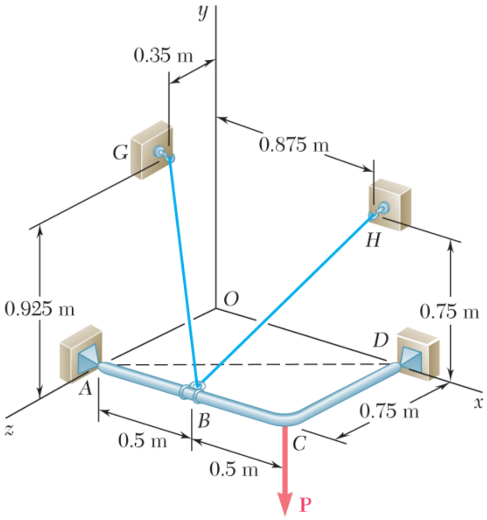
The moment of **Q** about *AB* may be obtained by multiplying the projection of **Q** on a plane perpendicular to *AB* by the perpendicular distance *d* from *AB* to **Q**:

$$\mathbf{M}_{AB} = (Q\sin\theta)d$$

From the solution to Prob. 3.56: $\mathbf{M}_{AB} = 176.6\text{ lb}\cdot\text{ft} = 2119.2\text{ lb}\cdot\text{in.}$

$$2119.2\text{ lb}\cdot\text{in.} = (174\text{ lb})(\sin 73.740^\circ)d$$

$d = 12.69$ in. ◀



PROBLEM 3.66

In Problem 3.57, determine the perpendicular distance between portion *BH* of the cable and the diagonal *AD*.

PROBLEM 3.57 The frame *ACD* is hinged at *A* and *D* and is supported by a cable that passes through a ring at *B* and is attached to hooks at *G* and *H*. Knowing that the tension in the cable is 450 N, determine the moment about the diagonal *AD* of the force exerted on the frame by portion *BH* of the cable.

SOLUTION

From the solution to Problem 3.57:

$$T_{BH} = 450 \text{ N}$$

$$\mathbf{T}_{BH} = (150 \text{ N})\mathbf{i} + (300 \text{ N})\mathbf{j} - (300 \text{ N})\mathbf{k}$$

$$|M_{AD}| = 90.0 \text{ N}\cdot\text{m}$$

$$\boldsymbol{\lambda}_{AD} = \frac{1}{5}(4\mathbf{i} - 3\mathbf{k})$$

Based on the discussion of Section 3.11, it follows that only the perpendicular component of $\mathbf{T}_{BH}$ will contribute to the moment of $\mathbf{T}_{BH}$ about line $\overrightarrow{AD}$.

Now
$$(T_{BH})_{\text{parallel}} = \mathbf{T}_{BH}\cdot\boldsymbol{\lambda}_{AD}$$

$$= (150\mathbf{i} + 300\mathbf{j} - 300\mathbf{k})\cdot\frac{1}{5}(4\mathbf{i} - 3\mathbf{k})$$

$$= \frac{1}{5}[(150)(4) + (-300)(-3)]$$

$$= 300 \text{ N}$$

Also,
$$\mathbf{T}_{BH} = (\mathbf{T}_{BH})_{\text{parallel}} + (\mathbf{T}_{BH})_{\text{perpendicular}}$$

so that
$$(T_{BH})_{\text{perpendicular}} = \sqrt{(450)^2 - (300)^2} = 335.41 \text{ N}$$

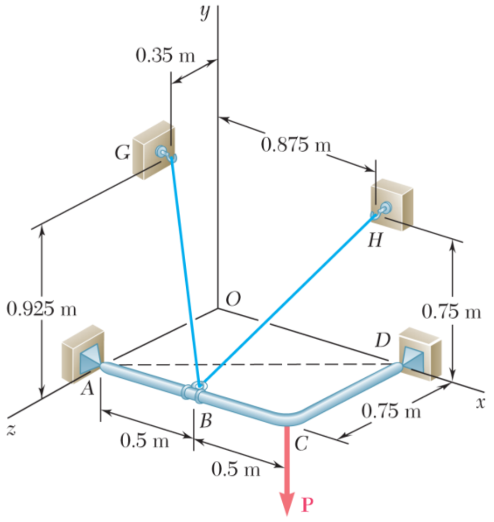
Since $\boldsymbol{\lambda}_{AD}$ and $(\mathbf{T}_{BH})_{\text{perpendicular}}$ are perpendicular, it follows that

$$M_{AD} = d(T_{BH})_{\text{perpendicular}}$$

or
$$90.0 \text{ N}\cdot\text{m} = d(335.41 \text{ N})$$

$$d = 0.26833 \text{ m}$$

$d = 0.268$ m ◀



PROBLEM 3.67

In Problem 3.58, determine the perpendicular distance between portion *BG* of the cable and the diagonal *AD*.

PROBLEM 3.58 In Problem 3.57, determine the moment about the diagonal *AD* of the force exerted on the frame by portion *BG* of the cable.

PROBLEM 3.57 The frame *ACD* is hinged at *A* and *D* and is supported by a cable that passes through a ring at *B* and is attached to hooks at *G* and *H*. Knowing that the tension in the cable is 450 N, determine the moment about the diagonal *AD* of the force exerted on the frame by portion *BH* of the cable.

SOLUTION

From the solution to Problem 3.58: $\mathbf{T}_{BG} = 450\text{ N}$

$$\mathbf{T}_{BG} = -(200\text{ N})\mathbf{i} + (370\text{ N})\mathbf{j} - (160\text{ N})\mathbf{k}$$

$$|M_{AD}| = 111\text{ N}\cdot\text{m}$$

$$\lambda_{AD} = \frac{1}{5}(4\mathbf{i} - 3\mathbf{k})$$

Based on the discussion of Section 3.11, it follows that only the perpendicular component of $\mathbf{T}_{BG}$ will contribute to the moment of $\mathbf{T}_{BG}$ about line $\overline{AD}$.

Now $$(T_{BG})_{\text{parallel}} = \mathbf{T}_{BG}\cdot\lambda_{AD}$$

$$= (-200\mathbf{i} + 370\mathbf{j} - 160\mathbf{k})\cdot\frac{1}{5}(4\mathbf{i} - 3\mathbf{k})$$

$$= \frac{1}{5}[(-200)(4) + (-160)(-3)]$$

$$= -64\text{ N}$$

Also, $$\bar{\mathbf{T}}_{BG} = (\mathbf{T}_{BG})_{\text{parallel}} + (\mathbf{T}_{BG})_{\text{perpendicular}}$$

so that $$(\mathbf{T}_{BG})_{\text{perpendicular}} = \sqrt{(450)^2 - (-64)^2} = 445.43\text{ N}$$

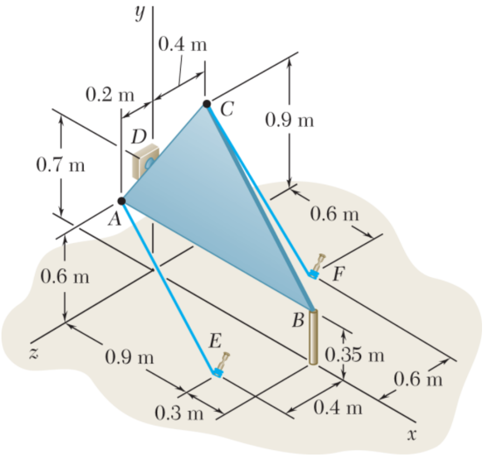
Since λ_{AD} and $(\mathbf{T}_{BG})_{\text{perpendicular}}$ are perpendicular, it follows that

$$M_{AD} = d(T_{BG})_{\text{perpendicular}}$$

or $$111\text{ N}\cdot\text{m} = d(445.43\text{ N})$$

$$d = 0.24920\text{ m}$$

$d = 0.249$ m ◀



PROBLEM 3.68

In Problem 3.59, determine the perpendicular distance between cable *AE* and the line joining Points *D* and *B*.

PROBLEM 3.59 The triangular plate *ABC* is supported by ball-and-socket joints at *B* and *D* and is held in the position shown by cables *AE* and *CF*. If the force exerted by cable *AE* at *A* is 55 N, determine the moment of that force about the line joining Points *D* and *B*.

SOLUTION

From the solution to Problem 3.59:

$$T_{AE} = 55\text{ N}$$

$$\mathbf{T}_{AE} = 5[(9\text{ N})\mathbf{i} - (6\text{ N})\mathbf{j} + (2\text{ N})\mathbf{k}]$$

$$|M_{DB}| = 2.28\text{ N}\cdot\text{m}$$

$$\boldsymbol{\lambda}_{DB} = \frac{1}{25}(24\mathbf{i} - 7\mathbf{j})$$

Based on the discussion of Section 3.11, it follows that only the perpendicular component of $\mathbf{T}_{AE}$ will contribute to the moment of $\mathbf{T}_{AE}$ about line $\overrightarrow{DB}$.

Now

$$\begin{aligned}(T_{AE})_{\text{parallel}} &= \mathbf{T}_{AE}\cdot\boldsymbol{\lambda}_{DB}\\ &= 5(9\mathbf{i} - 6\mathbf{j} + 2\mathbf{k})\cdot\frac{1}{25}(24\mathbf{i} - 7\mathbf{j})\\ &= \frac{1}{5}[(9)(24) + (-6)(-7)]\\ &= 51.6\text{ N}\end{aligned}$$

Also,

$$\mathbf{T}_{AE} = (\mathbf{T}_{AE})_{\text{parallel}} + (\mathbf{T}_{AE})_{\text{perpendicular}}$$

so that

$$(\mathbf{T}_{AE})_{\text{perpendicular}} = \sqrt{(55)^2 + (51.6)^2} = 19.0379\text{ N}$$

Since $\boldsymbol{\lambda}_{DB}$ and $(\mathbf{T}_{AE})_{\text{perpendicular}}$ are perpendicular, it follows that

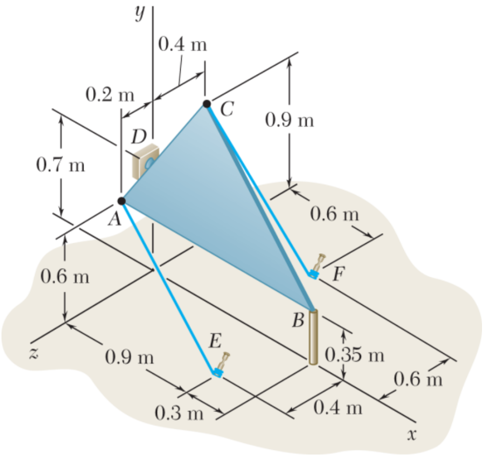
$$M_{DB} = d(T_{AE})_{\text{perpendicular}}$$

or

$$2.28\text{ N}\cdot\text{m} = d(19.0379\text{ N})$$

$$d = 0.119761$$

$d = 0.1198$ m ◀



PROBLEM 3.69

In Problem 3.60, determine the perpendicular distance between cable *CF* and the line joining Points *D* and *B*.

PROBLEM 3.60 The triangular plate *ABC* is supported by ball-and-socket joints at *B* and *D* and is held in the position shown by cables *AE* and *CF*. If the force exerted by cable *CF* at *C* is 33 N, determine the moment of that force about the line joining Points *D* and *B*.

SOLUTION

From the solution to Problem 3.60:

$$T_{CF} = 33 \text{ N}$$

$$\mathbf{T}_{CF} = 3[(6\text{ N})\mathbf{i} - (9\text{ N})\mathbf{j} - (2\text{ N})\mathbf{k}]$$

$$|M_{DB}| = 9.50 \text{ N}\cdot\text{m}$$

$$\boldsymbol{\lambda}_{DB} = \frac{1}{25}(24\mathbf{i} - 7\mathbf{j})$$

Based on the discussion of Section 3.11, it follows that only the perpendicular component of $\mathbf{T}_{CF}$ will contribute to the moment of $\mathbf{T}_{CF}$ about line $\overrightarrow{DB}$.

Now

$$\begin{aligned}(\mathbf{T}_{CF})_{\text{parallel}} &= \mathbf{T}_{CF}\cdot\boldsymbol{\lambda}_{DB}\\ &= 3(6\mathbf{i} - 9\mathbf{j} - 2\mathbf{k})\cdot\frac{1}{25}(24\mathbf{i} - 7\mathbf{j})\\ &= \frac{3}{25}[(6)(24) + (-9)(-7)]\\ &= 24.84 \text{ N}\end{aligned}$$

Also,

$$\mathbf{T}_{CF} = (\mathbf{T}_{CF})_{\text{parallel}} + (\mathbf{T}_{CF})_{\text{perpendicular}}$$

so that

$$\begin{aligned}(\mathbf{T}_{CF})_{\text{perpendicular}} &= \sqrt{(33)^2 - (24.84)^2}\\ &= 21.725 \text{ N}\end{aligned}$$

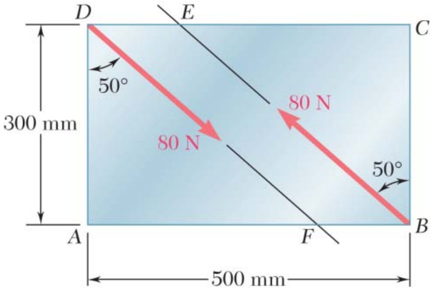
Since $\boldsymbol{\lambda}_{DB}$ and $(\mathbf{T}_{CF})_{\text{perpendicular}}$ are perpendicular, it follows that

$$|M_{DB}| = d(T_{CF})_{\text{perpendicular}}$$

or

$$9.50 \text{ N}\cdot\text{m} = d \times 21.725 \text{ N}$$

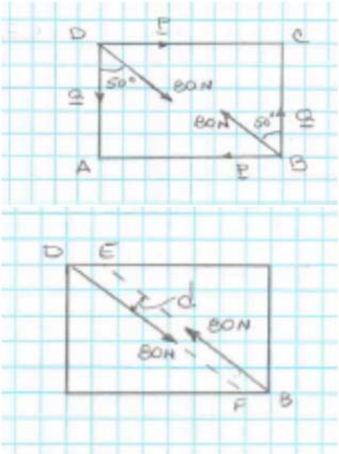
or $d = 0.437$ m ◀



PROBLEM 3.70

Two 80-N forces are applied as shown to the corners *B* and *D* of a rectangular plate. (*a*) Determine the moment of the couple formed by the two forces by resolving each force into horizontal and vertical components and adding the moments of the two resulting couples. (*b*) Use the result obtained to determine the perpendicular distance between lines *BE* and *DF*.

SOLUTION



(*a*) Resolving forces into components:

$$P = (80\text{ N})\sin 50^\circ = 61.284\text{ N}$$

$$Q = (80\text{ N})\cos 50^\circ = 51.423\text{ N}$$

$$M = (51.423\text{ N})(0.5\text{ m}) - (61.284\text{ N})(0.3\text{ m})$$
$$= 7.3263\text{ N}\cdot\text{m}$$

$$\mathbf{M} = 7.33\text{ N}\cdot\text{m} \circlearrowleft \blacktriangleleft$$

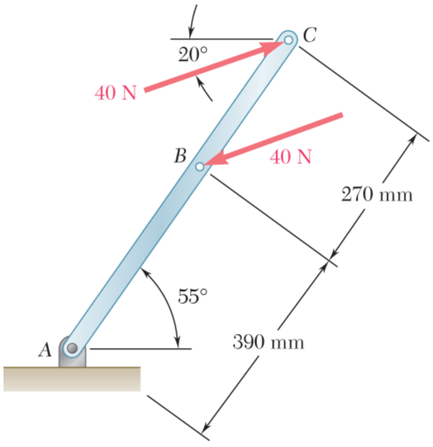
(*b*) Distance between lines *BE* and *DF*

$\mathbf{M} = Fd$

or $7.3263\text{ N}\cdot\text{m} = (80\text{ N})d$

$d = 0.091579\text{ m}$

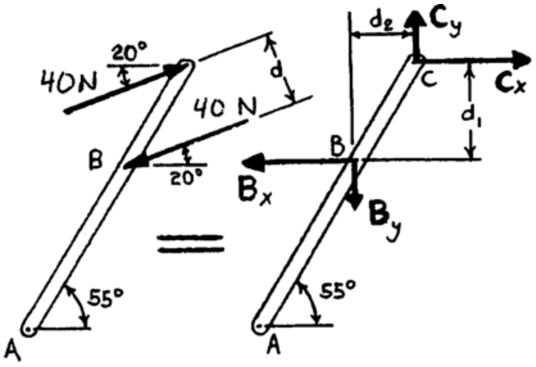
$$d = 91.6\text{ mm} \blacktriangleleft$$



PROBLEM 3.71

Two parallel 40-N forces are applied to a lever as shown. Determine the moment of the couple formed by the two forces (*a*) by resolving each force into horizontal and vertical components and adding the moments of the two resulting couples, (*b*) by using the perpendicular distance between the two forces, (*c*) by summing the moments of the two forces about Point *A*.

SOLUTION



(*a*) We have $\Sigma\mathbf{M}_B:\quad -d_1C_x + d_2C_y = \mathbf{M}$

where

$$d_1 = (0.270\text{ m})\sin 55° = 0.22117\text{ m}$$

$$d_2 = (0.270\text{ m})\cos 55° = 0.154866\text{ m}$$

$$C_x = (40\text{ N})\cos 20° = 37.588\text{ N}$$

$$C_y = (40\text{ N})\sin 20° = 13.6808\text{ N}$$

$$\mathbf{M} = -(0.22117\text{ m})(37.588\text{ N})\mathbf{k} + (0.154866\text{ m})(13.6808\text{ N})\mathbf{k}$$

$$= -(6.1946\text{ N}\cdot\text{m})\mathbf{k}$$

or $\mathbf{M} = 6.19\text{ N}\cdot\text{m}$ ↻ ◀

(*b*) We have

$$\mathbf{M} = Fd(-\mathbf{k})$$

$$= 40\text{ N}[(0.270\text{ m})\sin(55° - 20°)](-\mathbf{k})$$

$$= -(6.1946\text{ N}\cdot\text{m})\mathbf{k}$$

or $\mathbf{M} = 6.19\text{ N}\cdot\text{m}$ ↻ ◀

(*c*) We have $\Sigma\mathbf{M}_A:\quad \Sigma(\mathbf{r}_A \times \mathbf{F}) = \mathbf{r}_{B/A} \times \mathbf{F}_B + \mathbf{r}_{C/A} \times \mathbf{F}_C = \mathbf{M}$

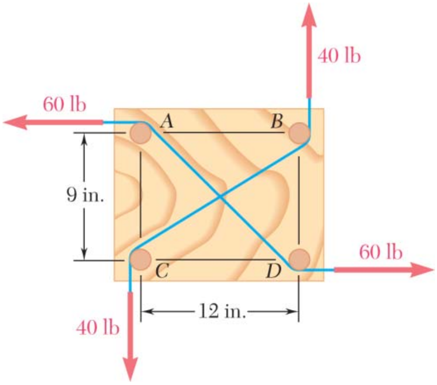
$$M = (0.390\text{ m})(40\text{ N})\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ \cos 55° & \sin 55° & 0 \\ -\cos 20° & -\sin 20° & 0 \end{vmatrix}$$

$$+ (0.660\text{ m})(40\text{ N})\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ \cos 55° & \sin 55° & 0 \\ \cos 20° & \sin 20° & 0 \end{vmatrix}$$

$$= (8.9478\text{ N}\cdot\text{m} - 15.1424\text{ N}\cdot\text{m})\mathbf{k}$$

$$= -(6.1946\text{ N}\cdot\text{m})\mathbf{k}$$

or $\mathbf{M} = 6.19\text{ N}\cdot\text{m}$ ↻ ◀



PROBLEM 3.72

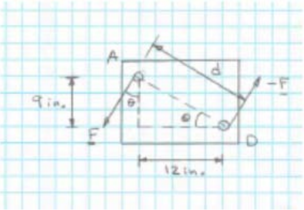
Four $1\frac{1}{2}$-in.-diameter pegs are attached to a board as shown. Two strings are passed around the pegs and pulled with the forces indicated. (*a*) Determine the resultant couple acting on the board. (*b*) If only one string is used, around which pegs should it pass and in what directions should it be pulled to create the same couple with the minimum tension in the string? (*c*) What is the value of that minimum tension?

SOLUTION

(*a*)

$$+\circlearrowright M = (60\text{ lb})(10.5\text{ in.}) + (40\text{ lb})(13.5\text{ in.})$$
$$= 630\text{ lb}\cdot\text{in.} + 540\text{ lb}\cdot\text{in.}$$

$$M = 1170\text{ lb}\cdot\text{in.}\ \circlearrowright$$ ◀



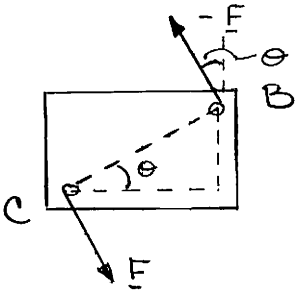
(*b*) With only one string, pegs *A* and *D*, or *B* and *C* should be used. We have

$$\tan\theta = \frac{9}{12} \qquad \theta = 36.9^\circ \qquad 90^\circ - \theta = 53.1^\circ$$

Direction of forces:

With pegs *A* and *D*: $\theta = 53.1^\circ$ ↗ ◀

With pegs *B* and *C*: $\theta = 53.1^\circ$ ↖ ◀



(*c*) The distance between the centers of the two pegs is

$$\sqrt{12^2 + 9^2} = 15\text{ in.}$$

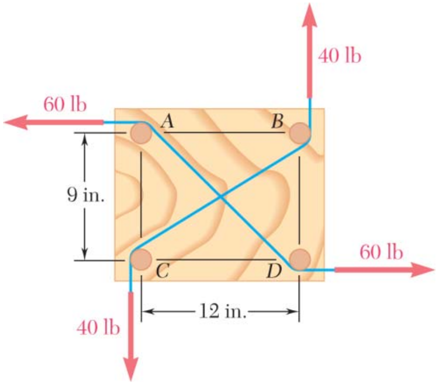
Therefore, the perpendicular distance *d* between the forces is

$$d = 15\text{ in.} + 2\left(\frac{3}{4}\text{ in.}\right)$$
$$= 16.5\text{ in.}$$

We must have $M = Fd \quad 1170\text{ lb}\cdot\text{in.} = F(16.5\text{ in.})$

$$F = 70.9\text{ lb}$$ ◀

PROBLEM 3.73

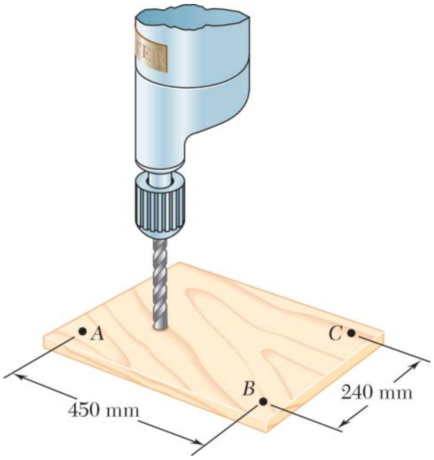


Four pegs of the same diameter are attached to a board as shown. Two strings are passed around the pegs and pulled with the forces indicated. Determine the diameter of the pegs knowing that the resultant couple applied to the board is 1132.5 lb·in. counterclockwise.

SOLUTION

$$M = d_{AD}F_{AD} + d_{BC}F_{BC}$$

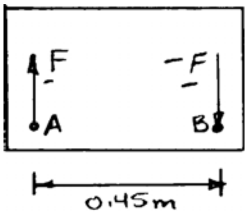
$$1132.5 \text{ lb}\cdot\text{in.} = [(9+d)\text{ in.}](60\text{ lb}) + [(12+d)\text{ in.}](40\text{ lb}) \qquad d = 1.125\text{ in.} \blacktriangleleft$$



PROBLEM 3.74

A piece of plywood in which several holes are being drilled successively has been secured to a workbench by means of two nails. Knowing that the drill exerts a 12-N·m couple on the piece of plywood, determine the magnitude of the resulting forces applied to the nails if they are located (*a*) at *A* and *B*, (*b*) at *B* and *C*, (*c*) at *A* and *C*.

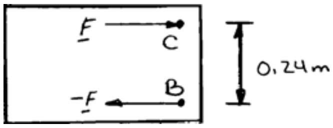
SOLUTION



(*a*) $M = Fd$

$12\ \text{N}\cdot\text{m} = F(0.45\ \text{m})$

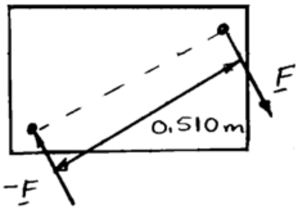
$F = 26.7\ \text{N}$ ◀



(*b*) $M = Fd$

$12\ \text{N}\cdot\text{m} = F(0.24\ \text{m})$

$F = 50.0\ \text{N}$ ◀

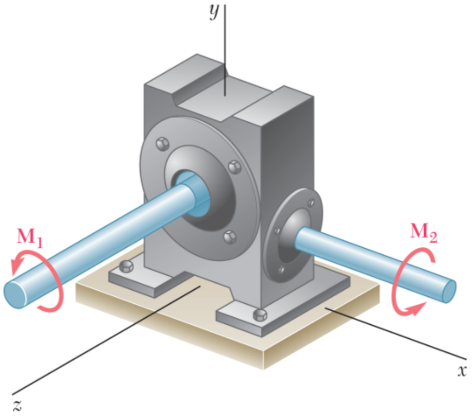


(*c*) $M = Fd \qquad d = \sqrt{(0.45\ \text{m})^2 + (0.24\ \text{m})^2}$

$= 0.510\ \text{m}$

$12\ \text{N}\cdot\text{m} = F(0.510\ \text{m})$

$F = 23.5\ \text{N}$ ◀



PROBLEM 3.75

The two shafts of a speed-reducer unit are subjected to couples of magnitude $M_1 = 15$ lb·ft and $M_2 = 3$ lb·ft, respectively. Replace the two couples with a single equivalent couple, specifying its magnitude and the direction of its axis.

SOLUTION

$$M_1 = (15 \text{ lb}\cdot\text{ft})\mathbf{k}$$

$$M_2 = (3 \text{ lb}\cdot\text{ft})\mathbf{i}$$

$$\begin{aligned} M &= \sqrt{M_1^2 + M_2^2} \\ &= \sqrt{(15)^2 + (3)^2} \\ &= 15.30 \text{ lb}\cdot\text{ft} \end{aligned}$$

$$\tan\theta_x = \frac{15}{3} = 5$$

$$\theta_x = 78.7°$$

$$\theta_y = 90°$$

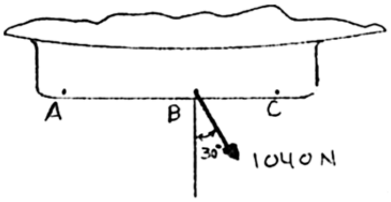
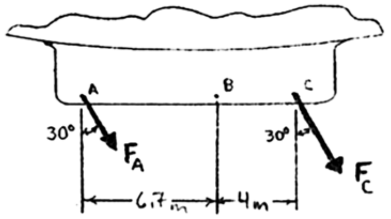
PROBLEM 3.83

A dirigible is tethered by a cable attached to its cabin at *B*. If the tension in the cable is 1040 N, replace the force exerted by the cable at *B* with an equivalent system formed by two parallel forces applied at *A* and *C*.

SOLUTION





Require the equivalent forces acting at *A* and *C* be parallel and at an angle of α with the vertical.

Then for equivalence,

$$\Sigma F_x: \quad (1040\text{ N})\sin 30° = F_A \sin\alpha + F_B \sin\alpha \qquad (1)$$

$$\Sigma F_y: \quad -(1040\text{ N})\cos 30° = -F_A \cos\alpha - F_B \cos\alpha \qquad (2)$$

Dividing Equation (1) by Equation (2),

$$\frac{(1040\text{ N})\sin 30°}{-(1040\text{ N})\cos 30°} = \frac{(F_A + F_B)\sin\alpha}{-(F_A + F_B)\cos\alpha}$$

Simplifying yields $\alpha = 30°$.

Based on

$$\Sigma M_C: \quad [(1040\text{ N})\cos 30°](4\text{ m}) = (F_A \cos 30°)(10.7\text{ m})$$

$$F_A = 388.79\text{ N}$$

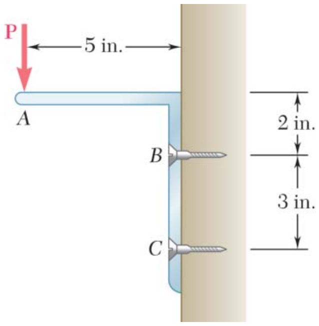
or $\mathbf{F}_A = 389\text{ N}$ ↘ 60.0° ◀

Based on

$$\Sigma M_A: \quad -[(1040\text{ N})\cos 30°](6.7\text{ m}) = (F_C \cos 30°)(10.7\text{ m})$$

$$F_C = 651.21\text{ N}$$

or $\mathbf{F}_C = 651\text{ N}$ ↘ 60.0° ◀



PROBLEM 3.84

A 30-lb vertical force **P** is applied at *A* to the bracket shown, which is held by screws at *B* and *C*. (*a*) Replace **P** with an equivalent force-couple system at *B*. (*b*) Find the two horizontal forces at *B* and *C* that are equivalent to the couple obtained in part *a*.

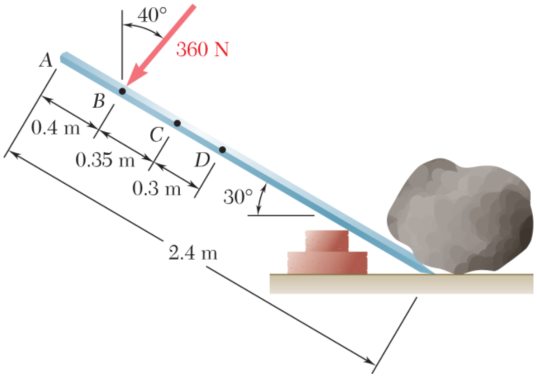
SOLUTION

(*a*)
$$M_B = (30 \text{ lb})(5 \text{ in.})$$
$$= 150.0 \text{ lb} \cdot \text{in.}$$

$$\mathbf{F} = 30.0 \text{ lb} \downarrow, \quad \mathbf{M}_B = 150.0 \text{ lb} \cdot \text{in.} \circlearrowright \blacktriangleleft$$

(*b*)
$$B = C = \frac{150 \text{ lb} \cdot \text{in.}}{3.0 \text{ in.}} = 50.0 \text{ lb}$$

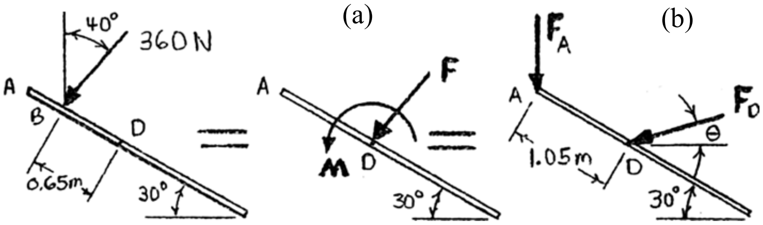
$$\mathbf{B} = 50.0 \text{ lb} \longleftarrow; \quad \mathbf{C} = 50.0 \text{ lb} \longrightarrow \blacktriangleleft$$



PROBLEM 3.85

A worker tries to move a rock by applying a 360-N force to a steel bar as shown. (*a*) Replace that force with an equivalent force-couple system at *D*. (b) Two workers attempt to move the same rock by applying a vertical force at *A* and another force at *D*. Determine these two forces if they are to be equivalent to the single force of Part *a*.

SOLUTION



(*a*) We have $\Sigma\mathbf{F}: \quad 360\text{ N}(-\sin 40°\mathbf{i} - \cos 40°\mathbf{j}) = -(231.40\text{ N})\mathbf{i} - (275.78\text{ N})\mathbf{j} = \mathbf{F}$

or $\mathbf{F} = 360\text{ N} \swarrow 50°$ ◀

We have $\Sigma\mathbf{M}_D: \quad \mathbf{r}_{B/D} \times \mathbf{R} = \mathbf{M}$

where

$$\begin{aligned}\mathbf{r}_{B/D} &= -[(0.65\text{ m})\cos 30°]\mathbf{i} + [(0.65\text{ m})\sin 30°]\mathbf{j}\\ &= -(0.56292\text{ m})\mathbf{i} + (0.32500\text{ m})\mathbf{j}\end{aligned}$$

$$\mathbf{M} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -0.56292 & 0.32500 & 0 \\ -231.40 & -275.78 & 0 \end{vmatrix} \text{N}\cdot\text{m}$$

$$= [155.240 + 75.206)\text{N}\cdot\text{m}]\mathbf{k}$$

$$= (230.45\text{ N}\cdot\text{m})\mathbf{k}$$

or $\mathbf{M} = 230\text{ N}\cdot\text{m} \circlearrowleft$ ◀

(*b*) We have $\Sigma\mathbf{M}_D: \quad \mathbf{M} = \mathbf{r}_{A/D} \times \mathbf{F}_A$

where

$$\begin{aligned}\mathbf{r}_{B/D} &= -[(1.05\text{ m})\cos 30°]\mathbf{i} + [(1.05\text{ m})\sin 30°]\mathbf{j}\\ &= -(0.90933\text{ m})\mathbf{i} + (0.52500\text{ m})\mathbf{j}\end{aligned}$$

$$F_A = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -0.90933 & 0.52500 & 0 \\ 0 & -1 & 0 \end{vmatrix} \text{N}\cdot\text{m}$$

$$= [230.45\text{ N}\cdot\text{m}]\mathbf{k}$$

PROBLEM 3.85 (Continued)

or $(0.90933F_A)\mathbf{k} = 230.45\mathbf{k}$

$F_A = 253.42 \text{ N}$ or $\mathbf{F}_A = 253 \text{ N}\downarrow$ ◀

We have $\Sigma\mathbf{F}: \quad \mathbf{F} = \mathbf{F}_A + \mathbf{F}_D$

$$-(231.40 \text{ N})\mathbf{i} - (275.78 \text{ N})\mathbf{j} = -(253.42 \text{ N})\mathbf{j} + F_D(-\cos\theta\mathbf{i} - \sin\theta\mathbf{j})$$

From $\mathbf{i}: \quad 231.40 \text{ N} = F_D \cos\theta \qquad (1)$

$\mathbf{j}: \quad 22.36 \text{ N} = F_D \sin\theta \qquad (2)$

Equation (2) divided by Equation (1)

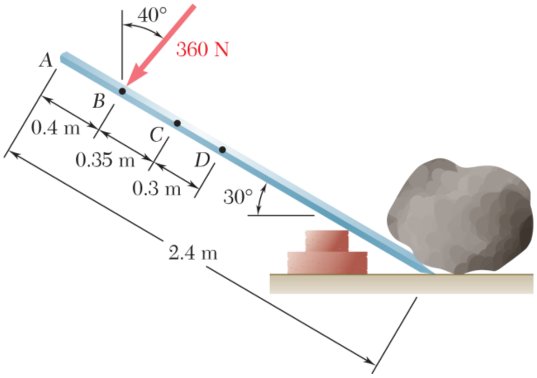
$\tan\theta = 0.096629$

$\theta = 5.5193°$ or $\theta = 5.52°$

Substitution into Equation (1)

$$F_D = \frac{231.40}{\cos 5.5193°} = 232.48 \text{ N}$$

or $\mathbf{F}_D = 232 \text{ N} \swarrow 5.52°$ ◀



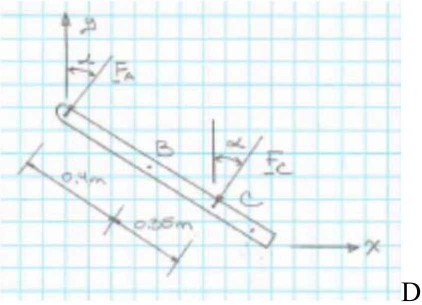
PROBLEM 3.86

A worker tries to move a rock by applying a 360-N force to a steel bar as shown. If two workers attempt to move the same rock by applying a force at *A* and a parallel force at *C*, determine these two forces so that they will be equivalent to the single 360-N force shown in the figure.

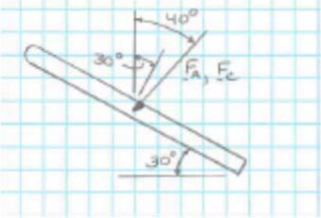
SOLUTION

$$\Sigma F_X:\ \ -360\sin 40^\circ = -F_A\sin\alpha - F_C\sin\alpha \quad (1)$$

$$\Sigma F_Y:\ \ -360\cos 40^\circ = F_A\cos\alpha - \mathrm{F}_C\cos\alpha \quad (2)$$



Dividing (1) by (2) yields $\alpha = 40^\circ$ and then $F_A + F_C = 360\text{ N} \quad (3)$



$$\Sigma\mathbf{M}_B:\ \ 0 = (0.4\text{ m})F_A\cos 10^\circ - (0.35\text{ m})F_C\cos 10^\circ$$

$$F_A = \frac{7}{8}F_C \quad (4)$$

Substituting into (3) ....

$$\frac{7}{8}F_C + F_C = 360$$

Finally $\mathbf{F}_A = 168.0\text{ N}$ ↙ 50.0°; $\mathbf{F}_C = 192.0\text{ N}$ ↙ 50.0°; ◀

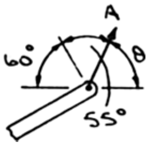
PROBLEM 3.89

Three control rods attached to a lever *ABC* exert on it the forces shown. (*a*) Replace the three forces with an equivalent force-couple system at *B*. (*b*) Determine the single force that is equivalent to the force-couple system obtained in Part *a*, and specify its point of application on the lever.

SOLUTION



(*a*) First note that the two 20-lb forces form *A* couple. Then

$$\mathbf{F} = 48 \text{ lb} \measuredangle \theta$$

where $\theta = 180° - (60° + 55°) = 65°$

and

$$\begin{aligned} M &= \Sigma M_B \\ &= (30 \text{ in.})(48 \text{ lb})\cos 55° - (70 \text{ in.})(20 \text{ lb})\cos 20° \\ &= -489.62 \text{ lb}\cdot\text{in} \end{aligned}$$

The equivalent force-couple system at *B* is

$$\mathbf{F} = 48.0 \text{ lb} \measuredangle 65.0°; \qquad \mathbf{M} = 490 \text{ lb}\cdot\text{in.} \circlearrowright$$ ◀

(*b*) The single equivalent force $\mathbf{F}'$ is equal to **F**. Further, since the sense of **M** is clockwise, $\mathbf{F}'$ must be applied between *A* and *B*. For equivalence.

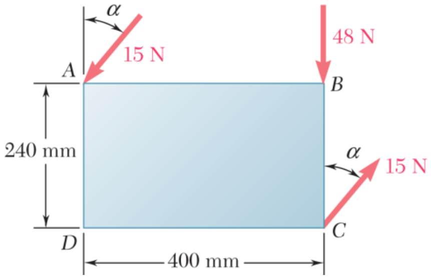
$$\Sigma M_B: \quad M = -aF' \cos 55°$$

where *a* is the distance from *B* to the point of application of $\mathbf{F}'$. Then

$$-489.62 \text{ lb}\cdot\text{in.} = -a(48.0 \text{ lb})\cos 55°$$

or $a = 17.78$ in. $\qquad \mathbf{F}' = 48.0 \text{ lb} \measuredangle 65.0°$ ◀

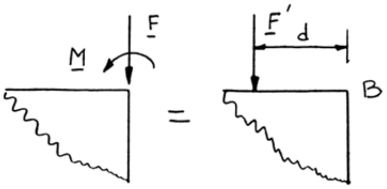
and is applied to the lever 17.78 in. to the left of pin *B* ◀



PROBLEM 3.90

A rectangular plate is acted upon by the force and couple shown. This system is to be replaced with a single equivalent force. (*a*) For $\alpha = 40°$, specify the magnitude and the line of action of the equivalent force. (*b*) Specify the value of α if the line of action of the equivalent force is to intersect line *CD* 300 mm to the right of *D*.

SOLUTION



(*a*) The given force-couple system (*F*, *M*) at *B* is

$$\mathbf{F} = 48 \text{ N}\downarrow$$

and $M = \Sigma M_B$

$$= (0.4 \text{ m})(15 \text{ N})\cos 40° + (0.24 \text{ m})(15 \text{ N})\sin 40°$$

or $\mathbf{M} = 6.9103 \text{ N}\cdot\text{m} \circlearrowright$

The single equivalent force F' is equal to **F**. Further for equivalence

$$\Sigma M_B:\quad M = dF'$$

or $6.9103 \text{ N}\cdot\text{m} = d \times 48 \text{ N}$

or $d = 0.14396 \text{ m}$ $\quad F' = 48.0 \text{ N}$ ◀

and the line of action of F' intersects line *AB* 144.0 mm to the right of *A*. ◀

(*b*) Following the solution to Part *a* but with $d = 0.1$ m and α unknown, have

$$\Sigma M_B:\quad (0.4 \text{ m})(15 \text{ N})\cos\alpha + (0.24 \text{ m})(15 \text{ N})\sin\alpha$$

$$= (0.1 \text{ m})(48 \text{ N})$$

or $5\cos\alpha + 3\sin\alpha = 4$

Rearranging and squaring $\quad 25\cos^2\alpha = (4 - 3\sin\alpha)^2$

Using $\cos^2\alpha = 1 - \sin^2\alpha$ and expanding

$$25(1 - \sin^2\alpha) = 16 - 24\sin\alpha + 9\sin^2\alpha$$

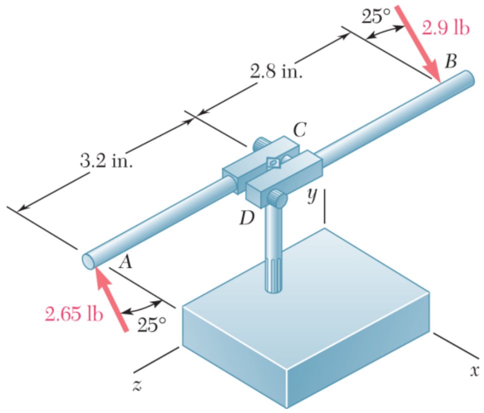
or $34\sin^2\alpha - 24\sin\alpha - 9 = 0$

Then

$$\sin\alpha = \frac{24 \pm \sqrt{(-24)^2 - 4(34)(-9)}}{2(34)}$$

$$\sin\alpha = 0.97686 \quad\text{or}\quad \sin\alpha = -0.27098$$

$$\alpha = 77.7° \quad\text{or}\quad \alpha = -15.72°$$ ◀



PROBLEM 3.91

While tapping a hole, a machinist applies the horizontal forces shown to the handle of the tap wrench. Show that these forces are equivalent to a single force, and specify, if possible, the point of application of the single force on the handle.

SOLUTION

Since the forces at *A* and *B* are parallel, the force at *B* can be replaced with the sum of two forces with one of the forces equal in magnitude to the force at *A* except with an opposite sense, resulting in a force-couple.

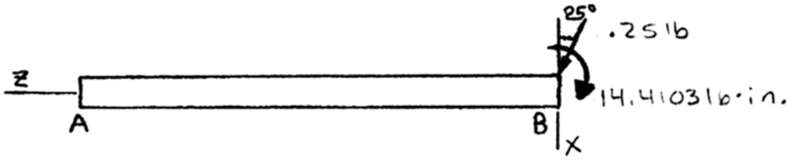
We have $F_B = 2.9\text{ lb} - 2.65\text{ lb} = 0.25\text{ lb}$, where the 2.65-lb force is part of the couple. Combining the two parallel forces,

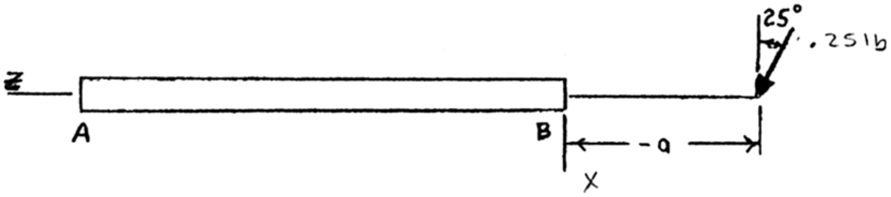
$$M_{\text{couple}} = (2.65\text{ lb})[(3.2\text{ in.} + 2.8\text{ in.})\cos 25°]$$

$$= 14.4103\text{ lb}\cdot\text{in.}$$

and

$$\mathbf{M}_{\text{couple}} = 14.4103\text{ lb}\cdot\text{in.}$$





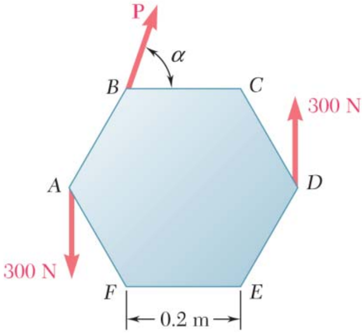
A single equivalent force will be located in the negative *z* direction.

Based on $\Sigma M_B: \quad -14.4103\text{ lb}\cdot\text{in.} = [(0.25\text{ lb})\cos 25°](a)$

$$a = 63.600\text{ in.}$$

$$\mathbf{F}' = (0.25\text{ lb})(\cos 25°\mathbf{i} + \sin 25°\mathbf{k})$$

$\mathbf{F}' = (0.227\text{ lb})\mathbf{i} + (0.1057\text{ lb})\mathbf{k}$ and is applied on an extension of handle *BD* at a distance of 63.6 in. to the right of *B*. ◀

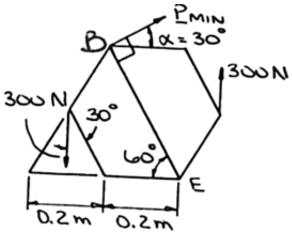


PROBLEM 3.92

A hexagonal plate is acted upon by the force **P** and the couple shown. Determine the magnitude and the direction of the smallest force **P** for which this system can be replaced with a single force at *E*.

SOLUTION

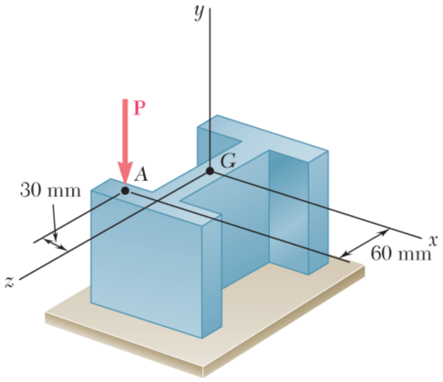
From the statement of the problem, it follows that $\Sigma M_E = 0$ for the given force-couple system. Further, for $\mathbf{P}_{\text{min}}$, we must require that **P** be perpendicular to $\mathbf{r}_{B/E}$. Then



$$\Sigma M_E: \quad (0.2 \sin 30° + 0.2)\text{m} \times 300\text{ N}$$
$$+ (0.2\text{ m}) \sin 30° \times 300\text{ N}$$
$$- (0.4\text{ m}) P_{\text{min}} = 0$$

or
$$P_{\text{min}} = 300\text{ N}$$

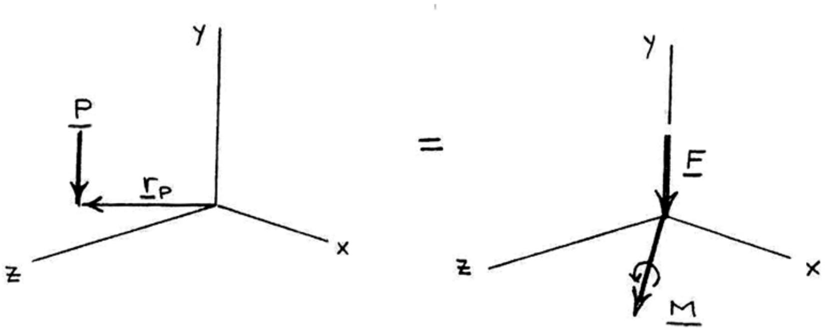
$\mathbf{P}_{\text{min}} = 300\text{ N} \measuredangle 30.0°$ ◀



PROBLEM 3.93

An eccentric, compressive 250-kN force **P** is applied to the end of a column. Replace **P** with an equivalent force-couple system at *G*.

SOLUTION



Have $\Sigma\mathbf{F}$: $-(250 \text{ kN})\mathbf{j} = \mathbf{F}$

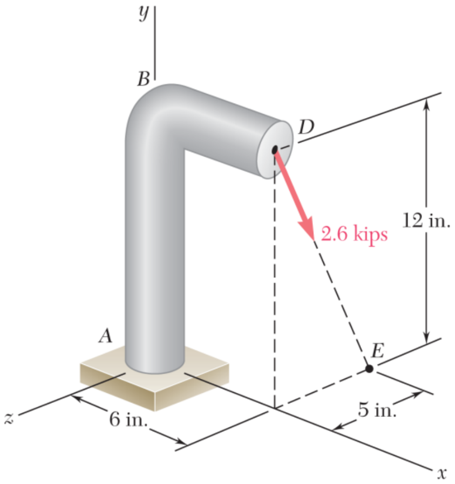
or $\mathbf{F} = -(250 \text{ kN})\mathbf{j}$ ◀

Also have $\Sigma\mathbf{M}_G$: $\mathbf{r}_P \times \mathbf{P} = \mathbf{M}$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -0.030 & 0 & 0.060 \\ 0 & -250 & 0 \end{vmatrix} \text{kN}\cdot\text{m} = \mathbf{M}$$

$$\therefore\ \mathbf{M} = (15 \text{ kN}\cdot\text{m})\mathbf{i} + (7.5 \text{ kN}\cdot\text{m})\mathbf{k}$$

or $\mathbf{M} = (15.00 \text{ kN}\cdot\text{m})\mathbf{i} + (7.50 \text{ kN}\cdot\text{m})\mathbf{k}$ ◀



PROBLEM 3.94

A 2.6-kip force is applied at Point D of the cast iron post shown. Replace that force with an equivalent force-couple system at the center A of the base section.

SOLUTION

$$\overrightarrow{DE} = -(12\text{ in.})\mathbf{j} - (5\text{ in.})\mathbf{k}; \quad DE = 13.00\text{ in.}$$

$$\mathbf{F} = (2.6\text{ kips})\frac{\overrightarrow{DE}}{DE}$$

$$\mathbf{F} = (2.6\text{ kips})\frac{-12\mathbf{j} - 5\mathbf{k}}{13}$$

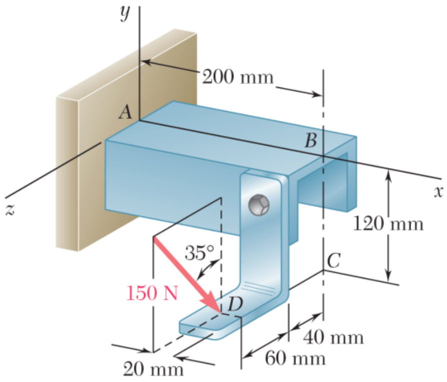
$$\mathbf{F} = -(2.40\text{ kips})\mathbf{j} - (1.000\text{ kip})\mathbf{k} \blacktriangleleft$$

$$\mathbf{M}_A = \mathbf{r}_{D/A} \times \mathbf{F}$$

where $\mathbf{r}_{D/A} = (6\text{ in.})\mathbf{i} + (12\text{ in.})\mathbf{j}$

$$\mathbf{M}_A = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 6\text{ in.} & 12\text{ in.} & 0 \\ 0 & -2.4\text{ kips} & -1.0\text{ kips} \end{vmatrix}$$

$$\mathbf{M}_A = -(12.00\text{ kip}\cdot\text{in.})\mathbf{i} + (6.00\text{ kip}\cdot\text{in.})\mathbf{j} - (14.40\text{ kip}\cdot\text{in.})\mathbf{k} \blacktriangleleft$$



PROBLEM 3.95

Replace the 150-N force with an equivalent force-couple system at *A*.

SOLUTION

Equivalence requires $\Sigma\mathbf{F}:\quad \mathbf{F} = (150\text{ N})(-\cos 35°\mathbf{j} - \sin 35°\mathbf{k})$

$$= -(122.873\text{ N})\mathbf{j} - (86.036\text{ N})\mathbf{k}$$

$$\Sigma\mathbf{M}_A:\quad \mathbf{M} = \mathbf{r}_{D/A} \times \mathbf{F}$$

where $\mathbf{r}_{D/A} = (0.18\text{ m})\mathbf{i} - (0.12\text{ m})\mathbf{j} + (0.1\text{ m})\mathbf{k}$

Then
$$\mathbf{M} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.18 & -0.12 & 0.1 \\ 0 & -122.873 & -86.036 \end{vmatrix} \text{N}\cdot\text{m}$$

$$= [(-0.12)(-86.036) - (0.1)(-122.873)]\mathbf{i}$$

$$+ [-(0.18)(-86.036)]\mathbf{j}$$

$$+ [(0.18)(-122.873)]\mathbf{k}$$

$$= (22.6\text{ N}\cdot\text{m})\mathbf{i} + (15.49\text{ N}\cdot\text{m})\mathbf{j} - (22.1\text{ N}\cdot\text{m})\mathbf{k}$$

The equivalent force-couple system at *A* is

$\mathbf{F} = -(122.9\text{ N})\mathbf{j} - (86.0\text{ N})\mathbf{k}$ ◀

$\mathbf{M} = (22.6\text{ N}\cdot\text{m})\mathbf{i} + (15.49\text{ N}\cdot\text{m})\mathbf{j} - (22.1\text{ N}\cdot\text{m})\mathbf{k}$ ◀

PROBLEM 3.97

A 46-lb force **F** and a 2120-lb·in. couple **M** are applied to corner *A* of the block shown. Replace the given force-couple system with an equivalent force-couple system at corner *H*.

SOLUTION

We have $$d_{AJ} = \sqrt{(18)^2 + (-14)^2 + (-3)^2} = 23 \text{ in.}$$

Then $$\mathbf{F} = \frac{46 \text{ lb}}{23}(18\mathbf{i} - 14\mathbf{j} - 3\mathbf{k})$$
$$= (36 \text{ lb})\mathbf{i} - (28 \text{ lb})\mathbf{j} - (6 \text{ lb})\mathbf{k}$$

Also $$d_{AC} = \sqrt{(-45)^2 + (0)^2 + (-28)^2} = 53 \text{ in.}$$

Then $$\mathbf{M} = \frac{2120 \text{ lb}\cdot\text{in.}}{53}(-45\mathbf{i} - 28\mathbf{k})$$
$$= -(1800 \text{ lb}\cdot\text{in.})\mathbf{i} - (1120 \text{ lb}\cdot\text{in.})\mathbf{k}$$

Now $$\mathbf{M}' = \mathbf{M} + \mathbf{r}_{A/H} \times \mathbf{F}$$

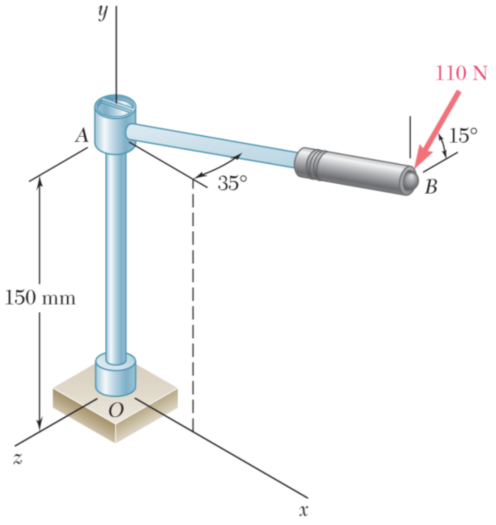
where $$\mathbf{r}_{A/H} = (45 \text{ in.})\mathbf{i} + (14 \text{ in.})\mathbf{j}$$

Then $$\mathbf{M}' = (-1800\mathbf{i} - 1120\mathbf{k}) + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 45 & 14 & 0 \\ 36 & -28 & -6 \end{vmatrix}$$

$$= (-1800\mathbf{i} - 1120\mathbf{k}) + \{[(14)(-6)]\mathbf{i} + [-(45)(-6)]\mathbf{j} + [(45)(-28) - (14)(36)]\mathbf{k}\}$$
$$= (-1800 - 84)\mathbf{i} + (270)\mathbf{j} + (-1120 - 1764)\mathbf{k}$$
$$= -(1884 \text{ lb}\cdot\text{in.})\mathbf{i} + (270 \text{ lb}\cdot\text{in.})\mathbf{j} - (2884 \text{ lb}\cdot\text{in.})\mathbf{k}$$
$$= -(157 \text{ lb}\cdot\text{ft})\mathbf{i} + (22.5 \text{ lb}\cdot\text{ft})\mathbf{j} - (240 \text{ lb}\cdot\text{ft})\mathbf{k}$$

The equivalent force-couple system at *H* is $$\mathbf{F}' = (36.0 \text{ lb})\mathbf{i} - (28.0 \text{ lb})\mathbf{j} - (6.00 \text{ lb})\mathbf{k} \blacktriangleleft$$

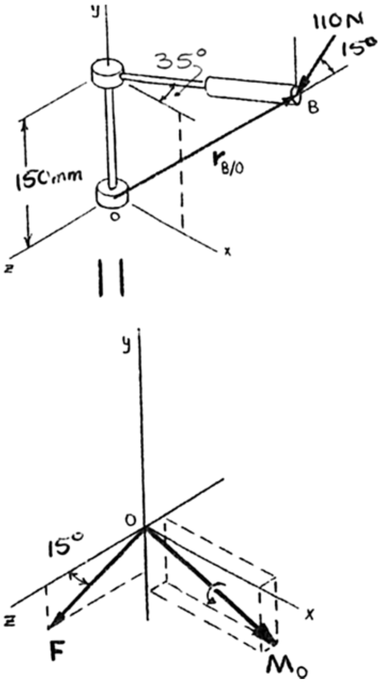
$$\mathbf{M}' = -(157.0 \text{ lb}\cdot\text{ft})\mathbf{i} + (22.5 \text{ lb}\cdot\text{ft})\mathbf{j} - (240 \text{ lb}\cdot\text{ft})\mathbf{k} \blacktriangleleft$$



PROBLEM 3.98

A 110-N force acting in a vertical plane parallel to the *yz*-plane is applied to the 220-mm-long horizontal handle *AB* of a socket wrench. Replace the force with an equivalent force-couple system at the origin *O* of the coordinate system.

SOLUTION



We have $\Sigma\mathbf{F}: \quad \mathbf{P}_B = \mathbf{F}$

where $\mathbf{P}_B = 110\text{ N}[-(\sin 15°)\mathbf{j} + (\cos 15°)\mathbf{k}]$

$$= -(28.470\text{ N})\mathbf{j} + (106.252\text{ N})\mathbf{k}$$

or $\mathbf{F} = -(28.5\text{ N})\mathbf{j} + (106.3\text{ N})\mathbf{k}$ ◀

We have $\Sigma M_O: \quad \mathbf{r}_{B/O} \times \mathbf{P}_B = \mathbf{M}_O$

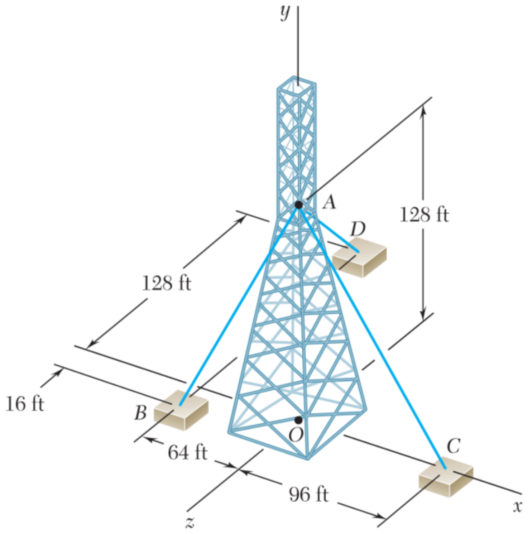
where $\mathbf{r}_{B/O} = [(0.22\cos 35°)\mathbf{i} + (0.15)\mathbf{j} - (0.22\sin 35°)\mathbf{k}]\text{ m}$

$$= (0.180213\text{ m})\mathbf{i} + (0.15\text{ m})\mathbf{j} - (0.126187\text{ m})\mathbf{k}$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.180213 & 0.15 & 0.126187 \\ 0 & -28.5 & 106.3 \end{vmatrix} \text{N} \cdot \text{m} = \mathbf{M}_O$$

$$\mathbf{M}_O = [(12.3487)\mathbf{i} - (19.1566)\mathbf{j} - (5.1361)\mathbf{k}]\text{ N} \cdot \text{m}$$

or $\mathbf{M}_O = (12.35\text{ N} \cdot \text{m})\mathbf{i} - (19.16\text{ N} \cdot \text{m})\mathbf{j} - (5.13\text{ N} \cdot \text{m})\mathbf{k}$ ◀



PROBLEM 3.99

An antenna is guyed by three cables as shown. Knowing that the tension in cable *AB* is 288 lb, replace the force exerted at *A* by cable *AB* with an equivalent force-couple system at the center *O* of the base of the antenna.

SOLUTION

We have $$d_{AB} = \sqrt{(-64)^2 + (-128)^2 + (16)^2} = 144 \text{ ft}$$

Then $$\mathbf{T}_{AB} = \frac{288 \text{ lb}}{144}(-64\mathbf{i} - 128\mathbf{j} + 16\mathbf{k})$$

$$= (32 \text{ lb})(-4\mathbf{i} - 8\mathbf{j} + \mathbf{k})$$

Now $$\mathbf{M} = \mathbf{M}_O = \mathbf{r}_{A/O} \times \mathbf{T}_{AB}$$

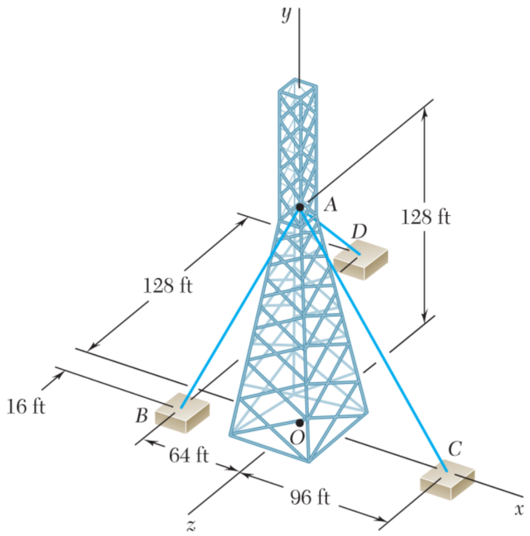
$$= 128\mathbf{j} \times 32(-4\mathbf{i} - 8\mathbf{j} + \mathbf{k})$$

$$= (4096 \text{ lb} \cdot \text{ft})\mathbf{i} + (16{,}384 \text{ lb} \cdot \text{ft})\mathbf{k}$$

The equivalent force-couple system at *O* is

$$\mathbf{F} = -(128.0 \text{ lb})\mathbf{i} - (256 \text{ lb})\mathbf{j} + (32.0 \text{ lb})\mathbf{k} \blacktriangleleft$$

$$\mathbf{M} = (4.10 \text{ kip} \cdot \text{ft})\mathbf{i} + (16.38 \text{ kip} \cdot \text{ft})\mathbf{k} \blacktriangleleft$$



PROBLEM 3.100

An antenna is guyed by three cables as shown. Knowing that the tension in cable *AD* is 270 lb, replace the force exerted at *A* by cable *AD* with an equivalent force-couple system at the center *O* of the base of the antenna.

SOLUTION

We have
$$d_{AD} = \sqrt{(-64)^2 + (-128)^2 + (-128)^2}$$
$$= 192 \text{ ft}$$

Then
$$\mathbf{T}_{AD} = \frac{270 \text{ lb}}{192}(-64\mathbf{i} - 128\mathbf{j} + 128\mathbf{k})$$
$$= (90 \text{ lb})(-\mathbf{i} - 2\mathbf{j} - 2\mathbf{k})$$

Now
$$\mathbf{M} = \mathbf{M}_O = \mathbf{r}_{A/O} \times \mathbf{T}_{AD}$$
$$= 128\mathbf{j} \times 90(-\mathbf{i} - 2\mathbf{j} - 2\mathbf{k})$$
$$= -(23{,}040 \text{ lb}\cdot\text{ft})\mathbf{i} + (11{,}520 \text{ lb}\cdot\text{ft})\mathbf{k}$$

The equivalent force-couple system at *O* is

$$\mathbf{F} = -(90.0 \text{ lb})\mathbf{i} - (180.0 \text{ lb})\mathbf{j} - (180.0 \text{ lb})\mathbf{k} \blacktriangleleft$$

$$\mathbf{M} = -(23.0 \text{ kip}\cdot\text{ft})\mathbf{i} + (11.52 \text{ kip}\cdot\text{ft})\mathbf{k} \blacktriangleleft$$

PROBLEM 3.101

A 3-m-long beam is subjected to a variety of loadings. (*a*) Replace each loading with an equivalent force-couple system at end *A* of the beam. (*b*) Which of the loadings are equivalent?

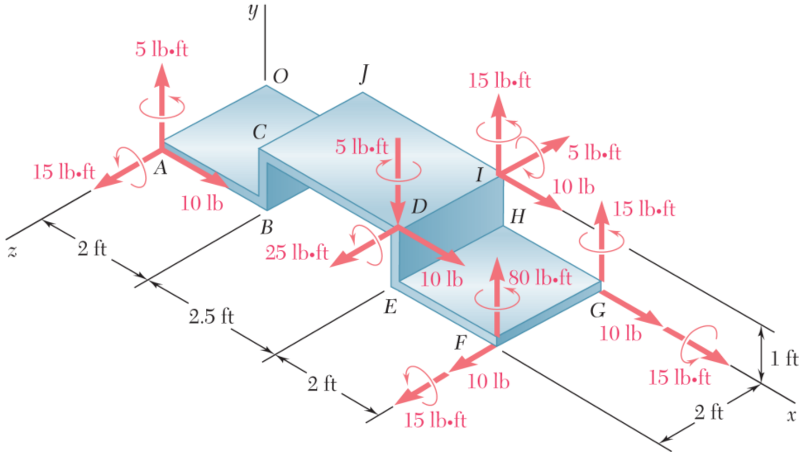
PROBLEM 3.104

Five separate force-couple systems act at the corners of a piece of sheet metal, which has been bent into the shape shown. Determine which of these systems is equivalent to a force $\mathbf{F} = (10\text{ lb})\mathbf{i}$ and a couple of moment $\mathbf{M} = (15\text{ lb}\cdot\text{ft})\mathbf{j} + (15\text{ lb}\cdot\text{ft})\mathbf{k}$ located at the origin.



SOLUTION

First note that the force-couple system at F cannot be equivalent because of the direction of the force [The force of the other four systems is $(10\text{ lb})\mathbf{i}$]. Next, move each of the systems to the origin O; the forces remain unchanged.

$$A:\quad \mathbf{M}_A = \Sigma\mathbf{M}_O = (5\text{ lb}\cdot\text{ft})\mathbf{j} + (15\text{ lb}\cdot\text{ft})\mathbf{k} + (2\text{ ft})\mathbf{k}\times(10\text{ lb})\mathbf{i}$$

$$= (25\text{ lb}\cdot\text{ft})\mathbf{j} + (15\text{ lb}\cdot\text{ft})\mathbf{k}$$

$$D:\quad \mathbf{M}_D = \Sigma\mathbf{M}_O = -(5\text{ lb}\cdot\text{ft})\mathbf{j} + (25\text{ lb}\cdot\text{ft})\mathbf{k}$$

$$+[(4.5\text{ ft})\mathbf{i} + (1\text{ ft})\mathbf{j} + (2\text{ ft})\mathbf{k}]\times 10\text{ lb})\mathbf{i}$$

$$= (15\text{ lb}\cdot\text{ft})\mathbf{i} + (15\text{ lb}\cdot\text{ft})\mathbf{k}$$

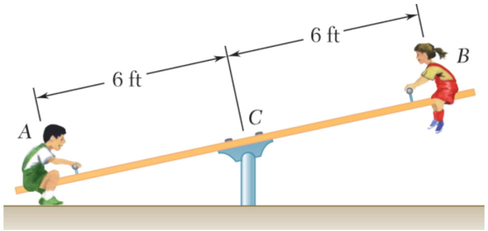
$$G:\quad \mathbf{M}_G = \Sigma\mathbf{M}_O = (15\text{ lb}\cdot\text{ft})\mathbf{i} + (15\text{ lb}\cdot\text{ft})\mathbf{j}$$

$$I:\quad \mathbf{M}_I = \Sigma\mathbf{M}_I = (15\text{ lb}\cdot\text{ft})\mathbf{j} - (5\text{ lb}\cdot\text{ft})\mathbf{k}$$

$$+[(4.5\text{ ft})\mathbf{i} + (1\text{ ft})\mathbf{j}]\times(10\text{ lb})\mathbf{j}$$

$$= (15\text{ lb}\cdot\text{ft})\mathbf{j} - (15\text{ lb}\cdot\text{ft})\mathbf{k}$$

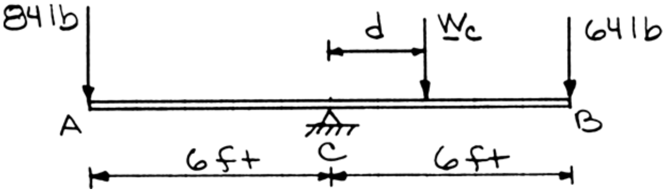
The equivalent force-couple system is the system at corner D. ◀



PROBLEM 3.105

The weights of two children sitting at ends *A* and *B* of a seesaw are 84 lb and 64 lb, respectively. Where should a third child sit so that the resultant of the weights of the three children will pass through *C* if she weighs (*a*) 60 lb, (*b*) 52 lb.

SOLUTION



(*a*) For the resultant weight to act at *C*, $\Sigma M_C = 0 \quad W_C = 60 \text{ lb}$

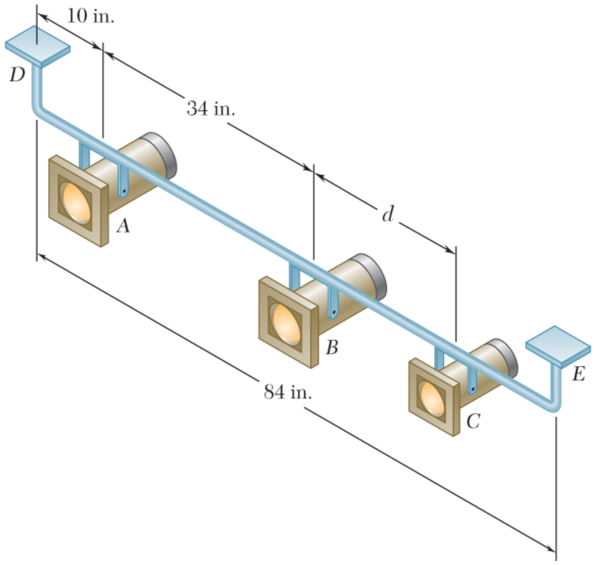
Then $(84 \text{ lb})(6 \text{ ft}) - 60 \text{ lb}(d) - 64 \text{ lb}(6 \text{ ft}) = 0$

$d = 2.00$ ft to the right of C ◀

(*b*) For the resultant weight to act at *C*, $\Sigma M_C = 0 \quad W_C = 52 \text{ lb}$

Then $(84 \text{ lb})(6 \text{ ft}) - 52 \text{ lb}(d) - 64 \text{ lb}(6 \text{ ft}) = 0$

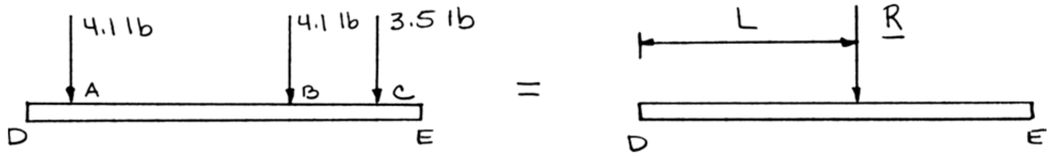
$d = 2.31$ ft to the right of C ◀



PROBLEM 3.106

Three stage lights are mounted on a pipe as shown. The lights at *A* and *B* each weigh 4.1 lb, while the one at *C* weighs 3.5 lb. (*a*) If $d = 25$ in., determine the distance from *D* to the line of action of the resultant of the weights of the three lights. (*b*) Determine the value of *d* so that the resultant of the weights passes through the midpoint of the pipe.

SOLUTION



For equivalence

$$\Sigma F_y: \quad -4.1 - 4.1 - 3.5 = -R \quad \text{or} \quad \mathbf{R} = 11.7 \text{ lb}\downarrow$$

$$\Sigma F_D: \quad -(10 \text{ in.})(4.1 \text{ lb}) - (44 \text{ in.})(4.1 \text{ lb})$$
$$-[(4.4 + d)\text{in.}](3.5 \text{ lb}) = -(L \text{ in.})(11.7 \text{ lb})$$

or $$375.4 + 3.5d = 11.7L \quad (d, L \text{ in in.})$$

(*a*) $$d = 25 \text{ in.}$$

We have $$375.4 + 3.5(25) = 11.7L \quad \text{or} \quad L = 39.6 \text{ in.}$$

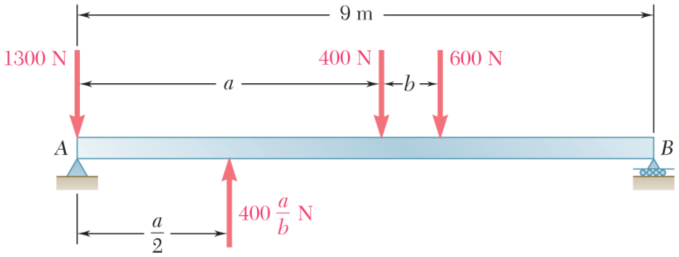
The resultant passes through a Point 39.6 in. to the right of *D*. ◀

(*b*) $$L = 42 \text{ in.}$$

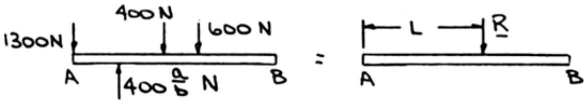
We have $$375.4 + 3.5d = 11.7(42)$$ or $d = 33.1$ in. ◀

PROBLEM 3.107

A beam supports three loads of given magnitude and a fourth load whose magnitude is a function of position. If $b = 1.5$ m and the loads are to be replaced with a single equivalent force, determine (*a*) the value of *a* so that the distance from support *A* to the line of action of the equivalent force is maximum, (*b*) the magnitude of the equivalent force and its point of application on the beam.



SOLUTION



For equivalence,

$$\Sigma F_y:\quad -1300 + 400\frac{a}{b} - 400 - 600 = -R$$

or

$$R = \left(2300 - 400\frac{a}{b}\right)\text{ N} \qquad (1)$$

$$\Sigma M_A:\quad \frac{a}{2}\left(400\frac{a}{b}\right) - a(400) - (a+b)(600) = -LR$$

or

$$L = \frac{1000a + 600b - 200\frac{a^2}{b}}{2300 - 400\frac{a}{b}}$$

Then with

$$b = 1.5\text{ m} \qquad L = \frac{10a + 9 - \frac{4}{3}a^2}{23 - \frac{8}{3}a} \qquad (2)$$

where *a*, *L* are in m.

(*a*) Find value of *a* to maximize *L*.

$$\frac{dL}{da} = \frac{\left(10 - \frac{8}{3}a\right)\left(23 - \frac{8}{3}a\right) - \left(10a + 9 - \frac{4}{3}a^2\right)\left(-\frac{8}{3}\right)}{\left(23 - \frac{8}{3}a\right)^2}$$

PROBLEM 3.107 (Continued)

or $$230 - \frac{184}{3}a - \frac{80}{3}a + \frac{64}{9}a^2 + \frac{80}{3}a + 24 - \frac{32}{9}a^2 = 0$$

or $$16a^2 - 276a + 1143 = 0$$

Then $$a = \frac{276 \pm \sqrt{(-276)^2 - 4(16)(1143)}}{2(16)}$$

or $a = 10.3435$ m and $a = 6.9065$ m

Since $AB = 9$ m, a must be less than 9 m $a = 6.91$ m ◀

(*b*) Using Eq. (1), $$R = 2300 - 400\frac{6.9065}{1.5}$$ or $R = 458$ N ◀

and using Eq. (2), $$L = \frac{10(6.9065) + 9 - \frac{4}{3}(6.9065)^2}{23 - \frac{8}{3}(6.9065)} = 3.16 \text{ m}$$

R is applied 3.16 m to the right of *A*. ◀

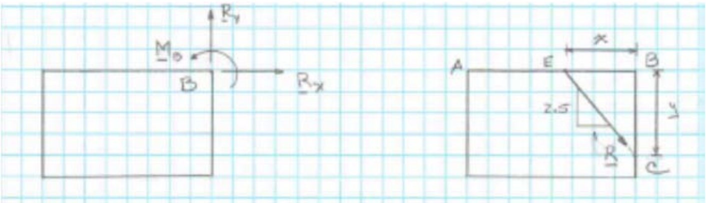
PROBLEM 3.110

To test the strength of a 625 × 500-mm suitcase, forces are applied as shown. If $P = 88$ N, (*a*) determine the resultant of the applied forces, (*b*) locate the two points where the line of action of the resultant intersects the edge of the suitcase.

SOLUTION

We have



First replace the applied forces and couples with an equivalent force-couple system at *B*.

(*a*)Thus, $\quad \Sigma F_x\!: \quad 100 + \dfrac{45}{53}(212) - 180 = R_x; \qquad R_x = 100\text{ N}$

$$\Sigma F_y\!: \quad -\frac{28}{53}(212) - 88 = R_y; \qquad R_y = -200\text{ N}$$

$$\mathbf{R} = (100\text{ N})\mathbf{i} - (200\text{ N})\mathbf{j}$$

$\mathbf{R} = 224\text{ N} \searrow 63.4°$ ◀

(*b*)

$$\Sigma M_B\!: \quad (0.1\text{ m})(100\text{ N}) + (0.53\text{ m})\left(\frac{28}{53}\right)(212\text{ N})$$

$$+ (0.08\text{ m})(88\text{ N}) - (0.28\text{ m})(180\text{ N}) = M_B$$

$$M_B = 26.0\text{ N}\cdot\text{m} \qquad (1)$$

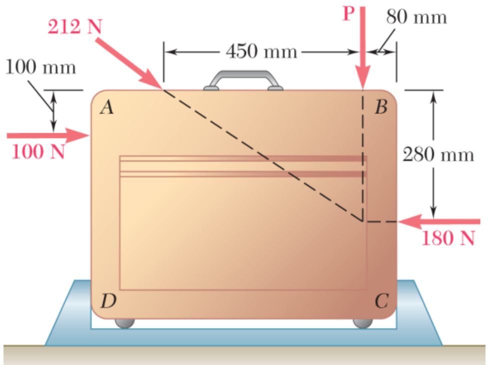
The single equivalent force **R** must then act as indicated. Then with **R** at *E*:

$$\Sigma M_B\!: \quad 26.0\text{ N}\cdot\text{m} = -x(200\text{ N})$$

$$x = 130\text{ mm}$$

$$\frac{y}{x} = \frac{2}{1} \quad \text{or } y = 260\text{ mm}$$

Therefore, the line of action of **R** intersects top *AB* 130.0 mm to the left of *B* and intersects side *BC* 260 mm below *B*. ◀



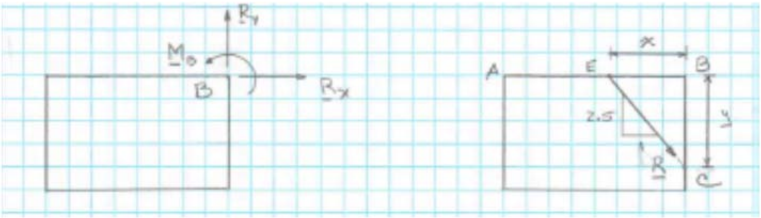
PROBLEM 3.111

Solve Prob. 3.110, assuming that $P = 138$ N.

Problem 3.110 To test the strength of a 625 × 500-mm suitcase, forces are applied as shown. If $P = 88$ N, (*a*) determine the resultant of the applied forces, (*b*) locate the two points where the line of action of the resultant intersects the edge of the suitcase.

SOLUTION

We have



First replace the applied forces and couples with an equivalent force-couple system at *B*.

(*a*) Thus,

$$\Sigma F_x:\quad 100 + \frac{45}{53}(212) - 180 = R_x; \quad R_x = 100\text{ N}$$

$$\Sigma F_y:\quad -\frac{28}{53}(212) - 138 = R_y; \qquad R_y = -250\text{ N}$$

$\mathbf{R} = 269\text{ N} \measuredangle 68.2^\circ$ ◀

(*b*)

$$\Sigma M_B:\quad (0.1\text{ m})(100\text{ N}) + (0.53\text{ m})\left(\frac{28}{53}\right)(212\text{ N})$$

$$+ (0.08\text{ m})(138\text{ N}) - (0.28\text{ m})(180\text{ N}) = M_B$$

$$M_B = 30.0\text{ N}\cdot\text{m}$$

The single equivalent force **R** must then act as indicated. Then with **R** at *E*:

$$\Sigma M_B:\quad 30\text{ N}\cdot\text{m} = -x(250\text{ N})$$

$$x = 120\text{ mm}$$

$$\frac{y}{x} = \frac{5}{2} \quad \text{or } y = 300\text{ mm}$$

Therefore, the line of action of **R** intersects top *AB* 120 mm to the left of *B* and intersects side *BC* 300 mm below *B*. ◀

80 N
40 N·m
P
=
R_y
M_G
R_x
=
F
J
b
R
I
G
a
H

First replace the applied forces and couples with an equivalent force-couple system at *G*.

Thus, $\Sigma F_x\colon\quad 200\cos 15° - 120\cos 70° + P = R_x$

or $R_x = (152.142 + P)\text{ N}$

$\Sigma F_y\colon\quad -200\sin 15° - 120\sin 70° - 80 = R_y$

or $R_y = -244.53\text{ N}$

$$\begin{aligned}\Sigma M_G\colon\quad & -(0.47\text{ m})(200\text{ N})\cos 15° + (0.05\text{ m})(200\text{ N})\sin 15° \\ & + (0.47\text{ m})(120\text{ N})\cos 70° - (0.19\text{ m})(120\text{ N})\sin 70° \\ & - (0.13\text{ m})(P\text{ N}) - (0.59\text{ m})(80\text{ N}) + 42\text{ N}\cdot\text{m} \\ & + 40\text{ N}\cdot\text{m} = M_G\end{aligned}$$

or $M_G = -(55.544 + 0.13P)\text{ N}\cdot\text{m}$ (1)

Setting $P = 0$ in Eq. (1):

Now with **R** at *I*, $\Sigma M_G\colon\quad -55.544\text{ N}\cdot\text{m} = -a(244.53\text{ N})$

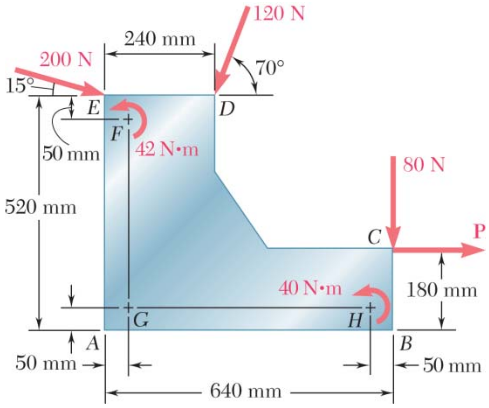
or $a = 0.227\text{ m}$

and with **R** at *J*, $\Sigma M_G\colon\quad -55.544\text{ N}\cdot\text{m} = -b(152.142\text{ N})$

or $b = 0.365\text{ m}$

(*a*) The rivet hole is 0.365 m above *G*. ◀

(*b*) The rivet hole is 0.227 m to the right of *G*. ◀



PROBLEM 3.117

Solve Problem 3.116, assuming that $P = 60$ N.

PROBLEM 3.116 A machine component is subjected to the forces and couples shown. The component is to be held in place by a single rivet that can resist a force but not a couple. For $P = 0$, determine the location of the rivet hole if it is to be located (*a*) on line *FG*, (*b*) on line *GH*.

SOLUTION

See the solution to Problem 3.116 leading to the development of Equation (1):

$$M_G = -(55.544 + 0.13P)\ \text{N} \cdot \text{m}$$

and $$R_x = (152.142 + P)\ \text{N}$$

For $$P = 60\ \text{N}$$

we have
$$\begin{aligned} R_x &= (152.142 + 60) \\ &= 212.14\ \text{N} \\ M_G &= -[55.544 + 0.13(60)] \\ &= -63.344\ \text{N} \cdot \text{m} \end{aligned}$$

Then with **R** at *I*, $$\Sigma M_G\!: \quad -63.344\ \ \text{N} \cdot \text{m} = -a(244.53\ \text{N})$$

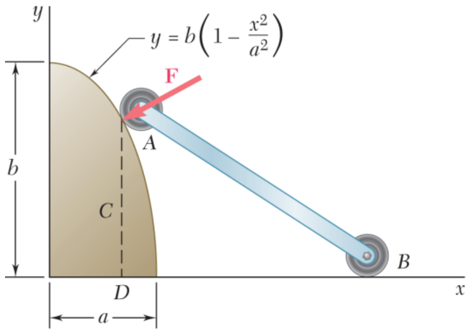
or $$a = 0.259\ \text{m}$$

and with **R** at *J*, $$\Sigma M_G\!: \quad -63.344\ \text{N} \cdot \text{m} = -b(212.14\ \text{N})$$

or $$b = 0.299\ \text{m}$$

(*a*) The rivet hole is 0.299 m above *G*. ◀

(*b*) The rivet hole is 0.259 m to the right of *G*. ◀



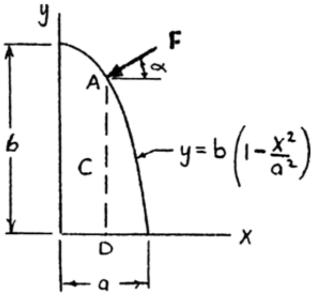
PROBLEM 3.118

As follower *AB* rolls along the surface of member *C*, it exerts a constant force **F** perpendicular to the surface. (*a*) Replace **F** with an equivalent force-couple system at Point *D* obtained by drawing the perpendicular from the point of contact to the *x*-axis. (*b*) For $a = 1$ m and $b = 2$ m, determine the value of *x* for which the moment of the equivalent force-couple system at *D* is maximum.

SOLUTION

(*a*) The slope of any tangent to the surface of member *C* is

$$\frac{dy}{dx} = \frac{d}{dx}\left[b\left(1 - \frac{x^2}{a^2}\right)\right] = \frac{-2b}{a^2}x$$



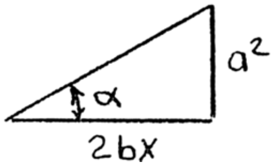
Since the force **F** is perpendicular to the surface,

$$\tan\alpha = -\left(\frac{dy}{dx}\right)^{-1} = \frac{a^2}{2b}\left(\frac{1}{x}\right)$$

For equivalence,

$$\Sigma F: \quad \mathbf{F} = \mathbf{R}$$

$$\Sigma M_D: \quad (F\cos\alpha)(y_A) = M_D$$



where

$$\cos\alpha = \frac{2bx}{\sqrt{(a^2)^2 + (2bx)^2}}$$

$$y_A = b\left(1 - \frac{x^2}{a^2}\right)$$

$$M_D = \frac{2Fb^2\left(x - \frac{x^3}{a^2}\right)}{\sqrt{a^4 + 4b^2x^2}}$$

Therefore, the equivalent force-couple system at *D* is

$$\mathbf{R} = F \swarrow \tan^{-1}\left(\frac{a^2}{2bx}\right) \blacktriangleleft$$

$$\mathbf{M} = \frac{2Fb^2\left(x - \frac{x^3}{a^2}\right)}{\sqrt{a^4 + 4b^2x^2}} \blacktriangleleft$$

PROBLEM 3.118 (Continued)

(*b*) To maximize *M*, the value of *x* must satisfy $\dfrac{dM}{dx} = 0$

where for $a = 1\text{ m}, \quad b = 2\text{ m}$

$$M = \frac{8F(x - x^3)}{\sqrt{1 + 16x^2}}$$

$$\frac{dM}{dx} = 8F\frac{\sqrt{1+16x^2}(1-3x^2) - (x - x^3)\left[\frac{1}{2}(32x)(1+16x^2)^{-1/2}\right]}{(1+16x^2)} = 0$$

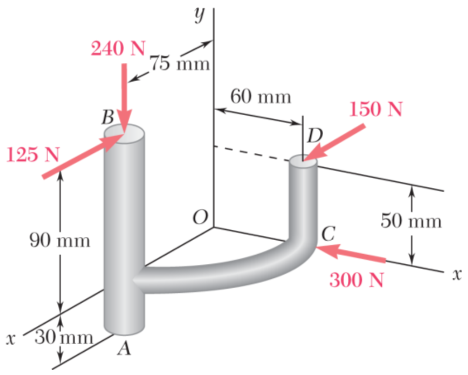
$$(1 + 16x^2)(1 - 3x^2) - 16x(x - x^3) = 0$$

or

$$32x^4 + 3x^2 - 1 = 0$$

$$x^2 = \frac{-3 \pm \sqrt{9 - 4(32)(-1)}}{2(32)} = 0.136011\text{ m}^2 \quad \text{and} \quad -0.22976\text{ m}^2$$

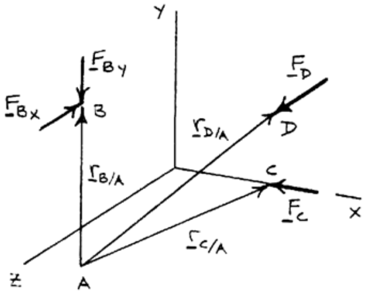
Using the positive value of x^2: $x = 0.36880\text{ m}$ or $x = 0.369\text{ m}$ ◀



PROBLEM 3.119

A machine component is subjected to the forces shown, each of which is parallel to one of the coordinate axes. Replace these forces with an equivalent force-couple system at *A*.

SOLUTION



For equivalence

$$\Sigma \mathbf{F}: \quad \mathbf{F}_B + \mathbf{F}_C + \mathbf{F}_D = \mathbf{R}_A$$

$$\mathbf{R}_A = -(240\text{ N})\mathbf{j} - (125\text{ N})\mathbf{k} - (300\text{ N})\mathbf{i} + (150\text{ N})\mathbf{k}$$

$$\therefore \quad \mathbf{R}_A = -(300\text{ N})\mathbf{i} - (240\text{ N})\mathbf{j} + (25.0\text{ N})\mathbf{k} \blacktriangleleft$$

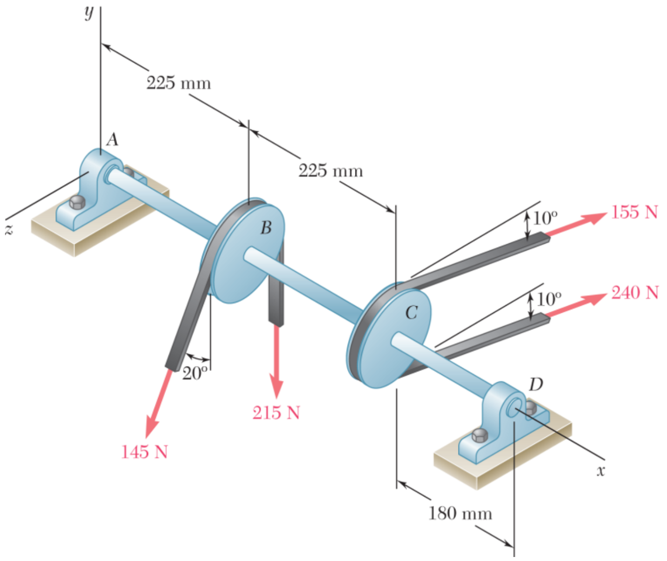
Also for equivalence

$$\Sigma \mathbf{M}_A: \quad \mathbf{r}_{B/A} \times \mathbf{F}_B + \mathbf{r}_{C/A} \times \mathbf{F}_C + \mathbf{r}_{D/A} \times \mathbf{F}_D = \mathbf{M}_A$$

$$\text{or } M_A = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 0.12\text{ m} & 0 \\ 0 & -240\text{ N} & -125\text{ N} \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.06\text{ m} & 0.03\text{ m} & -0.075\text{ m} \\ -300\text{ N} & 0 & 0 \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.06\text{ m} & 0.08\text{ m} & -0.75\text{ m} \\ 0 & 0 & 150\text{ N} \end{vmatrix}$$

$$= \left[-(15\text{ N}\cdot\text{m})\mathbf{i}\right] + \left[(22.5\text{ N}\cdot\text{m})\mathbf{j} + (9\text{ N}\cdot\text{m})\mathbf{k}\right] + \left[(12\text{ N}\cdot\text{m})\mathbf{i} - (9\text{ N}\cdot\text{m})\mathbf{j}\right]$$

or $\quad \mathbf{M}_A = -(3.00\text{ N}\cdot\text{m})\mathbf{i} + (13.50\text{ N}\cdot\text{m})\mathbf{j} + (9.00\text{ N}\cdot\text{m})\mathbf{k} \blacktriangleleft$

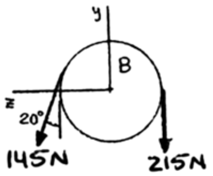


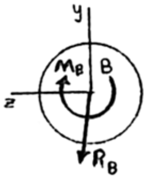
PROBLEM 3.120

Two 150-mm-diameter pulleys are mounted on line shaft *AD*. The belts at *B* and *C* lie in vertical planes parallel to the *yz*-plane. Replace the belt forces shown with an equivalent force-couple system at *A*.

SOLUTION

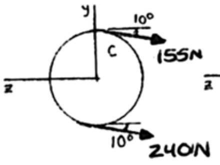
Equivalent force-couple at each pulley:

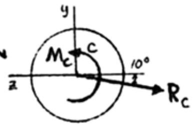




Pulley *B*:

$$\mathbf{R}_B = (145\text{ N})(-\cos 20°\mathbf{j} + \sin 20°\mathbf{k}) - 215\text{ N}\mathbf{j}$$
$$= -(351.26\text{ N})\mathbf{j} + (49.593\text{ N})\mathbf{k}$$
$$\mathbf{M}_B = -(215\text{ N} - 145\text{ N})(0.075\text{ m})\mathbf{i}$$
$$= -(5.25\text{ N}\cdot\text{m})\mathbf{i}$$





Pulley *C*:

$$\mathbf{R}_C = (155\text{ N} + 240\text{ N})(-\sin 10°\mathbf{j} - \cos 10°\mathbf{k})$$
$$= -(68.591\text{ N})\mathbf{j} - (389.00\text{ N})\mathbf{k}$$
$$\mathbf{M}_C = (240\text{ N} - 155\text{ N})(0.075\text{ m})\mathbf{i}$$
$$= (6.3750\text{ N}\cdot\text{m})\mathbf{i}$$

Then

$$\mathbf{R} = \mathbf{R}_B + \mathbf{R}_C = -(419.85\text{ N})\mathbf{j} - (339.41)\mathbf{k} \qquad \text{or} \quad \mathbf{R} = (420\text{ N})\mathbf{j} - (339\text{ N})\mathbf{k} \blacktriangleleft$$

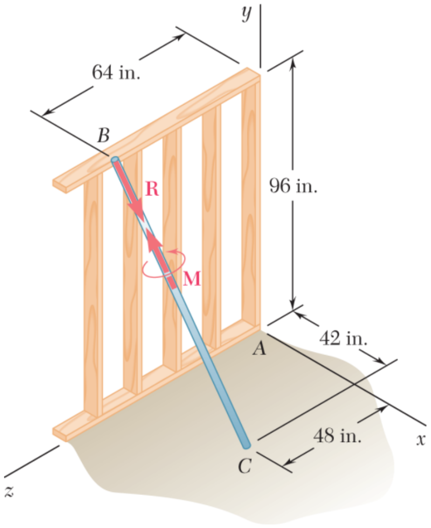
$$\mathbf{M}_A = \mathbf{M}_B + \mathbf{M}_C + \mathbf{r}_{B/A} \times \mathbf{R}_B + \mathbf{r}_{C/A} \times \mathbf{R}_C$$

$$= -(5.25\text{ N}\cdot\text{m})\mathbf{i} + (6.3750\text{ N}\cdot\text{m})\mathbf{i} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.225 & 0 & 0 \\ 0 & -351.26 & 49.593 \end{vmatrix} \text{N}\cdot\text{m}$$

$$+ \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.45 & 0 & 0 \\ 0 & -68.591 & -389.00 \end{vmatrix} \text{N}\cdot\text{m}$$

$$= (1.12500\text{ N}\cdot\text{m})\mathbf{i} + (163.892\text{ N}\cdot\text{m})\mathbf{j} - (109.899\text{ N}\cdot\text{m})\mathbf{k}$$

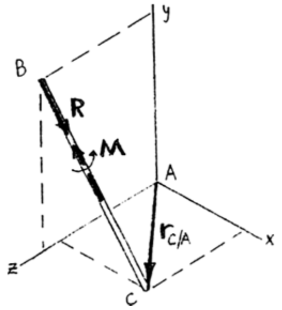
$$\text{or} \quad \mathbf{M}_A = (1.125\text{ N}\cdot\text{m})\mathbf{i} + (163.9\text{ N}\cdot\text{m})\mathbf{j} - (109.9\text{ N}\cdot\text{m})\mathbf{k} \blacktriangleleft$$



PROBLEM 3.121

As an adjustable brace *BC* is used to bring a wall into plumb, the force-couple system shown is exerted on the wall. Replace this force-couple system with an equivalent force-couple system at *A* if $R = 21.2$ lb and $M = 13.25$ lb · ft.

SOLUTION



We have $\quad \Sigma\mathbf{F}: \quad \mathbf{R} = \mathbf{R}_A = \mathbf{R}\lambda_{BC}$

where $\boldsymbol{\lambda}_{BC} = \dfrac{(42 \text{ in.})\mathbf{i} - (96 \text{ in.})\mathbf{j} - (16 \text{ in.})\mathbf{k}}{106 \text{ in.}}$

$$\mathbf{R}_A = \frac{21.2 \text{ lb}}{106}(42\mathbf{i} - 96\mathbf{j} - 16\mathbf{k})$$

or $\quad \mathbf{R}_A = (8.40 \text{ lb})\mathbf{i} - (19.20 \text{ lb})\mathbf{j} - (3.20 \text{ lb})\mathbf{k}$ ◀

We have $\quad \Sigma\mathbf{M}_A: \quad \mathbf{r}_{C/A} \times \mathbf{R} + \mathbf{M} = \mathbf{M}_A$

where $\mathbf{r}_{C/A} = (42 \text{ in.})\mathbf{i} + (48 \text{ in.})\mathbf{k} = \dfrac{1}{12}(42\mathbf{i} + 48\mathbf{k})\text{ft}$

$$= (3.5 \text{ ft})\mathbf{i} + (4.0 \text{ ft})\mathbf{k}$$

$$\mathbf{R} = (8.40 \text{ lb})\mathbf{i} - (19.50 \text{ lb})\mathbf{j} - (3.20 \text{ lb})\mathbf{k}$$

$$\mathbf{M} = -\lambda_{BC}M$$

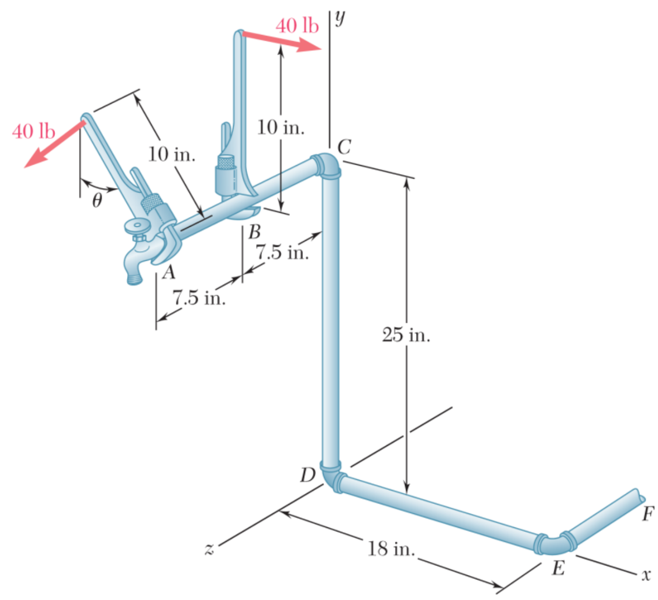
$$= \frac{-42\mathbf{i} + 96\mathbf{j} + 16\mathbf{k}}{106}(13.25 \text{ lb} \cdot \text{ft})$$

$$= -(5.25 \text{ lb} \cdot \text{ft})\mathbf{i} + (12 \text{ lb} \cdot \text{ft})\mathbf{j} + (2 \text{ lb} \cdot \text{ft})\mathbf{k}$$

Then $\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 3.5 & 0 & 4.0 \\ 8.40 & -19.20 & -3.20 \end{vmatrix} \text{lb} \cdot \text{ft} + (-5.25\mathbf{i} + 12\mathbf{j} + 2\mathbf{k}) \text{ lb} \cdot \text{ft} = \mathbf{M}_A$

$$\mathbf{M}_A = (71.55 \text{ lb} \cdot \text{ft})\mathbf{i} + (56.80 \text{ lb} \cdot \text{ft})\mathbf{j} - (65.20 \text{ lb} \cdot \text{ft})\mathbf{k}$$

or $\quad \mathbf{M}_A = (71.6 \text{ lb} \cdot \text{ft})\mathbf{i} + (56.8 \text{ lb} \cdot \text{ft})\mathbf{j} - (65.2 \text{ lb} \cdot \text{ft})\mathbf{k}$ ◀



PROBLEM 3.122

In order to unscrew the tapped faucet *A*, a plumber uses two pipe wrenches as shown. By exerting a 40-lb force on each wrench, at a distance of 10 in. from the axis of the pipe and in a direction perpendicular to the pipe and to the wrench, he prevents the pipe from rotating, and thus avoids loosening or further tightening the joint between the pipe and the tapped elbow *C*. Determine (*a*) the angle *θ* that the wrench at *A* should form with the vertical if elbow *C* is not to rotate about the vertical, (*b*) the force-couple system at *C* equivalent to the two 40-lb forces when this condition is satisfied.

SOLUTION

We first reduce the given forces to force-couple systems at *A* and *B*, noting that

$$|\mathbf{M}_A| = |\mathbf{M}_B| = (40\text{ lb})(10\text{ in.})$$
$$= 400\text{ lb}\cdot\text{in.}$$

We now determine the equivalent force-couple system at *C*.

$$\mathbf{R} = (40\text{ lb})(1-\cos\theta)\mathbf{i} - (40\text{ lb})\sin\theta\mathbf{j} \qquad (1)$$

$$\mathbf{M}_C^R = \mathbf{M}_A + \mathbf{M}_B + (15\text{ in.})\mathbf{k}\times[-(40\text{ lb})\cos\theta\mathbf{i} - (40\text{ lb})\sin\theta\mathbf{j}]$$
$$+ (7.5\text{ in.})\mathbf{k}\times(40\text{ lb})\mathbf{i}$$
$$= +400 - 400 - 600\cos\theta\mathbf{j} + 600\sin\theta\mathbf{i} + 300\mathbf{j}$$
$$= (600\text{ lb}\cdot\text{in.})\sin\theta\mathbf{i} + (300\text{ lb}\cdot\text{in.})(1-2\cos\theta)\mathbf{j} \qquad (2)$$

(*a*) For no rotation about vertical, *y* component of $\mathbf{M}_C^R$ must be zero.

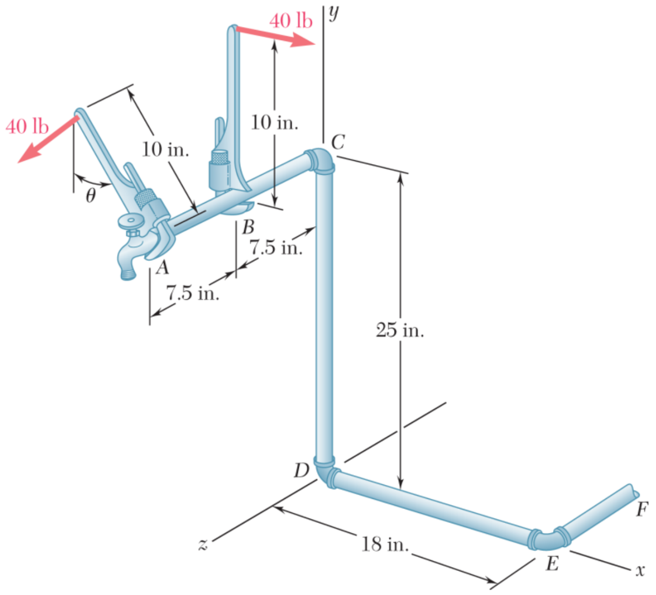
$$1 - 2\cos\theta = 0$$
$$\cos\theta = 1/2$$

$\theta = 60.0°$ ◀

(*b*) For $\theta = 60.0°$ in Eqs. (1) and (2),

$$\mathbf{R} = (20.0\text{ lb})\mathbf{i} - (34.641\text{ lb})\mathbf{j};\ \mathbf{M}_C^R = (519.62\text{ lb}\cdot\text{in.})\mathbf{i}$$

$\mathbf{R} = (20.0\text{ lb})\mathbf{i} - (34.6\text{ lb})\mathbf{j};\ \mathbf{M}_C^R = (520\text{ lb}\cdot\text{in.})\mathbf{i}$ ◀



PROBLEM 3.123

Assuming $\theta = 60°$ in Prob. 3.122, replace the two 40-lb forces with an equivalent force-couple system at *D* and determine whether the plumber's action tends to tighten or loosen the joint between (*a*) pipe *CD* and elbow *D*, (*b*) elbow *D* and pipe *DE*. Assume all threads to be right-handed.

PROBLEM 3.122 In order to unscrew the tapped faucet *A*, a plumber uses two pipe wrenches as shown. By exerting a 40-lb force on each wrench, at a distance of 10 in. from the axis of the pipe and in a direction perpendicular to the pipe and to the wrench, he prevents the pipe from rotating, and thus avoids loosening or further tightening the joint between the pipe and the tapped elbow *C*. Determine (*a*) the angle θ that the wrench at *A* should form with the vertical if elbow *C* is not to rotate about the vertical, (*b*) the force-couple system at *C* equivalent to the two 40-lb forces when this condition is satisfied.

SOLUTION

The equivalent force-couple system at *C* for $\theta = 60°$ was obtained in the solution to Prob. 3.122:

$$\mathbf{R} = (20.0 \text{ lb})\mathbf{i} - (34.641 \text{ lb})\mathbf{j}$$

$$\mathbf{M}_C^R = (519.62 \text{ lb}\cdot\text{in.})\mathbf{i}$$

The equivalent force-couple system at *D* is made of **R** and $\mathbf{M}_D^R$ where

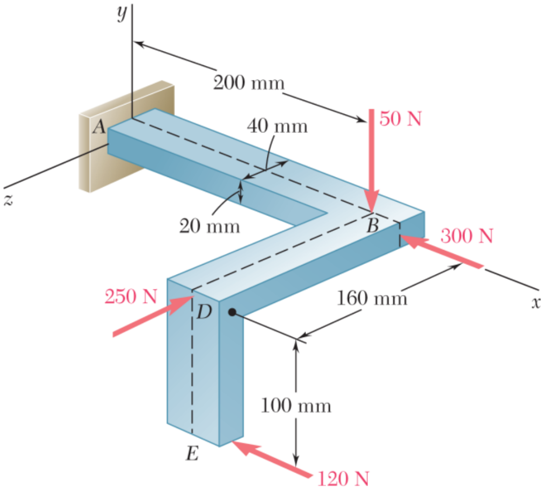
$$\begin{aligned}\mathbf{M}_D^R &= \mathbf{M}_C^R + \mathbf{r}_{C/D} \times \mathbf{R}\\ &= (519.62 \text{ lb}\cdot\text{in.})\mathbf{i} + (25.0 \text{ in.})\mathbf{j} \times [(20.0 \text{ lb})\mathbf{i} - (34.641 \text{ lb})\mathbf{j}]\\ &= (519.62 \text{ lb}\cdot\text{in.})\mathbf{i} - (500 \text{ lb}\cdot\text{in.})\mathbf{k}\end{aligned}$$

Equivalent force-couple at *D*:

$$\mathbf{R} = (20.0 \text{ lb})\mathbf{i} - (34.6 \text{ lb})\mathbf{j};\ \ \mathbf{M}_C^R = (520 \text{ lb}\cdot\text{in.})\mathbf{i} - (500 \text{ lb}\cdot\text{in.})\mathbf{k} \ \blacktriangleleft$$

(*a*) Since $\mathbf{M}_D^R$ has no component along the *y*-axis, the plumber's action will neither loosen nor tighten the joint between pipe *CD* and elbow. ◀

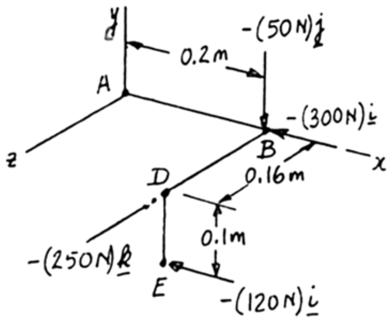
(*b*) Since the *x* component of $\mathbf{M}_D^R$ is ↶, the plumber's action will tend to tighten the joint between elbow and pipe *DE*. ◀



PROBLEM 3.124

Four forces are applied to the machine component *ABDE* as shown. Replace these forces with an equivalent force-couple system at *A*.

SOLUTION



$$\mathbf{R} = -(50\text{ N})\mathbf{j} - (300\text{ N})\mathbf{i} - (120\text{ N})\mathbf{i} - (250\text{ N})\mathbf{k}$$

$$\mathbf{R} = -(420\text{ N})\mathbf{i} - (50\text{ N})\mathbf{j} - (250\text{ N})\mathbf{k}$$

$$\mathbf{r}_B = (0.2\text{ m})\mathbf{i}$$

$$\mathbf{r}_D = (0.2\text{ m})\mathbf{i} + (0.16\text{ m})\mathbf{k}$$

$$\mathbf{r}_E = (0.2\text{ m})\mathbf{i} - (0.1\text{ m})\mathbf{j} + (0.16\text{ m})\mathbf{k}$$

$$\mathbf{M}_A^R = \mathbf{r}_B \times [-(300\text{ N})\mathbf{i} - (50\text{ N})\mathbf{j}]$$

$$+\mathbf{r}_D \times (-250\text{ N})\mathbf{k} + \mathbf{r} \times (-120\text{ N})\mathbf{i}$$

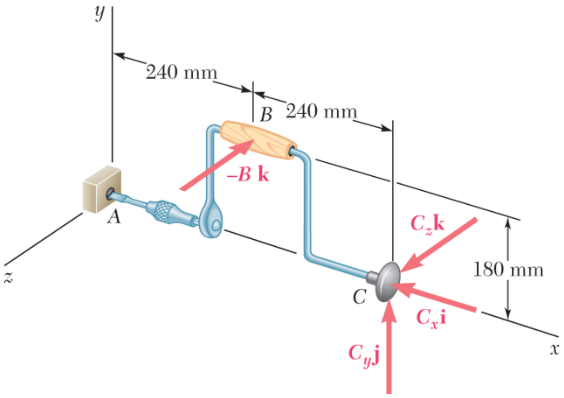
$$= \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.2\text{ m} & 0 & 0 \\ -300\text{ N} & -50\text{ N} & 0 \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.2\text{ m} & 0 & 0.16\text{ m} \\ 0 & 0 & -250\text{ N} \end{vmatrix}$$

$$+ \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.2\text{ m} & -0.1\text{ m} & 0.16\text{ m} \\ -120\text{ N} & 0 & 0 \end{vmatrix}$$

$$= -(10\text{ N}\cdot\text{m})\mathbf{k} + (50\text{ N}\cdot\text{m})\mathbf{j} - (19.2\text{ N}\cdot\text{m})\mathbf{j} - (12\text{ N}\cdot\text{m})\mathbf{k}$$

Force-couple system at *A* is

$$\mathbf{R} = -(420\text{ N})\mathbf{i} - (50\text{ N})\mathbf{j} - (250\text{ N})\mathbf{k} \quad \mathbf{M}_A^R = (30.8\text{ N}\cdot\text{m})\mathbf{j} - (22.0\text{ N}\cdot\text{m})\mathbf{k} \blacktriangleleft$$



PROBLEM 3.125

A blade held in a brace is used to tighten a screw at A. (*a*) Determine the forces exerted at B and C, knowing that these forces are equivalent to a force-couple system at A consisting of $\mathbf{R} = -(25\text{ N})\mathbf{i} + R_y\mathbf{j} + R_z\mathbf{k}$ and $\mathbf{M}_A^R = -(13.5\text{ N}\cdot\text{m})\mathbf{i}$. (*b*) Find the corresponding values of R_y and R_z. (*c*) What is the orientation of the slot in the head of the screw for which the blade is least likely to slip when the brace is in the position shown?

SOLUTION

(*a*) Equivalence requires $\Sigma\mathbf{F}$: $\mathbf{R} = \mathbf{B} + \mathbf{C}$

or

$$-(25\text{ N})\mathbf{i} + R_y\mathbf{j} + R_z\mathbf{k} = -B\mathbf{k} + (-C_x\mathbf{i} + C_y\mathbf{j} + C_z\mathbf{k})$$

Equating the **i** coefficients: $\mathbf{i}:\ -25\text{ N} = -C_x$ or $C_x = 25\text{ N}$

Also, $\Sigma\mathbf{M}_A$: $\mathbf{M}_A^R = \mathbf{r}_{B/A}\times\mathbf{B} + \mathbf{r}_{C/A}\times\mathbf{C}$

or

$$-(13.5\text{ N}\cdot\text{m})\mathbf{i} = [(0.2\text{ m})\mathbf{i} + (0.15\text{ m})\mathbf{j}]\times(-B)\mathbf{k}$$
$$+(0.4\text{ m})\mathbf{i}\times[-(25\text{ N})\mathbf{i} + C_y\mathbf{j} + C_z\mathbf{k}]$$

Equating coefficients:

$\mathbf{i}:\ -13.5\text{ N}\cdot\text{m} = -(0.15\text{ m})B$ or $B = 75\text{ N}$

$\mathbf{k}:\ 0 = (0.4\text{ m})C_y$ or $C_y = 0$

$\mathbf{j}:\ 0 = (0.2\text{ m})(75\text{ N}) - (0.4\text{ m})C_z$ or $C_z = 37.5\text{ N}$

$$\mathbf{B} = -(75.0\text{ N})\mathbf{k}\quad \mathbf{C} = -(25.0\text{ N})\mathbf{i} + (37.5\text{ N})\mathbf{k}\ ◀$$

(*b*) Now we have for the equivalence of forces

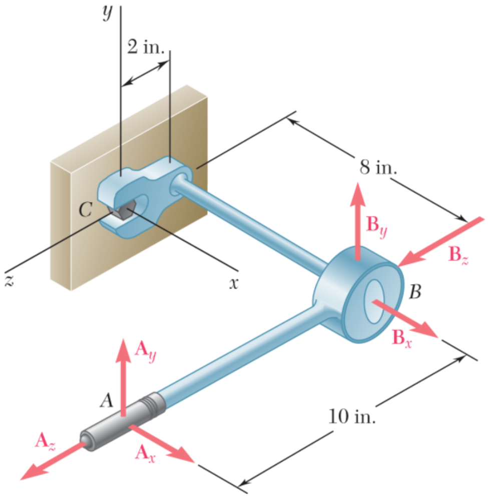
$$-(25\text{ N})\mathbf{i} + R_y\mathbf{j} + R_z\mathbf{k} = -(75\text{ N})\mathbf{k} + [(-25\text{ N})\mathbf{i} + (37.5\text{ N})\mathbf{k}]$$

Equating coefficients:

$\mathbf{j}:\ R_y = 0$ $\qquad R_y = 0$ ◀

$\mathbf{k}:\ R_z = -75 + 37.5$ or $R_z = -37.5\text{ N}$ ◀

(*c*) First note that $\mathbf{R} = -(25\text{ N})\mathbf{i} - (37.5\text{ N})\mathbf{k}$. Thus, the screw is best able to resist the lateral force R_z when the slot in the head of the screw is vertical. ◀



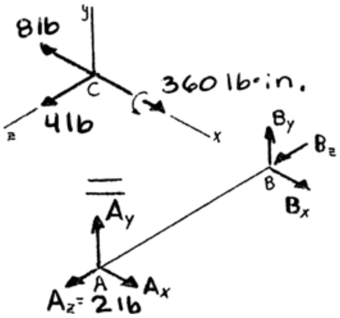
PROBLEM 3.126

A mechanic uses a crowfoot wrench to loosen a bolt at *C*. The mechanic holds the socket wrench handle at Points *A* and *B* and applies forces at these points. Knowing that these forces are equivalent to a force-couple system at *C* consisting of the force $\mathbf{C} = (8\text{ lb})\mathbf{i} + (4\text{ lb})\mathbf{k}$ and the couple $\mathbf{M}_C = (360\text{ lb}\cdot\text{in.})\mathbf{i}$, determine the forces applied at *A* and at *B* when $A_z = 2$ lb.

SOLUTION

We have $\Sigma\mathbf{F}$: $\mathbf{A} + \mathbf{B} = \mathbf{C}$

or F_x: $A_x + B_x = 8\text{ lb}$



(1)

$A_y = -B_y$ (2)

ΣF_z: $2\text{ lb} + B_z = 4\text{ lb}$

or $B_z = 2\text{ lb}$ (3)

We have $\Sigma\mathbf{M}_C$: $\mathbf{r}_{B/C} \times \mathbf{B} + \mathbf{r}_{A/C} \times \mathbf{A} = \mathbf{M}_C$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 8 & 0 & 2 \\ B_x & B_y & 2 \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 8 & 0 & 8 \\ A_x & A_y & 2 \end{vmatrix} \text{lb}\cdot\text{in.} = (360\text{ lb}\cdot\text{in.})\mathbf{i}$$

or $(2B_y - 8A_y)\mathbf{i} + (2B_x - 16 + 8A_x - 16)\mathbf{j}$

$+(8B_y + 8A_y)\mathbf{k} = (360\text{ lb}\cdot\text{in.})\mathbf{i}$

From **i**-coefficient: $2B_y - 8A_y = 360\text{ lb}\cdot\text{in.}$ (4)

j-coefficient: $-2B_x + 8A_x = 32\text{ lb}\cdot\text{in.}$ (5)

k-coefficient: $8B_y + 8A_y = 0$ (6)

PROBLEM 3.126 (Continued)

From Equations (2) and (4): $2B_y - 8(-B_y) = 360$

$B_y = 36 \text{ lb} \quad A_y = 36 \text{ lb}$

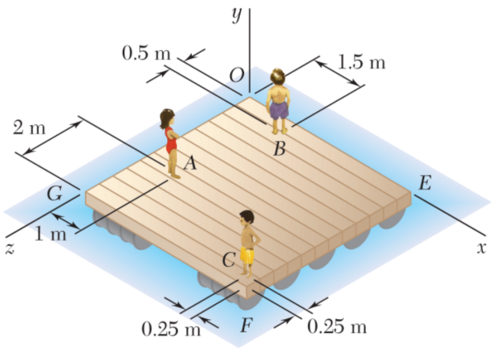
From Equations (1) and (5): $2(-A_x - 8) + 8A_x = 32$

$A_x = 1.6 \text{ lb}$

From Equation (1): $B_x = -(1.6 + 8) = -9.6 \text{ lb}$

$\mathbf{A} = (1.600 \text{ lb})\mathbf{i} - (36.0 \text{ lb})\mathbf{j} + (2.00 \text{ lb})\mathbf{k}$ ◀

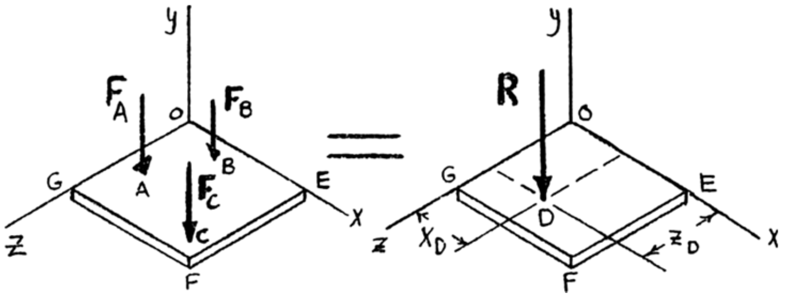
$\mathbf{B} = -(9.60 \text{ lb})\mathbf{i} + (36.0 \text{ lb})\mathbf{j} + (2.00 \text{ lb})\mathbf{k}$ ◀



PROBLEM 3.127

Three children are standing on a 5×5-m raft. If the weights of the children at Points *A*, *B*, and *C* are 375 N, 260 N, and 400 N, respectively, determine the magnitude and the point of application of the resultant of the three weights.

SOLUTION



We have $\Sigma\mathbf{F}:\quad \mathbf{F}_A + \mathbf{F}_B + \mathbf{F}_C = \mathbf{R}$

$$-(375\text{ N})\mathbf{j} - (260\text{ N})\mathbf{j} - (400\text{ N})\mathbf{j} = \mathbf{R}$$

$$-(1035\text{ N})\mathbf{j} = \mathbf{R}$$

or $R = 1035\text{ N}$ ◀

We have $\Sigma M_x:\quad F_A(z_A) + F_B(z_B) + F_C(z_C) = R(z_D)$

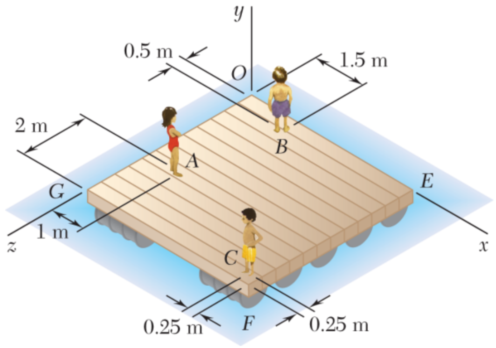
$$(375\text{ N})(3\text{ m}) + (260\text{ N})(0.5\text{ m}) + (400\text{ N})(4.75\text{ m}) = (1035\text{ N})(z_D)$$

$z_D = 3.0483\text{ m}$ or $z_D = 3.05\text{ m}$ ◀

We have $\Sigma M_z:\quad F_A(x_A) + F_B(x_B) + F_C(x_C) = R(x_D)$

$$375\text{ N}(1\text{ m}) + (260\text{ N})(1.5\text{ m}) + (400\text{ N})(4.75\text{ m}) = (1035\text{ N})(x_D)$$

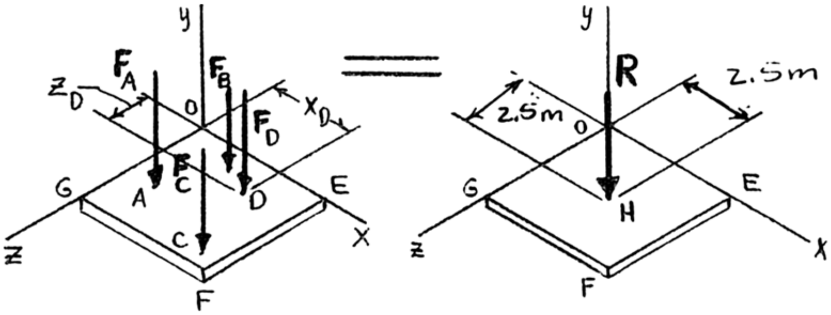
$x_D = 2.5749\text{ m}$ or $x_D = 2.57\text{ m}$ ◀



PROBLEM 3.128

Three children are standing on a 5×5-m raft. The weights of the children at Points *A*, *B*, and *C* are 375 N, 260 N, and 400 N, respectively. If a fourth child of weight 425 N climbs onto the raft, determine where she should stand if the other children remain in the positions shown and the line of action of the resultant of the four weights is to pass through the center of the raft.

SOLUTION



We have $\qquad \Sigma \mathbf{F}: \quad \mathbf{F}_A + \mathbf{F}_B + \mathbf{F}_C = \mathbf{R}$

$$-(375\text{ N})\mathbf{j} - (260\text{ N})\mathbf{j} - (400\text{ N})\mathbf{j} - (425\text{ N})\mathbf{j} = \mathbf{R}$$

$$\mathbf{R} = -(1460\text{ N})\mathbf{j}$$

We have $\qquad \Sigma M_x: \quad F_A(z_A) + F_B(z_B) + F_C(z_C) + F_D(z_D) = R(z_H)$

$$(375\text{ N})(3\text{ m}) + (260\text{ N})(0.5\text{ m}) + (400\text{ N})(4.75\text{ m})$$
$$+ (425\text{ N})(z_D) = (1460\text{ N})(2.5\text{ m})$$

$z_D = 1.16471\text{ m}$ $\qquad$ or $\quad z_D = 1.165\text{ m}$ ◀

We have $\qquad \Sigma M_z: \quad F_A(x_A) + F_B(x_B) + F_C(x_C) + F_D(x_D) = R(x_H)$

$$(375\text{ N})(1\text{ m}) + (260\text{ N})(1.5\text{ m}) + (400\text{ N})(4.75\text{ m})$$
$$+ (425\text{ N})(x_D) = (1460\text{ N})(2.5\text{ m})$$

$x_D = 2.3235\text{ m}$ $\qquad$ or $\quad x_D = 2.32\text{ m}$ ◀

PROBLEM 3.130

Four signs are mounted on a frame spanning a highway, and the magnitudes of the horizontal wind forces acting on the signs are as shown. Determine *a* and *b* so that the point of application of the resultant of the four forces is at *G*.

SOLUTION

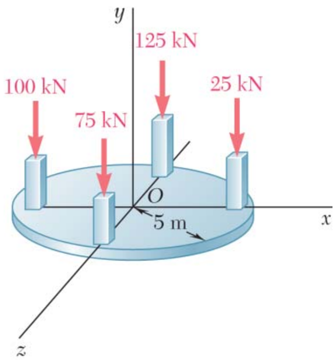
Since **R** acts at *G*, equivalence then requires that $\Sigma \mathbf{M}_G$ of the applied system of forces also be zero. Then at

$$G:\Sigma M_x: \quad -(a+3)\text{ ft}\times(90\text{ lb})+(2\text{ ft})(105\text{ lb}) + (2.5\text{ ft})(50\text{ lb})=0$$

or $a = 0.722$ ft ◀

$$\Sigma M_y: \quad -(9\text{ ft})(105\text{ ft})-(14.5-b)\text{ ft}\times(90\text{ lb}) + (8\text{ ft})(50\text{ lb})=0$$

or $b = 20.6$ ft ◀



PROBLEM 3.131

A concrete foundation mat of 5-m radius supports four equally spaced columns, each of which is located 4 m from the center of the mat. Determine the magnitude and the point of application of the resultant of the four loads.

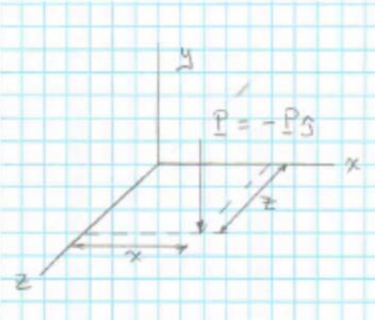
SOLUTION

Have: $\Sigma\mathbf{F}$: $\quad \mathbf{F}_A + \mathbf{F}_C + \mathbf{F}_D + \mathbf{F}_E = \mathbf{R}$

$$\mathbf{R} = -(100\text{ kN})\mathbf{j} - (125\text{ kN})\mathbf{j} - (25\text{kN})\mathbf{j} - (75\text{ kN})\mathbf{j}$$

$$= -(325\text{ kN})\mathbf{j}$$

$\mathbf{R} = \mathbf{P} = -(325\text{ kN})\mathbf{j}$ or $R = 325\text{ kN}$ ◀



Have: ΣM_x: $\quad F_C(z_C) + F_E(z_E) = R(z_G)$

$$-(125\text{ kN})(4\text{ m}) + (75\text{ kN})(4\text{ m})$$

$$= (325\text{ kN})z_G$$

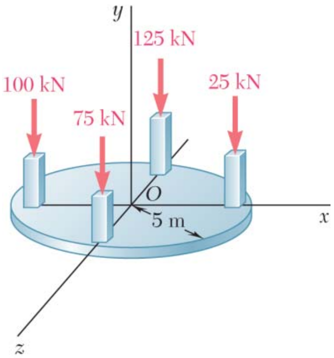
$\therefore \quad z_G = -0.61539\text{ m}$

or $z_G = -0.615\text{ m}$ ◀

ΣM_z: $\quad F_A(x_A) + F_D(x_D) = R(x_G)$

$$(100\text{ kN})(4\text{ m}) - (25\text{ kN})(4\text{ m}) = -(325\text{ kN})x_G$$

or $x_G = -0.923\text{ m}$ ◀

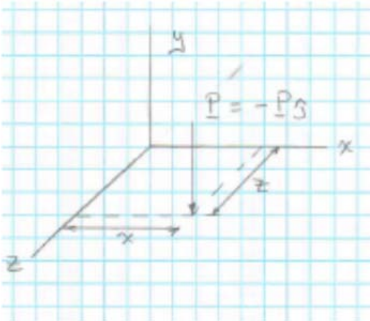


PROBLEM 3.132

Determine the magnitude and the point of application of the smallest additional load that must be applied to the foundation mat of Prob. 3.131 if the resultant of the five loads is to pass through the center of the mat.

SOLUTION

The smallest load P will be placed on the edge of the mat at a radius of 5 m. Therefore $x_P{}^2 + z_P{}^2 = (5\text{ m})^2$ (1)



Have: ΣM_x: $F_C(z_C) + F_E(z_E) + P(z_P) = R(z_G)$

$$-(125\text{ kN})(4\text{ m}) + (75\text{ kN})(4\text{ m}) + P(z_P) = R(0)$$

$$P(z_G) = 200\text{ kN}\cdot\text{m} \qquad (2)$$

Also ΣM_z: $F_A(x_A) + F_D(x_D) + P(x_P) = R(x_G)$

$$(100\text{ kN})(4\text{ m}) - (25\text{ kN})(4\text{ m}) - P(x_P) = R(0)$$

$$P(x_P) = 300\text{ kN}\cdot\text{m}$$

(3)

Substituting for x and z from equations (2) and (3) into (1), $\left(\dfrac{300}{P}\right)^2 + \left(\dfrac{200}{P}\right)^2 = (5)^2$

$$P^2 = \frac{(300)^2 + (200)^2}{(5)^2} = 5200 \quad \text{or } P = 72.111\text{ kN} \qquad P = 72.1\text{ kN} ◀$$

Finally, from (2) and (3) $x_P = 4.16\text{ m}$; $z_P = 2.77\text{ m}$◀

$$\cos\theta_x = \cos\theta_y = \cos\theta_z = \frac{a}{a\sqrt{3}} = \frac{1}{\sqrt{3}}$$

$$R = P\sqrt{3} \quad \theta_x = \theta_y = \theta_z = 54.7°$$

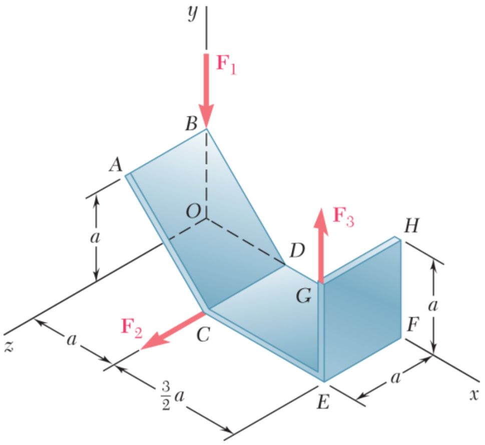
$$M_1 = M_O^R = -Pa\sqrt{3}$$

$$\text{Pitch} = p = \frac{M_1}{R} = \frac{-Pa\sqrt{3}}{P\sqrt{3}} = -a$$

(a) $R = P\sqrt{3} \quad \theta_x = \theta_y = \theta_z = 54.7°$ ◀

(b) $-a$ ◀

(c) Axis of the wrench is diagonal OA. ◀



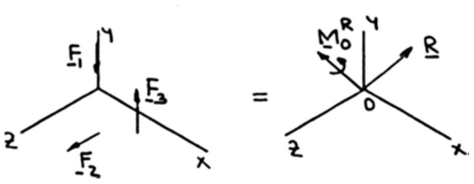
PROBLEM 3.134*

A piece of sheet metal is bent into the shape shown and is acted upon by three forces. If the forces have the same magnitude P, replace them with an equivalent wrench and determine (*a*) the magnitude and the direction of the resultant force **R**, (*b*) the pitch of the wrench, (*c*) the axis of the wrench.

SOLUTION

First reduce the given forces to an equivalent force-couple system $(\mathbf{R},\ \mathbf{M}_O^R)$ at the origin.

We have



$$\Sigma\mathbf{F}:\quad -P\mathbf{j} + P\mathbf{j} + P\mathbf{k} = R$$

or $\quad \mathbf{R} = P\mathbf{k}$

$$\Sigma\mathbf{M}_O:\quad -(aP)\mathbf{j} + \left[-(aP)\mathbf{i} + \left(\frac{5}{2}aP\right)\mathbf{k}\right] = M_O^R$$

or $\quad \mathbf{M}_O^R = aP\left(-\mathbf{i} - \mathbf{j} + \frac{5}{2}\mathbf{k}\right)$

(*a*) Then for the wrench,

$$R = P \blacktriangleleft$$

and $\quad \boldsymbol{\lambda}_{\text{axis}} = \frac{\mathbf{R}}{R} = \mathbf{k}$

$$\cos\theta_x = 0 \quad \cos\theta_y = 0 \quad \cos\theta_z = 1$$

or $\quad \theta_x = 90° \quad \theta_y = 90° \quad \theta_z = 0° \quad \blacktriangleleft$

(*b*) Now

$$M_1 = \boldsymbol{\lambda}_{\text{axis}} \cdot \mathbf{M}_O^R$$

$$= \mathbf{k} \cdot aP\left(-\mathbf{i} - \mathbf{j} + \frac{5}{2}\mathbf{k}\right)$$

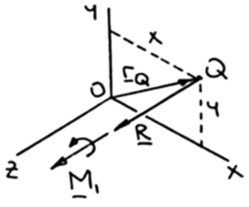
$$= \frac{5}{2}aP$$

Then $\quad P = \frac{\mathbf{M}_1}{R} = \frac{\frac{5}{2}aP}{P} \quad$ or $\quad P = \frac{5}{2}a \blacktriangleleft$

PROBLEM 3.134* (Continued)

(*c*) The components of the wrench are $(\mathbf{R},\ \mathbf{M}_1)$, where $\mathbf{M}_1 = M_1\boldsymbol{\lambda}_{\text{axis}}$, and the axis of the wrench is assumed to intersect the *xy*-plane at Point *Q*, whose coordinates are (*x*, *y*, 0). Thus, we require

$$\mathbf{M}_z = \mathbf{r}_Q \times \mathbf{R}_R$$



where $$\mathbf{M}_z = \mathbf{M}_O \times \mathbf{M}_1$$

Then

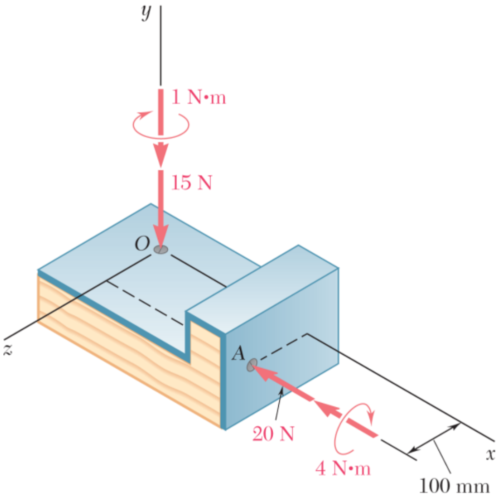
$$aP\left(-\mathbf{i}-\mathbf{j}+\frac{5}{2}\mathbf{k}\right)-\frac{5}{2}aP\mathbf{k} = (x\mathbf{i}+y\mathbf{j})+P\mathbf{k}$$

Equating coefficients:

$\mathbf{i}$: $\ -aP = yP \quad$ or $\quad y = -a$

$\mathbf{j}$: $\ -aP = -xP \quad$ or $\quad x = a$

The axis of the wrench is parallel to the *z*-axis and intersects the *xy*-plane at $x = a,\ y = -a.$ ◀



PROBLEM 3.135*

The forces and couples shown are applied to two screws as a piece of sheet metal is fastened to a block of wood. Reduce the forces and the couples to an equivalent wrench and determine (*a*) the resultant force **R**, (*b*) the pitch of the wrench, (*c*) the point where the axis of the wrench intersects the *xz*-plane.

SOLUTION

First, reduce the given force system to a force-couple system.

We have $\Sigma\mathbf{F}: \quad -(20\text{ N})\mathbf{i} - (15\text{ N})\mathbf{j} = \mathbf{R} \quad R = 25\text{ N}$

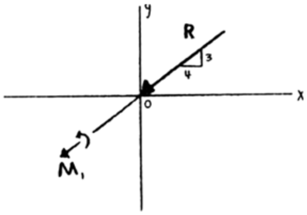
We have $\Sigma\mathbf{M}_O: \quad \Sigma(\mathbf{r}_O \times \mathbf{F}) + \Sigma\mathbf{M}_C = \mathbf{M}_O^R$

$$\mathbf{M}_O^R = -20\text{ N}(0.1\text{ m})\mathbf{j} - (4\text{ N}\cdot\text{m})\mathbf{i} - (1\text{ N}\cdot\text{m})\mathbf{j}$$
$$= -(4\text{ N}\cdot\text{m})\mathbf{i} - (3\text{ N}\cdot\text{m})\mathbf{j}$$

(*a*) $\mathbf{R} = -(20.0\text{ N})\mathbf{i} - (15.00\text{ N})\mathbf{j}$ ◀

(*b*) We have $M_1 = \boldsymbol{\lambda}_R \cdot \mathbf{M}_O^R \quad \boldsymbol{\lambda} = \dfrac{\mathbf{R}}{R}$

$$= (-0.8\mathbf{i} - 0.6\mathbf{j}) \cdot [-(4\text{ N}\cdot\text{m})\mathbf{i} - (3\text{ N}\cdot\text{m})\mathbf{j}]$$
$$= 5\text{ N}\cdot\text{m}$$



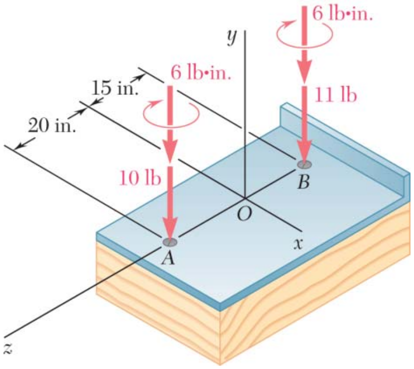
Pitch: $p = \dfrac{M_1}{R} = \dfrac{5\text{ N}\cdot\text{m}}{25\text{ N}} = 0.200\text{ m}$

or $p = 0.200\text{ m}$ ◀

(*c*) From above, note that

$\mathbf{M}_1 = \mathbf{M}_O^R$

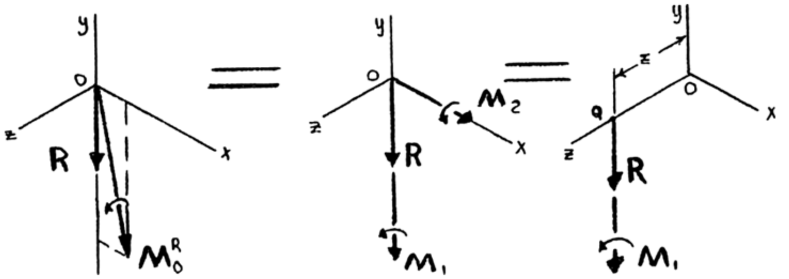
Therefore, the axis of the wrench goes through the origin. The line of action of the wrench lies in the *xy*-plane with a slope of $y = \dfrac{3}{4}x$ ◀



PROBLEM 3.136*

The forces and couples shown are applied to two screws as a piece of sheet metal is fastened to a block of wood. Reduce the forces and the couples to an equivalent wrench and determine (*a*) the resultant force **R**, (*b*) the pitch of the wrench, (*c*) the point where the axis of the wrench intersects the *xz*-plane.

SOLUTION



First, reduce the given force system to a force-couple at the origin.

We have $\Sigma \mathbf{F}: \quad -(10\text{ lb})\mathbf{j} - (11\text{ lb})\mathbf{j} = \mathbf{R}$

$$\mathbf{R} = -(21\text{ lb})\mathbf{j}$$

We have $\Sigma \mathbf{M}_O: \quad \Sigma(\mathbf{r}_O \times \mathbf{F}) + \Sigma \mathbf{M}_C = \mathbf{M}_O^R$

$$\mathbf{M}_O^R = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 0 & 20 \\ 0 & -10 & 0 \end{vmatrix} \text{lb}\cdot\text{in.} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 0 & -15 \\ 0 & -11 & 0 \end{vmatrix} \text{lb}\cdot\text{in.} - (12\text{ lb}\cdot\text{in})\mathbf{j}$$

$$= (35\text{ lb}\cdot\text{in.})\mathbf{i} - (12\text{ lb}\cdot\text{in.})\mathbf{j}$$

(*a*) $\mathbf{R} = -(21\text{ lb})\mathbf{j}$ or $\mathbf{R} = -(21.0\text{ lb})\mathbf{j}$ ◀

(*b*) We have $M_1 = \boldsymbol{\lambda}_R \cdot \mathbf{M}_O^R \quad \boldsymbol{\lambda}_R = \dfrac{\mathbf{R}}{R}$

$$= (-\mathbf{j}) \cdot [(35\text{ lb}\cdot\text{in.})\mathbf{i} - (12\text{ lb}\cdot\text{in.})\mathbf{j}]$$

$$= 12\text{ lb}\cdot\text{in.} \quad \text{and} \quad \mathbf{M}_1 = -(12\text{ lb}\cdot\text{in.})\mathbf{j}$$

and pitch $p = \dfrac{M_1}{R} = \dfrac{12\text{ lb}\cdot\text{in.}}{21\text{ lb}} = 0.57143\text{ in.}$ or $p = 0.571\text{ in.}$ ◀

(*c*) We have

$$\mathbf{M}_O^R = \mathbf{M}_1 + \mathbf{M}_2$$

$$\mathbf{M}_2 = \mathbf{M}_O^R - \mathbf{M}_1 = (35\text{ lb}\cdot\text{in.})\mathbf{i}$$

We require

$$\mathbf{M}_2 = \mathbf{r}_{Q/O} \times \mathbf{R}$$

$$(35\text{ lb}\cdot\text{in.})\mathbf{i} = (x\mathbf{i} + z\mathbf{k}) \times [-(21\text{ lb})\mathbf{j}]$$

$$35\mathbf{i} = -(21x)\mathbf{k} + (21z)\mathbf{i}$$

From **i**:

$$35 = 21z$$

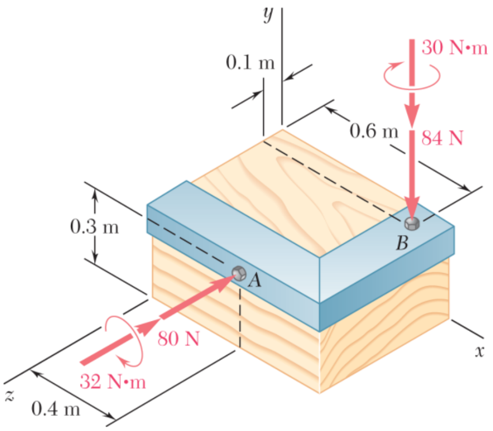
$$z = 1.66667\text{ in.}$$

From **k**:

$$0 = -21x$$

$$z = 0$$

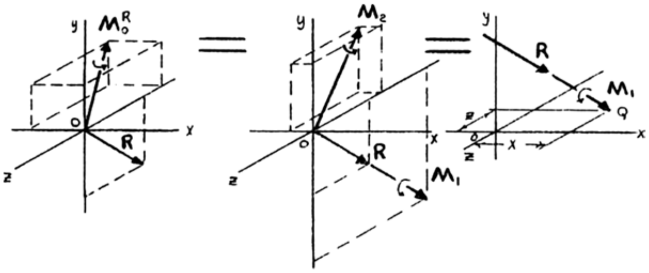
The axis of the wrench is parallel to the *y*-axis and intersects the *xz*-plane at $x = 0$, $z = 1.667$ in. ◀



PROBLEM 3.137*

Two bolts at *A* and *B* are tightened by applying the forces and couples shown. Replace the two wrenches with a single equivalent wrench and determine (*a*) the resultant **R**, (*b*) the pitch of the single equivalent wrench, (*c*) the point where the axis of the wrench intersects the *xz*-plane.

SOLUTION



First, reduce the given force system to a force-couple at the origin.

We have $\quad \Sigma\mathbf{F}: \quad -(84\text{ N})\mathbf{j} - (80\text{ N})\mathbf{k} = \mathbf{R} \quad R = 116\text{ N}$

and $\quad \Sigma\mathbf{M}_O: \quad \Sigma(\mathbf{r}_O \times \mathbf{F}) + \Sigma\mathbf{M}_C = \mathbf{M}_O^R$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.6 & 0 & 0.1 \\ 0 & 84 & 0 \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.4 & 0.3 & 0 \\ 0 & 0 & 80 \end{vmatrix} + (-30\mathbf{j} - 32\mathbf{k})\text{ N}\cdot\text{m} = \mathbf{M}_O^R$$

$$\mathbf{M}_O^R = -(15.6\text{ N}\cdot\text{m})\mathbf{i} + (2\text{ N}\cdot\text{m})\mathbf{j} - (82.4\text{ N}\cdot\text{m})\mathbf{k}$$

(*a*) $\quad \mathbf{R} = -(84.0\text{ N})\mathbf{j} - (80.0\text{ N})\mathbf{k}$ ◀

(*b*) We have $\quad M_1 = \boldsymbol{\lambda}_R \cdot \mathbf{M}_O^R \quad \boldsymbol{\lambda}_R = \dfrac{\mathbf{R}}{R}$

$$= -\frac{-84\mathbf{j} - 80\mathbf{k}}{116} \cdot [-(15.6\text{ N}\cdot\text{m})\mathbf{i} + (2\text{ N}\cdot\text{m})\mathbf{j} - (82.4\text{ N}\cdot\text{m})\mathbf{k}]$$

$$= 55.379\text{ N}\cdot\text{m}$$

and $\quad \mathbf{M}_1 = M_1\lambda_R = -(40.102\text{ N}\cdot\text{m})\mathbf{j} - (38.192\text{ N}\cdot\text{m})\mathbf{k}$

Then pitch $\quad p = \dfrac{M_1}{R} = \dfrac{55.379\text{ N}\cdot\text{m}}{116\text{ N}} = 0.47741\text{ m}$ $\quad$ or $\quad p = 0.477\text{ m}$ ◀

PROBLEM 3.137* (Continued)

(*c*) We have $\mathbf{M}_O^R = \mathbf{M}_1 + \mathbf{M}_2$

$$\mathbf{M}_2 = \mathbf{M}_O^R - \mathbf{M}_1 = [(-15.6\mathbf{i} + 2\mathbf{j} - 82.4\mathbf{k}) - (40.102\mathbf{j} - 38.192\mathbf{k})]\ \text{N}\cdot\text{m}$$
$$= -(15.6\ \text{N}\cdot\text{m})\mathbf{i} + (42.102\ \text{N}\cdot\text{m})\mathbf{j} - (44.208\ \text{N}\cdot\text{m})\mathbf{k}$$

We require $\mathbf{M}_2 = \mathbf{r}_{Q/O} \times \mathbf{R}$

$$(-15.6\mathbf{i} + 42.102\mathbf{j} - 44.208\mathbf{k}) = (x\mathbf{i} + z\mathbf{k}) \times (84\mathbf{j} - 80\mathbf{k})$$
$$= (84z)\mathbf{i} + (80x)\mathbf{j} - (84x)\mathbf{k}$$

From **i**: $-15.6 = 84z$

$$z = -0.185714\ \text{m}$$

or $z = -0.1857\ \text{m}$

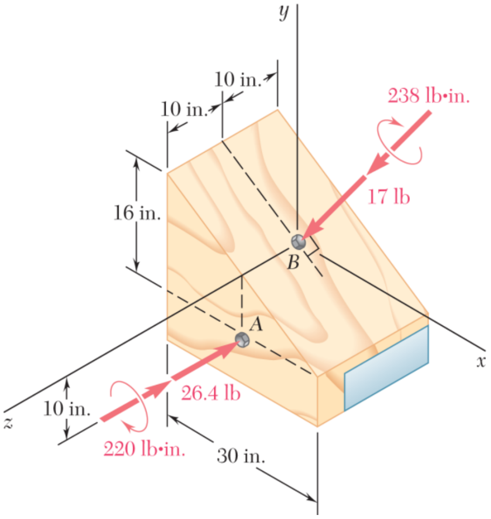
From **k**: $-44.208 = -84x$

$$x = 0.52629\ \text{m}$$

or $x = 0.526\ \text{m}$

The axis of the wrench intersects the *xz*-plane at

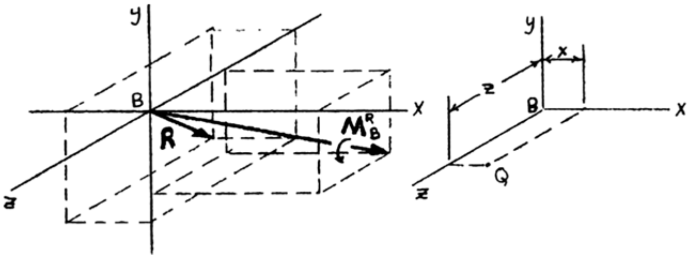
$x = 0.526\ \text{m} \quad y = 0 \quad z = -0.1857\ \text{m}$ ◀



PROBLEM 3.138*

Two bolts at *A* and *B* are tightened by applying the forces and couples shown. Replace the two wrenches with a single equivalent wrench and determine (*a*) the resultant **R**, (*b*) the pitch of the single equivalent wrench, (*c*) the point where the axis of the wrench intersects the *xz*-plane.

SOLUTION



First, reduce the given force system to a force-couple at the origin at *B*.

(*a*) We have $\Sigma\mathbf{F}:\quad -(26.4\text{ lb})\mathbf{k}-(17\text{ lb})\left(\frac{8}{17}\mathbf{i}+\frac{15}{17}\mathbf{j}\right)=\mathbf{R}$

$$\mathbf{R}=-(8.00\text{ lb})\mathbf{i}-(15.00\text{ lb})\mathbf{j}-(26.4\text{ lb})\mathbf{k}\ ◀$$

and $R=31.4\text{ lb}$

We have $\Sigma\mathbf{M}_B:\quad \mathbf{r}_{A/B}\times\mathbf{F}_A+\mathbf{M}_A+\mathbf{M}_B=\mathbf{M}_B^R$

$$\mathbf{M}_B^R=\begin{vmatrix}\mathbf{i} & \mathbf{j} & \mathbf{k}\\ 0 & -10 & 0\\ 0 & 0 & -26.4\end{vmatrix}-220\mathbf{k}-238\left(\frac{8}{17}\mathbf{i}+\frac{15}{17}\mathbf{j}\right)=264\mathbf{i}-220\mathbf{k}-14(8\mathbf{i}+15\mathbf{j})$$

$$\mathbf{M}_B^R=(152\text{ lb}\cdot\text{in.})\mathbf{i}-(210\text{ lb}\cdot\text{in.})\mathbf{j}-(220\text{ lb}\cdot\text{in.})\mathbf{k}$$

(*b*) We have $M_1=\boldsymbol{\lambda}_R\cdot\mathbf{M}_O^R\quad \boldsymbol{\lambda}_R=\frac{\mathbf{R}}{R}$

$$=\frac{-8.00\mathbf{i}-15.00\mathbf{j}-26.4\mathbf{k}}{31.4}\cdot[(152\text{ lb}\cdot\text{in.})\mathbf{i}-(210\text{ lb}\cdot\text{in.})\mathbf{j}-(220\text{ lb}\cdot\text{in.})\mathbf{k}]$$

$$=246.56\text{ lb}\cdot\text{in.}$$

PROBLEM 3.138* (Continued)

and $$\mathbf{M}_1 = M_1\lambda_R = -(62.818\ \text{lb}\cdot\text{in.})\mathbf{i} - (117.783\ \text{lb}\cdot\text{in.})\mathbf{j} - (207.30\ \text{lb}\cdot\text{in.})\mathbf{k}$$

Then pitch $$p = \frac{M_1}{R} = \frac{246.56\ \text{lb}\cdot\text{in.}}{31.4\ \text{lb}} = 7.8522\ \text{in.}$$ or $p = 7.85$ in. ◀

(*c*) We have $$\mathbf{M}_B^R = \mathbf{M}_1 + \mathbf{M}_2$$

$$\mathbf{M}_2 = \mathbf{M}_B^R - \mathbf{M}_1 = (152\mathbf{i} - 210\mathbf{j} - 220\mathbf{k}) - (-62.818\mathbf{i} - 117.783\mathbf{j} - 207.30\mathbf{k})$$
$$= (214.82\ \text{lb}\cdot\text{in.})\mathbf{i} - (92.217\ \text{lb}\cdot\text{in.})\mathbf{j} - (12.7000\ \text{lb}\cdot\text{in.})\mathbf{k}$$

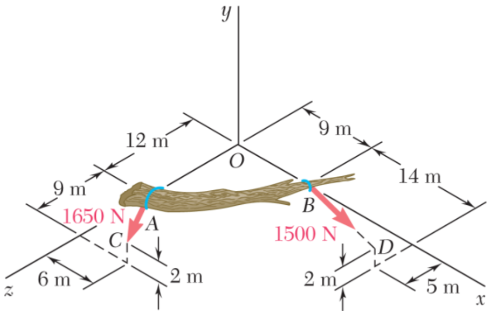
We require $$\mathbf{M}_2 = \mathbf{r}_{Q/B} \times \mathbf{R}$$

$$214.82\mathbf{i} - 92.217\mathbf{j} - 12.7000\mathbf{k} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ x & 0 & z \\ -8 & -15 & -26.4 \end{vmatrix}$$
$$= (15z)\mathbf{i} - (8z)\mathbf{j} + (26.4x)\mathbf{j} - (15x)\mathbf{k}$$

From **i**: $214.82 = 15z \qquad z = 14.3213$ in.

From **k**: $-12.7000 = -15x \qquad x = 0.84667$ in.

The axis of the wrench intersects the *xz*-plane at $x = 0.847$ in. $\quad y = 0 \quad z = 14.32$ in. ◀



PROBLEM 3.139*

Two ropes attached at *A* and *B* are used to move the trunk of a fallen tree. Replace the forces exerted by the ropes with an equivalent wrench and determine (*a*) the resultant force **R**, (*b*) the pitch of the wrench, (*c*) the point where the axis of the wrench intersects the *yz*-plane.

SOLUTION

(*a*) First replace the given forces with an equivalent force-couple system $\left(\mathbf{R},\ \mathbf{M}_O^R\right)$ at the origin.

We have

$$d_{AC} = \sqrt{(6)^2 + (2)^2 + (9)^2} = 11 \text{ m}$$

$$d_{BD} = \sqrt{(14)^2 + (2)^2 + (5)^2} = 15 \text{ m}$$

Then

$$\begin{aligned} T_{AC} &= \frac{1650 \text{ N}}{11} = (6\mathbf{i} + 2\mathbf{j} + 9\mathbf{k}) \\ &= (900 \text{ N})\mathbf{i} + (300 \text{ N})\mathbf{j} + (1350 \text{ N})\mathbf{k} \end{aligned}$$

and

$$\begin{aligned} T_{BD} &= \frac{1500 \text{ N}}{15} = (14\mathbf{i} + 2\mathbf{j} + 5\mathbf{k}) \\ &= (1400 \text{ N})\mathbf{i} + (200 \text{ N})\mathbf{j} + (500 \text{ N})\mathbf{k} \end{aligned}$$

Equivalence then requires

$$\begin{aligned} \Sigma\mathbf{F}: \quad \mathbf{R} &= \mathbf{T}_{AC} + \mathbf{T}_{BD} \\ &= (900\mathbf{i} + 300\mathbf{j} + 1350\mathbf{k}) \\ &\quad + (1400\mathbf{i} + 200\mathbf{j} + 500\mathbf{k}) \\ &= (2300 \text{ N})\mathbf{i} + (500 \text{ N})\mathbf{j} + (1850 \text{ N})\mathbf{k} \end{aligned}$$

$$\begin{aligned} \Sigma\mathbf{M}_O: \quad \mathbf{M}_O^R &= \mathbf{r}_A \times \mathbf{T}_{AC} + \mathbf{r}_B \times \mathbf{T}_{BD} \\ &= (12 \text{ m})\mathbf{k} \times [(900 \text{ N})\mathbf{i} + (300 \text{ N})\mathbf{j} + (1350 \text{ N})\mathbf{k}] \\ &\quad + (9 \text{ m})\mathbf{i} \times [(1400 \text{ N})\mathbf{i} + (200 \text{ N})\mathbf{j} + (500 \text{ N})\mathbf{k}] \\ &= -(3600)\mathbf{i} + (10{,}800 - 4500)\mathbf{j} + (1800)\mathbf{k} \\ &= -(3600 \text{ N}\cdot\text{m})\mathbf{i} + (6300 \text{ N}\cdot\text{m})\mathbf{j} + (1800 \text{ N}\cdot\text{m})\mathbf{k} \end{aligned}$$

The components of the wrench are $(\mathbf{R},\ \mathbf{M}_1)$, where

$$\mathbf{R} = (2300 \text{ N})\mathbf{i} + (500 \text{ N})\mathbf{j} + (1850 \text{ N})\mathbf{k}$$ ◀

PROBLEM 3.139* (Continued)

(*b*) We have

$$R = 100\sqrt{(23)^2 + (5)^2 + (18.5)^2} = 2993.7 \text{ N}$$

Let

$$\boldsymbol{\lambda}_{\text{axis}} = \frac{\mathbf{R}}{R} = \frac{1}{29.937}(23\mathbf{i} + 5\mathbf{j} + 18.5\mathbf{k})$$

Then

$$\begin{aligned} M_1 &= \boldsymbol{\lambda}_{\text{axis}} \cdot \mathbf{M}_O^R \\ &= \frac{1}{29.937}(23\mathbf{i} + 5\mathbf{j} + 18.5\mathbf{k}) \cdot (-3600\mathbf{i} + 6300\mathbf{j} + 1800\mathbf{k}) \\ &= \frac{1}{0.29937}[(23)(-36) + (5)(63) + (18.5)(18)] \\ &= -601.26 \text{ N} \cdot \text{m} \end{aligned}$$

Finally,

$$P = \frac{M_1}{R} = \frac{-601.26 \text{ N} \cdot \text{m}}{2993.7 \text{ N}}$$

or $P = -0.201$ m ◀

(*c*) We have

$$\begin{aligned} M_1 &= M_1\boldsymbol{\lambda}_{\text{axis}} \\ &= (-601.26 \text{ N} \cdot \text{m}) \times \frac{1}{29.937}(23\mathbf{i} + 5\mathbf{j} + 18.5\mathbf{k}) \end{aligned}$$

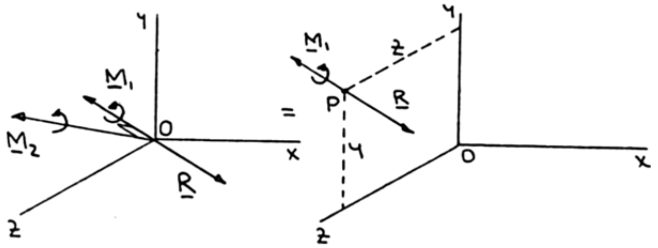
or

$$\mathbf{M}_1 = -(461.93 \text{ N} \cdot \text{m})\mathbf{i} - (100.421 \text{ N} \cdot \text{m})\mathbf{j} - (371.56 \text{ N} \cdot \text{m})\mathbf{k}$$

Now

$$\begin{aligned} \mathbf{M}_2 &= \mathbf{M}_O^R - \mathbf{M}_1 \\ &= (-3600\mathbf{i} + 6300\mathbf{j} + 1800\mathbf{k}) \\ &\quad -(-461.93\mathbf{i} - 100.421\mathbf{j} - 371.56\mathbf{k}) \\ &= -(3138.1 \text{ N} \cdot \text{m})\mathbf{i} + (6400.4 \text{ N} \cdot \text{m})\mathbf{j} + (2171.6 \text{ N} \cdot \text{m})\mathbf{k} \end{aligned}$$

For equivalence:



PROBLEM 3.139* (Continued)

Thus, we require $\mathbf{M}_2 = \mathbf{r}_P \times \mathbf{R} \qquad \mathbf{r} = (y\mathbf{j} + z\mathbf{k})$

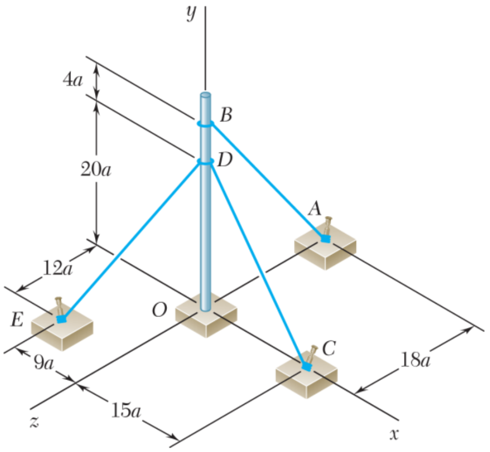
Substituting:

$$-3138.1\mathbf{i} + 6400.4\mathbf{j} + 2171.6\mathbf{k} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & y & z \\ 2300 & 500 & 1850 \end{vmatrix}$$

Equating coefficients:

$$\mathbf{j}: \quad 6400.4 = 2300z \qquad \text{or} \qquad z = 2.78 \text{ m}$$
$$\mathbf{k}: \quad 2171.6 = -2300y \qquad \text{or} \qquad y = -0.944 \text{ m}$$

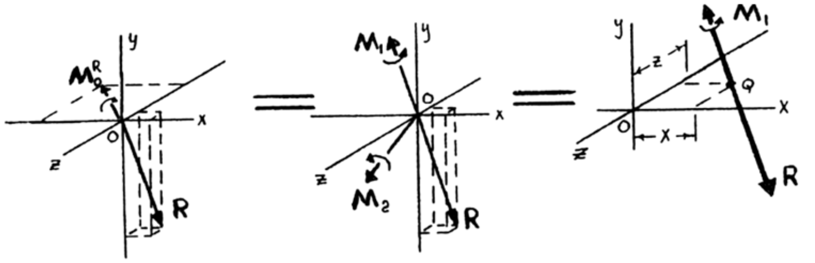
The axis of the wrench intersects the *yz*-plane at $y = -0.944$ m $\quad z = 2.78$ m ◀



PROBLEM 3.140*

A flagpole is guyed by three cables. If the tensions in the cables have the same magnitude P, replace the forces exerted on the pole with an equivalent wrench and determine (*a*) the resultant force **R**, (*b*) the pitch of the wrench, (*c*) the point where the axis of the wrench intersects the *xz*-plane.

SOLUTION



(*a*) First reduce the given force system to a force-couple at the origin.

We have $\Sigma\mathbf{F}$: $P\boldsymbol{\lambda}_{BA} + P\boldsymbol{\lambda}_{DC} + P\boldsymbol{\lambda}_{DE} = \mathbf{R}$

$$\mathbf{R} = P\left[\left(\frac{4}{5}\mathbf{j} - \frac{3}{5}\mathbf{k}\right) + \left(\frac{3}{5}\mathbf{i} - \frac{4}{5}\mathbf{j}\right) + \left(\frac{-9}{25}\mathbf{i} - \frac{4}{5}\mathbf{j} + \frac{12}{25}\mathbf{k}\right)\right]$$

$$\mathbf{R} = \frac{3P}{25}(2\mathbf{i} - 20\mathbf{j} - \mathbf{k}) \blacktriangleleft$$

$$R = \frac{3P}{25}\sqrt{(2)^2 + (20)^2 + (1)^2} = \frac{27\sqrt{5}}{25}P$$

We have $\Sigma\mathbf{M}$: $\Sigma(\mathbf{r}_O \times P) = \mathbf{M}_O^R$

$$(24a)\mathbf{j} \times \left(\frac{-4P}{5}\mathbf{j} - \frac{3P}{5}\mathbf{k}\right) + (20a)\mathbf{j} \times \left(\frac{3P}{5}\mathbf{i} - \frac{4P}{5}\mathbf{j}\right) + (20a)\mathbf{j} \times \left(\frac{-9P}{25}\mathbf{i} - \frac{4P}{5}\mathbf{j} + \frac{12P}{25}\mathbf{k}\right) = \mathbf{M}_O^R$$

$$\mathbf{M}_O^R = \frac{24Pa}{5}(-\mathbf{i} - \mathbf{k})$$

PROBLEM 3.140* (Continued)

(*b*) We have $M_1 = \boldsymbol{\lambda}_R \cdot \mathbf{M}_O^R$

where $\boldsymbol{\lambda}_R = \dfrac{\mathbf{R}}{R} = \dfrac{3P}{25}(2\mathbf{i} - 20\mathbf{j} - \mathbf{k})\dfrac{25}{27\sqrt{5}P} = \dfrac{1}{9\sqrt{5}}(2\mathbf{i} - 20\mathbf{j} - \mathbf{k})$

Then $M_1 = \dfrac{1}{9\sqrt{5}}(2\mathbf{i} - 20\mathbf{j} - \mathbf{k}) \cdot \dfrac{24Pa}{5}(-\mathbf{i} - \mathbf{k}) = \dfrac{-8Pa}{15\sqrt{5}}$

and pitch $p = \dfrac{M_1}{R} = \dfrac{-8Pa}{15\sqrt{5}}\left(\dfrac{25}{27\sqrt{5}P}\right) = \dfrac{-8a}{81}$ or $p = -0.0988a$ ◀

(*c*)

$$\mathbf{M}_1 = M_1\boldsymbol{\lambda}_R = \frac{-8Pa}{15\sqrt{5}}\left(\frac{1}{9\sqrt{5}}\right)(2\mathbf{i} - 20\mathbf{j} - \mathbf{k}) = \frac{8Pa}{675}(-2\mathbf{i} + 20\mathbf{j} + \mathbf{k})$$

Then $\mathbf{M}_2 = \mathbf{M}_O^R - \mathbf{M}_1 = \dfrac{24Pa}{5}(-\mathbf{i} - \mathbf{k}) - \dfrac{8Pa}{675}(-2\mathbf{i} + 20\mathbf{j} + \mathbf{k}) = \dfrac{8Pa}{675}(-430\mathbf{i} - 20\mathbf{j} - 406\mathbf{k})$

We require $\mathbf{M}_2 = \mathbf{r}_{Q/O} \times \mathbf{R}$

$$\left(\frac{8Pa}{675}\right)(-403\mathbf{i} - 20\mathbf{j} - 406\mathbf{k}) = (x\mathbf{i} + z\mathbf{k}) \times \left(\frac{3P}{25}\right)(2\mathbf{i} - 20\mathbf{j} - \mathbf{k})$$

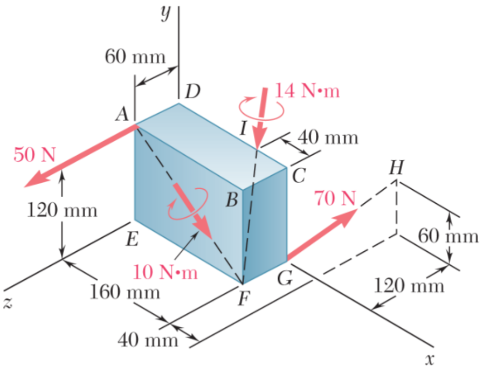
$$= \left(\frac{3P}{25}\right)[20z\mathbf{i} + (x + 2z)\mathbf{j} - 20x\mathbf{k}]$$

From **i**: $8(-403)\dfrac{Pa}{675} = 20z\left(\dfrac{3P}{25}\right)$ $z = -1.99012a$

From **k**: $8(-406)\dfrac{Pa}{675} = -20x\left(\dfrac{3P}{25}\right)$ $x = 2.0049a$

The axis of the wrench intersects the *xz*-plane at

$x = 2.00a,\ z = -1.990a$ ◀



PROBLEM 3.141*

Determine whether the force-and-couple system shown can be reduced to a single equivalent force **R**. If it can, determine **R** and the point where the line of action of **R** intersects the *yz*-plane. If it cannot be so reduced, replace the given system with an equivalent wrench and determine its resultant, its pitch, and the point where its axis intersects the *yz*-plane.

SOLUTION

First, reduce the given force system to a force-couple at the origin.

We have $\Sigma\mathbf{F}: \quad \mathbf{F}_A + \mathbf{F}_G = \mathbf{R}$

$$\mathbf{R} = (50\text{ N})\mathbf{k} + 70\text{ N}\left[\frac{(40\text{ mm})\mathbf{i} + (60\text{ mm})\mathbf{j} - (120\text{ mm})\mathbf{k}}{140\text{ mm}}\right]$$

$$= (20\text{ N})\mathbf{i} + (30\text{ N})\mathbf{j} - (10\text{ N})\mathbf{k}$$

and $R = 37.417\text{ N}$

We have $\Sigma\mathbf{M}_O: \quad \Sigma(\mathbf{r}_O \times \mathbf{F}) + \Sigma\mathbf{M}_C = \mathbf{M}_O^R$

$$\mathbf{M}_O^R = [(0.12\text{ m})\mathbf{j} \times (50\text{ N})\mathbf{k}] + \{(0.16\text{ m})\mathbf{i} \times [(20\text{ N})\mathbf{i} + (30\text{ N})\mathbf{j} - (60\text{ N})\mathbf{k}]\}$$

$$+ (10\text{ N}\cdot\text{m})\left[\frac{(160\text{ mm})\mathbf{i} - (120\text{ mm})\mathbf{j}}{200\text{ mm}}\right]$$

$$+ (14\text{ N}\cdot\text{m})\left[\frac{(40\text{ mm})\mathbf{i} - (120\text{ mm})\mathbf{j} + (60\text{ mm})\mathbf{k}}{140\text{ mm}}\right]$$

$$\mathbf{M}_0^R = (18\text{ N}\cdot\text{m})\mathbf{i} - (8.4\text{ N}\cdot\text{m})\mathbf{j} + (10.8\text{ N}\cdot\text{m})\mathbf{k}$$

To be able to reduce the original forces and couples to a single equivalent force, **R** and **M** must be perpendicular. Thus, $\mathbf{R}\cdot\mathbf{M} = 0$.

Substituting

$$(20\mathbf{i} + 30\mathbf{j} - 10\mathbf{k})\cdot(18\mathbf{i} - 8.4\mathbf{j} + 10.8\mathbf{k}) \overset{?}{=} 0$$

or

$$(20)(18) + (30)(-8.4) + (-10)(10.8) \overset{?}{=} 0$$

or

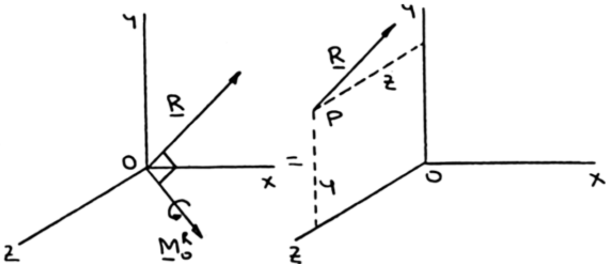
$$0 \overset{\checkmark}{=} 0$$

R and **M** are perpendicular so that the given system can be reduced to the single equivalent force.

$\mathbf{R} = (20.0\text{ N})\mathbf{i} + (30.0\text{ N})\mathbf{j} - (10.00\text{ N})\mathbf{k}$ ◀

PROBLEM 3.141* (Continued)

Then for equivalence,



Thus, we require $\mathbf{M}_O^R = \mathbf{r}_p \times \mathbf{R} \quad \mathbf{r}_p = y\mathbf{j} + z\mathbf{k}$

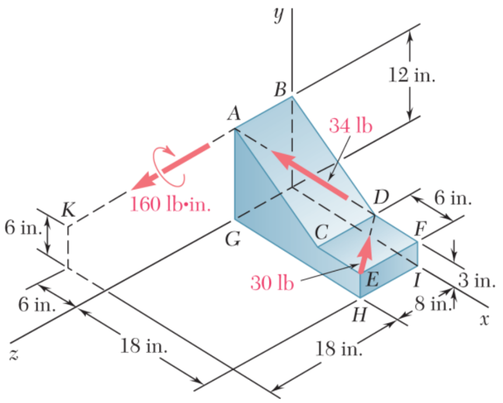
Substituting:

$$18\mathbf{i} - 8.4\mathbf{j} + 10.8\mathbf{k} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & y & z \\ 20 & 30 & -10 \end{vmatrix}$$

Equating coefficients:

$$\mathbf{j}: \quad -8.4 = 20z \qquad \text{or} \qquad z = -0.42 \text{ m}$$
$$\mathbf{k}: \quad 10.8 = -20y \qquad \text{or} \qquad y = -0.54 \text{ m}$$

The line of action of **R** intersects the *yz*-plane at $x = 0 \quad y = -0.540 \text{ m} \quad z = -0.420 \text{ m}$ ◀



PROBLEM 3.142*

Determine whether the force-and-couple system shown can be reduced to a single equivalent force **R**. If it can, determine **R** and the point where the line of action of **R** intersects the *yz*-plane. If it cannot be so reduced, replace the given system with an equivalent wrench and determine its resultant, its pitch, and the point where its axis intersects the *yz*-plane.

SOLUTION

First determine the resultant of the forces at *D*. We have

$$d_{DA} = \sqrt{(-12)^2 + (9)^2 + (8)^2} = 17 \text{ in.}$$

$$d_{ED} = \sqrt{(-6)^2 + (0)^2 + (-8)^2} = 10 \text{ in.}$$

Then

$$\mathbf{F}_{DA} = \frac{34 \text{ lb}}{17} = (-12\mathbf{i} + 9\mathbf{j} + 8\mathbf{k})$$

$$= -(24 \text{ lb})\mathbf{i} + (18 \text{ lb})\mathbf{j} + (16 \text{ lb})\mathbf{k}$$

and

$$\mathbf{F}_{ED} = \frac{30 \text{ lb}}{10} = (-6\mathbf{i} - 8\mathbf{k})$$

$$= -(18 \text{ lb})\mathbf{i} - (24 \text{ lb})\mathbf{k}$$

Then

$$\Sigma\mathbf{F}: \quad \mathbf{R} = \mathbf{F}_{DA} + \mathbf{F}_{ED}$$

$$= (-24\mathbf{i} + 18\mathbf{j} + 16\mathbf{k} + (-18\mathbf{i} - 24\mathbf{k})$$

$$= -(42 \text{ lb})\mathbf{i} + (18 \text{ lb})\mathbf{j} - (8 \text{ lb})\mathbf{k}$$

For the applied couple

$$d_{AK} = \sqrt{(-6)^2 + (-6)^2 + (18)^2} = 6\sqrt{11} \text{ in.}$$

Then

$$\mathbf{M} = \frac{160 \text{ lb} \cdot \text{in.}}{6\sqrt{11}}(-6\mathbf{i} - 6\mathbf{j} + 18\mathbf{k})$$

$$= \frac{160}{\sqrt{11}}[-(1 \text{ lb} \cdot \text{in.})\mathbf{i} - (1 \text{ lb} \cdot \text{in.})\mathbf{j} + (3 \text{ lb} \cdot \text{in.})\mathbf{k}]$$

To be able to reduce the original forces and couple to a single equivalent force, **R** and **M** must be perpendicular. Thus

$$\mathbf{R} \cdot \mathbf{M} \overset{?}{=} 0$$

PROBLEM 3.142* (Continued)

Substituting

$$(-42\mathbf{i}+18\mathbf{j}-8\mathbf{k})\cdot\frac{160}{\sqrt{11}}(-\mathbf{i}-\mathbf{j}+3\mathbf{k}) \overset{?}{=} 0$$

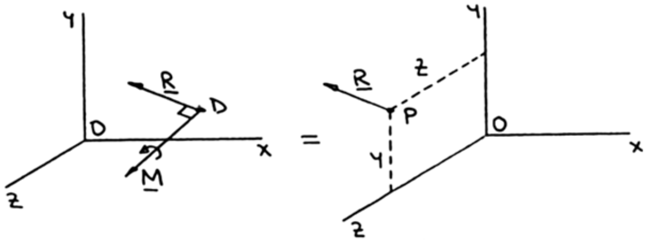
or $$\frac{160}{\sqrt{11}}[(-42)(-1)+(18)(-1)+(-8)(3)] \overset{?}{=} 0$$

or $$0 \overset{\checkmark}{=} 0$$

R and **M** are perpendicular so that the given system can be reduced to the single equivalent force.

$$\mathbf{R} = -(42.0\text{ lb})\mathbf{i}+(18.00\text{ lb})\mathbf{j}-(8.00\text{ lb})\mathbf{k} \blacktriangleleft$$

Then for equivalence,



Thus, we require $\mathbf{M} = \mathbf{r}_{P/D}\times\mathbf{R}$

where $\mathbf{r}_{P/D} = -(12\text{ in.})\mathbf{i}+[(y-3)\text{in.}]\mathbf{j}+(z\text{ in.})\mathbf{k}$

Substituting:

$$\frac{160}{\sqrt{11}}(-\mathbf{i}-\mathbf{j}+3\mathbf{k}) = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -12 & (y-3) & z \\ -42 & 18 & -8 \end{vmatrix}$$

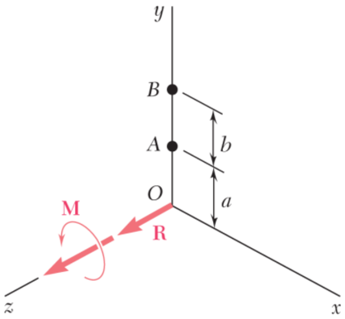
$$\begin{aligned} &= [(y-3)(-8)-(z)(18)]\mathbf{i} \\ &\quad +[(z)(-42)-(-12)(-8)]\mathbf{j} \\ &\quad +[(-12)(18)-(y-3)(-42)]\mathbf{k} \end{aligned}$$

Equating coefficients:

$$\mathbf{j}:\quad -\frac{160}{\sqrt{11}} = -42z-96 \qquad \text{or} \quad z = -1.137\text{ in.}$$

$$\mathbf{k}:\quad \frac{480}{\sqrt{11}} = -216+42(y-3) \qquad \text{or} \quad y = 11.59\text{ in.}$$

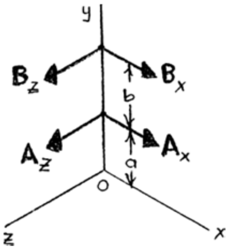
The line of action of **R** intersects the *yz*-plane at $x = 0 \quad y = 11.59\text{ in.} \quad z = -1.137\text{ in.}$ ◀



PROBLEM 3.143*

Replace the wrench shown with an equivalent system consisting of two forces perpendicular to the *y*-axis and applied respectively at *A* and *B*.

SOLUTION



Express the forces at *A* and *B* as

$$\mathbf{A} = A_x\mathbf{i} + A_z\mathbf{k}$$

$$\mathbf{B} = B_x\mathbf{i} + B_z\mathbf{k}$$

Then, for equivalence to the given force system,

$$\Sigma F_x: \quad A_x + B_x = 0 \qquad (1)$$

$$\Sigma F_z: \quad A_z + B_z = R \qquad (2)$$

$$\Sigma M_x: \quad A_z(a) + B_z(a+b) = 0 \qquad (3)$$

$$\Sigma M_z: \quad -A_x(a) - B_x(a+b) = M \qquad (4)$$

From Equation (1), $B_x = -A_x$

Substitute into Equation (4):

$$-A_x(a) + A_x(a+b) = M$$

$$A_x = \frac{M}{b} \quad \text{and} \quad B_x = -\frac{M}{b}$$

From Equation (2), $B_z = R - A_z$

and Equation (3), $A_z a + (R - A_z)(a+b) = 0$

$$A_z = R\left(1 + \frac{a}{b}\right)$$

and $B_z = R - R\left(1 + \frac{a}{b}\right)$

$$B_z = -\frac{a}{b}R$$

Then

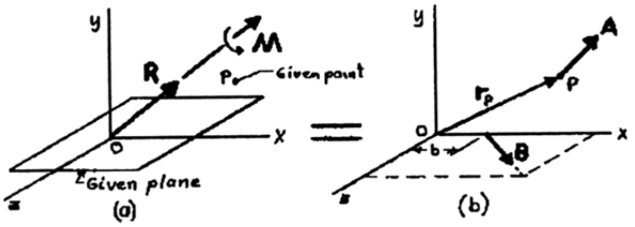
$$\mathbf{A} = \left(\frac{M}{b}\right)\mathbf{i} + R\left(1 + \frac{a}{b}\right)\mathbf{k} \blacktriangleleft$$

$$\mathbf{B} = -\left(\frac{M}{b}\right)\mathbf{i} - \left(\frac{a}{b}R\right)\mathbf{k} \blacktriangleleft$$

PROBLEM 3.144*

Show that, in general, a wrench can be replaced with two forces chosen in such a way that one force passes through a given point while the other force lies in a given plane.

SOLUTION



First, choose a coordinate system so that the *xy*-plane coincides with the given plane. Also, position the coordinate system so that the line of action of the wrench passes through the origin as shown in Figure *a*. Since the orientation of the plane and the components (**R**, **M**) of the wrench are known, it follows that the scalar components of **R** and **M** are known relative to the shown coordinate system.

A force system to be shown as equivalent is illustrated in Figure *b*. Let **A** be the force passing through the given Point *P* and **B** be the force that lies in the given plane. Let *b* be the *x*-axis intercept of **B**.

The known components of the wrench can be expressed as

$$\mathbf{R} = R_x\mathbf{i} + R_y\mathbf{j} + R_z\mathbf{k} \quad \text{and} \quad M = M_x\mathbf{i} + M_y\mathbf{j} + M_z\mathbf{k}$$

while the unknown forces **A** and **B** can be expressed as

$$\mathbf{A} = A_x\mathbf{i} + A_y\mathbf{j} + A_z\mathbf{k} \quad \text{and} \quad \mathbf{B} = B_x\mathbf{i} + B_z\mathbf{k}$$

Since the position vector of Point *P* is given, it follows that the scalar components (*x*, *y*, *z*) of the position vector $\mathbf{r}_P$ are also known.

Then, for equivalence of the two systems,

$$\Sigma F_x: \quad R_x = A_x + B_x \tag{1}$$

$$\Sigma F_y: \quad R_y = A_y \tag{2}$$

$$\Sigma F_z: \quad R_z = A_z + B_z \tag{3}$$

$$\Sigma M_x: \quad M_x = yA_z - zA_y \tag{4}$$

$$\Sigma M_y: \quad M_y = zA_x - xA_z - bB_z \tag{5}$$

$$\Sigma M_z: \quad M_z = xA_y - yA_x \tag{6}$$

Based on the above six independent equations for the six unknowns $(A_x, A_y, A_z, B_x, B_z, b)$, there exists a unique solution for **A** and **B**.

From Equation (2), $A_y = R_y$ ◀

PROBLEM 3.144* (Continued)

Equation (6): $$A_x = \left(\frac{1}{y}\right)(xR_y - M_z) \blacktriangleleft$$

Equation (1): $$B_x = R_x - \left(\frac{1}{y}\right)(xR_y - M_z) \blacktriangleleft$$

Equation (4): $$A_z = \left(\frac{1}{y}\right)(M_x + zR_y) \blacktriangleleft$$

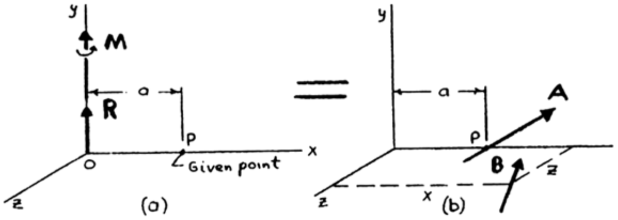
Equation (3): $$B_z = R_z - \left(\frac{1}{y}\right)(M_x + zR_y) \blacktriangleleft$$

Equation (5): $$b = \frac{(xM_x + yM_y + zM_z)}{(M_x - yR_z + zR_y)} \blacktriangleleft$$

PROBLEM 3.145*

Show that a wrench can be replaced with two perpendicular forces, one of which is applied at a given point.

SOLUTION



First, observe that it is always possible to construct a line perpendicular to a given line so that the constructed line also passes through a given point. Thus, it is possible to align one of the coordinate axes of a rectangular coordinate system with the axis of the wrench while one of the other axes passes through the given point.

See Figures *a* and *b*.

We have $\mathbf{R} = R\mathbf{j}$ and $\mathbf{M} = M\mathbf{j}$ and are known.

The unknown forces **A** and **B** can be expressed as

$$\mathbf{A} = A_x\mathbf{i} + A_y\mathbf{j} + A_z\mathbf{k} \quad \text{and} \quad \mathbf{B} = B_x\mathbf{i} + B_y\mathbf{j} + B_z\mathbf{k}$$

The distance *a* is known. It is assumed that force **B** intersects the *xz*-plane at (*x*, 0, *z*). Then for equivalence,

$$\Sigma F_x: \quad 0 = A_x + B_x \tag{1}$$

$$\Sigma F_y: \quad R = A_y + B_y \tag{2}$$

$$\Sigma F_z: \quad 0 = A_z + B_z \tag{3}$$

$$\Sigma M_x: \quad 0 = -zB_y \tag{4}$$

$$\Sigma M_y: \quad M = -aA_z - xB_z + zB_x \tag{5}$$

$$\Sigma M_z: \quad 0 = aA_y + xB_y \tag{6}$$

Since **A** and **B** are made perpendicular,

$$\mathbf{A} \cdot \mathbf{B} = 0 \quad \text{or} \quad A_xB_x + A_yB_y + A_zB_z = 0 \tag{7}$$

There are eight unknowns: $A_x, A_y, A_z, B_x, B_y, B_z, x, z$

But only seven independent equations. Therefore, *there exists an infinite number of solutions.*

Next, consider Equation (4): $0 = -zB_y$

If $B_y = 0$, Equation (7) becomes $A_xB_x + A_zB_z = 0$

Using Equations (1) and (3), this equation becomes $A_x^2 + A_z^2 = 0$

Since the components of **A** must be real, a nontrivial solution is not possible. Thus, it is required that $B_y \neq 0,$ so that from Equation (4), $z = 0.$

To obtain one possible solution, arbitrarily let $A_x = 0.$

(*Note:* Setting $A_y, A_z,$ or B_z equal to zero results in unacceptable solutions.)

The defining equations then become

$$0 = B_x \tag{1)$'$ (}$$

$$R = A_y + B_y \qquad (2)$$

$$0 = A_z + B_z \qquad (3)$$

$$M = -aA_z - xB_z \qquad (5)'$$

$$0 = aA_y + xB_y \qquad (6)$$

$$A_yB_y + A_zB_z = 0 \qquad (7)'$$

Then Equation (2) can be written $A_y = R - B_y$

Equation (3) can be written $B_z = -A_z$

Equation (6) can be written $x = -\dfrac{aA_y}{B_y}$

Substituting into Equation (5)′,

$$M = -aA_z - \left(-a\frac{R-B_y}{B_y}\right)(-A_z)$$

or

$$A_z = -\frac{M}{aR}B_y \qquad (8)$$

Substituting into Equation (7)′,

$$(R-B_y)B_y + \left(-\frac{M}{aR}B_y\right)\left(\frac{M}{aR}B_y\right) = 0$$

or

$$B_y = \frac{a^2R^3}{a^2R^2 + M^2}$$

Then from Equations (2), (8), and (3),

$$A_y = R - \frac{a^2R^2}{a^2R^2 + M^2} = \frac{RM^2}{a^2R^2 + M^2}$$

$$A_z = -\frac{M}{aR}\left(\frac{a^2R^3}{a^2R^2 + M^2}\right) = -\frac{aR^2M}{a^2R^2 + M^2}$$

$$B_z = \frac{aR^2M}{a^2R^2 + M^2}$$

In summary,

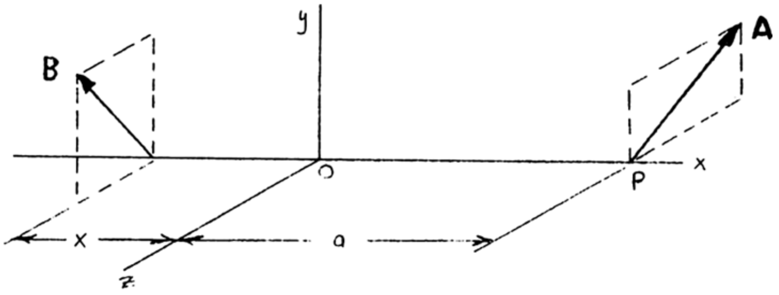
$$\mathbf{A} = \frac{RM}{a^2R^2 + M^2}(M\mathbf{j} - aR\mathbf{k}) \quad \blacktriangleleft$$

$$\mathbf{B} = \frac{aR^2}{a^2R^2 + M^2}(aR\mathbf{j} + M\mathbf{k}) \quad \blacktriangleleft$$

Which shows that it is possible to replace a wrench with two perpendicular forces, one of which is applied at a given point.

Lastly, if $R > 0$ and $M > 0$, it follows from the equations found for **A** and **B** that $A_y > 0$ and $B_y > 0$.

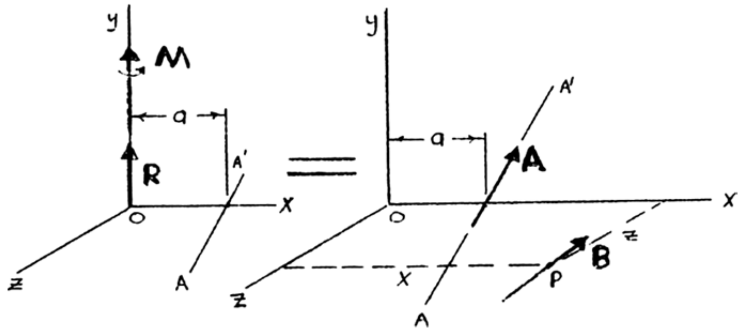
From Equation (6), $x < 0$ (assuming $a > 0$). Then, as a consequence of letting $A_x = 0$, force **A** lies in a plane parallel to the *yz*-plane and to the right of the origin, while force **B** lies in a plane parallel to the *yz*-plane but to the left to the origin, as shown in the figure below.



PROBLEM 3.146*

Show that a wrench can be replaced with two forces, one of which has a prescribed line of action.

SOLUTION



First, choose a rectangular coordinate system where one axis coincides with the axis of the wrench and another axis intersects the prescribed line of action (AA'). Note that it has been assumed that the line of action of force **B** intersects the xz-plane at Point $P(x, 0, z)$. Denoting the known direction of line AA' by

$$\lambda_A = \lambda_x \mathbf{i} + \lambda_y \mathbf{j} + \lambda_z \mathbf{k}$$

it follows that force **A** can be expressed as

$$\mathbf{A} = A\lambda_A = A(\lambda_x \mathbf{i} + \lambda_y \mathbf{j} + \lambda_z \mathbf{k})$$

Force **B** can be expressed as

$$\mathbf{B} = B_x \mathbf{i} + B_y \mathbf{j} + B_z \mathbf{k}$$

Next, observe that since the axis of the wrench and the prescribed line of action AA' are known, it follows that the distance a can be determined. In the following solution, it is assumed that a is known.

Then for equivalence,

$$\Sigma F_x: \quad 0 = A\lambda_x + B_x \tag{1}$$

$$\Sigma F_y: \quad R = A\lambda_y + B_y \tag{2}$$

$$\Sigma F_z: \quad 0 = A\lambda_z + B_z \tag{3}$$

$$\Sigma M_x: \quad 0 = -zB_y \tag{4}$$

$$\Sigma M_y: \quad M = -aA\lambda_z + zB_x - xB_z \tag{5}$$

$$\Sigma M_x: \quad 0 = -aA\lambda_y + xB_y \tag{6}$$

Since there are six unknowns (A, B_x, B_y, B_z, x, z) and six independent equations, it will be possible to obtain a solution.

PROBLEM 3.146* (Continued)

Case 1: Let $z = 0$ to satisfy Equation (4).

Now Equation (2): $$A\lambda_y = R - B_y$$

Equation (3): $$B_z = -A\lambda_z$$

Equation (6): $$x = -\frac{aA\lambda_y}{B_y} = -\left(\frac{a}{B_y}\right)(R - B_y)$$

Substitution into Equation (5):

$$M = -aA\lambda_z - \left[-\left(\frac{a}{B_y}\right)(R - B_y)(-A\lambda_z)\right]$$

$$A = -\frac{1}{\lambda_z}\left(\frac{M}{aR}\right)B_y$$

Substitution into Equation (2):

$$R = -\frac{1}{\lambda_z}\left(\frac{M}{aR}\right)B_y\lambda_y + B_y$$

$$B_y = \frac{\lambda_z aR^2}{\lambda_z aR - \lambda_y M}$$

Then $$A = -\frac{MR}{\lambda_z aR - \lambda_y M} = \frac{R}{\lambda_y - \frac{aR}{M}\lambda_z}$$

$$B_x = -A\lambda_x = \frac{\lambda_x MR}{\lambda_z aR - \lambda_y M}$$

$$B_z = -A\lambda_z = \frac{\lambda_z MR}{\lambda_z aR - \lambda_y M}$$

In summary, $$\mathbf{A} = \frac{P}{\lambda_y - \frac{aR}{M}\lambda_z}\lambda_A \blacktriangleleft$$

$$\mathbf{B} = \frac{R}{\lambda_z aR - \lambda_y M}(\lambda_x M\,\mathbf{i} + \lambda_z aR\mathbf{j} + \lambda_z M\,\mathbf{k}) \blacktriangleleft$$

and $$x = a\left(1 - \frac{R}{B_y}\right)$$

$$= a\left[1 - R\left(\frac{\lambda_z aR - \lambda_y M}{\lambda_z aR^2}\right)\right]$$

or $$x = \frac{\lambda_y M}{\lambda_z R} \blacktriangleleft$$

Note that for this case, the lines of action of both **A** and **B** intersect the *x*-axis.

PROBLEM 3.146* (Continued)

Case 2: Let $B_y = 0$ to satisfy Equation (4).

Now Equation (2): $A = \frac{R}{\lambda_y}$

Equation (1): $B_x = -R\left(\frac{\lambda_x}{\lambda_y}\right)$

Equation (3): $B_z = -R\left(\frac{\lambda_z}{\lambda_y}\right)$

Equation (6): $aA\lambda_y = 0$ which requires $a = 0$

Substitution into Equation (5):

$$M = z\left[-R\left(\frac{\lambda_x}{\lambda_y}\right)\right] - x\left[-R\left(\frac{\lambda_z}{\lambda_y}\right)\right] \quad \text{or} \quad \lambda_z x - \lambda_x z = \left(\frac{M}{R}\right)\lambda_y$$

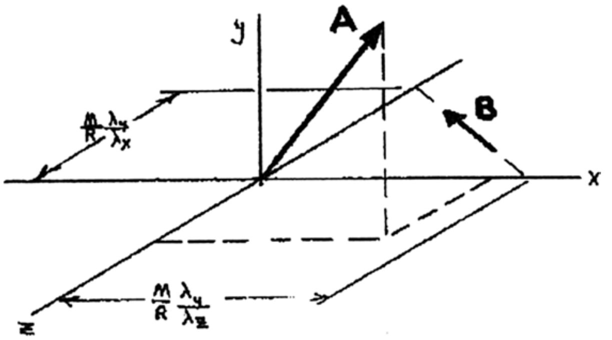
This last expression is the equation for the line of action of force **B**.

In summary,

$$\mathbf{A} = \left(\frac{R}{\lambda_y}\right)\lambda_A \quad ◀$$

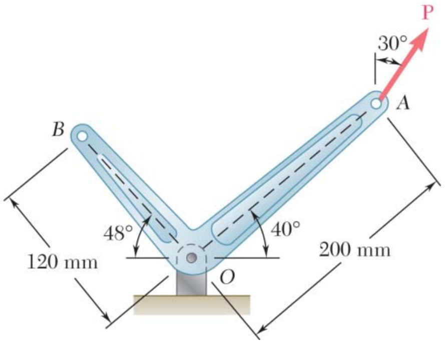
$$\mathbf{B} = \left(\frac{R}{\lambda_y}\right)(-\lambda_x\mathbf{i} - \lambda_x\mathbf{k}) \quad ◀$$

Assuming that $\lambda_x, \lambda_y, \lambda_z$. 0, the equivalent force system is as shown below.



y
A
B
x
z
$\frac{M}{R}\frac{\lambda_y}{\lambda_x}$
$\frac{M}{R}\frac{\lambda_y}{\lambda_z}$

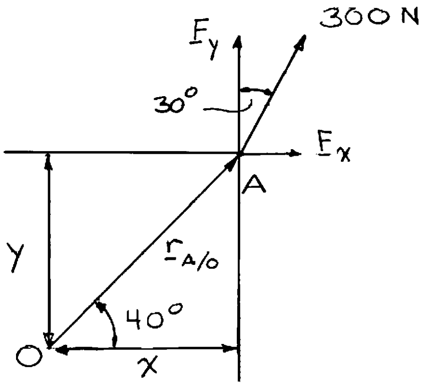
Note that the component of **A** in the *xz*-plane is parallel to **B**.



PROBLEM 3.147

A 300-N force **P** is applied at Point *A* of the bell crank shown. (*a*) Compute the moment of the force **P** about *O* by resolving it into horizontal and vertical components. (*b*) Using the result of part (*a*), determine the perpendicular distance from *O* to the line of action of **P**.

SOLUTION



$$x = (0.2\ \text{m})\cos 40°$$
$$= 0.153209\ \text{m}$$
$$y = (0.2\ \text{m})\sin 40°$$
$$= 0.128558\ \text{m}$$
$$\therefore\quad \mathbf{r}_{A/O} = (0.153209\ \text{m})\mathbf{i} + (0.128558\ \text{m})\mathbf{j}$$

(*a*) $F_x = (300\ \text{N})\sin 30°$

$= 150\ \text{N}$

$F_y = (300\ \text{N})\cos 30°$

$= 259.81\ \text{N}$

$\mathbf{F} = (150\ \text{N})\mathbf{i} + (259.81\ \text{N})\mathbf{j}$

$\mathbf{M}_O = \mathbf{r}_{A/O} \times \mathbf{F}$

$= (0.153209\mathbf{i} + 0.128558\mathbf{j})\ \text{m} \times (150\mathbf{i} + 259.81\mathbf{j})\ \text{N}$

$= (39.805\mathbf{k} - 19.2837\mathbf{k})\ \text{N}\cdot\text{m}$

$= (20.521\ \text{N}\cdot\text{m})\mathbf{k}$

$\mathbf{M}_O = 20.5\ \text{N}\cdot\text{m} \circlearrowleft$ ◀

(*b*) $M_O = Fd$

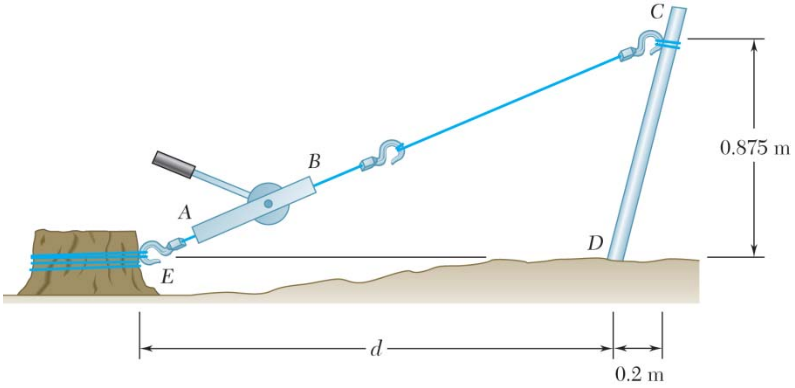
$20.521\ \text{N}\cdot\text{m} = (300\ \text{N})(d)$

$d = 0.068403\ \text{m}$

$d = 68.4\ \text{mm}$ ◀

PROBLEM 3.148

A winch puller *AB* is used to straighten a fence post. Knowing that the tension in cable *BC* is 1040 N and length *d* is 1.90 m, determine the moment about *D* of the force exerted by the cable at *C* by resolving that force into horizontal and vertical components applied (*a*) at Point *C*, (*b*) at Point *E*.



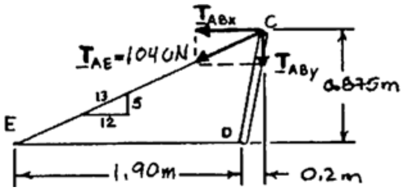
C
B
A
D
E
0.875 m
d
0.2 m

SOLUTION

(*a*) Slope of line: $EC = \dfrac{0.875\text{ m}}{1.90\text{ m} + 0.2\text{ m}} = \dfrac{5}{12}$

Then

$$T_{ABx} = \frac{12}{13}(T_{AB})$$
$$= \frac{12}{13}(1040\text{ N})$$
$$= 960\text{ N}$$



T_ABx
C

5
12
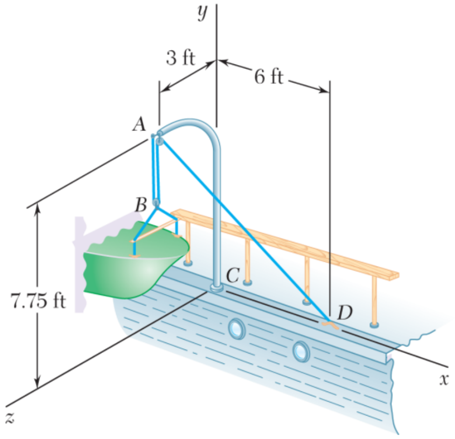
T_ABx
E
D
T_AB
T_ABy
1.90m

(*b*)

(*b*) We have

$$M_D = T_{ABx}(y) + T_{ABx}(x)$$
$$= (960\text{ N})(0) + (400\text{ N})(1.90\text{ m})$$
$$= 760\text{ N}\cdot\text{m}$$

or $\mathbf{M}_D = 760\text{ N}\cdot\text{m}$ ↻ ◀



PROBLEM 3.149

A small boat hangs from two davits, one of which is shown in the figure. The tension in line *ABAD* is 82 lb. Determine the moment about *C* of the resultant force $\mathbf{R}_A$ exerted on the davit at *A*.

SOLUTION

We have $$\mathbf{R}_A = 2\mathbf{F}_{AB} + \mathbf{F}_{AD}$$

where $$\mathbf{F}_{AB} = -(82\text{ lb})\mathbf{j}$$

and $$\mathbf{F}_{AD} = F_{AD}\frac{\overrightarrow{AD}}{AD} = (82\text{ lb})\frac{6\mathbf{i} - 7.75\mathbf{j} - 3\mathbf{k}}{10.25}$$

$$\mathbf{F}_{AD} = (48\text{ lb})\mathbf{i} - (62\text{ lb})\mathbf{j} - (24\text{ lb})\mathbf{k}$$

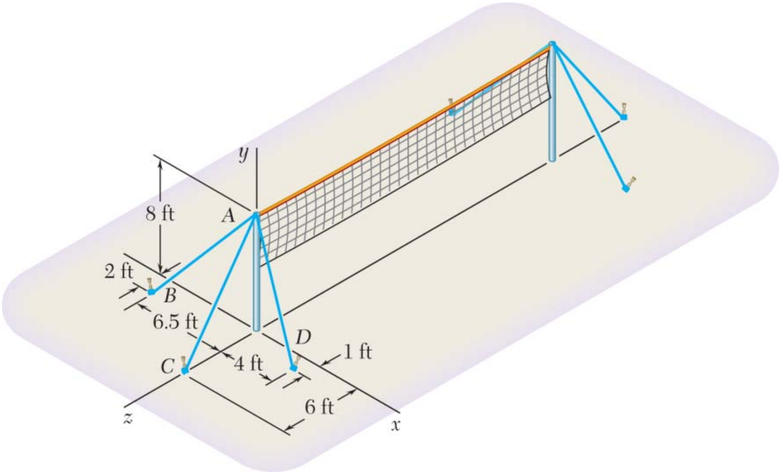
Thus $$\mathbf{R}_A = 2\mathbf{F}_{AB} + \mathbf{F}_{AD} = (48\text{ lb})\mathbf{i} - (226\text{ lb})\mathbf{j} - (24\text{ lb})\mathbf{k}$$

Also $$\mathbf{r}_{A/C} = (7.75\text{ ft})\mathbf{j} + (3\text{ ft})\mathbf{k}$$

Using Eq. (3.21): $$\mathbf{M}_C = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 7.75 & 3 \\ 48 & -226 & -24 \end{vmatrix}$$

$$= (492\text{ lb}\cdot\text{ft})\mathbf{i} + (144.0\text{ lb}\cdot\text{ft})\mathbf{j} - (372\text{ lb}\cdot\text{ft})\mathbf{k}$$

$$\mathbf{M}_C = (492\text{ lb}\cdot\text{ft})\mathbf{i} + (144.0\text{ lb}\cdot\text{ft})\mathbf{j} - (372\text{ lb}\cdot\text{ft})\mathbf{k}$$ ◀



PROBLEM 3.150

Consider the volleyball net shown. Determine the angle formed by guy wires *AB* and *AC*.

SOLUTION

First note:

$$AB = \sqrt{(-6.5)^2 + (-8)^2 + (2)^2} = 10.5 \text{ ft}$$

$$AC = \sqrt{(0)^2 + (-8)^2 + (6)^2} = 10 \text{ ft}$$

and

$$\overrightarrow{AB} = -(6.5 \text{ ft})\mathbf{i} - (8 \text{ ft})\mathbf{j} + (2 \text{ ft})\mathbf{k}$$

$$\overrightarrow{AC} = -(8 \text{ ft})\mathbf{j} + (6 \text{ ft})\mathbf{k}$$

By definition,

$$\overrightarrow{AB} \cdot \overrightarrow{AC} = (AB)(AC)\cos\theta$$

or

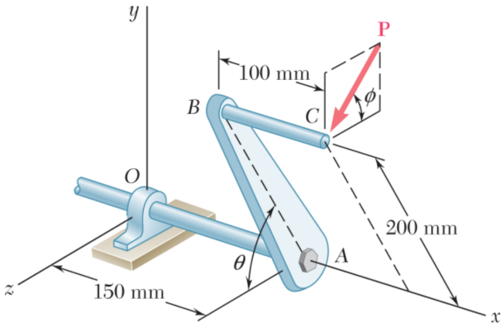
$$(-6.5\mathbf{i} - 8\mathbf{j} + 2\mathbf{k}) \cdot (-8\mathbf{j} + 6\mathbf{k}) = (10.5)(10)\cos\theta$$

$$(-6.5)(0) + (-8)(-8) + (2)(6) = 105\cos\theta$$

or

$$\cos\theta = 0.72381$$

or $\theta = 43.6°$ ◀



PROBLEM 3.151

A single force **P** acts at *C* in a direction perpendicular to the handle *BC* of the crank shown. Determine the moment M_x of **P** about the *x*-axis when $\theta = 65°$, knowing that $M_y = -15\ \text{N}\cdot\text{m}$ and $M_z = -36\ \text{N}\cdot\text{m}$.

SOLUTION

See the solution to Prob. 3.53 for the derivation of the following equations:

$$M_x = (0.2)P\sin(\theta+\phi) \qquad (1)$$

$$\tan\phi = \frac{M_z}{M_y} \qquad (4)$$

$$P = 4\sqrt{M_y^2 + M_z^2} \qquad (5)$$

Substituting for known data gives:

$$\tan\phi = \frac{-36\ \text{N}\cdot\text{m}}{-15\ \text{N}\cdot\text{m}}$$

$$\phi = 67.380°$$

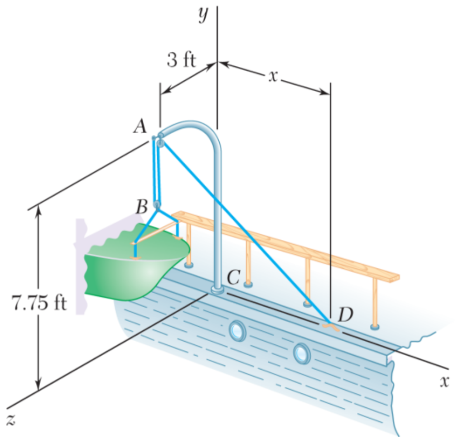
$$P = 4\sqrt{(-15)^2 + (-36)^2}$$

$$P = 156.0\ \text{N}$$

$$M_x = 0.2\ \text{m}(156.0\ \text{N})\sin(65° + 67.380°)$$

$$= 23.047\ \text{N}\cdot\text{m}$$

$$M_x = 23.0\ \text{N}\cdot\text{m} \blacktriangleleft$$



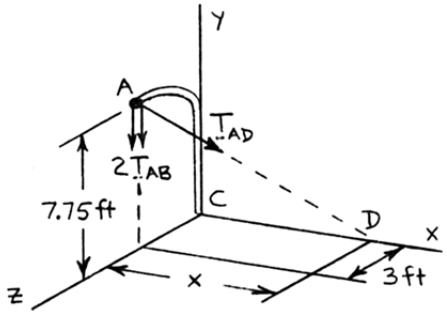
PROBLEM 3.152

A small boat hangs from two davits, one of which is shown in the figure. It is known that the moment about the *z*-axis of the resultant force $\mathbf{R}_A$ exerted on the davit at *A* must not exceed 279 lb·ft in absolute value. Determine the largest allowable tension in line *ABAD* when $x = 6$ ft.

SOLUTION

First note: $$\mathbf{R}_A = 2\mathbf{T}_{AB} + \mathbf{T}_{AD}$$

Also note that only $\mathbf{T}_{AD}$ will contribute to the moment about the *z*-axis.



Now $$AD = \sqrt{(6)^2 + (-7.75)^2 + (-3)^2}$$
$$= 10.25 \text{ ft}$$

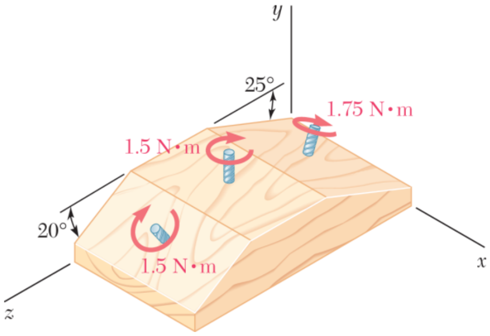
Then $$\mathbf{T}_{AD} = T\frac{\overrightarrow{AD}}{AD}$$
$$= \frac{T}{10.25}(6\mathbf{i} - 7.75\mathbf{j} - 3\mathbf{k})$$

Now $$M_z = \mathbf{k} \cdot (\mathbf{r}_{A/C} \times \mathbf{T}_{AD})$$

where $$\mathbf{r}_{A/C} = (7.75 \text{ ft})\mathbf{j} + (3 \text{ ft})\mathbf{k}$$

Then for $T_{\max}$, $$279 = \left|\frac{T_{\max}}{10.25}\begin{vmatrix} 0 & 0 & 1 \\ 0 & 7.75 & 3 \\ 6 & -7.75 & -3 \end{vmatrix}\right|$$
$$= \frac{T_{\max}}{10.25}\left|-(1)(7.75)(6)\right|$$

or $T_{\max} = 61.5$ lb ◀



PROBLEM 3.153

In a manufacturing operation, three holes are drilled simultaneously in a workpiece. If the holes are perpendicular to the surfaces of the workpiece, replace the couples applied to the drills with a single equivalent couple, specifying its magnitude and the direction of its axis.

SOLUTION

$$\mathbf{M} = \mathbf{M}_1 + \mathbf{M}_2 + \mathbf{M}_3$$

$$= (1.5\text{ N}\cdot\text{m})(-\cos 20°\mathbf{j} + \sin 20°\mathbf{k}) - (1.5\text{ N}\cdot\text{m})\mathbf{j}$$

$$+ (1.75\text{ N}\cdot\text{m})(-\cos 25°\mathbf{j} + \sin 25°\mathbf{k})$$

$$= -(4.4956\text{ N}\cdot\text{m})\mathbf{j} + (0.22655\text{ N}\cdot\text{m})\mathbf{k}$$

$$M = \sqrt{(0)^2 + (-4.4956)^2 + (0.22655)^2}$$

$$= 4.5013\text{ N}\cdot\text{m}$$

$M = 4.50\text{ N}\cdot\text{m}$ ◀

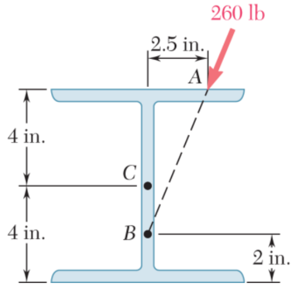
$$\lambda_{\text{axis}} = \frac{\mathbf{M}}{M} = -(0.99873\mathbf{j} + 0.050330\mathbf{k})$$

$$\cos\theta_x = 0$$

$$\cos\theta_y = -0.99873$$

$$\cos\theta_z = 0.050330$$

$\theta_x = 90.0°, \quad \theta_y = 177.1°, \quad \theta_z = 87.1°$ ◀



PROBLEM 3.154

A 260-lb force is applied at A to the rolled-steel section shown. Replace that force with an equivalent force-couple system at the center C of the section.

SOLUTION

$$AB = \sqrt{(2.5\text{ in.})^2 + (6.0\text{ in.})^2} = 6.50\text{ in.}$$

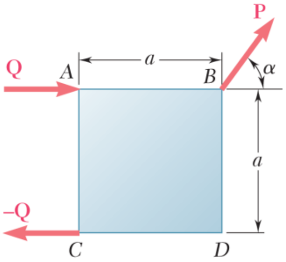
$$\sin\alpha = \frac{2.5\text{ in.}}{6.5\text{ in.}} = \frac{5}{13}$$

$$\cos\alpha = \frac{6.0\text{ in.}}{6.5\text{ in.}} = \frac{12}{13} \qquad \alpha = 22.6^\circ$$

$$\begin{aligned}\mathbf{F} &= -F\sin\alpha\mathbf{i} - F\cos\alpha\mathbf{j}\\ &= -(260\text{ lb})\frac{5}{13}\mathbf{i} - (260\text{ lb})\frac{12}{13}\mathbf{j}\\ &= -(100.0\text{ lb})\mathbf{i} - (240\text{ lb})\mathbf{j}\end{aligned}$$

$$\begin{aligned}\mathbf{M}_C &= \mathbf{r}_{A/C} \times \mathbf{F}\\ &= (2.5\mathbf{i} + 4.0\mathbf{j}) \times (-100.0\mathbf{i} - 240\mathbf{j})\\ &= 400\mathbf{k} - 600\mathbf{k}\\ &= -(200\text{ lb}\cdot\text{in.})\mathbf{k}\end{aligned}$$

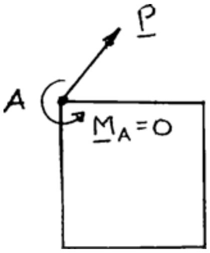
$\mathbf{F} = 260\text{ lb} \measuredangle 67.4^\circ$; $\mathbf{M}_C = 200\text{ lb}\cdot\text{in.} \circlearrowright$ ◀



PROBLEM 3.155

The force and couple shown are to be replaced by an equivalent single force. Knowing that $P = 2Q$, determine the required value of α if the line of action of the single equivalent force is to pass through (*a*) Point A, (*b*) Point C.

SOLUTION

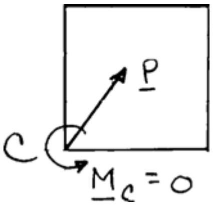


(*a*) We must have $M_A = 0$

$$(P\sin\alpha)a - Q(a) = 0$$

$$\sin\alpha = \frac{Q}{P} = \frac{Q}{2Q} = \frac{1}{2}$$

$\alpha = 30.0°$ ◀



(*b*) We must have $M_C = 0$

$$(P\sin\alpha)a - (P\cos\alpha)a - Q(a) = 0$$

$$\sin\alpha - \cos\alpha = \frac{Q}{P} = \frac{Q}{2Q} = \frac{1}{2}$$

$$\sin\alpha = \cos\alpha + \frac{1}{2} \qquad (1)$$

$$\sin^2\alpha = \cos^2\alpha + \cos\alpha + \frac{1}{4}$$

$$1 - \cos^2\alpha = \cos^2\alpha + \cos\alpha + \frac{1}{4}$$

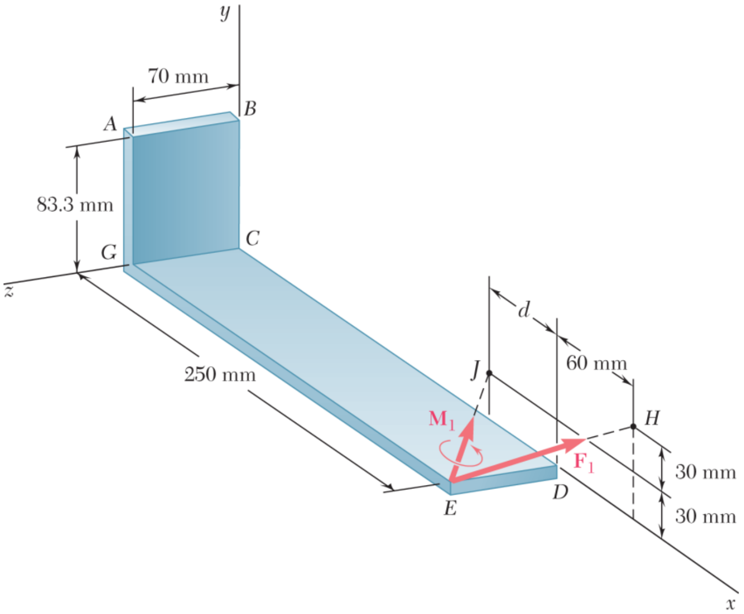
$$2\cos^2\alpha + \cos\alpha - 0.75 = 0 \qquad (2)$$

Solving the quadratic in $\cos\alpha$:

$$\cos\alpha = \frac{-1 \pm \sqrt{7}}{4} \qquad \alpha = 65.7° \text{ or } 155.7°$$

Only the first value of α satisfies Eq. (1),

therefore $\alpha = 65.7°$ ◀



PROBLEM 3.156

A 77-N force $\mathbf{F}_1$ and a 31-N · m couple $\mathbf{M}_1$ are applied to corner *E* of the bent plate shown. If $\mathbf{F}_1$ and $\mathbf{M}_1$ are to be replaced with an equivalent force-couple system $(\mathbf{F}_2, \mathbf{M}_2)$ at corner *B* and if $(M_2)_z = 0$, determine (*a*) the distance *d*, (*b*) $\mathbf{F}_2$ and $\mathbf{M}_2$.

SOLUTION

(*a*) We have

$$\Sigma M_{Bz}: \quad M_{2z} = 0$$

$$\mathbf{k}\cdot(\mathbf{r}_{H/B}\times \mathbf{F}_1) + M_{1z} = 0 \qquad (1)$$

where

$$\mathbf{r}_{H/B} = (0.31\text{ m})\mathbf{i} - (0.0233)\mathbf{j}$$

$$\mathbf{F}_1 = \boldsymbol{\lambda}_{EH} F_1$$

$$= \frac{(0.06\text{ m})\mathbf{i} + (0.06\text{ m})\mathbf{j} - (0.07\text{ m})\mathbf{k}}{0.11\text{ m}}(77\text{ N})$$

$$= (42\text{ N})\mathbf{i} + (42\text{ N})\mathbf{j} - (49\text{ N})\mathbf{k}$$

$$M_{1z} = \mathbf{k}\cdot\mathbf{M}_1$$

$$\mathbf{M}_1 = \boldsymbol{\lambda}_{EJ} M_1$$

$$= \frac{-d\mathbf{i} + (0.03\text{ m})\mathbf{j} - (0.07\text{ m})\mathbf{k}}{\sqrt{d^2 + 0.0058}\text{ m}}(31\text{ N}\cdot\text{m})$$

Then from Equation (1),

$$\begin{vmatrix} 0 & 0 & 1 \\ 0.31 & -0.0233 & 0 \\ 42 & 42 & -49 \end{vmatrix} + \frac{(-0.07\text{ m})(31\text{ N}\cdot\text{m})}{\sqrt{d^2 + 0.0058}} = 0$$

Solving for *d*, Equation (1) reduces to

$$(13.0200 + 0.9786) - \frac{2.17\text{ N}\cdot\text{m}}{\sqrt{d^2 + 0.0058}} = 0$$

from which $d = 0.1350\text{ m}$ or $d = 135.0\text{ mm}$ ◀

PROBLEM 3.156 (Continued)

(*b*) $\mathbf{F}_2 = \mathbf{F}_1 = (42\mathbf{i} + 42\mathbf{j} - 49\mathbf{k})\ \text{N}$ or $\mathbf{F}_2 = (42.0\ \text{N})\mathbf{i} + (42.0\ \text{N})\mathbf{j} - (49.0\ \text{N})\mathbf{k}$ ◀

$$\mathbf{M}_2 = \mathbf{r}_{H/B} \times \mathbf{F}_1 + \mathbf{M}_1$$

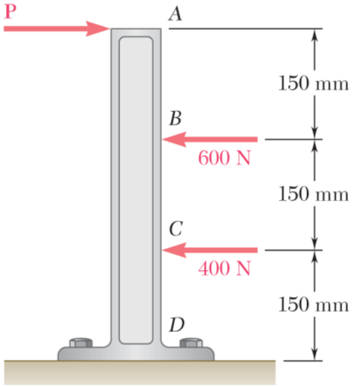
$$= \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0.31 & -0.0233 & 0 \\ 42 & 42 & -49 \end{vmatrix} + \frac{(0.1350)\mathbf{i} + 0.03\mathbf{j} - 0.07\mathbf{k}}{0.155000}(31\ \text{N}\cdot\text{m})$$

$$= (1.14170\mathbf{i} + 15.1900\mathbf{j} + 13.9986\mathbf{k})\ \text{N}\cdot\text{m}$$

$$+ (-27.000\mathbf{i} + 6.0000\mathbf{j} - 14.0000\mathbf{k})\ \text{N}\cdot\text{m}$$

$$\mathbf{M}_2 = -(25.858\ \text{N}\cdot\text{m})\mathbf{i} + (21.190\ \text{N}\cdot\text{m})\mathbf{j}$$

or $\mathbf{M}_2 = -(25.9\ \text{N}\cdot\text{m})\mathbf{i} + (21.2\ \text{N}\cdot\text{m})\mathbf{j}$ ◀

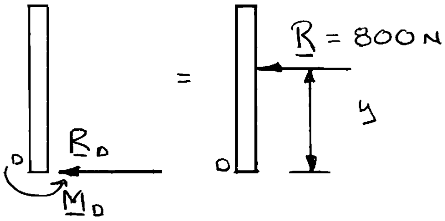


PROBLEM 3.157

Three horizontal forces are applied as shown to a vertical cast iron arm. Determine the resultant of the forces and the distance from the ground to its line of action when (*a*) P = 200 N, (*b*) P = 2400 N, (*c*) P = 1000 N.

SOLUTION

(*a*)



$$+\longrightarrow R_D = +200\text{ N} - 600\text{ N} - 400\text{ N} = -800\text{ N}$$

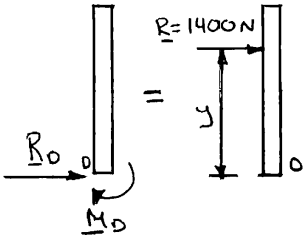
$$+\circlearrowleft M_D = -(200\text{ N})(0.450\text{ m}) + (600\text{ N})(0.300\text{ m}) + (400\text{ N})(0.1500\text{ m})$$

$$= +150.0\text{ N}\cdot\text{m}$$

$$y = \frac{M_D}{R} = \frac{150\text{ N}\cdot\text{m}}{800\text{ N}} = 0.1875\text{ m}$$

$\mathbf{R} = 800\text{ N} \longleftarrow;\ y = 187.5\text{ mm}$ ◀

(*b*)



$$+\longrightarrow R_D = +2400\text{ N} - 600\text{ N} - 400\text{ N} = +1400\text{ N}$$

$$+\circlearrowleft M_D = -(2400\text{ N})(0.450\text{ m}) + (600\text{ N})(0.300\text{ m}) + (400\text{ N})(0.1500\text{ m})$$

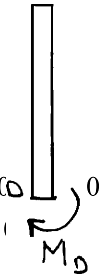
$$= -840\text{ N}\cdot\text{m}$$

$$y = \frac{M_D}{R} = \frac{840\text{ N}\cdot\text{m}}{1400\text{ N}} = 0.600\text{ m}$$

$\mathbf{R} = 1400\text{ N} \longrightarrow;\ y = 600\text{ mm}$ ◀

PROBLEM 3.157 (Continued)

(*c*)



$$+\longrightarrow R_D = +1000 - 600 - 400 = 0$$

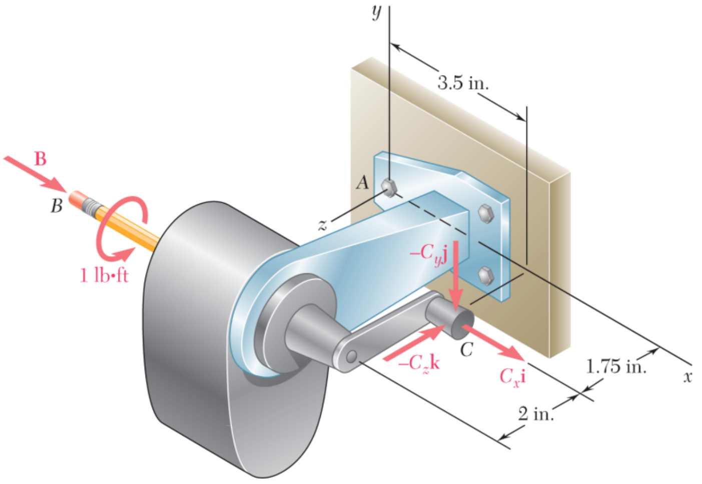
$$+\circlearrowleft$$

$$M_D = -(1 \quad 0.450\text{ m}) + (600\text{ N})(0.300\text{ m}) + (400\text{ N})(0.1500\text{ m})$$

$$= -21$$

$\therefore \quad y = \infty$ System reduces to a couple.

$\mathbf{M}_D = 210\text{ N}\cdot\text{m} \circlearrowright$ ◀



PROBLEM 3.158

While using a pencil sharpener, a student applies the forces and couple shown. (*a*) Determine the forces exerted at *B* and *C* knowing that these forces and the couple are equivalent to a force-couple system at *A* consisting of the force $\mathbf{R} = (2.6\text{ lb})\mathbf{i} + R_y\mathbf{j} - (0.7\text{ lb})\mathbf{k}$ and the couple $\mathbf{M}_A^R = M_x\mathbf{i} + (1.0\text{ lb}\cdot\text{ft})\mathbf{j} - (0.72\text{ lb}\cdot\text{ft})\mathbf{k}$. (*b*) Find the corresponding values of R_y and M_x.

SOLUTION

(*a*) From the statement of the problem, equivalence requires

$$\Sigma\mathbf{F}: \quad \mathbf{B} + \mathbf{C} = \mathbf{R}$$

or $$\Sigma F_x: \quad B_x + C_x = 2.6\text{ lb} \qquad (1)$$

$$\Sigma F_y: \quad -C_y = R_y \qquad (2)$$

$$\Sigma F_z: \quad -C_z = -0.7\text{ lb} \quad \text{or} \quad C_z = 0.7\text{ lb}$$

and $$\Sigma\mathbf{M}_A: \quad (\mathbf{r}_{B/A} \times \mathbf{B} + \mathbf{M}_B) + \mathbf{r}_{C/A} \times \mathbf{C} = M_A^R$$

or $$\Sigma\mathbf{M}_x: \quad (1\text{ lb}\cdot\text{ft}) + \left(\frac{1.75}{12}\text{ ft}\right)(C_y) = M_x \qquad (3)$$

$$\Sigma M_y: \quad \left(\frac{3.75}{12}\text{ ft}\right)(B_x) + \left(\frac{1.75}{12}\text{ ft}\right)(C_x) + \left(\frac{3.5}{12}\text{ ft}\right)(0.7\text{ lb}) = 1\text{ lb}\cdot\text{ft}$$

or $$3.75B_x + 1.75C_x = 9.55$$

Using Eq. (1): $$3.75B_x + 1.75(2.6B_x) = 9.55$$

or $$B_x = 2.5\text{ lb}$$

and $$C_x = 0.1\text{ lb}$$

$$\Sigma M_z: \quad -\left(\frac{3.5}{12}\text{ ft}\right)(C_y) = -0.72\text{ lb}\cdot\text{ft}$$

or $$C_y = 2.4686\text{ lb}$$

$$\mathbf{B} = (2.50\text{ lb})\mathbf{i} \quad \mathbf{C} = (0.1000\text{ lb})\mathbf{i} - (2.47\text{ lb})\mathbf{j} - (0.700\text{ lb})\mathbf{k} \blacktriangleleft$$

(*b*) Eq. (2) ⇒ $$R_y = -2.47\text{ lb} \blacktriangleleft$$

Using Eq. (3): $$1 + \left(\frac{1.75}{12}\right)(2.4686) = M_x \qquad \text{or} \quad M_x = 1.360\text{ lb}\cdot\text{ft} \blacktriangleleft$$

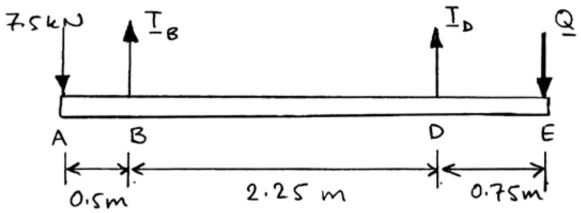
7.5 kN
P
Q
C
A
E
B
D
0.5 m
0.75 m
1.5 m
0.75 m

PROBLEM 4.9

Three loads are applied as shown to a light beam supported by cables attached at *B* and *D*. Neglecting the weight of the beam, determine the range of values of *Q* for which neither cable becomes slack when $P = 0$.

SOLUTION

Free-Body Diagram:



7.5 kN
T_B
T_D
Q
A
B
D
E
0.5m
2.25 m
0.75m

For $Q_{\min}$, $T_D = 0$

$+\circlearrowleft \Sigma M_B = 0$: $\quad (7.5 \text{ kN})(0.5 \text{ m}) - Q_{\min}(3 \text{ m}) = 0$

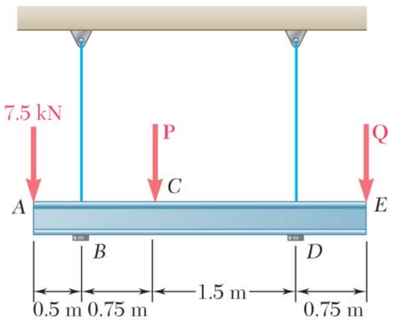
$$Q_{\min} = 1.250 \text{ kN}$$

For $Q_{\max}$, $T_B = 0$

$+\circlearrowleft \Sigma M_D = 0$: $\quad (7.5 \text{ kN})(2.75 \text{ m}) - Q_{\max}(0.75 \text{ m}) = 0$

$$Q_{\max} = 27.5 \text{ kN}$$

Therefore: $1.250 \text{ kN} \leq Q \leq 27.5 \text{ kN}$ ◀

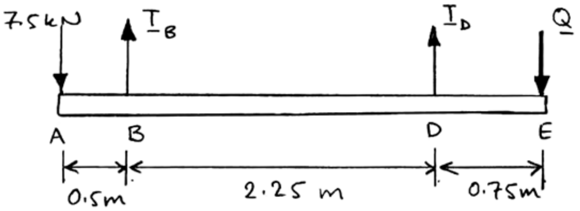


PROBLEM 4.10

Three loads are applied as shown to a light beam supported by cables attached at *B* and *D*. Knowing that the maximum allowable tension in each cable is 12 kN and neglecting the weight of the beam, determine the range of values of *Q* for which the loading is safe when $P = 0$.

SOLUTION

Free-Body Diagram:



$$+\circlearrowleft \Sigma M_D = 0: \qquad (7.5\text{ kN})(2.75\text{ m}) - T_B(2.25\text{ m}) - Q(0.75\text{ m}) = 0$$

$$Q = 27.5 - 3T_B \qquad (1)$$

$$+\circlearrowleft \Sigma M_B = 0: \qquad (7.5\text{ kN})(0.5\text{ m}) + T_D(2.25\text{ m}) - Q(3\text{ m}) = 0$$

$$Q = 1.25 + (0.75\, T_D) \qquad (2)$$

For the loading to be safe, cables must not be slack and tension must not exceed 12 kN.

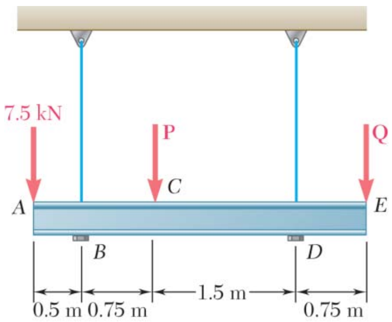
Thus, making $0 \le T_B \le 12$ kN in (1), we have

$$-8.50\text{ kN} \le Q \le 27.5\text{ kN} \qquad (3)$$

And making $0 \le T_D \le 12$ kN in (2), we have

$$1.25 \le Q \le 10.25\text{ kN} \qquad (4)$$

(3) and (4) now give: $1.250\text{ kN} \le Q \le 10.25\text{ kN}$ ◀

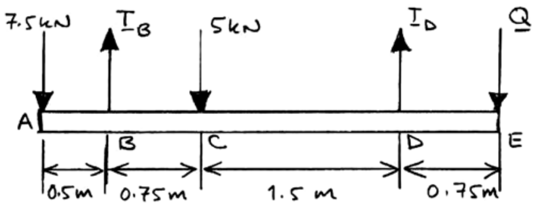


PROBLEM 4.11

For the beam of Prob. 4.10, determine the range of values of Q for which the loading is safe when $P = 5$ kN.

SOLUTION

Free-Body Diagram:



$$+\circlearrowleft \Sigma M_D = 0: \quad (7.5\text{ kN})(2.75\text{ m}) - T_B(2.25\text{ m}) + (5\text{ kN})(1.5\text{ m}) - Q(0.75\text{ m}) = 0$$

$$Q = (37.5 - 3T_B)\text{ kN} \qquad (1)$$

$$+\circlearrowleft \Sigma M_B = 0: \quad (7.5\text{ kN})(0.5\text{ m}) - (5\text{ kN})(0.75\text{ m}) + T_D(2.25\text{ m}) - Q(3\text{ m}) = 0$$

$$Q = (0.75\,T_D)\text{ kN} \qquad (2)$$

For the loading to be safe, cables must not be slack and tension must not exceed 12 kN.

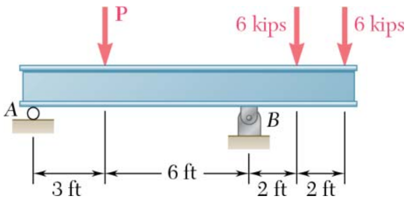
Thus, making $0 \le T_B \le 12$ kN in (1), we have

$$1.500\text{ kN} \le Q \le 37.5\text{ kN} \qquad (3)$$

And making $0 \le T_D \le 12$ kN in (2), we have

$$0 \le Q \le 9.00\text{ kN} \qquad (4)$$

(3) and (4) now give: $1.500\text{ kN} \le Q \le 9.00\text{ kN}$ ◀

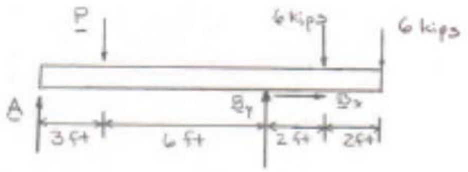


PROBLEM 4.12

For the beam of Sample Prob. 4.2, determine the range of values of *P* for which the beam will be safe, knowing that the maximum allowable value of each of the reactions is 25 kips and that the reaction at *A* must be directed upward.

SOLUTION

Free-Body Diagram:



$$+\circlearrowleft \Sigma M_A = 0: \quad -P(3\text{ ft}) + B_y(9\text{ ft}) - (6\text{ kips})(11\text{ft}) - (6\text{ kips})(13\text{ ft}) = 0$$

$$Q = (3\text{B}_y - 48)\text{ kips} \qquad (1)$$

$$+\circlearrowleft \Sigma M_B = 0: \quad -A_y(9\text{ ft}) + P(6\text{ ft}) - (6\text{ kips})(2\text{ ft}) - (6\text{ kips})(4\text{ ft}) = 0$$

$$P = (1.5A_y + 6)\text{ kips} \qquad (2)$$

For the loading to meet the design criteria, the reactions must not exceed 25 kips.

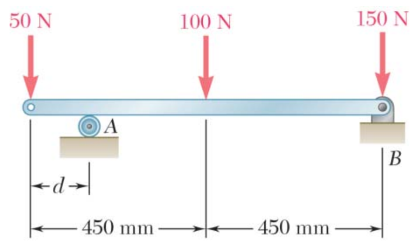
Thus, making $B_y \leq 25$ kips in (1), we have

$$P \leq 27.0\text{ kips} \qquad (3)$$

And making $0 \leq A_y \leq 25$ kips in (2), we have

$$6.00 \leq P \leq 43.5\text{ kips} \qquad (4)$$

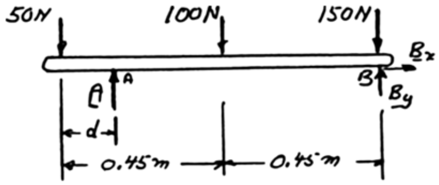
(3) and (4) now give: $6.00\text{ kips} \leq P \leq 27.0\text{ kips}$ ◀



PROBLEM 4.13

The maximum allowable value of each of the reactions is 180 N. Neglecting the weight of the beam, determine the range of the distance *d* for which the beam is safe.

SOLUTION



$$\Sigma F_x = 0: \quad B_x = 0$$

$$B = B_y$$

$$+\circlearrowleft \Sigma M_A = 0: \quad (50\text{ N})d - (100\text{ N})(0.45\text{ m} - d) - (150\text{ N})(0.9\text{ m} - d) + B(0.9\text{ m} - d) = 0$$

$$50d - 45 + 100d - 135 + 150d + 0.9B - Bd = 0$$

$$d = \frac{180\text{ N}\cdot\text{m} - (0.9\text{ m})B}{300A - B} \qquad (1)$$

$$+\circlearrowleft \Sigma M_B = 0: \quad (50\text{ N})(0.9\text{ m}) - A(0.9\text{ m} - d) + (100\text{ N})(0.45\text{ m}) = 0$$

$$45 - 0.9A + Ad + 45 = 0$$

$$d = \frac{(0.9\text{ m})A - 90\text{ N}\cdot\text{m}}{A} \qquad (2)$$

Since $B \le 180$ N, Eq. (1) yields

$$d \ge \frac{180 - (0.9)180}{300 - 180} = \frac{18}{120} = 0.15\text{ m} \qquad d \ge 150.0\text{ mm} \ \triangleleft$$

Since $A \le 180$ N, Eq. (2) yields

$$d \le \frac{(0.9)180 - 90}{180} = \frac{72}{180} = 0.40\text{ m} \qquad d \le 400\text{ mm} \ \triangleleft$$

Range: $150.0\text{ mm} \le d \le 400\text{ mm}$ ◀

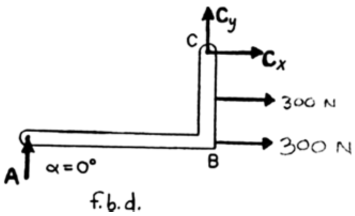
PROBLEM 4.28

Determine the reactions at A and C when (a) $\alpha = 0$, (b) $\alpha = 30°$.

SOLUTION

(a) $\alpha = 0$

From F.B.D. of member ABC:



$$+\circlearrowleft \Sigma M_C = 0: \quad (300\text{ N})(0.2\text{ m}) + (300\text{ N})(0.4\text{ m}) - A(0.8\text{ m}) = 0$$

$$A = 225\text{ N} \qquad \text{or} \qquad \mathbf{A} = 225\text{ N}\uparrow \blacktriangleleft$$

$$+\uparrow \Sigma F_y = 0: \quad C_y + 225\text{ N} = 0$$

$$C_y = -225\text{ N} \quad \text{or} \quad \mathbf{C}_y = 225\text{ N}\downarrow$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad 300\text{ N} + 300\text{ N} + C_x = 0$$

$$C_x = -600\text{ N} \quad \text{or} \quad \mathbf{C}_x = 600\text{ N} \longleftarrow$$

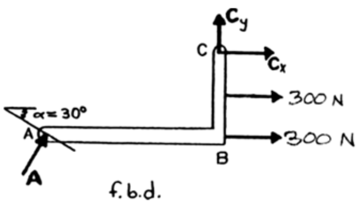
Then
$$C = \sqrt{C_x^2 + C_y^2} = \sqrt{(600)^2 + (225)^2} = 640.80\text{ N}$$

and
$$\theta = \tan^{-1}\left(\frac{C_y}{C_x}\right) = \tan^{-1}\left(\frac{-225}{-600}\right) = 20.556°$$

$$\text{or} \quad \mathbf{C} = 641\text{ N} \measuredangle 20.6° \blacktriangleleft$$

(b) $\alpha = 30°$

From F.B.D. of member ABC:



$$+\circlearrowleft \Sigma M_C = 0: \quad (300\text{ N})(0.2\text{ m}) + (300\text{ N})(0.4\text{ m}) - (A\cos 30°)(0.8\text{ m})$$
$$+ (A\sin 30°)(20\text{ in.}) = 0$$

$$A = 365.24\text{ N} \qquad \text{or} \qquad \mathbf{A} = 365\text{ N} \measuredangle 60.0° \blacktriangleleft$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad 300\text{ N} + 300\text{ N} + (365.24\text{ N})\sin 30° + C_x = 0$$

$$C_x = -782.62$$

PROBLEM 4.28 (Continued)

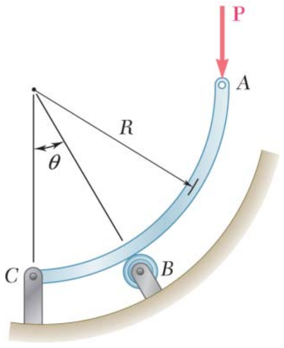
$$+\uparrow \Sigma F_y = 0: \quad C_y + (365.24\text{ N})\cos 30° = 0$$

$$C_y = -316.31\text{ N} \quad \text{or} \quad \mathbf{C}_y = 316\text{ N} \downarrow$$

Then $$C = \sqrt{C_x^2 + C_y^2} = \sqrt{(782.62)^2 + (316.31)^2} = 884.12\text{ N}$$

and $$\theta = \tan^{-1}\left(\frac{C_y}{C_x}\right) = \tan^{-1}\left(\frac{-316.31}{-782.62}\right) = 22.007°$$

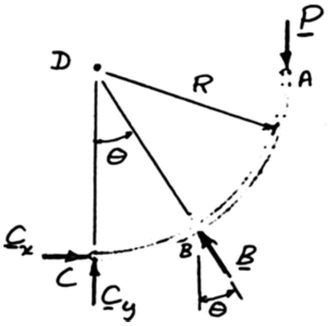
or $$\mathbf{C} = 884\text{ N} \swarrow 22.0° \;◀$$



PROBLEM 4.29

Rod *ABC* is bent in the shape of an arc of circle of radius *R*. Knowing the $\theta = 30°$, determine the reaction (*a*) at *B*, (*b*) at *C*.

SOLUTION



Free-Body Diagram:

$$+\circlearrowleft \Sigma M_D = 0: \quad C_x(R) - P(R) = 0$$

$$C_x = +P$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad C_x - B\sin\theta = 0$$

$$P - B\sin\theta = 0$$

$$B = P/\sin\theta$$

$$\mathbf{B} = \frac{P}{\sin\theta} \nwarrow \theta$$

$$+\uparrow \Sigma F_y = 0: \quad C_y + B\cos\theta - P = 0$$

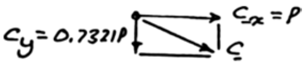
$$C_y + (P/\sin\theta)\cos\theta - P = 0$$

$$C_y = P\left(1 - \frac{1}{\tan\theta}\right)$$

For $\theta = 30°$,

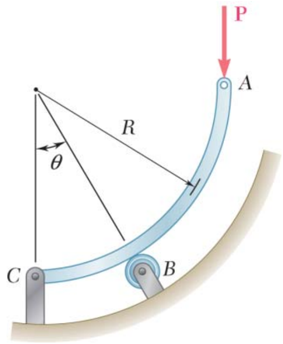
(*a*) $B = P/\sin 30° = 2P$ $\quad \mathbf{B} = 2P \nwarrow 60.0°$ ◀

(*b*) $C_x = +P \qquad C_x = P \longrightarrow$



$C_y = P(1 - 1/\tan 30°) = -0.732/P$ $\quad \mathbf{C}_y = 0.7321P \downarrow$

$\mathbf{C} = 1.239P \searrow 36.2°$ ◀



PROBLEM 4.30

Rod *ABC* is bent in the shape of an arc of circle of radius *R*. Knowing that $\theta = 60°$, determine the reaction (*a*) at *B*, (*b*) at *C*.

SOLUTION

See the solution to Problem 4.33 for the free-body diagram and analysis leading to the following expressions:

$$C_x = +P$$

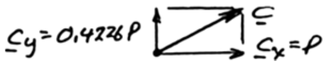
$$C_y = P\left(1 - \frac{1}{\tan\theta}\right)$$

$$B = \frac{P}{\sin\theta}$$

For $\theta = 60°$,

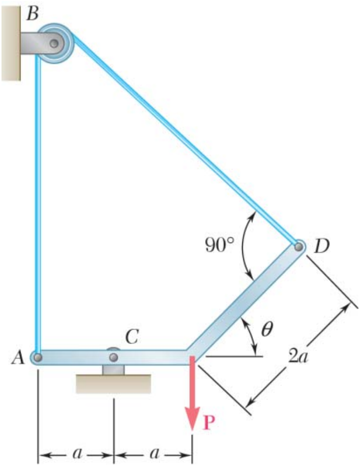
(*a*) $B = P/\sin 60° = 1.1547P$ $\mathbf{B} = 1.155P \searrow 30.0°$ ◀

(*b*) $C_x = +P \qquad C_x = P \longrightarrow$



$C_y = P(1 - 1/\tan 60°) = +0.4226P$ $\mathbf{C}_y = 0.4226P \downarrow$

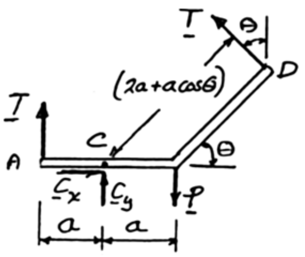
$\mathbf{C} = 1.086P \nearrow 22.9°$ ◀



PROBLEM 4.31

Neglecting friction, determine the tension in cable *ABD* and the reaction at *C* when $\theta = 60°$.

SOLUTION



$$+\circlearrowleft \Sigma M_C = 0: \quad T(2a + a\cos\theta) - Ta + Pa = 0$$

$$T = \frac{P}{1+\cos\theta} \qquad (1)$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad C_x - T\sin\theta = 0$$

$$C_x = T\sin\theta = \frac{P\sin\theta}{1+\cos\theta}$$

$$+\circlearrowleft \Sigma F_y = 0: \quad C_y + T + T\cos\theta - P = 0$$

$$C_y = P - T(1+\cos\theta) = P - P\frac{1+\cos\theta}{1+\cos\theta}$$

$$C_y = 0$$

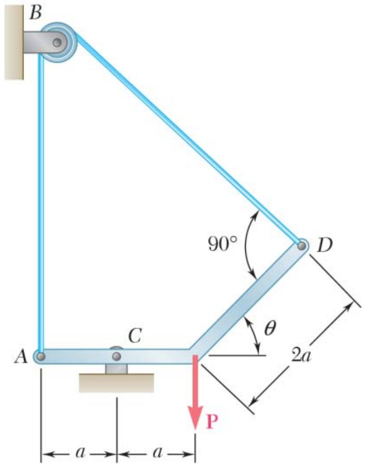
Since $C_y = 0, \quad C = C_x$ $\qquad \mathbf{C} = P\dfrac{\sin\theta}{1+\cos\theta}$

$\longrightarrow$ (2)

For $\theta = 60°$:

Eq. (1): $T = \dfrac{P}{1+\cos 60°} = \dfrac{P}{1+\frac{1}{2}}$ $\qquad T = \dfrac{2}{3}P$ ◀

Eq. (2): $C = P\dfrac{\sin 60°}{1+\cos 60°} = P\dfrac{0.866}{1+\frac{1}{2}}$ $\qquad \mathbf{C} = 0.577P \longrightarrow$ ◀

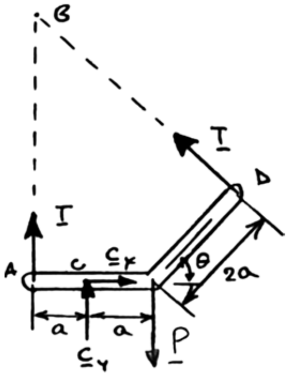


PROBLEM 4.32

Neglecting friction, determine the tension in cable *ABD* and the reaction at *C* when $\theta = 45°$.

SOLUTION

Free-Body Diagram:



Equilibrium for bracket:

$$+\circlearrowleft \Sigma M_C = 0: \quad -T(a) - P(a) + (T\sin 45°)(2a\sin 45°) + (T\cos 45°)(a + 2a\cos 45°) = 0$$

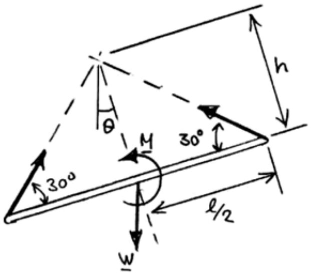
PROBLEM 4.51

A uniform rod *AB* with a length of *l* and weight of *W* is suspended from two cords *AC* and *BC* of equal length. Determine the angle θ corresponding to the equilibrium position when a couple **M** is applied to the rod.

SOLUTION

Free-Body Diagram:



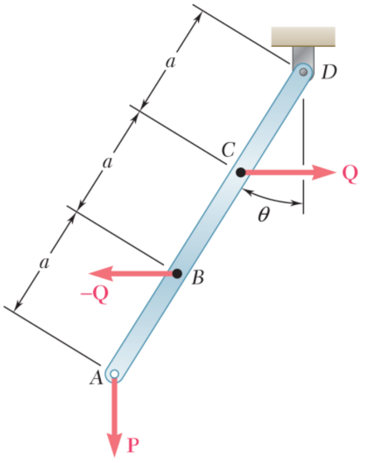
Using $h = \dfrac{l}{2}\tan\alpha$

$$\overset{+}{\circlearrowleft}\ \Sigma M_C = 0: \qquad M - (W)(h\sin\theta) = 0$$

$$\text{or } \sin\theta = \frac{M}{Wh}$$

$$= \frac{M}{W}\left(\frac{2}{l}\cot\alpha\right)$$

$$\text{or } \theta = \sin^{-1}\left(2M\frac{\cot\alpha}{Wl}\right) \blacktriangleleft$$

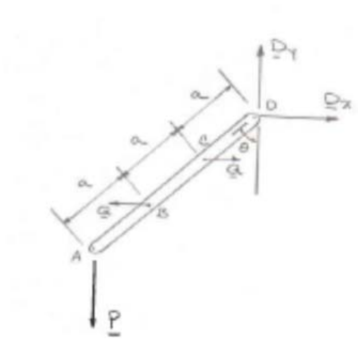


PROBLEM 4.52

Rod AD is acted upon by a vertical force **P** at end A and by two equal and opposite horizontal forces of magnitude Q at points B and C. Neglecting the weight of the rod, express the angle θ corresponding to the equilibrium position in terms of P and Q.

SOLUTION

Free-Body Diagram:

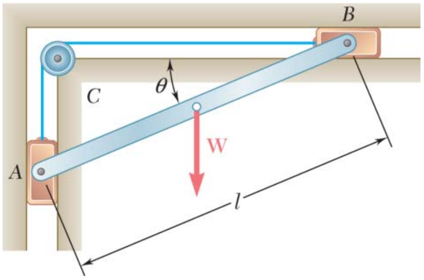


$$+\circlearrowleft \Sigma M_D = 0: \qquad P(3a\sin\theta) + Q(a\cos\theta) - Q(2a\cos\theta) = 0$$

$$3P\sin\theta = Q\cos\theta$$

$$\tan\theta = \frac{Q}{3P}$$

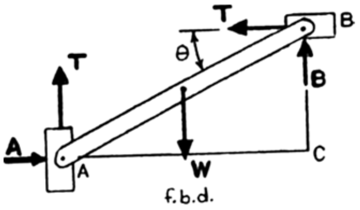
$$\text{or } \theta = \tan^{-1}\left(\frac{Q}{3P}\right) \blacktriangleleft$$



PROBLEM 4.53

A slender rod *AB*, of weight *W*, is attached to blocks *A* and *B*, which move freely in the guides shown. The blocks are connected by an elastic cord that passes over a pulley at *C*. (*a*) Express the tension in the cord in terms of *W* and *θ*. (*b*) Determine the value of *θ* for which the tension in the cord is equal to 3*W*.

SOLUTION



(*a*) From F.B.D. of rod *AB*:

$$\circlearrowleft + \Sigma M_C = 0: \quad T(l\sin\theta) + W\left[\left(\frac{1}{2}\right)\cos\theta\right] - T(l\cos\theta) = 0$$

$$T = \frac{W\cos\theta}{2(\cos\theta - \sin\theta)}$$

Dividing both numerator and denominator by cos *θ*,

$$T = \frac{W}{2}\left(\frac{1}{1-\tan\theta}\right) \qquad \text{or} \quad T = \frac{\left(\frac{W}{2}\right)}{(1-\tan\theta)} \blacktriangleleft$$

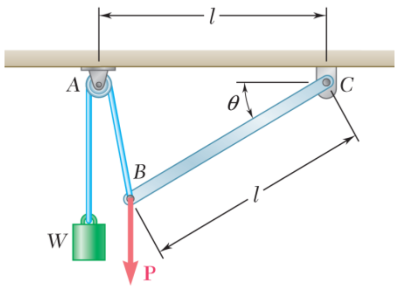
(*b*) For $T = 3W$,

$$3W = \frac{\left(\frac{W}{2}\right)}{(1-\tan\theta)}$$

$$1 - \tan\theta = \frac{1}{6}$$

or

$$\theta = \tan^{-1}\left(\frac{5}{6}\right) = 39.806° \qquad \text{or} \quad \theta = 39.8° \blacktriangleleft$$

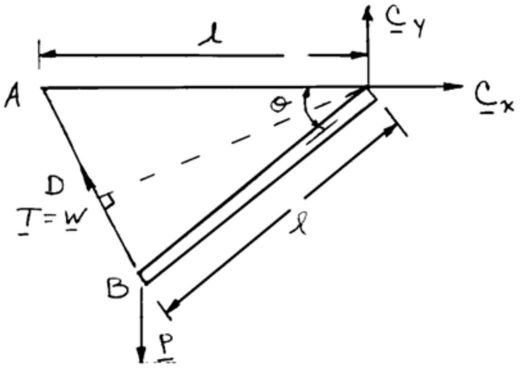


PROBLEM 4.54

A vertical load **P** is applied at end B of rod BC. (*a*) Neglecting the weight of the rod, express the angle θ corresponding to the equilibrium position in terms of P, l, and the counterweight W. (*b*) Determine the value of θ corresponding to equilibrium if $P = 2W$.

SOLUTION

Free-Body Diagram:



(*a*) Triangle ABC is isosceles. We have

$$CD = (BC)\cos\left(\frac{\theta}{2}\right) = l\cos\left(\frac{\theta}{2}\right)$$

$$+\circlearrowleft \Sigma M_C = 0: \quad P(l\cos\theta) - W\left(l\cos\frac{\theta}{2}\right) = 0$$

Setting $\cos\theta = 2\cos^2\frac{\theta}{2} - 1$:

$$Pl\left(2\cos^2\frac{\theta}{2} - 1\right) - Wl\cos\frac{\theta}{2} = 0$$

$$\cos^2\frac{\theta}{2} - \left(\frac{W}{2P}\right)\cos\frac{\theta}{2} - \frac{1}{2} = 0$$

$$\cos\frac{\theta}{2} = \frac{1}{4}\left(\frac{W}{P} \pm \sqrt{\frac{W^2}{P^2} + 8}\right)$$

$$\theta = 2\cos^{-1}\left[\frac{1}{4}\left(\frac{W}{P} \pm \sqrt{\frac{W^2}{P^2} + 8}\right)\right] \blacktriangleleft$$

PROBLEM 4.54 (Continued)

(*b*) For $P = 2W$,

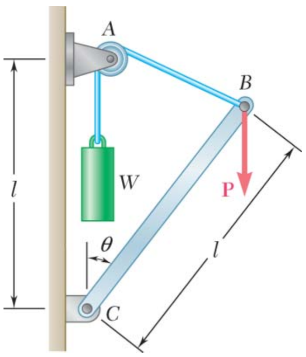
$$\cos\frac{\theta}{2} = \frac{1}{4}\left(\frac{1}{2} \pm \sqrt{\frac{1}{4} + 8}\right) = \frac{1}{8}\left(1 \pm \sqrt{33}\right)$$

$$\cos\frac{\theta}{2} = 0.84307 \quad \text{and} \quad \cos\frac{\theta}{2} = -0.59307$$

$$\frac{\theta}{2} = 32.534° \qquad \frac{\theta}{2} = 126.375°$$

$$\theta = 65.1° \qquad \theta = 252.75° \quad \text{(discard)}$$

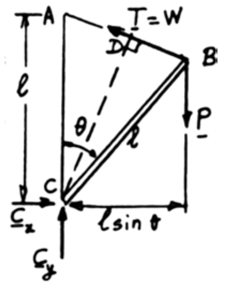
$\theta = 65.1°$ ◀



PROBLEM 4.55

A vertical load **P** is applied at end B of rod BC. (a) Neglecting the weight of the rod, express the angle θ corresponding to the equilibrium position in terms of P, l, and the counterweight W. (b) Determine the value of θ corresponding to equilibrium if $P = 2W$.

SOLUTION



(a) Triangle ABC is isosceles. We have

$$CD = (BC)\cos\frac{\theta}{2} = l\cos\frac{\theta}{2}$$

$$+\circlearrowleft \Sigma M_C = 0: \quad W\left(l\cos\frac{\theta}{2}\right) - P(l\sin\theta) = 0$$

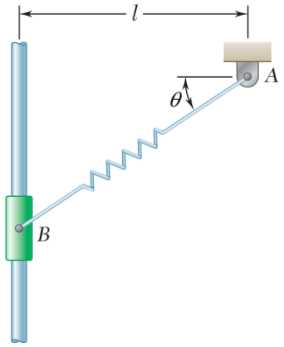
Setting $\sin\theta = 2\sin\frac{\theta}{2}\cos\frac{\theta}{2}$: $\quad Wl\cos\frac{\theta}{2} - 2Pl\sin\frac{\theta}{2}\cos\frac{\theta}{2} = 0$

$$W - 2P\sin\frac{\theta}{2} = 0 \qquad \theta = 2\sin^{-1}\left(\frac{W}{2P}\right) ◀$$

(b) For $P = 2W$, $\quad \sin\frac{\theta}{2} = \frac{W}{2P} = \frac{W}{4W} = 0.25$

$$\frac{\theta}{2} = 14.5° \qquad \theta = 29.0° ◀$$

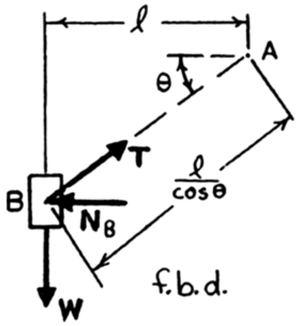
or $\quad \frac{\theta}{2} = 165.5° \quad \theta = 331° \quad$ (discard)



PROBLEM 4.56

A collar B of weight W can move freely along the vertical rod shown. The constant of the spring is k, and the spring is unstretched when $\theta = 0$. (a) Derive an equation in θ, W, k, and l that must be satisfied when the collar is in equilibrium. (b) Knowing that $W = 300\text{ N}$, $l = 500\text{ mm}$, and $k = 800\text{ N/m}$, determine the value of θ corresponding to equilibrium.

SOLUTION



First note: $T = ks$

where $k =$ spring constant

$s =$ elongation of spring

$$= \frac{l}{\cos\theta} - l$$

$$= \frac{l}{\cos\theta}(1-\cos\theta)$$

$$T = \frac{kl}{\cos\theta}(1-\cos\theta)$$

(a) From F.B.D. of collar B: $+\!\uparrow \Sigma F_y = 0\text{:} \quad T\sin\theta - W = 0$

or $$\frac{kl}{\cos\theta}(1-\cos\theta)\sin\theta - W = 0$$

or $\tan\theta - \sin\theta = \dfrac{W}{kl}$ ◀

(b) For $W = 3\text{ lb}$

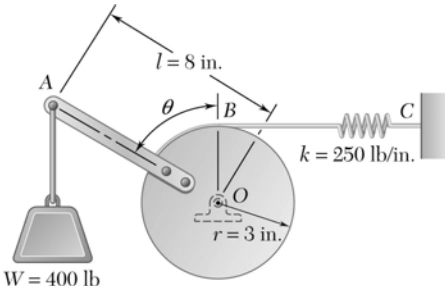
$l = 6\text{ in.}$

$k = 8\text{ lb/ft}$

$$l = \frac{6\text{ in.}}{12\text{ in./ft}} = 0.5\text{ ft}$$

$$\tan\theta - \sin\theta = \frac{3\text{ lb}}{(8\text{ lb/ft})(0.5\text{ ft})} = 0.75$$

Solving numerically, $\theta = 57.957°$ or $\theta = 58.0°$ ◀

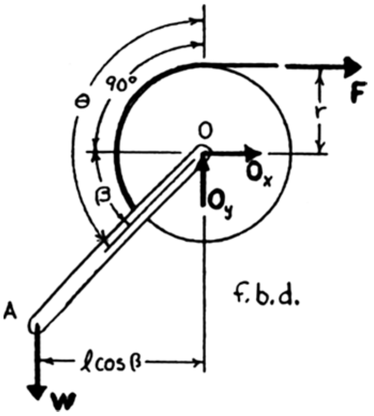


$l = 8$ in.
A
θ
B
C
$k = 250$ lb/in.
O
$r = 3$ in.
$W = 400$ lb

PROBLEM 4.57

Solve Sample Problem 4.5, assuming that the spring is unstretched when $\theta = 90°$.

SOLUTION



90°

F
r
O
O_x
β
O_y
f.b.d.
A
$\ell \cos \beta$
W

First note: $T = \text{tension in spring} = ks$

where
$$s = \text{deformation of spring}$$
$$= r\beta$$
$$F = kr\beta$$

From F.B.D. of assembly: $+\circlearrowleft \Sigma M_0 = 0\text{:}\quad W(l\cos\beta) - F(r) = 0$

or
$$Wl\cos\beta - kr^2\beta = 0$$
$$\cos\beta = \frac{kr^2}{Wl}\beta$$

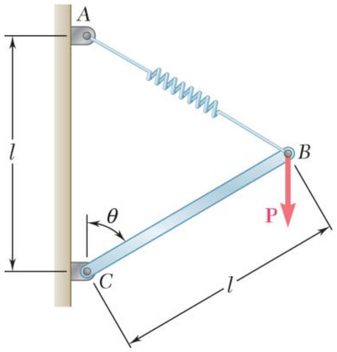
For
$$k = 250 \text{ lb/in.}$$
$$r = 3 \text{ in.}$$
$$l = 8 \text{ in.}$$
$$W = 400 \text{ lb}$$
$$\cos\beta = \frac{(250 \text{ lb/in.})(3 \text{ in.})^2}{(400 \text{ lb})(8 \text{ in.})}\beta$$

or $\cos\beta = 0.703125\beta$

Solving numerically, $\beta = 0.89245 \text{ rad}$

or $\beta = 51.134°$

Then $\theta = 90° + 51.134° = 141.134°$ or $\theta = 141.1°$ ◀

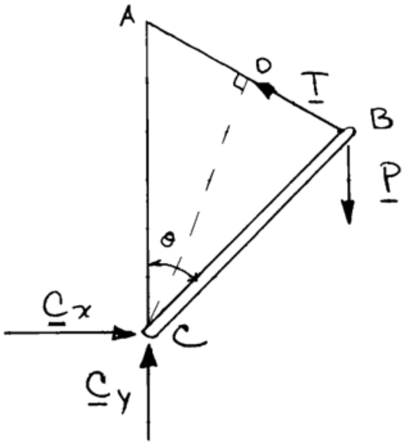


PROBLEM 4.58

A vertical load **P** is applied at end *B* of rod *BC*. The constant of the spring is *k*, and the spring is unstretched when $\theta = 60°$. (*a*) Neglecting the weight of the rod, express the angle θ corresponding to the equilibrium position terms of *P*, *k*, and *l*. (*b*) Determine the value of θ corresponding to equilibrium if $P = \frac{1}{4}kl$.

SOLUTION

Free-Body Diagram:



(*a*) Triangle *ABC* is isosceles. We have

$$AB = 2(AD) = 2l\sin\left(\frac{\theta}{2}\right);\ CD = l\cos\left(\frac{\theta}{2}\right)$$

Elongation of spring: $x = (AB)_\theta - (AB)_{\theta} = 60°$

$$= 2l\sin\left(\frac{\theta}{2}\right) - 2l\sin 30°$$

$$T = kx = 2kl\left(\sin\frac{\theta}{2} - \frac{1}{2}\right)$$

$$\circlearrowleft \Sigma M_C = 0:\quad T\left(l\cos\ \frac{\theta}{2}\right) - P(l\sin\theta) = 0$$

PROBLEM 4.58 (Continued)

$$2kl\left(\sin\frac{\theta}{2}-\frac{1}{2}\right)l\cos\frac{\theta}{2}-Pl\left(2\sin\frac{\theta}{2}\cos\frac{\theta}{2}\right)=0$$

$$\cos\frac{\theta}{2}=0 \quad \text{or} \quad 2(kl-P)\sin\frac{\theta}{2}-kl=0$$

$$\theta=180° \text{ (trivial)} \qquad \sin\frac{\theta}{2}=\frac{\frac{1}{2}kl}{kl-P}$$

$$\theta=2\sin^{-1}\left[\frac{1}{2}kl/(kl-P)\right] \blacktriangleleft$$

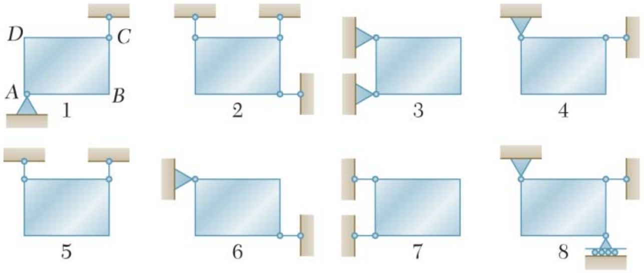
(*b*) For $P=\frac{1}{4}kl$,

$$\sin\frac{\theta}{2}=\frac{\frac{1}{2}kl}{\frac{3}{4}kl}=\frac{2}{3}$$

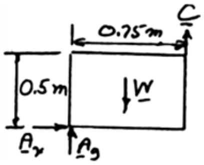
$$\frac{\theta}{2}=41.8° \qquad \theta=83.6° \blacktriangleleft$$

PROBLEM 4.59

Eight identical 500×750-mm rectangular plates, each of mass $m = 40$ kg, are held in a vertical plane as shown. All connections consist of frictionless pins, rollers, or short links. In each case, determine whether (*a*) the plate is completely, partially, or improperly constrained, (*b*) the reactions are statically determinate or indeterminate, (*c*) the equilibrium of the plate is maintained in the position shown. Also, wherever possible, compute the reactions.



SOLUTION



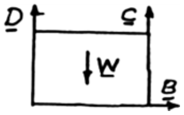
1. Three non-concurrent, non-parallel reactions:

   (*a*) Plate: completely constrained

   (*b*) Reactions: determinate

   (*c*) Equilibrium maintained

$$\mathbf{A} = \mathbf{C} = 196.2\text{ N}\uparrow$$



2. Three non-concurrent, non-parallel reactions:

   (*a*) Plate: completely constrained

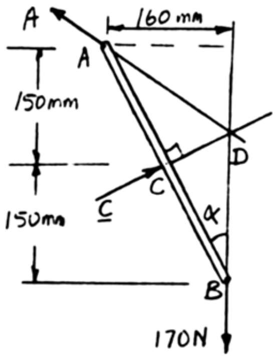
PROBLEM 4.75

Rod *AB* is supported by a pin and bracket at *A* and rests against a frictionless peg at *C*. Determine the reactions at *A* and *C* when a 170-N vertical force is applied at *B*.

SOLUTION

Free-Body Diagram:
(Three-force body)



The reaction at *A* must pass through *D* where **C** and the 170-N force intersect.

$$\tan\alpha = \frac{160\text{ mm}}{300\text{ mm}}$$

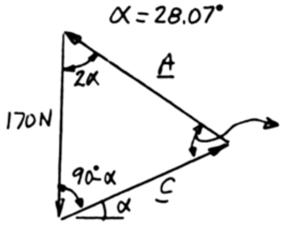
$$\alpha = 28.07°$$

We note that triangle *ABD* is isosceles (since $AC = BC$) and, therefore,

$$\sphericalangle CAD = \alpha = 28.07°$$

Also, since $CD \perp CB$, reaction **C** forms angle $\alpha = 28.07°$ with the horizontal axis.

Force triangle



We note that **A** forms angle 2α with the vertical axis. Thus, **A** and **C** form angle

$$180° - (90° - \alpha) - 2\alpha = 90° - \alpha$$

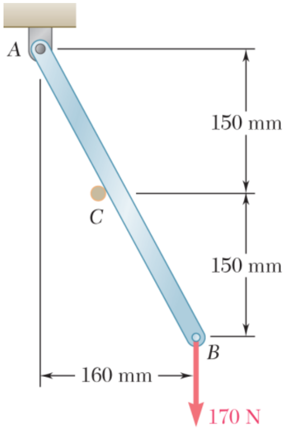
Force triangle is isosceles, and we have

$$A = 170\text{ N}$$

$$C = 2(170\text{ N})\sin\alpha$$

$$= 160.0\text{ N}$$

$\mathbf{A} = 170.0\text{ N}$ ⦩ 33.9°; $\mathbf{C} = 160.0\text{ N}$ ∠ 28.1° ◀



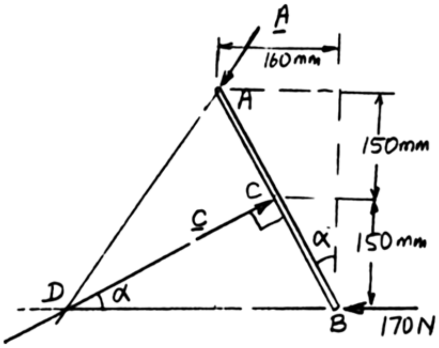
PROBLEM 4.76

Solve Problem 4.75, assuming that the 170-N force applied at *B* is horizontal and directed to the left.

PROBLEM 4.75 Rod *AB* is supported by a pin and bracket at *A* and rests against a frictionless peg at *C*. Determine the reactions at *A* and *C* when a 170-N vertical force is applied at *B*.

SOLUTION

Free-Body Diagram: (Three-Force body)



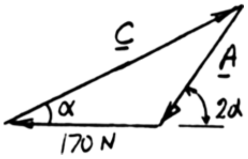
The reaction at *A* must pass through *D*, where **C** and the 170-N force intersect.

$$\tan\alpha = \frac{160\text{ mm}}{300\text{ mm}}$$

$$\alpha = 28.07^\circ$$

We note that triangle *ADB* is isosceles (since $AC = BC$). Therefore $\measuredangle A = \measuredangle B = 90^\circ - \alpha$.

Also $\measuredangle ADB = 2\alpha$



Force triangle

The angle between **A** and **C** must be $2\alpha - \alpha = \alpha$

$\alpha = 28.07^\circ$

Thus, force triangle is isosceles and

$$A = 170.0\text{ N}$$

$$C = 2(170\text{ N})\cos\alpha = 300\text{ N}$$

$\mathbf{A} = 170.0\text{ N} \measuredangle 56.1^\circ \quad \mathbf{C} = 300\text{ N} \measuredangle 28.1^\circ$ ◀

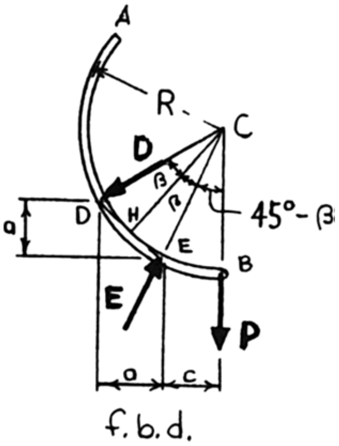
PROBLEM 4.83

Rod AB is bent into the shape of an arc of circle and is lodged between two pegs D and E. It supports a load **P** at end B. Neglecting friction and the weight of the rod, determine the distance c corresponding to equilibrium when $a = 20$ mm and $R = 100$ mm.

SOLUTION

Free-Body Diagram:



Since $y_{ED} = x_{ED} = a,$

slope of ED is ↘ 45°;

slope of HC is ↗ 45°.

Also $$DE = \sqrt{2}a$$

and $$DH = HE = \left(\frac{1}{2}\right)DE = \frac{a}{\sqrt{2}}$$

For triangles DHC and EHC, $$\sin\beta = \frac{\frac{a}{\sqrt{2}}}{R} = \frac{a}{\sqrt{2}R}$$

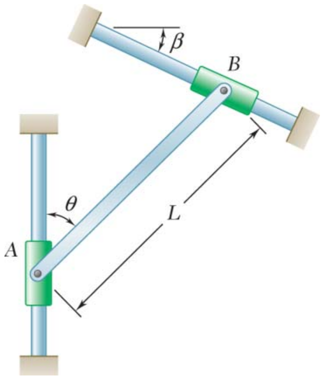
Now $$c = R\sin(45° - \beta)$$

For $$a = 20 \text{ mm} \quad \text{and} \quad R = 100 \text{ mm}$$

$$\sin\beta = \frac{20 \text{ mm}}{\sqrt{2}(100 \text{ mm})}$$
$$= 0.141421$$
$$\beta = 8.1301°$$

and $$c = (100 \text{ mm})\sin(45° - 8.1301°)$$
$$= 60.00 \text{ mm}$$

or $c = 60.0$ mm ◀



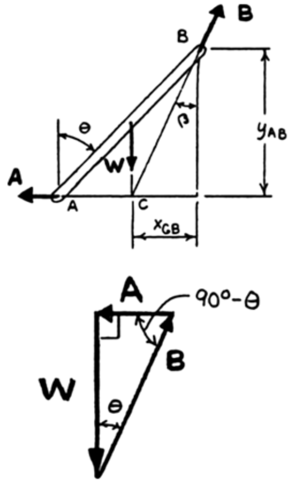
PROBLEM 4.84

A slender rod of length L is attached to collars that can slide freely along the guides shown. Knowing that the rod is in equilibrium, derive an expression for the angle θ in terms of the angle β.

SOLUTION

As shown in the free-body diagram of the slender rod AB, the three forces intersect at C. From the force geometry:

Free-Body Diagram:



$$\tan\beta = \frac{x_{GB}}{y_{AB}}$$

where

$$y_{AB} = L\cos\theta$$

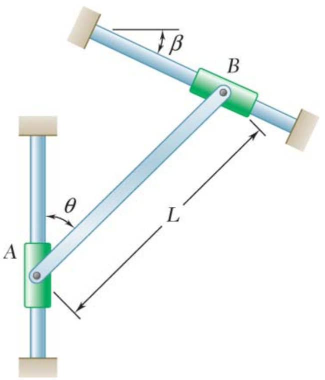
and

$$x_{GB} = \frac{1}{2}L\sin\theta$$

$$\tan\beta = \frac{\frac{1}{2}L\sin\theta}{L\cos\theta}$$

$$= \frac{1}{2}\tan\theta$$

or $\tan\theta = 2\tan\beta$ ◀



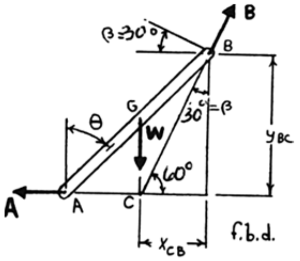
PROBLEM 4.85

An 8-kg slender rod of length L is attached to collars that can slide freely along the guides shown. Knowing that the rod is in equilibrium and that $\beta = 30°$, determine (*a*) the angle θ that the rod forms with the vertical, (*b*) the reactions at A and B.

SOLUTION

(*a*) As shown in the free-body diagram of the slender rod AB, the three forces intersect at C. From the geometry of the forces:

Free-Body Diagram:



$$\tan\beta = \frac{x_{CB}}{y_{BC}}$$

where

$$x_{CB} = \frac{1}{2}L\sin\theta$$

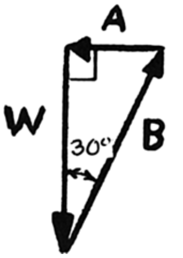
and

$$y_{BC} = L\cos\theta$$

$$\tan\beta = \frac{1}{2}\tan\theta$$

or $$\tan\theta = 2\tan\beta$$

For $$\beta = 30°$$



$$\tan\theta = 2\tan 30°$$
$$= 1.15470$$
$$\theta = 49.107°$$

or $\theta = 49.1°$ ◀

(*b*) $$W = mg = (8 \text{ kg})(9.81 \text{ m/s}^2) = 78.480 \text{ N}$$

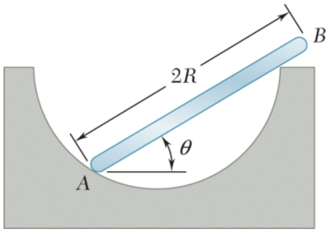
From force triangle:

$$A = W\tan\beta$$
$$= (78.480 \text{ N})\tan 30°$$
$$= 45.310 \text{ N}$$

or **A** = 45.3 N ← ◀

and $$B = \frac{W}{\cos\beta} = \frac{78.480 \text{ N}}{\cos 30°} = 90.621 \text{ N}$$

or **B** = 90.6 N ∠ 60.0° ◀



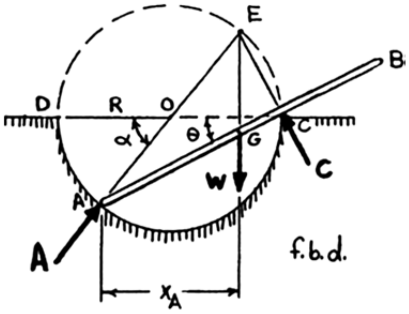
PROBLEM 4.86

A uniform rod *AB* of length 2*R* rests inside a hemispherical bowl of radius *R* as shown. Neglecting friction, determine the angle θ corresponding to equilibrium.

SOLUTION

Based on the F.B.D., the uniform rod *AB* is a three-force body. Point *E* is the point of intersection of the three forces. Since force *A* passes through *O*, the center of the circle, and since force **C** is perpendicular to the rod, triangle *ACE* is a right triangle inscribed in the circle. Thus, *E* is a point on the circle.

Note that the angle α of triangle *DOA* is the central angle corresponding to the inscribed angle θ of triangle *DCA*.



$$\alpha = 2\theta$$

The horizontal projections of $AE, (x_{AE}),$ and $AG, (x_{AG}),$ are equal.

$$x_{AE} = x_{AG} = x_A$$

or $$(AE)\cos 2\theta = (AG)\cos\theta$$

and $$(2R)\cos 2\theta = R\cos\theta$$

Now $$\cos 2\theta = 2\cos^2\theta - 1$$

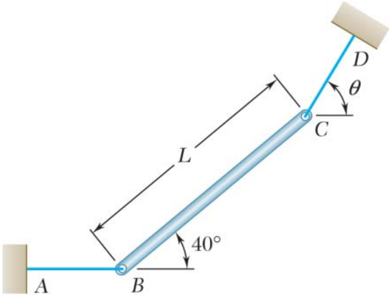
then $$4\cos^2\theta - 2 = \cos\theta$$

or $$4\cos^2\theta - \cos\theta - 2 = 0$$

Applying the quadratic equation,

$$\cos\theta = 0.84307 \quad \text{and} \quad \cos\theta = -0.59307$$

$$\theta = 32.534° \quad \text{and} \quad \theta = 126.375° \quad \text{(Discard)} \qquad \text{or} \quad \theta = 32.5° \blacktriangleleft$$



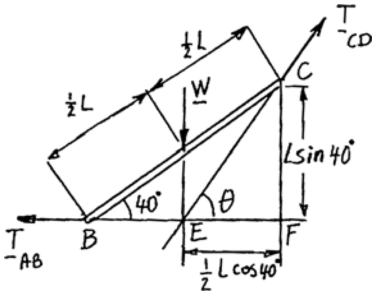
PROBLEM 4.87

A slender rod *BC* of length *L* and weight *W* is held by two cables as shown. Knowing that cable *AB* is horizontal and that the rod forms an angle of 40° with the horizontal, determine (*a*) the angle *θ* that cable *CD* forms with the horizontal, (*b*) the tension in each cable.

SOLUTION

Free-Body Diagram:

(Three-force body)



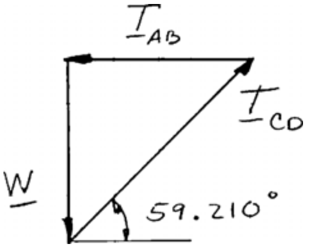
(*a*) The line of action of $\mathbf{T}_{CD}$ must pass through *E*, where $\mathbf{T}_{AB}$ and **W** intersect.

$$\begin{aligned}\tan\theta &= \frac{CF}{EF}\\ &= \frac{L\sin 40^\circ}{\frac{1}{2}L\cos 40^\circ}\\ &= 2\tan 40^\circ\\ &= 59.210^\circ\end{aligned}$$

$\theta = 59.2^\circ$ ◀

(b) Force Triangle

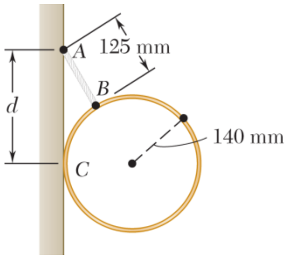
$$\begin{aligned}T_{AB} &= W\tan 30.790^\circ\\ &= 0.59588W\end{aligned}$$



$T_{AB} = 0.596W$ ◀

$$\begin{aligned}T_{CD} &= \frac{W}{\cos 30.790^\circ}\\ &= 1.16408W\end{aligned}$$

$T_{CD} = 1.164W$ ◀



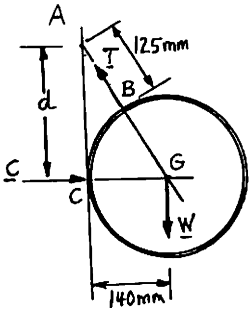
PROBLEM 4.88

A thin ring of mass 2 kg and radius $r = 140$ mm is held against a frictionless wall by a 125-mm string *AB*. Determine (*a*) the distance *d*, (*b*) the tension in the string, (*c*) the reaction at *C*.

SOLUTION

Free-Body Diagram:

(Three-force body)



The force *T* exerted at *B* must pass through the center *G* of the ring, since **C** and **W** intersect at that point.

Thus, points *A*, *B*, and *G* are in a straight line.

(*a*) From triangle *ACG*:

$$d = \sqrt{(AG)^2 - (CG)^2}$$

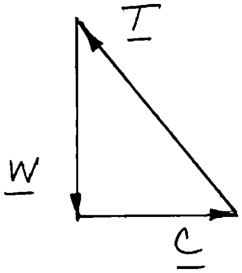
$$= \sqrt{(265 \text{ mm})^2 - (140 \text{ mm})^2}$$

$$= 225.00 \text{ mm}$$

$d = 225$ mm ◀

Force Triangle

$$W = (2 \text{ kg})(9.81 \text{ m/s}^2) = 19.6200 \text{ N}$$

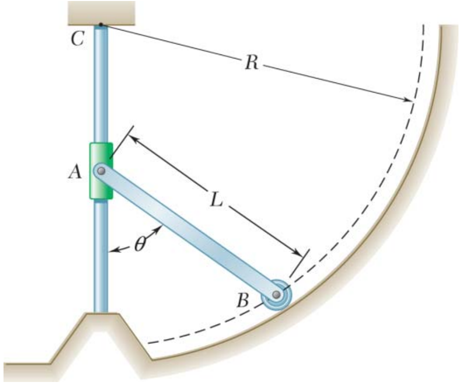


Law of sines:

$$\frac{T}{265 \text{ mm}} = \frac{C}{140 \text{ mm}} = \frac{19.6200 \text{ N}}{225.00 \text{ mm}}$$

(*b*) $T = 23.1$ N ◀

(*c*) $\mathbf{C} = 12.21 \text{ N} \longrightarrow$ ◀

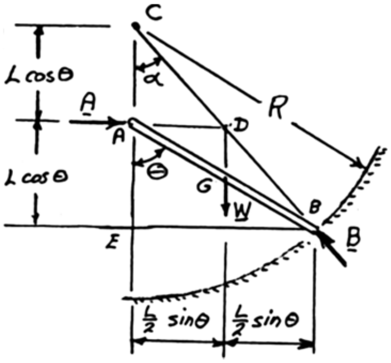


PROBLEM 4.89

A slender rod of length L and weight W is attached to a collar at A and is fitted with a small wheel at B. Knowing that the wheel rolls freely along a cylindrical surface of radius R, and neglecting friction, derive an equation in θ, L, and R that must be satisfied when the rod is in equilibrium.

SOLUTION

Free-Body Diagram (Three-force body)



Reaction **B** must pass through D where **B** and **W** intersect.

Note that ΔABC and ΔBGD are similar.

$$AC = AE = L\cos\theta$$

In ΔABC:

$$(CE)^2 + (BE)^2 = (BC)^2$$

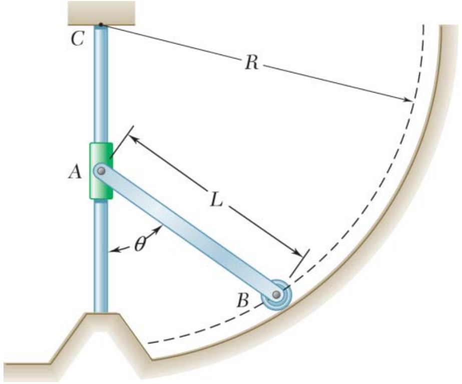
$$(2L\cos\theta)^2 + (L\sin\theta)^2 = R^2$$

$$\left(\frac{R}{L}\right)^2 = 4\cos^2\theta + \sin^2\theta$$

$$\left(\frac{R}{L}\right)^2 = 4\cos^2\theta + 1 - \cos^2\theta$$

$$\left(\frac{R}{L}\right)^2 = 3\cos^2\theta + 1$$

$$\cos^2\theta = \frac{1}{3}\left[\left(\frac{R}{L}\right)^2 - 1\right] \blacktriangleleft$$



PROBLEM 4.90

Knowing that for the rod of Problem 4.89, L = 15 in., R = 20 in., and W = 10 lb, determine (*a*) the angle θ corresponding to equilibrium, (*b*) the reactions at A and B.

SOLUTION

See the solution to Problem 4.86 for the free-body diagram and analysis leading to the following equation:

$$\cos^2\theta = \frac{1}{3}\left[\left(\frac{R}{L}\right)^2 - 1\right]$$

For $L = 15$ in., $R = 20$ in., and $W = 10$ lb,

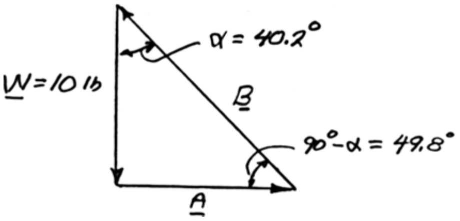
(*a*) $$\cos^2\theta = \frac{1}{3}\left[\left(\frac{20\text{ in.}}{15\text{ in.}}\right)^2 - 1\right]; \quad \theta = 59.39^\circ \qquad \theta = 59.4^\circ \blacktriangleleft$$

In ΔABC: $$\tan\alpha = \frac{BE}{CE} = \frac{L\sin\theta}{2L\cos\theta} = \frac{1}{2}\tan\theta$$

$$\tan\alpha = \frac{1}{2}\tan 59.39^\circ = 0.8452$$

$$\alpha = 40.2^\circ$$

Force Triangle



$$A = W\tan\alpha = (10\text{ lb})\tan 40.2^\circ = 8.45\text{ lb}$$

$$B = \frac{W}{\cos\alpha} = \frac{(10\text{ lb})}{\cos 40.2^\circ} = 13.09\text{ lb}$$

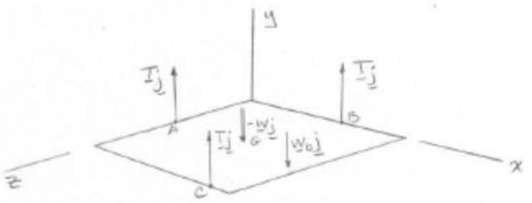
PROBLEM 4.97

The 20 × 20-in. square plate shown weighs 56 lb and is supported by three vertical wires. Determine the tension in each wire.

SOLUTION



$W_b\mathbf{j} = 0$ and $W = -(56.0 \text{ lb})\mathbf{j}$

$$\Sigma M_A = 0: \quad \mathbf{r}_{B/A} \times T_B\mathbf{j} + \mathbf{r}_{C/A} \times T_C\mathbf{j} + \mathbf{r}_{G/A} \times (-W\mathbf{j}) = 0$$

$$(16\mathbf{i} - 10\mathbf{k}) \times T_B\mathbf{j} + (16\mathbf{i} + 10\mathbf{k}) \times \mathrm{T}_C\,\mathbf{j} + 10\mathbf{i} \times (-W\mathbf{j}) = 0$$

$$16T_B\mathbf{k} + 10T_B\mathbf{i} + 16T_C\mathbf{k} - 10T_C\mathbf{i} - 10W\mathbf{k} = 0$$

Equate coefficients of unit vectors to zero:

$$\mathbf{i}: \quad 10T_B - 10T_C = 0; \quad T_B = T_C$$

$$\mathbf{k}: \quad 16T_B + 16T_C - 10W = 0$$

$$16T_B + 16T_B - 10(56.0 \text{ lb}) = 0$$

$$T_B = T_C = 17.50 \text{ lb}$$

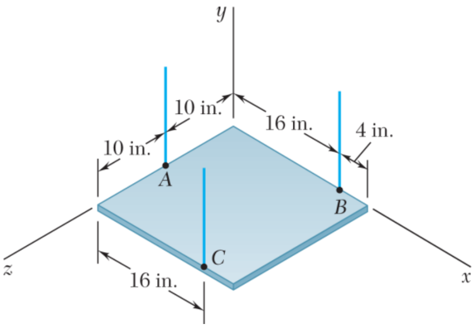
$$\Sigma F_y = 0: \quad T_A + T_B + T_C - W = 0$$

$$T_A + 17.50 + 17.50 - 56.0 = 0$$

$$T_A = 21.0 \text{ lb}$$

$T_A = 21.0$ lb ◀

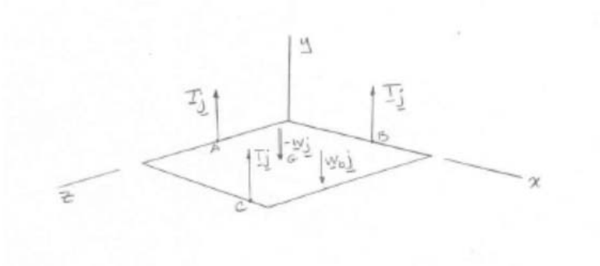
$T_B = T_C = 17.50$ lb ◀



PROBLEM 4.98

The 20 × 20-in. square plate shown weighs 56 lb and is supported by three vertical wires. Determine the weight and location of the lightest block that should be placed on the plate if the tensions in the three wires are to be equal.

SOLUTION



Let $-W_b\mathbf{j}$ be the weight of block; x and z its coordinates.

Since the tensions in the wires are equal, let $T_A = T_B = T_C = T$

$$\Sigma M_O = 0: \quad \mathbf{r}_A \times T\mathbf{j} + \mathbf{r}_B \times T\mathbf{j} + \mathbf{r}_C \times T\mathbf{j} + \mathbf{r}_G \times (-W\mathbf{j}) + (x\mathbf{i} + z\mathbf{k}) \times (-W_b\mathbf{j}) = 0$$

$$(10\mathbf{k}) \times T\mathbf{j} + (16\mathbf{i}) \times T\mathbf{j} + (16\mathbf{i} + 20\mathbf{k}) \times T\mathbf{j} \times (10\mathbf{i} + 10\mathbf{k}) \times (-W\mathbf{j}) + (x\mathbf{i} + z\mathbf{k}) \times (-W_b\mathbf{j}) = 0$$

$$-10T\mathbf{i} + 16T\mathbf{k} + 16T\mathbf{k} - 20T\mathbf{i} - 10W\mathbf{k} + 10W\mathbf{i} - W_b x\mathbf{k} + W_b z\mathbf{i} = 0$$

Equate coefficients of unit vectors to zero:

$$\mathbf{i}: \quad -30T + 10W + W_b z = 0; \quad (1)$$

$$\mathbf{k}: \quad 32T - 10W - W_b x = 0 \quad (2)$$

Also,

$$\Sigma F_y = 0: \quad 3T - W - W_b = 0 \quad (3)$$

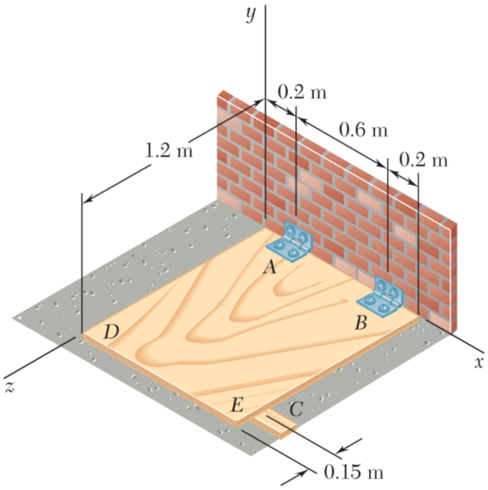
$$(1)+10(3): \quad (z-10)W_b = 0 \quad \text{since } x \text{ and } z \text{ must be} \le 20 \text{ in.} \;\; z = 10 \text{ in.}$$

$$3(2) - 32(3): \quad 2W + (-3x + 32)W_b = 0$$

$$\frac{W_b}{W} = \frac{2}{3x - 32}; \quad \text{since } x \le 20 \text{ in.} \quad \frac{W_b}{W} \ge \frac{2}{3(20) - 32}$$

Finally, with $W = 56$ lb; $W_b = (56 \text{ lb})\dfrac{1}{14} = 4.00$ lb

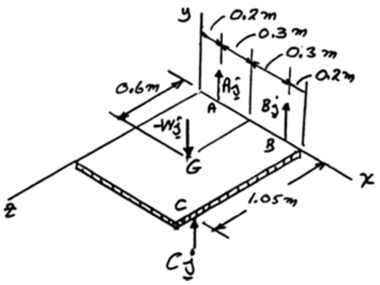
$W_b = 4.00$ lb at $x = 20.0$ in., $z = 10.00$ in. ◀



PROBLEM 4.99

An opening in a floor is covered by a $1 \times 1.2\text{-m}$ sheet of plywood of mass 18 kg. The sheet is hinged at *A* and *B* and is maintained in a position slightly above the floor by a small block *C*. Determine the vertical component of the reaction (*a*) at *A*, (*b*) at *B*, (*c*) at *C*.

SOLUTION



$$\mathbf{r}_{B/A} = 0.6\mathbf{i}$$

$$\mathbf{r}_{C/A} = 0.8\mathbf{i} + 1.05\mathbf{k}$$

$$\mathbf{r}_{G/A} = 0.3\mathbf{i} + 0.6\mathbf{k}$$

$$W = mg = (18\text{ kg})9.81$$

$$W = 176.58\text{ N}$$

$$\Sigma M_A = 0: \quad \mathbf{r}_{B/A} \times B\mathbf{j} + \mathbf{r}_{C/A} \times C\mathbf{j} + \mathbf{r}_{G/A} \times (-W\mathbf{j}) = 0$$

$$(0.6\mathbf{i}) \times B\mathbf{j} + (0.8\mathbf{i} + 1.05\mathbf{k}) \times C\mathbf{j} + (0.3\mathbf{i} + 0.6\mathbf{k}) \times (-W\mathbf{j}) = 0$$

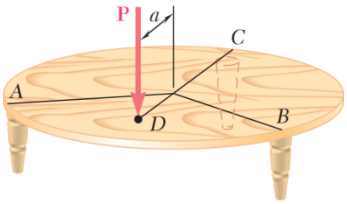
From Eq. (1): $8 \text{ lb} = \dfrac{15(24 \text{ lb})}{30 + a}$

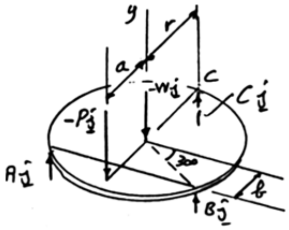
$30 \text{ in.} + a = 45$ $a = 15.00 \text{ in.}$ ◀



PROBLEM 4.104

The table shown weighs 30 lb and has a diameter of 4 ft. It is supported by three legs equally spaced around the edge. A vertical load **P** of magnitude 100 lb is applied to the top of the table at *D*. Determine the maximum value of *a* if the table is not to tip over. Show, on a sketch, the area of the table over which **P** can act without tipping the table.

SOLUTION



$$r = 2\text{ ft} \quad b = r\sin 30° = 1\text{ ft}$$

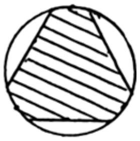
We shall sum moments about *AB*.

$$(b + r)C + (a - b)P - bW = 0$$

$$(1 + 2)C + (a - 1)100 - (1)30 = 0$$

$$C = \frac{1}{3}[30 - (a - 1)100]$$

If table is not to tip, $C \geq 0$.

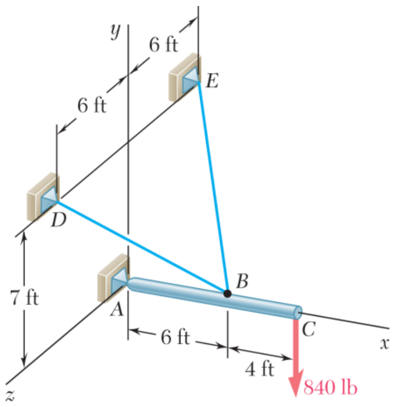


$$[30 - (a - 1)100] \geq 0$$

$$30 \geq (a - 1)100$$

$$a - 1 \leq 0.3 \quad a \leq 1.3\text{ ft} \qquad a = 1.300\text{ ft} ◀$$

Only ⊥ distance from *P* to *AB* matters. Same condition must be satisfied for each leg. *P* must be located in shaded area for no tipping.



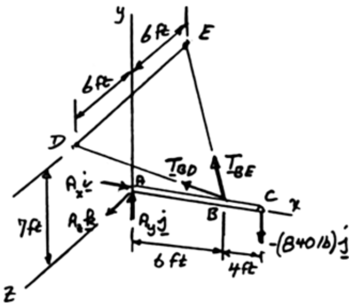
PROBLEM 4.105

A 10-ft boom is acted upon by the 840-lb force shown. Determine the tension in each cable and the reaction at the ball-and-socket joint at *A*.

SOLUTION

We have five unknowns and six equations of equilibrium, but equilibrium is maintained $(\Sigma M_x = 0)$.

Free-Body Diagram:



$$\overrightarrow{BD} = (-6\text{ ft})\mathbf{i} + (7\text{ ft})\mathbf{j} + (6\text{ ft})\mathbf{k} \qquad BD = 11\text{ ft}$$

$$\overrightarrow{BE} = (-6\text{ ft})\mathbf{i} + (7\text{ ft})\mathbf{j} - (6\text{ ft})\mathbf{k} \qquad BE = 11\text{ ft}$$

$$\mathbf{T}_{BD} = T_{BD}\frac{\overrightarrow{BD}}{BD} = \frac{T_{BD}}{11}(-6\mathbf{i} + 7\mathbf{j} + 6\mathbf{k})$$

$$\mathbf{T}_{BE} = T_{BE}\frac{\overrightarrow{BE}}{BE} = \frac{T_{BE}}{11}(-6\mathbf{i} + 7\mathbf{j} - 6\mathbf{k})$$

$$\Sigma M_A = 0: \quad \mathbf{r}_B \times \mathbf{T}_{BD} + \mathbf{r}_B \times \mathbf{T}_{BE} + \mathbf{r}_C \times (-840\mathbf{j}) = 0$$

$$6\mathbf{i} \times \frac{T_{BD}}{11}(-6\mathbf{i} + 7\mathbf{j} + 6\mathbf{k}) + 6\mathbf{i} \times \frac{T_{BE}}{11}(-6\mathbf{i} + 7\mathbf{j} - 6\mathbf{k}) + 10\mathbf{i} \times (-840\mathbf{j}) = 0$$

$$\frac{42}{11}T_{BD}\mathbf{k} - \frac{36}{11}T_{BD}\mathbf{j} + \frac{42}{11}T_{BE}\mathbf{k} + \frac{36}{11}T_{BE}\mathbf{j} - 8400\mathbf{k} = 0$$

Equate coefficients of unit vectors to zero:

$$\mathbf{i}: \quad -\frac{36}{11}T_{BD} + \frac{36}{11}T_{BE} = 0 \qquad T_{BE} = T_{BD}$$

$$\mathbf{k}: \quad \frac{42}{11}T_{BD} + \frac{42}{11}T_{BE} - 8400 = 0$$

$$2\left(\frac{42}{11}T_{BD}\right) = 8400$$

$T_{BD} = 1100\text{ lb}$ ◀

$T_{BE} = 1100\text{ lb}$ ◀

PROBLEM 4.105 (Continued)

$$\Sigma F_x = 0: \quad A_x - \frac{6}{11}(1100\text{ lb}) - \frac{6}{11}(1100\text{ lb}) = 0$$

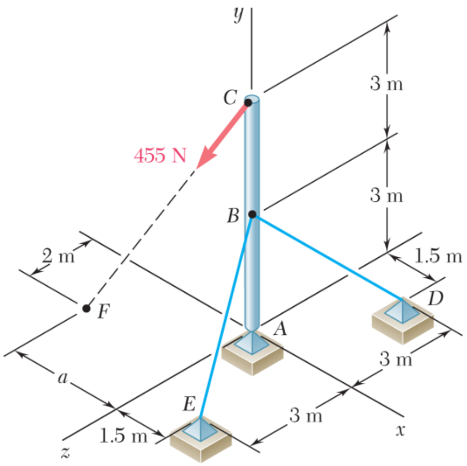
$$A_x = 1200\text{ lb}$$

$$\Sigma F_y = 0: \quad A_y + \frac{7}{11}(1100\text{ lb}) + \frac{7}{11}(1100\text{ lb}) - 840\text{ lb} = 0$$

$$A_y = -560\text{ lb}$$

$$\Sigma F_z = 0: \quad A_z + \frac{6}{11}(1100\text{ lb}) - \frac{6}{11}(1100\text{ lb}) = 0$$

$$A_z = 0 \qquad \mathbf{A} = (1200\text{ lb})\mathbf{i} - (560\text{ lb})\mathbf{j} \blacktriangleleft$$

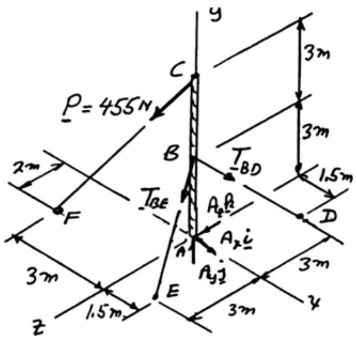


PROBLEM 4.106

The 6-m pole *ABC* is acted upon by a 455-N force as shown. The pole is held by a ball-and-socket joint at *A* and by two cables *BD* and *BE*. For $a = 3$ m, determine the tension in each cable and the reaction at *A*.

SOLUTION

Free-Body Diagram:



Five unknowns and six Eqs. of equilibrium, but equilibrium is maintained

$$(\Sigma M_{AC} = 0)$$

$$\mathbf{r}_B = 3\mathbf{j}$$
$$\mathbf{r}_C = 6\mathbf{j}$$

$$\overrightarrow{CF} = -3\mathbf{i} - 6\mathbf{j} + 2\mathbf{k} \quad CF = 7 \text{ m}$$
$$\overrightarrow{BD} = 1.5\mathbf{i} - 3\mathbf{j} - 3\mathbf{k} \quad BD = 4.5 \text{ m}$$
$$\overrightarrow{BE} = 1.5\mathbf{i} - 3\mathbf{j} + 3\mathbf{k} \quad BE = 4.5 \text{ m}$$

$$\mathbf{P} = P\frac{\overrightarrow{CF}}{CE} = \frac{P}{7}(-3\mathbf{i} - 6\mathbf{j} + 2\mathbf{k})$$

$$\mathbf{T}_{BD} = T_{BD}\frac{\overrightarrow{BD}}{BD} = \frac{T_{BD}}{4.5}(1.5\mathbf{i} - 3\mathbf{j} - 3\mathbf{k}) = \frac{T_{BD}}{3}(\mathbf{i} - 2\mathbf{j} - 2\mathbf{k})$$

$$\mathbf{T}_{BE} = T_{BE} = \frac{\overrightarrow{BE}}{BE} = \frac{T_{BD}}{3}(\mathbf{i} - 2\mathbf{j} + 2\mathbf{k})$$

$$\Sigma M_A = 0: \quad \mathbf{r}_B \times \mathbf{T}_{BD} + \mathbf{r}_B \times \mathbf{T}_{BE} + \mathbf{r}_C \times \mathbf{P} = 0$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 3 & 0 \\ 1 & -2 & -2 \end{vmatrix} \frac{T_{BD}}{3} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 3 & 0 \\ 1 & -2 & 2 \end{vmatrix} \frac{T_{BE}}{3} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 6 & 0 \\ -3 & -6 & 2 \end{vmatrix} \frac{P}{7} = 0$$

Coefficient of **i**: $$-2T_{BD} + 2T_{BE} + \frac{12}{7}P = 0 \qquad (1)$$

Coefficient of **k**: $$-T_{BD} - T_{BF} + \frac{18}{7}P = 0 \qquad (2)$$

PROBLEM 4.106 (Continued)

Eq. (1) + 2 Eq. (2): $-4T_{BD}+\dfrac{48}{7}P=0 \quad T_{BD}=\dfrac{12}{7}P$

Eq. (2): $-\dfrac{12}{7}P-T_{BE}+\dfrac{18}{7}P=0 \quad T_{BE}=\dfrac{6}{7}P$

Since $P=445\text{ N} \quad T_{BD}=\dfrac{12}{7}(455)$ $\qquad T_{BD}=780\text{ N}$ ◀

$$T_{BE}=\frac{6}{7}(455) \qquad T_{BE}=390\text{ N} \blacktriangleleft$$

$$\Sigma\mathbf{F}=0: \quad \mathbf{T}_{BD}+\mathbf{T}_{BE}+\mathbf{P}+\mathbf{A}=0$$

Coefficient of **i**: $\dfrac{780}{3}+\dfrac{390}{3}-\dfrac{455}{7}(3)+A_x=0$

$$260+130-195+A_x=0 \quad A_x=195.0\text{ N}$$

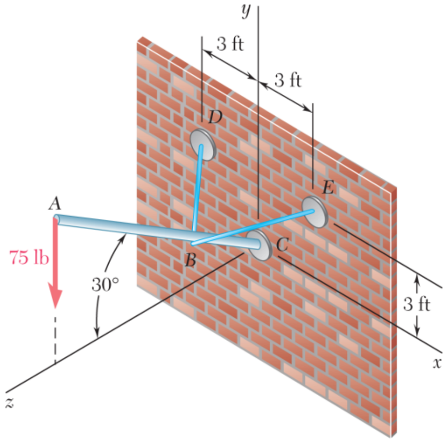
Note: Since the forces and reaction are concurrent at *A*, we could have used the methods of Chapter 2.

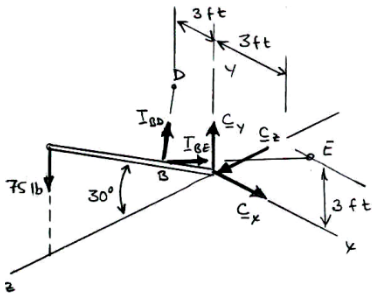


PROBLEM 4.110

The 10-ft flagpole AC forms an angle of $30°$ with the z axis. It is held by a ball-and-socket joint at C and by two thin braces BD and BE. Knowing that the distance BC is 3 ft, determine the tension in each brace and the reaction at C.

SOLUTION

Free-Body Diagram:



Express all forces in terms of rectangular components:

$$\mathbf{r}_E = (3\text{ ft})\mathbf{i} + (3\text{ ft})\mathbf{j}$$

$$\mathbf{r}_B = (3\text{ ft})\sin 30°\mathbf{j} + (3\text{ ft})\cos 30°\mathbf{k} = (1.5\text{ ft})\mathbf{j} + (2.598\text{ ft})\mathbf{k}$$

$$\mathbf{r}_D = -(3\text{ ft})\mathbf{i} + (3\text{ ft})\mathbf{j}$$

$$\mathbf{r}_A = (10\text{ ft})\sin 30°\mathbf{j} - (10\text{ ft})\cos 30°\mathbf{k} = (5\text{ ft})\mathbf{j} + (8.66\text{ ft})\mathbf{k}$$

$$\overrightarrow{BE} = \mathbf{r}_E - \mathbf{r}_B = (3\text{ ft})\mathbf{i} + (3\text{ ft})\mathbf{j} - (1.5\text{ ft})\mathbf{j} - (2.598\text{ ft})\mathbf{k}$$

or $\overrightarrow{BE} = (3\text{ ft})\mathbf{i} + (1.5\text{ ft})\mathbf{j} - (2.598\text{ ft})\mathbf{k}$, and $BE = 4.243\text{ ft}$

$$\overrightarrow{BD} = \mathbf{r}_D - \mathbf{r}_B = -(3\text{ ft})\mathbf{i} + (3\text{ ft})\mathbf{j} - (1.5\text{ ft})\mathbf{j} - (2.598\text{ ft})\mathbf{k}$$

or $\overrightarrow{BD} = -(3\text{ ft})\mathbf{i} + (1.5\text{ ft})\mathbf{j} - (2.598\text{ ft})\mathbf{k}$, and $BD = 4.243\text{ ft}$

Then

$$\vec{T}_{BD} = T_{BD}\frac{\overrightarrow{BD}}{BD} = T_{BD}(-0.707\mathbf{i} + 0.3535\mathbf{j} - 0.6123\mathbf{k})$$

$$\vec{T}_{BE} = T_{BE}\frac{\overrightarrow{BE}}{BE} = T_{BE}(0.707\mathbf{i} + 0.3535\mathbf{j} - 0.6123\mathbf{k})$$

PROBLEM 4.110 (Continued)

$$\Sigma \mathbf{M}_C = 0: \qquad \mathbf{r}_B \times \mathbf{T}_{BD} + \mathbf{r}_B \times \mathbf{T}_{BE} + \left[(5\text{ ft})\mathbf{j} + (8.66\text{ ft})\mathbf{k}\right] \times (-75\text{ lb})\mathbf{j}$$

or

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 1.5 & 2.598 \\ -0.707 & 0.3535 & -0.6123 \end{vmatrix} T_{BD} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 1.5 & 2.598 \\ 0.707 & 0.3535 & -0.6123 \end{vmatrix} + 649.5\mathbf{i} = 0$$

Equating the coefficients of the unit vectors to zero:

$\mathbf{j}$: $\quad -1.837T_{BD} + 1.837T_{BE} = 0$

$\mathbf{i}$: $\quad -1.837T_{BD} + 1.837T_{BE} + 649.5\text{ lb} = 0$

$T_{BD} = 176.8\text{ lb}$ ◀

$T_{BE} = 176.8\text{ lb}$ ◀

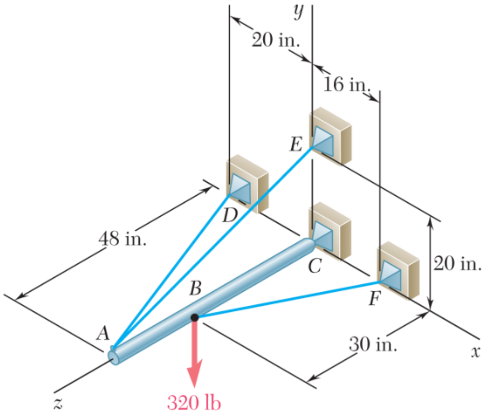
Force equations:

$C_x + (176.8)(-0.707) + (176.8)(0.707) = 0, \quad \text{or} \quad C_x = 0$

$C_y + (176.8)(0.3535) + (176.8)(0.3535) - 75\text{ lb} = 0, \quad \text{or} \quad C_y = -50\text{ lb}$

$C_z + (176.8)(-0.6123) + (176.8)(-0.6123) = 0, \quad \text{or} \quad C_z = 216.5\text{ lb}$

$\mathbf{C} = -(50\text{ lb})\mathbf{j} + (216.5\text{ lb})\mathbf{k}$ ◀



PROBLEM 4.111

A 48-in. boom is held by a ball-and-socket joint at *C* and by two cables *BF* and *DAE*; cable *DAE* passes around a frictionless pulley at *A*. For the loading shown, determine the tension in each cable and the reaction at *C*.

SOLUTION

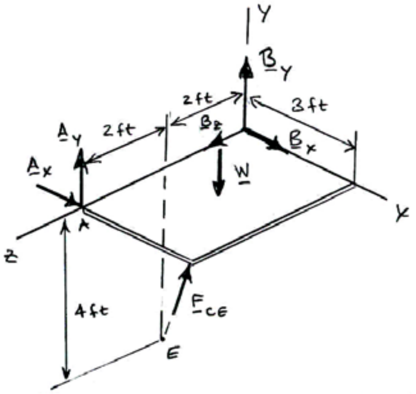
PROBLEM 4.115

The horizontal platform *ABCD* weighs 60 lb and supports a 240-lb load at its center. The platform is normally held in position by hinges at *A* and *B* and by braces *CE* and *DE*. If brace *DE* is removed, determine the reactions at the hinges and the force exerted by the remaining brace *CE*. The hinge at *A* does not exert any axial thrust.

SOLUTION

Free-Body Diagram:



Express forces, weight in terms of rectangular components:

$$\overrightarrow{EC} = (3\text{ ft})\mathbf{i} + (4\text{ ft})\mathbf{j} + (2\text{ ft})\mathbf{k}$$

$$\mathbf{F}_{CE} = F_{CE}\frac{\overrightarrow{EC}}{EC} = F_{CE}\frac{3\mathbf{i} + 4\mathbf{j} + 2\mathbf{k}}{\sqrt{(3)^2 + (4)^2 + (2)^2}}$$

$$= 0.55709F_{CE}\,\mathbf{i} + 0.74278F_{CE}\,\mathbf{j} + 0.37139F_{CE}\,\mathbf{k}$$

$$\mathbf{W} = -(mg)\mathbf{j} = -(300\text{ lb})\mathbf{j}$$

$$\Sigma\mathbf{M}_B = 0: \quad (4\text{ ft})\mathbf{k}\times\mathbf{A} + \left[(1.5\text{ ft})\mathbf{i} + (2\text{ ft})\mathbf{k}\right]\times(-300\text{ lb})\mathbf{j}$$

$$+\left[(3\text{ ft})\mathbf{i} + (4\text{ ft})\mathbf{k}\right]\times\mathbf{F}_{CE} = 0$$

or

$$-(4\text{ ft})A_y\mathbf{i} + (4\text{ ft})A_z\mathbf{j} - (1.5\text{ ft})(300\text{ lb})\mathbf{k} + (2\text{ ft})(300\text{ lb})\mathbf{i}$$

$$+\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 3 & 0 & 4 \\ 0.55709 & 0.74278 & 0.37139 \end{vmatrix} F_{CE}(\text{ft}) = 0$$

PROBLEM 4.115 (Continued)

Setting the coefficients of the unit vectors equal to zero:

k: $(0.74278F_{CE})(3\text{ ft}) - (300\text{ lb})(1.5\text{ ft}) = 0$

$$F_{CE} = 201.94\text{ lb}$$

or $F_{CE} = 202\text{ lb}$ ◀

j: $A_x(4\text{ ft}) + [0.55709(201.94\text{ lb})](4\text{ ft}) - [0.37139(201.94\text{ lb})](3\text{ ft}) = 0$

$$A_x = -56.250\text{ lb}$$

i: $-A_y(4\text{ ft}) - [0.74278(201.94\text{ lb})](4\text{ ft}) + (300\text{ lb})(2\text{ ft}) = 0$

$$A_y = 0$$

$\Sigma F_x = 0$: $-56.250\text{ lb} + B_x + 0.55709(201.94\text{ lb}) = 0$

$$B_x = -56.249\text{ lb}$$

$\Sigma F_y = 0$: $0 + B_y - 300\text{ lb} + 0.74278(201.94\text{ lb}) = 0$

$$B_y = 150.003\text{ lb}$$

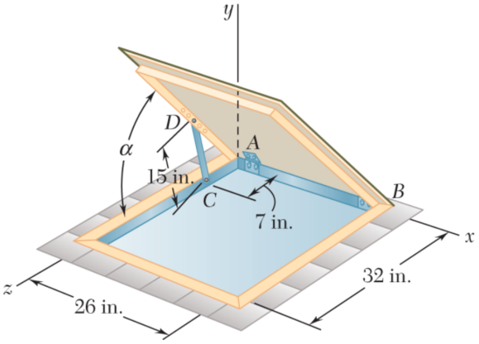
$\Sigma F_z = 0$: $B_z + 0.371391(201.94\text{ lb}) = 0$

$$B_z = -74.999\text{ lb}$$

Therefore:

$\mathbf{A} = -(56.3\text{ lb})\mathbf{i}$ ◀

$\mathbf{B} = -(56.2\text{ lb})\mathbf{i} + (150.0\text{ lb})\mathbf{j} - (75.0\text{ lb})\mathbf{k}$ ◀

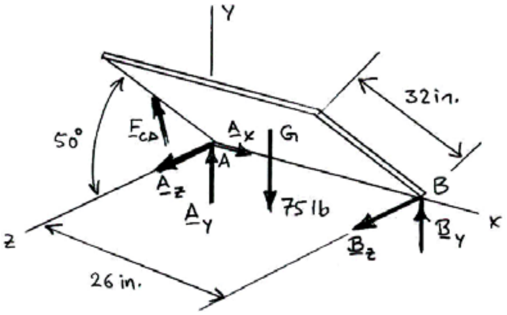


PROBLEM 4.116

The lid of a roof scuttle weighs 75 lb. It is hinged at corners *A* and *B* and maintained in the desired position by a rod *CD* pivoted at *C*; a pin at end *D* of the rod fits into one of several holes drilled in the edge of the lid. For the position shown, determine (*a*) the magnitude of the force exerted by rod *CD*, (*b*) the reactions at the hinges. Assume that the hinge at *B* does not exert any axial thrust.

SOLUTION

Free-Body Diagram:



Geometry:

Using triangle *ACD* and the law of sines

$$\frac{\sin\alpha}{7\text{ in.}} = \frac{\sin 50^\circ}{15\text{ in.}} \quad \text{or } \alpha = 20.946^\circ$$

$$\beta = 50^\circ + 20.946^\circ = 70.946^\circ$$

Expressing $\mathbf{F}_{CD}$ in terms of its rectangular coordinates:

$$\mathbf{F}_{CD} = F_{CD}\sin\beta\mathbf{j} + F_{CD}\cos\beta\mathbf{k}$$

$$= F_{CD}\sin 70.946^\circ\mathbf{j} + F_{CD}\cos 70.946^\circ\mathbf{k}$$

$$\mathbf{F}_{CD} = 0.94521F_{CD}\mathbf{j} + 0.32646F_{CD}\mathbf{k}$$

$$\Sigma\mathbf{M}_B = 0: \quad (-26\text{ in.})\mathbf{i}\times\mathbf{A} + \left[(-13\text{ in.})\mathbf{i} + (16\text{ in.})\sin 50^\circ\mathbf{j} + (16\text{ in.})\cos 50^\circ\mathbf{k}\right]\times(-75\text{ lb})\mathbf{j}$$

$$+\left[(-26\text{ in.})\mathbf{i} + (7\text{ in.})\mathbf{k}\right]\times\mathbf{F}_{CD} = 0$$

or

$$-(26\text{ in.})A_y\mathbf{k} + (26\text{ in.})A_z\mathbf{j} + (13\text{ in.})(75\text{ lb})\mathbf{k} + (16\text{ in.})(75\text{ lb})\cos 50^\circ\mathbf{i}$$

$$-(26\text{ in.})(0.94521F_{CD})\mathbf{k} + (26\text{ in.})(0.32646F_{CD})\mathbf{j} - (7\text{ in.})(0.94521F_{CD})\mathbf{i} = 0$$

PROBLEM 4.116 (Continued)

(*a*) Setting the coefficients of the unit vectors to zero:

$$\mathbf{i}: \quad (75\text{ lb})\left[(16\text{ in.})\cos 50°\right] - (0.94521F_{CD})(7\text{ in.}) = 0$$

$$F_{CD} = 116.6\text{ lb} \blacktriangleleft$$

(*b*) $\Sigma F_x = 0: \quad A_x = 0$

$$\mathbf{k}: \quad -\left[0.94521(116.580\text{ lb})\right](26\text{ in.}) + (75\text{ lb})(13\text{ in.}) - A_y(26\text{ in.}) = 0$$

$$A_y = -72.693\text{ lb}$$

$$\mathbf{j}: \quad \left[0.32646(116.580\text{ lb})\right](26\text{ in.}) + A_z(26\text{ in.}) = 0$$

$$A_z = -38.059\text{ lb}$$

$$\Sigma F_y = 0: \quad -72.693\text{ lb} + 0.94521(116.580\text{ lb}) - 75\text{ lb} + B_y = 0$$

$$B_y = 37.500\text{ lb}$$

$$\Sigma F_z = 0: \quad -38.059\text{ lb} + 0.32646(116.580\text{ lb}) + B_z = 0$$

$$B_z = 0$$

Therefore:

$$\mathbf{A} = -(72.7\text{ lb})\mathbf{j} - (38.1\text{ lb})\mathbf{k} \blacktriangleleft$$

PROBLEM 4.118

Solve Problem 4.117, assuming that cable *DCE* is replaced by a cable attached to Point *E* and hook *C*.

PROBLEM 4.117 A 100-kg uniform rectangular plate is supported in the position shown by hinges *A* and *B* and by cable *DCE* that passes over a frictionless hook at *C*. Assuming that the tension is the same in both parts of the cable, determine (*a*) the tension in the cable, (*b*) the reactions at *A* and *B*. Assume that the hinge at *B* does not exert any axial thrust.

SOLUTION

See solution to Problem 4.113 for free-body diagram and analysis leading to the following:

$$CD = 1065 \text{ mm}$$

$$CE = 855 \text{ mm}$$

Now,

$$\mathbf{T}_{CD} = \frac{T}{1065}(-690\mathbf{i} + 675\mathbf{j} - 450\mathbf{k})$$

$$\mathbf{T}_{CE} = \frac{T}{855}(270\mathbf{i} + 675\mathbf{j} - 450\mathbf{k})$$

$$\mathbf{W} = -mg\mathbf{i} = -(100 \text{ kg})(9.81 \text{ m/s}^2)\mathbf{j} = -(981 \text{ N})\mathbf{j}$$

$$\Sigma\mathbf{M}_A = 0: \quad \mathbf{r}_{C/A} \times T_{CE} + \mathbf{r}_{G/A} \times (-W\mathbf{j}) + \mathbf{r}_{B/A} \times B = 0$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 600 & 0 & 450 \\ 270 & 675 & -450 \end{vmatrix} \frac{T}{855} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 390 & 0 & 225 \\ 0 & -981 & 0 \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 780 & 0 & 0 \\ 0 & B_y & B_z \end{vmatrix} = 0$$

Coefficient of **i**:

$$-(450)(675)\frac{T}{855} + 220.73 \times 10^3 = 0$$

$$T = 621.31 \text{ N} \qquad\qquad T = 621 \text{ N} \blacktriangleleft$$

Coefficient of **j**:

$$(270 \times 450 + 600 \times 450)\frac{621.31}{855} - 780B_z = 0 \quad B_z = 364.74 \text{ N}$$

Coefficient of **k**:

$$(600)(675)\frac{621.31}{855} - 382.59 \times 10^3 + 780B_y = 0 \quad B_y = 113.186 \text{ N}$$

$$\mathbf{B} = (113.2 \text{ N})\mathbf{j} + (365 \text{ N})\mathbf{k} \blacktriangleleft$$

PROBLEM 4.118 (Continued)

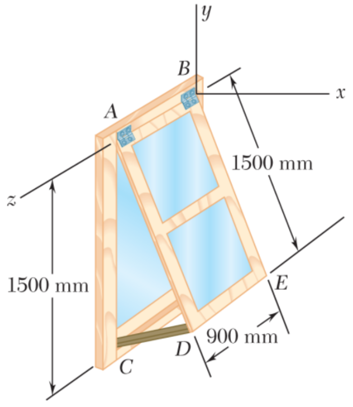
$$\Sigma \mathbf{F} = 0: \quad \mathbf{A} + \mathbf{B} + \mathbf{T}_{CE} + \mathbf{W} = 0$$

Coefficient of **i**: $A_x + \frac{270}{855}(621.31) = 0$ $\qquad A_x = -196.2 \text{ N}$

Coefficient of **j**: $A_y + 113.186 + \frac{675}{855}(621.31) - 981 = 0$ $\qquad A_y = 377.3 \text{ N}$

Coefficient of **k**: $A_z + 364.74 - \frac{450}{855}(621.31) = 0$ $\qquad A_z = -37.7 \text{ N}$

$$\mathbf{A} = -(196.2 \text{ N})\mathbf{i} + (377 \text{ N})\mathbf{j} - (37.7 \text{ N})\mathbf{k} \blacktriangleleft$$



PROBLEM 4.119

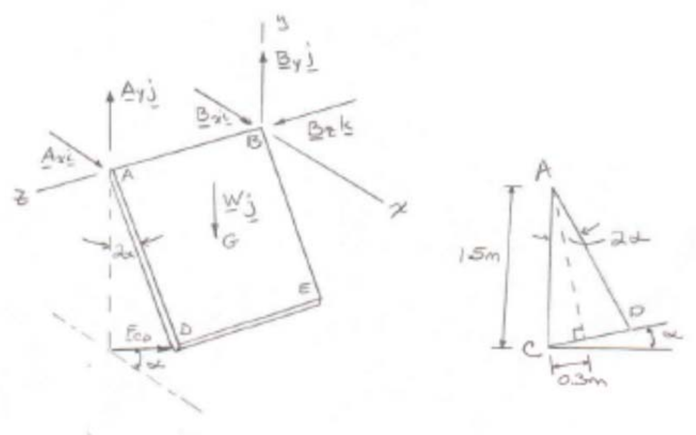
Solve Prob. 4.113, assuming that the hinge at *A* has been removed and that the hinge at *B* can exert couples about axes parallel to the *x* and *y* axes.

PROBLEM 4.113A 10-kg storm window measuring 900 × 1500 mm is held by hinges at *A* and *B*. In the position shown, it is held away from the side of the house by a 600-mm stick *CD*. Assuming that the hinge at *A* does not exert any axial thrust, determine the magnitude of the force exerted by the stick and the components of the reactions at *A* and *B*.

SOLUTION

Free-Body Diagram: Since *CD* is a two-force member, F_{CD}

is directed along *CD* and triangle *ACD* is isosceles. We have



$$\mathbf{W} = -(10\text{ kg})(9.81\text{ m/s}^2) = -(98.10\text{ N})\mathbf{j}$$

$$\mathbf{r}_G = (0.75\text{ m})\sin 23.074^\circ\,\mathbf{i} - (0.75\text{ m})\cos 23.074^\circ\,\mathbf{j} + (0.45\text{ m})\mathbf{k}$$
$$\mathbf{r}_G = (0.29394\text{ m})\mathbf{i} - (0.690\text{ m})\mathbf{j} + (0.45\text{ m})\mathbf{k}$$

$$\mathbf{F}_{CD} = F_{CD}(\cos 11.5370^\circ\,\mathbf{i} + \sin 11.5370^\circ\,\mathbf{j})$$
$$\mathbf{F}_{CD} = F_{CD}(0.97980\mathbf{i} + 0.20\mathbf{j})$$

With hinge at *A* removed, hinge at *B* will develop two couples to prevent rotation about the *x* and *z* axes.

$$\Sigma M_B = 0: \quad (M_B)_x\mathbf{i} + (M_B)_y\mathbf{j} + \mathbf{r}_G \times \mathbf{W} + \mathbf{r}_C \times \mathbf{F}_{CD} = 0$$

$$(M_B)_x\mathbf{i} + (M_B)_y\mathbf{j} + (0.29394\mathbf{i} - 0.690\mathbf{j} + 0.45\mathbf{k}) \times (-98.10)\mathbf{j}$$
$$+ (1.5\mathbf{j} + 0.9\mathbf{k}) \times F_{CD}(0.97980\mathbf{i} + 0.20\mathbf{j}) = 0$$

$$(M_B)_x\mathbf{i} + (M_B)_y\mathbf{j} - 28.836\mathbf{k} + 44.145\mathbf{i} + 1.46970F_{CD}\,\mathbf{k} + 0.88182F_{CD}\mathbf{j} - 0.180F_{CD}\mathbf{i} = 0$$

PROBLEM 4.119 (Continued)

Equating the coefficients of the unit vectors to zero,

$$\mathbf{k}: \quad -28.836 + 1.46970F_{CD} = 0; \quad F_{CD} = 19.6203 \text{ N}$$

$$\mathbf{j}: \quad (M_B)_y + 0.88182(19.6203) = 0; \qquad (M_B)_y = -17.3016 \text{ N}\cdot\text{m}$$

$$\mathbf{i}: \quad (M_B)_x + 44.145 - 0.180(19.6203) = 0; \quad (M_B)_x = -40.613 \text{ N}\cdot\text{m}$$

$$F_{CD} = 19.62 \text{ N} ◀$$

$$\mathbf{M}_B = -(40.6 \text{ N}\cdot\text{m})\mathbf{i} - (17.30 \text{ N}\cdot\text{m})\mathbf{j} ◀$$

$$\Sigma F_x = 0: \quad B_x + F_{CD}\cos 11.5370° = 0$$

$$B_x + 19.6203\cos 11.5370^\circ = 0$$

$$B_x = -19.22 \text{ N}$$

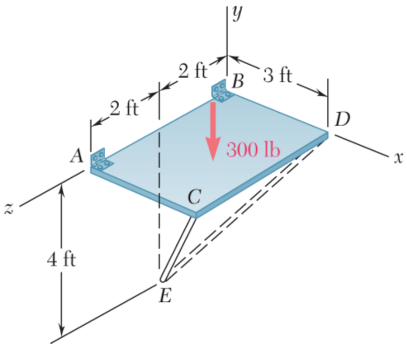
$$\Sigma F_y = 0: \quad B_y + F_{CD}\sin 11.5370^\circ - W = 0$$

$$B_y + 19.6230\sin 11.5370^\circ - 98.1 = 0$$

$$B_y = 94.2 \text{ N}$$

$$\Sigma F_z = 0: \quad B_z = 0$$

$$\mathbf{B} = -(19.22 \text{ N})\mathbf{i} + (94.2 \text{ N})\mathbf{j} ◀$$



PROBLEM 4.120

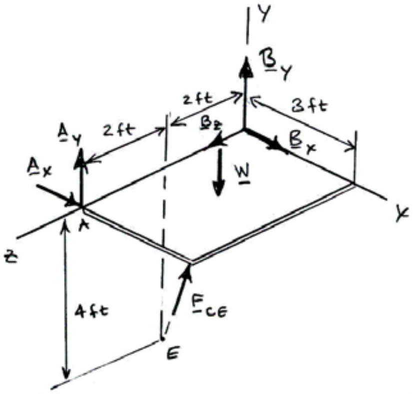
Solve Prob. 4.115, assuming that the hinge at *B* has been removed and that the hinge at *A* can exert an axial thrust, as well as couples about axes parallel to the *x* and *y* axes.

PROBLEM 4.115 The horizontal platform *ABCD* weighs 60 lb and supports a 240-lb load at its center. The platform is normally held in position by hinges at *A* and *B* and by braces *CE* and *DE*. If brace *DE* is removed, determine the reactions at the hinges and the force exerted by the remaining brace *CE*. The hinge at *A* does not exert any axial thrust.

SOLUTION

Free-Body Diagram:

$B_x = B_y = B_z = 0$



Express forces, weight in terms of rectangular components:

$$\overrightarrow{EC} = (3\text{ ft})\mathbf{i} + (4\text{ ft})\mathbf{j} + (2\text{ ft})\mathbf{k}$$

$$\mathbf{F}_{CE} = F_{CE}\frac{\overrightarrow{EC}}{EC} = F_{CE}\frac{3\mathbf{i} + 4\mathbf{j} + 2\mathbf{k}}{\sqrt{(3)^2 + (4)^2 + (2)^2}}$$

$$= 0.55709F_{CE}\,\mathbf{i} + 0.74278F_{CE}\,\mathbf{j} + 0.37139F_{CE}\,\mathbf{k}$$

$$\mathbf{W} = -(mg)\mathbf{j} = -(300\text{ lb})\mathbf{j}$$

$$\Sigma\mathbf{M}_A = 0\text{:}\ \ \mathbf{r}_{G/A} \times (-W)\mathbf{j} + \mathbf{r}_{C/A} \times F_{CE} + (M_{A_x})\mathbf{i} + (M_{A_y})\mathbf{j} = 0$$

$$\Sigma\mathbf{M}_A = 0\text{:}\qquad (1.5\mathbf{i} - 2\mathbf{k}) \times (-300\mathbf{j}) + 3\mathbf{i} \times F_{CE}(0.55709\mathbf{i} + 0.74278\mathbf{j} + 0.37139\mathbf{k}) + (M_{A_x})\mathbf{i} + (M_{A_y})\mathbf{j} = 0$$

or

$$-450\mathbf{k} - 600\mathbf{i} + 2.2283F_{CE}\mathbf{k} - 1.11417F_{CE}\mathbf{j} + M_{A_x}\mathbf{i} + M_{A_y}\mathbf{j} = 0$$

PROBLEM 4.120 (Continued)

Setting the coefficients of the unit vectors equal to zero:

$\mathbf{k}$: $-450 + \left(2.2283F_{CE}\right) = 0$

$$F_{CE} = 201.95 \text{ lb}$$

or $F_{CE} = 202 \text{ lb}$ ◀

$\mathbf{j}$: $-1.11417(201.95) + (M_{A_y}) = 0$

$$M_{A_y} = 225.00 \text{ lb} \cdot \text{ft}$$

$\mathbf{i}$: $-600 + M_{A_x} = 0$

$$M_{A_x} = 600 \text{ lb} \cdot \text{ft}$$

$\Sigma F_x = 0$: $A_x + 0.55709\left(201.94 \text{ lb}\right) = 0$

$$A_x = -112.499 \text{ lb}$$

$\Sigma F_y = 0$: $A_y - 300 \text{ lb} + 0.74278\left(201.94 \text{ lb}\right) = 0$

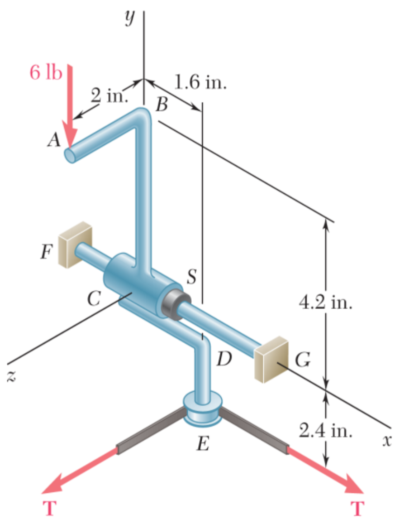
$$A_y = 150.003 \text{ lb}$$

$\Sigma F_z = 0$: $A_z + 0.371391\left(201.94 \text{ lb}\right) = 0$

$$A_z = -74.999 \text{ lb}$$

Therefore: $\mathbf{M}_A = \left(600 \text{ lb} \cdot \text{ft}\right)\mathbf{i} + (225 \text{ lb} \cdot \text{ft})\mathbf{j}$ ◀

$\mathbf{A} = -\left(112.5 \text{ lb}\right)\mathbf{i} + \left(150.0 \text{ lb}\right)\mathbf{j} - \left(75.0 \text{ lb}\right)\mathbf{k}$ ◀

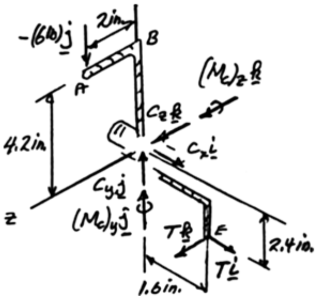


PROBLEM 4.121

The assembly shown is used to control the tension *T* in a tape that passes around a frictionless spool at *E*. Collar *C* is welded to rods *ABC* and *CDE*. It can rotate about shaft *FG* but its motion along the shaft is prevented by a washer *S*. For the loading shown, determine (*a*) the tension *T* in the tape, (*b*) the reaction at *C*.

SOLUTION

Free-Body Diagram:



$$\mathbf{r}_{A/C} = 4.2\mathbf{j} + 2\mathbf{k}$$

$$\mathbf{r}_{E/C} = 1.6\mathbf{i} - 2.4\mathbf{j}$$

$$\Sigma M_C = 0: \quad \mathbf{r}_{A/C} \times (-6\mathbf{j}) + \mathbf{r}_{E/C} \times T(\mathbf{i} + \mathbf{k}) + (M_C)_y\,\mathbf{j} + (M_C)_z\,\mathbf{k} = 0$$

$$(4.2\,\mathbf{j} + 2\mathbf{k}) \times (-6\mathbf{j}) + (1.6\mathbf{i} - 2.4\mathbf{j}) \times T(\mathbf{i} + \mathbf{k}) + (M_C)_y\,\mathbf{j} + (M_C)_z\,\mathbf{k} = 0$$

Coefficient of **i**: $12 - 2.4T = 0$ $T = 5.00 \text{ lb}$ ◀

Coefficient of **j**: $-1.6(5\text{ lb}) + (M_C)_y = 0 \quad (M_C)_y = 8 \text{ lb}\cdot\text{in.}$

Coefficient of **k**: $2.4(5\text{ lb}) + (M_C)_z = 0 \quad (M_C)_z = -12 \text{ lb}\cdot\text{in.}$

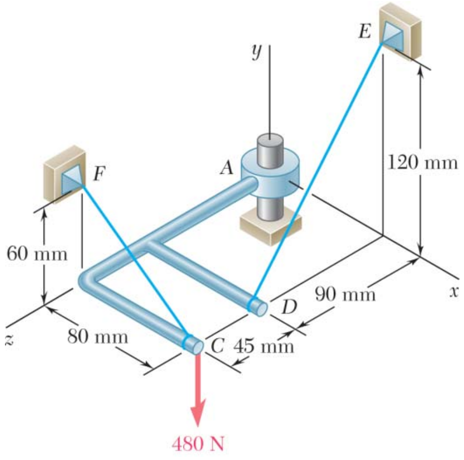
$$\mathbf{M}_C = (8.00 \text{ lb}\cdot\text{in.})\mathbf{j} - (12.00 \text{ lb}\cdot\text{in.})\mathbf{k}$$ ◀

$$\Sigma F = 0: \quad C_x\mathbf{i} + C_y\mathbf{j} + C_z\mathbf{k} - (6\text{ lb})\mathbf{j} + (5\text{ lb})\mathbf{i} + (5\text{ lb})\mathbf{k} = 0$$

Equate coefficients of unit vectors to zero.

$C_x = -5 \text{ lb} \quad C_y = 6 \text{ lb} \quad C_z = -5 \text{ lb}$ ◀

$$\mathbf{C} = -(5.00 \text{ lb})\mathbf{i} + (6.00 \text{ lb})\mathbf{j} - (5.00 \text{ lb})\mathbf{k}$$ ◀

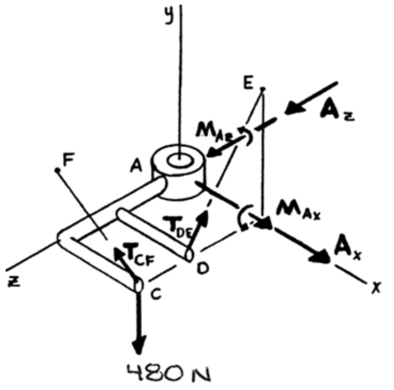


PROBLEM 4.122

The assembly shown is welded to collar *A* that fits on the vertical pin shown. The pin can exert couples about the *x* and *z* axes but does not prevent motion about or along the *y*-axis. For the loading shown, determine the tension in each cable and the reaction at *A*.

SOLUTION

Free-Body Diagram:



First note:

$$\mathbf{T}_{CF} = \boldsymbol{\lambda}_{CF} T_{CF} = \frac{-(0.08\text{ m})\mathbf{i} + (0.06\text{ m})\mathbf{j}}{\sqrt{(0.08)^2 + (0.06)^2}\text{ m}} T_{CF}$$

$$= T_{CF}(-0.8\mathbf{i} + 0.6\mathbf{j})$$

$$\mathbf{T}_{DE} = \boldsymbol{\lambda}_{DE} T_{DE} = \frac{(0.12\text{ m})\mathbf{j} - (0.09\text{ m})\mathbf{k}}{\sqrt{(0.12)^2 + (0.09)^2}\text{ m}} T_{DE}$$

$$= T_{DE}(0.8\mathbf{j} - 0.6\mathbf{k})$$

(*a*) From F.B.D. of assembly:

$$\Sigma F_y = 0\text{:} \quad 0.6T_{CF} + 0.8T_{DE} - 480\text{ N} = 0$$

or

$$0.6T_{CF} + 0.8T_{DE} = 480\text{ N} \tag{1}$$

$$\Sigma M_y = 0\text{:} \quad -(0.8T_{CF})(0.135\text{ m}) + (0.6T_{DE})(0.08\text{ m}) = 0$$

or

$$T_{DE} = 2.25T_{CF} \tag{2}$$

Substituting Equation (2) into Equation (1),

$$0.6T_{CF} + 0.8[(2.25)T_{CF}] = 480\text{ N}$$

$$T_{CF} = 200.00\text{ N}$$

or $T_{CF} = 200\text{ N}$ ◀

and from Equation (2): $T_{DE} = 2.25(200.00\text{ N}) = 450.00$

or $T_{DE} = 450\text{ N}$ ◀

(*b*) From F.B.D. of assembly:

$$\Sigma F_z = 0: \quad A_z - (0.6)(450.00 \text{ N}) = 0 \quad A_z = 270.00 \text{ N}$$

$$\Sigma F_x = 0: \quad A_x - (0.8)(200.00 \text{ N}) = 0 \quad A_x = 160.000 \text{ N}$$

or $\mathbf{A} = (160.0 \text{ N})\mathbf{i} + (270 \text{ N})\mathbf{k}$ ◀

$$\Sigma M_x = 0: \quad M_{A_x} + (480 \text{ N})(0.135 \text{ m}) - [(200.00 \text{ N})(0.6)](0.135 \text{ m}) - [(450 \text{ N})(0.8)](0.09 \text{ m}) = 0$$

$$M_{A_x} = -16.2000 \text{ N}\cdot\text{m}$$

$$\Sigma M_z = 0: \quad M_{A_z} - (480 \text{ N})(0.08 \text{ m}) + [(200.00 \text{ N})(0.6)](0.08 \text{ m}) + [(450 \text{ N})(0.8)](0.08 \text{ m}) = 0$$

$$M_{A_z} = 0$$

or $\mathbf{M}_A = -(16.20 \text{ N}\cdot\text{m})\mathbf{i}$ ◀

420
320
A_y
T_{CD}
A
A_z
T_{BD}
A_x
E
C
x
B
T_{BE}
W = 1.8 kN
a
z

In this problem: $a = 210$ mm

We have

$$\overrightarrow{CD} = (240 \text{ mm})\mathbf{j} - (320 \text{ mm})\mathbf{k} \quad CD = 400 \text{ mm}$$

$$\overrightarrow{BD} = -(420 \text{ mm})\mathbf{i} + (240 \text{ mm})\mathbf{j} - (320 \text{ mm})\mathbf{k} \quad BD = 580 \text{ mm}$$

$$\overrightarrow{BE} = (420 \text{ mm})\mathbf{i} - (320 \text{ mm})\mathbf{k} \quad BE = 528.02 \text{ mm}$$

Thus,

$$T_{CD} = T_{CD}\frac{\overrightarrow{CD}}{CD} = T_{CD}(0.6\mathbf{j} - 0.8\mathbf{k})$$

$$T_{BD} = T_{BD}\frac{\overrightarrow{BD}}{BD} = T_{BD}(-0.72414\mathbf{i} + 0.41379\mathbf{j} - 0.55172\mathbf{k})$$

$$T_{BE} = T_{BE}\frac{\overrightarrow{BE}}{BE} = T_{BE}(0.79542\mathbf{i} - 0.60604\mathbf{k})$$

$$\Sigma\mathbf{M}_A = 0: \quad (\mathbf{r}_C \times \mathbf{T}_{CD}) + (\mathbf{r}_B \times \mathbf{T}_{BD}) + (\mathbf{r}_B \times \mathbf{T}_{BE}) + (\mathbf{r}_W \times \mathbf{W}) = 0$$

Noting that

$$\mathbf{r}_C = -(420\text{ mm})\mathbf{i} + (320\text{ mm})\mathbf{k}$$
$$\mathbf{r}_B = (320\text{ mm})\mathbf{k}$$
$$\mathbf{r}_W = -a\mathbf{i} + (320\text{ mm})\mathbf{k}$$

and using determinants, we write

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -420 & 0 & 320 \\ 0 & 0.6 & -0.8 \end{vmatrix} T_{CD} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 0 & 320 \\ -0.72414 & 0.41379 & -0.55172 \end{vmatrix} T_{BD}$$
$$+ \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 0 & 320 \\ 0.79542 & 0 & -0.60604 \end{vmatrix} T_{BE} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -a & 0 & 320 \\ 0 & -1.8 & 0 \end{vmatrix} = 0$$

Equating to zero the coefficients of the unit vectors,

$$\mathbf{i}: \quad -192T_{CD} - 132.413T_{BD} + 576 = 0 \qquad (1)$$

$$\mathbf{j}: \quad -336T_{CD} - 231.72T_{BD} + 254.53T_{BE} = 0 \qquad (2)$$

$$\mathbf{k}: \quad -252T_{CD} + 1.8a = 0 \qquad (3)$$

Recalling that $a = 210$ mm, Eq. (3) yields

$$T_{CD} = \frac{1.8(210)}{252} = 1.500\text{ kN} \qquad T_{CD} = 1.500\text{ kN} \blacktriangleleft$$

From Eq. (1):

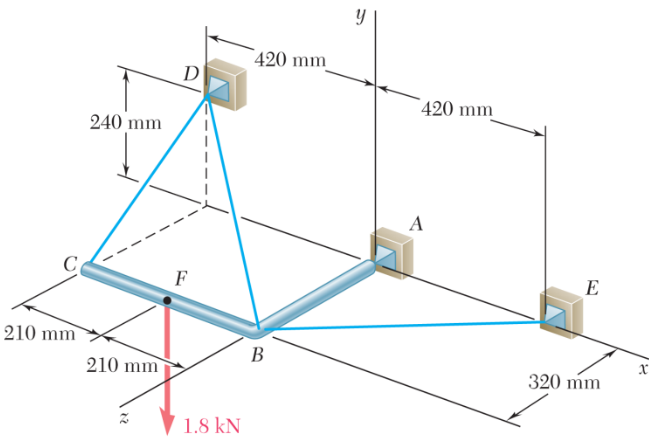
$$-192(1.5) - 132.413T_{BD} + 576 = 0$$

$$T_{BD} = 2.1751\text{ kN} \qquad T_{BD} = 2.18\text{ kN} \blacktriangleleft$$

From Eq. (2):

$$-336(1.5) - 231.72(2.1751) + 254.53T_{BE} = 0$$

$$T_{BE} = 3.9603\text{ kN} \qquad T_{BE} = 3.96\text{ kN} \blacktriangleleft$$



PROBLEM 4.124

Solve Problem 4.123, assuming that the 1.8-kN load is applied at *C*.

PROBLEM 4.123 The rigid L-shaped member *ABC* is supported by a ball-and-socket joint at *A* and by three cables. If a 1.8-kN load is applied at *F*, determine the tension in each cable.

SOLUTION

See solution of Problem 4.123 for free-body diagram and derivation of Eqs. (1), (2), and (3):

$$-192T_{CD} - 132.413T_{BD} + 576 = 0 \tag{1}$$

$$-336T_{CD} - 231.72T_{BD} + 254.53T_{BE} = 0 \tag{2}$$

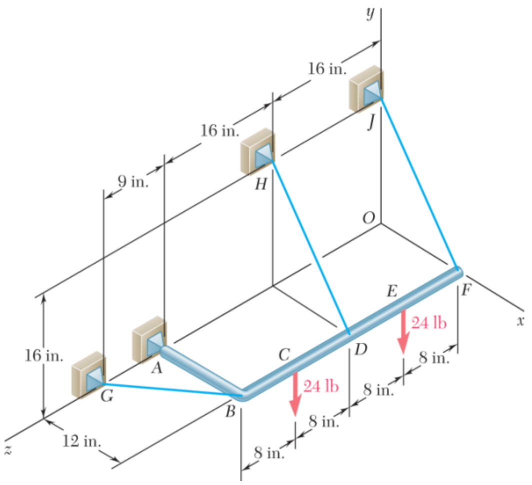
$$-252T_{CD} + 1.8a = 0 \tag{3}$$

In this problem, the 1.8-kN load is applied at *C* and we have $a = 420$ mm. Carrying into Eq. (3) and solving for T_{CD},

$$T_{CD} = 3.00$$ $T_{CD} = 3.00$ kN ◀

From Eq. (1): $-(192)(3) - 132.413T_{BD} + 576 = 0$ $T_{BD} = 0$ ◀

From Eq. (2): $-336(3) - 0 + 254.53T_{BE} = 0$ $T_{BE} = 3.96$ kN ◀

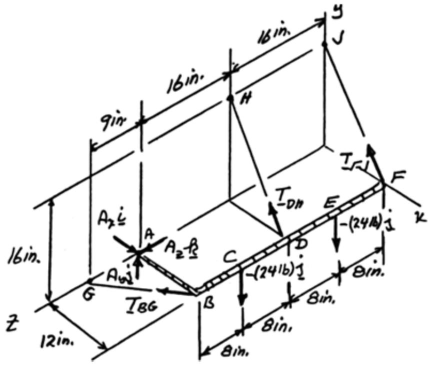


PROBLEM 4.125

The rigid L-shaped member *ABF* is supported by a ball-and-socket joint at *A* and by three cables. For the loading shown, determine the tension in each cable and the reaction at *A*.

SOLUTION

Free-Body Diagram:



$$\mathbf{r}_{B/A} = 12\mathbf{i}$$
$$\mathbf{r}_{F/A} = 12\mathbf{j} - 8\mathbf{k}$$
$$\mathbf{r}_{D/A} = 12\mathbf{i} - 16\mathbf{k}$$
$$\mathbf{r}_{E/A} = 12\mathbf{i} - 24\mathbf{k}$$
$$\mathbf{r}_{F/A} = 12\mathbf{i} - 32\mathbf{k}$$

$$\overrightarrow{BG} = -12\mathbf{i} + 9\mathbf{k}$$
$$BG = 15 \text{ in.}$$
$$\boldsymbol{\lambda}_{BG} = -0.8\mathbf{i} + 0.6\mathbf{k}$$

$$\overrightarrow{DH} = -12\mathbf{i} + 16\mathbf{j}; \quad DH = 20 \text{ in.}; \quad \lambda_{DH} = -0.6\mathbf{i} + 0.8\mathbf{j}$$
$$\overrightarrow{FJ} = -12\mathbf{i} + 16\mathbf{j}; \quad FJ = 20 \text{ in.}; \quad \lambda_{FJ} = -0.6\mathbf{i} + 0.8\mathbf{j}$$

$$\Sigma \mathbf{M}_A = 0: \quad \mathbf{r}_{B/A} \times \mathbf{T}_{BG}\lambda_{BG} + \mathbf{r}_{DH} \times \mathbf{T}_{DH}\lambda_{DH} + \mathbf{r}_{F/A} \times \mathbf{T}_{FJ}\lambda_{FJ}$$
$$+\mathbf{r}_{F/A} \times (-24\mathbf{j}) + \mathbf{r}_{E/A} \times (-24\mathbf{j}) = 0$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 12 & 0 & 0 \\ -0.8 & 0 & 0.6 \end{vmatrix} T_{BG} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 12 & 0 & -16 \\ -0.6 & 0.8 & 0 \end{vmatrix} T_{DH} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 12 & 0 & -32 \\ -0.6 & 0.8 & 0 \end{vmatrix} T_{FJ}$$
$$+ \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 12 & 0 & -8 \\ 0 & -24 & 0 \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 12 & 0 & -24 \\ 0 & -24 & 0 \end{vmatrix} = 0$$

Coefficient of **i**: $+12.8T_{DH} + 25.6T_{FJ} - 192 - 576 = 0$ (1)

Coefficient of **k**: $+9.6T_{DH} + 9.6T_{FJ} - 288 - 288 = 0$ (2)

$\frac{3}{4}$ Eq. (1) – Eq. (2): $9.6T_{FJ} = 0$ $\quad T_{FJ} = 0$ ◀

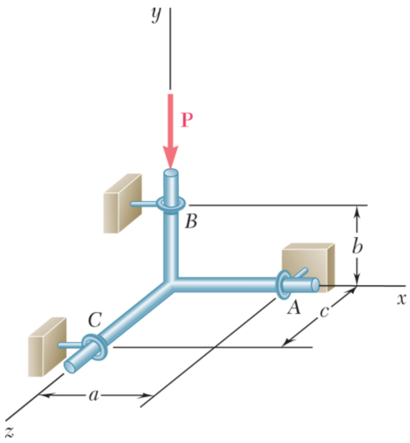
$$\mathbf{k}: \quad A_z + (60)(0.6) = 0 \qquad A_z = -36.0 \text{ lb}$$

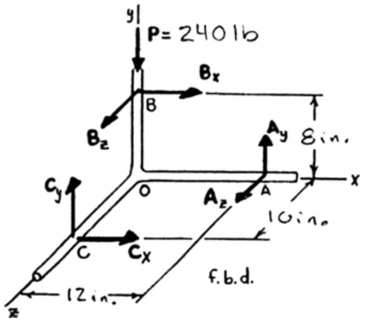
$$\mathbf{A} = (66.0 \text{ lb})\mathbf{i} - (36.0 \text{ lb})\mathbf{k} \blacktriangleleft$$



PROBLEM 4.127

Three rods are welded together to form a “corner” that is supported by three eyebolts. Neglecting friction, determine the reactions at A, B, and C when $P = 240$ lb, $a = 12$ in., $b = 8$ in., and $c = 10$ in.

SOLUTION



From F.B.D. of weldment:

$$\Sigma \mathbf{M}_O = 0: \quad \mathbf{r}_{A/O} \times \mathbf{A} + \mathbf{r}_{B/O} \times \mathbf{B} + \mathbf{r}_{C/O} \times \mathbf{C} = 0$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 12 & 0 & 0 \\ 0 & A_y & A_z \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 8 & 0 \\ B_x & 0 & B_z \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 0 & 10 \\ C_x & C_y & 0 \end{vmatrix} = 0$$

$$(-12A_z\mathbf{j} + 12A_y\mathbf{k}) + (8B_z\mathbf{i} - 8B_x\mathbf{k}) + (-10C_y\mathbf{i} + 10C_x\mathbf{j}) = 0$$

From **i**-coefficient: $\quad 8B_z - 10C_y = 0$

or $\quad B_z = 1.25C_y \quad (1)$

j-coefficient: $\quad -12A_z + 10C_x = 0$

or $\quad C_x = 1.2A_z \quad (2)$

k-coefficient: $\quad 12A_y - 8B_x = 0$

or $\quad B_x = 1.5A_y \quad (3)$

$$\Sigma \mathbf{F} = 0: \quad \mathbf{A} + \mathbf{B} + \mathbf{C} - \mathbf{P} = 0$$

or $\quad (B_x + C_x)\mathbf{i} + (A_y + C_y - 240\text{ lb})\mathbf{j} + (A_z + B_z)\mathbf{k} = 0$

From **i**-coefficient: $\quad B_x + C_x = 0$

or $\quad C_x = -B_x \quad (4)$

j-coefficient: $\quad A_y + C_y - 240\text{ lb} = 0$

or $\quad A_y + C_y = 240\text{ lb} \quad (5)$

Copyright © McGraw-Hill Education. Permission required for reproduction or display.

PROBLEM 4.127 (Continued)

k-coefficient: $A_z + B_z = 0$

or $$A_z = -B_z \tag{6}$$

Substituting C_x from Equation (4) into Equation (2),

$$-B_z = 1.2A_z \tag{7}$$

Using Equations (1), (6), and (7),

$$C_y = \frac{B_z}{1.25} = \frac{-A_z}{1.25} = \frac{1}{1.25}\left(\frac{B_x}{1.2}\right) = \frac{B_x}{1.5} \tag{8}$$

From Equations (3) and (8):

$$C_y = \frac{1.5A_y}{1.5} \quad \text{or} \quad C_y = A_y$$

and substituting into Equation (5),

$$2A_y = 240 \text{ lb}$$

$$A_y = C_y = 120 \text{ lb} \tag{9}$$

Using Equation (1) and Equation (9),

$$B_z = 1.25(120 \text{ lb}) = 150.0 \text{ lb}$$

Using Equation (3) and Equation (9),

$$B_x = 1.5(120 \text{ lb}) = 180.0 \text{ lb}$$

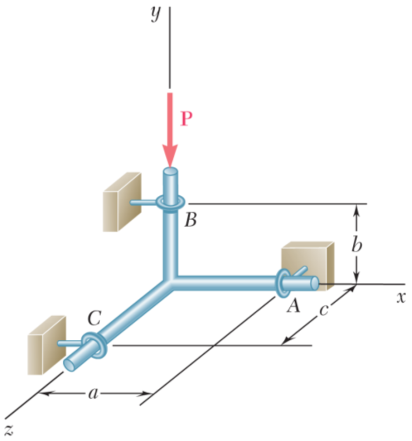
From Equation (4): $C_x = -180.0 \text{ lb}$

From Equation (6): $A_z = -150.0 \text{ lb}$

Therefore, $\mathbf{A} = (120.0 \text{ lb})\mathbf{j} - (150.0 \text{ lb})\mathbf{k}$ ◀

$\mathbf{B} = (180.0 \text{ lb})\mathbf{i} + (150.0 \text{ lb})\mathbf{k}$ ◀

$\mathbf{C} = -(180.0 \text{ lb})\mathbf{i} + (120.0 \text{ lb})\mathbf{j}$ ◀

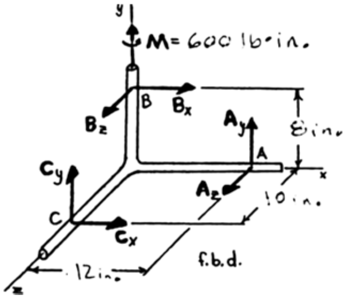


PROBLEM 4.128

Solve Problem 4.127, assuming that the force **P** is removed and is replaced by a couple $\mathbf{M} = +(600\text{ lb}\cdot\text{in.})\mathbf{j}$ acting at B.

PROBLEM 4.127 Three rods are welded together to form a "corner" that is supported by three eyebolts. Neglecting friction, determine the reactions at A, B, and C when $P = 240$ lb, $a = 12$ in., $b = 8$ in., and $c = 10$ in.

SOLUTION



From F.B.D. of weldment:

$$\Sigma\mathbf{M}_O = 0: \quad \mathbf{r}_{A/O} \times \mathbf{A} + \mathbf{r}_{B/O} \times \mathbf{B} + \mathbf{r}_{C/O} \times \mathbf{C} + \mathbf{M} = 0$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 12 & 0 & 0 \\ 0 & A_y & A_z \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 8 & 0 \\ B_x & 0 & B_z \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 0 & 10 \\ C_x & C_y & 0 \end{vmatrix} + (600\text{ lb}\cdot\text{in.})\mathbf{j} = 0$$

$$(-12A_z\mathbf{j} + 12A_y\mathbf{k}) + (8B_z\mathbf{j} - 8B_x\mathbf{k}) + (-10C_y\mathbf{i} + 10C_x\mathbf{j}) + (600\text{ lb}\cdot\text{in.})\mathbf{j} = 0$$

From **i**-coefficient: $8B_z - 10C_y = 0$

or $C_y = 0.8B_z$ (1)

j-coefficient: $-12A_z + 10C_x + 600 = 0$

or $C_x = 1.2A_z - 60$ (2)

k-coefficient: $12A_y - 8B_x = 0$

or $B_x = 1.5A_y$ (3)

$$\Sigma\mathbf{F} = 0: \quad \mathbf{A} + \mathbf{B} + \mathbf{C} = 0$$

$$(B_x + C_x)\mathbf{i} + (A_y + C_y)\mathbf{j} + (A_z + B_z)\mathbf{k} = 0$$

From **i**-coefficient: $C_x = -B_x$ (4)

j-coefficient: $C_y = -A_y$ (5)

k-coefficient: $A_z = -B_z$ (6)

PROBLEM 4.128 (Continued)

Substituting C_x from Equation (4) into Equation (2),

$$A_z = 50 - \left(\frac{B_x}{1.2}\right) \tag{7}$$

Using Equations (1), (6), and (7),

$$C_y = 0.8B_z = -0.8A_z = \left(\frac{2}{3}\right)B_x - 40 \tag{8}$$

From Equations (3) and (8):

$$C_y = A_y - 40$$

Substituting into Equation (5), $2A_y = 40$

$$A_y = 20.0 \text{ lb}$$

From Equation (5): $C_y = -20.0 \text{ lb}$

Equation (1): $B_z = -25.0 \text{ lb}$

Equation (3): $B_x = 30.0 \text{ lb}$

Equation (4): $C_x = -30.0 \text{ lb}$

Equation (6): $A_z = 25.0 \text{ lb}$

Therefore,

$\mathbf{A} = (20.0 \text{ lb})\mathbf{j} + (25.0 \text{ lb})\mathbf{k}$ ◀

$\mathbf{B} = (30.0 \text{ lb})\mathbf{i} - (25.0 \text{ lb})\mathbf{k}$ ◀

$\mathbf{C} = -(30.0 \text{ lb})\mathbf{i} - (20.0 \text{ lb})\mathbf{j}$ ◀

$$A_x = 3000 \text{ N}$$

$$\Sigma F_y = 0: \quad A_y + (T_{DG})_y - 350 \text{ N} = 0$$

$$A_y + \left(\frac{7}{25} \times 1250 \text{ N}\right) - 350 \text{ N} = 0$$

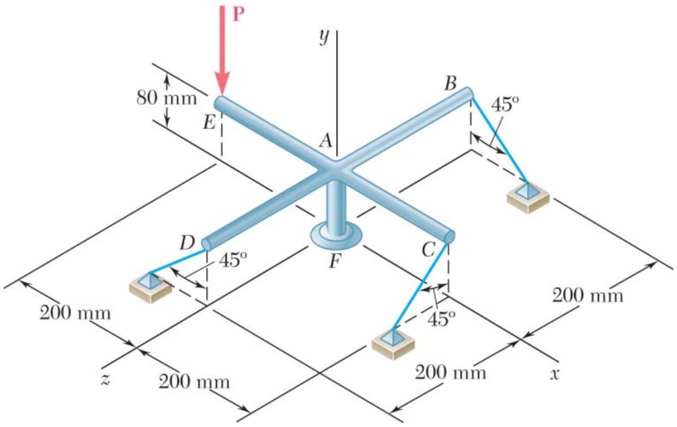
$$A_y = 0$$

$$\Sigma F_z = 0: \quad A_z + (T_{BE})_z = 0$$

$$A_z + \left(\frac{5}{13} \times 1950 \text{ N}\right) = 0$$

$$A_z = -750 \text{ N}$$

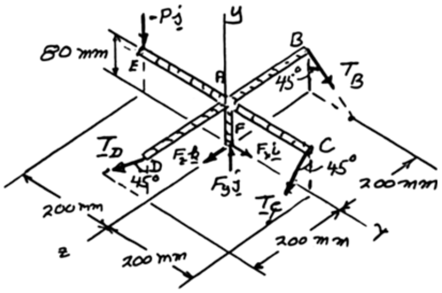
Therefore **A** = (3000 N)**i** – (750 N)**k** ◀



PROBLEM 4.131

The assembly shown consists of an 80-mm rod *AF* that is welded to a cross consisting of four 200-mm arms. The assembly is supported by a ball-and-socket joint at *F* and by three short links, each of which forms an angle of 45° with the vertical. For the loading shown, determine (*a*) the tension in each link, (*b*) the reaction at *F*.

SOLUTION



$$\mathbf{r}_{E/F} = -200\,\mathbf{i} + 80\mathbf{j}$$

$$\mathbf{T}_B = T_B(\mathbf{i} - \mathbf{j})/\sqrt{2} \qquad \mathbf{r}_{B/F} = 80\mathbf{j} - 200\mathbf{k}$$

$$\mathbf{T}_C = T_C(-\mathbf{j} + \mathbf{k})/\sqrt{2} \qquad \mathbf{r}_{C/F} = 200\mathbf{i} + 80\mathbf{j}$$

$$\mathbf{T}_D = T_D(-\mathbf{i} + \mathbf{j})/\sqrt{2} \qquad \mathbf{r}_{D/E} = 80\mathbf{j} + 200\mathbf{k}$$

$$\Sigma M_F = 0: \quad \mathbf{r}_{B/F} \times \mathbf{T}_B + \mathbf{r}_{C/F} \times \mathbf{T}_C + \mathbf{r}_{D/F} \times T_D + \mathbf{r}_{E/F} \times (-P\mathbf{j}) = 0$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 80 & -200 \\ 1 & -1 & 0 \end{vmatrix} \frac{T_B}{\sqrt{2}} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 200 & 80 & 0 \\ 0 & -1 & 1 \end{vmatrix} \frac{T_C}{\sqrt{2}} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ 0 & 80 & 200 \\ -1 & -1 & 0 \end{vmatrix} \frac{T_D}{\sqrt{2}} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -200 & 80 & 0 \\ 0 & -P & 0 \end{vmatrix} = 0$$

Equate coefficients of unit vectors to zero and multiply each equation by $\sqrt{2}$.

$$\mathbf{i}: \qquad -200T_B + 80T_C + 200\,T_D = 0 \qquad (1)$$

$$\mathbf{j}: \qquad -200T_B - 200T_C - 200T_D = 0 \qquad (2)$$

$$\mathbf{k}: \qquad -80T_B - 200T_C + 80T_D + 200\sqrt{2}P = 0 \qquad (3)$$

$$\frac{80}{200}(2): \qquad -80T_B - 80T_C - 80T_D = 0 \qquad (4)$$

Eqs. $(3)+(4)$: $\qquad -160T_B - 280T_C + 200\sqrt{2}P = 0 \qquad (5)$

Eqs. $(1)+(2)$: $\qquad -400T_B - 120T_C = 0$

$$T_B = -\frac{120}{400}T_C - 0.3T_C \qquad (6)$$

PROBLEM 4.131 (Continued)

Eqs. (6) $\longrightarrow$ (5): $-160(-0.3T_C) - 280T_C + 200\sqrt{2}P = 0$

$-232T_C + 200\sqrt{2}P = 0$

$T_C = 1.2191P$ $\quad$ $T_C = 1.219P$ ◀

From Eq. (6): $T_B = -0.3(1.2191P) = -0.36574 = P$ $\quad$ $T_B = -0.366P$ ◀

From Eq. (2): $-200(-0.3657P) - 200(1.2191P) - 200T_{\theta D} = 0$

$T_D = -0.8534P$ $\quad$ $T_D = -0.853P$ ◀

$\Sigma\mathbf{F} = 0$: $\mathbf{F} + \mathbf{T}_B + \mathbf{T}_C + \mathbf{T}_D - P\mathbf{j} = 0$

$\mathbf{i}$: $F_x + \dfrac{(-0.36574P)}{\sqrt{2}} - \dfrac{(-0.8534P)}{\sqrt{2}} = 0$

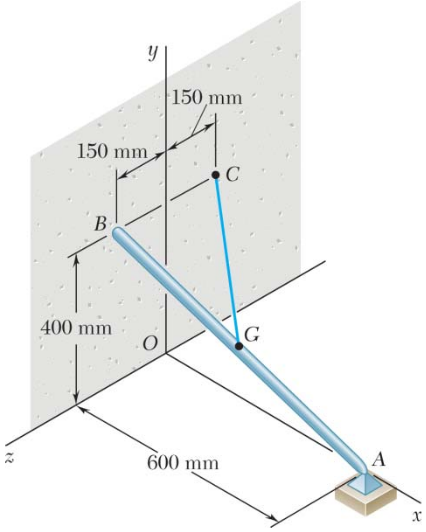
$F_x = -0.3448P$ $\quad$ $F_x = -0.345P$

$\mathbf{j}$: $F_y - \dfrac{(-0.36574P)}{\sqrt{2}} - \dfrac{(1.2191P)}{\sqrt{2}} - \dfrac{(-0.8534P)}{\sqrt{2}} - 200 = 0$

$F_y = P$ $\quad$ $F_y = P$

$\mathbf{k}$: $F_z + \dfrac{(1.2191P)}{\sqrt{2}} = 0$

$F_z = -0.8620P$ $\quad$ $F_z = -0.862P$ $\quad$ $\mathbf{F} = -0.345P\mathbf{i} + P\mathbf{j} - 0.862P\mathbf{k}$ ◀

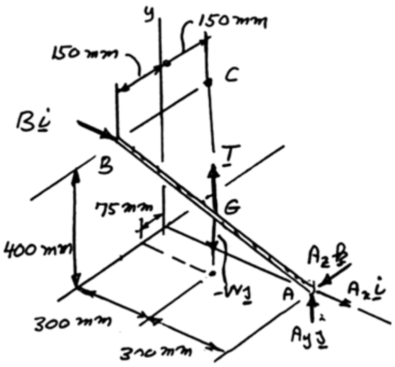


PROBLEM 4.132

The uniform 10-kg rod *AB* is supported by a ball-and-socket joint at *A* and by the cord *CG* that is attached to the midpoint *G* of the rod. Knowing that the rod leans against a frictionless vertical wall at *B*, determine (*a*) the tension in the cord, (*b*) the reactions at *A* and *B*.

SOLUTION

Free-Body Diagram:



Five unknowns and six equations of equilibrium, but equilibrium is maintained $(\Sigma M_{AB} = 0)$.

(*a*)

$$W = mg$$

$$= (10\text{ kg})\,9.81\text{ m/s}^2$$

$$W = 98.1\text{ N}$$

$$\overrightarrow{GC} = -300\mathbf{i} + 200\mathbf{j} - 225\mathbf{k} \qquad GC = 425\text{ mm}$$

$$\mathbf{T} = T\frac{\overrightarrow{GC}}{GC} = \frac{T}{425}(-300\mathbf{i} + 200\mathbf{j} - 225\mathbf{k})$$

$$\mathbf{r}_{B/A} = -600\mathbf{i} + 400\mathbf{j} + 150\text{ mm}$$

$$\mathbf{r}_{G/A} = -300\mathbf{i} + 200\mathbf{j} + 75\text{ mm}$$

$$\Sigma M_A = 0: \quad \mathbf{r}_{B/A} \times \mathbf{B} + \mathbf{r}_{G/A} \times \mathbf{T} + \mathbf{r}_{G/A} \times (-W\mathbf{j}) = 0$$

$$\begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -600 & 400 & 150 \\ B & 0 & 0 \end{vmatrix} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -300 & 200 & 75 \\ -300 & 200 & -225 \end{vmatrix} \frac{T}{425} + \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -300 & 200 & 75 \\ 0 & -98.1 & 0 \end{vmatrix}$$

Coefficient of **i**: $(-105.88 - 35.29)T + 7357.5 = 0$

$$T = 52.12\text{ N}$$

$T = 52.1\text{ N}$ ◀

PROBLEM 4.132 (Continued)

(*b*)

Coefficient of **j**: $150B-(300\times 75+300\times 225)\dfrac{52.12}{425}=0$

$B=73.58\text{ N}$ $\quad$ $\mathbf{B}=(73.6\text{ N})\mathbf{i}$ ◀

$\Sigma\mathbf{F}=0$: $\mathbf{A}+\mathbf{B}+\mathbf{T}-W\mathbf{j}=0$

Coefficient of **i**: $A_x+73.58-52.15\dfrac{300}{425}=0$ $\quad$ $A_x=-36.8\text{ N}$ ◀

Coefficient of **j**: $A_y+52.15\dfrac{200}{425}-98.1=0$ $\quad$ $A_y=73.6\text{ N}$ ◀

Coefficient of **k**: $A_z-52.15\dfrac{225}{425}=0$ $\quad$ $A_z=27.6\text{ N}$ ◀

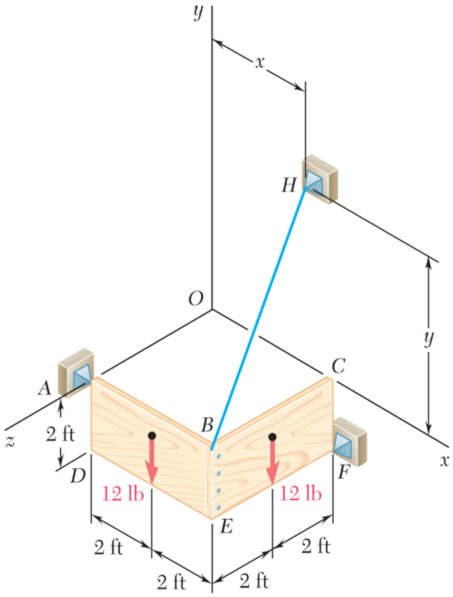
$$-653.91 T_{CF} + 384 \times 10^3 = 0 \qquad T_{CF} = 587 \text{ N} \blacktriangleleft$$

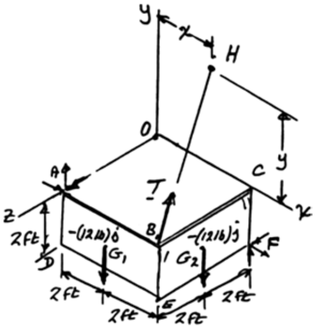


PROBLEM 4.140

Two 2×4-ft plywood panels, each of weight 12 lb, are nailed together as shown. The panels are supported by ball-and-socket joints at *A* and *F* and by the wire *BH*. Determine (*a*) the location of *H* in the *xy* plane if the tension in the wire is to be minimum, (*b*) the corresponding minimum tension.

SOLUTION

Free-Body Diagram:



$$\overrightarrow{AF} = 4\mathbf{i} - 2\mathbf{j} - 4\mathbf{k} \qquad AF = 6\,\text{ft}$$

$$\boldsymbol{\lambda}_{AF} = \frac{1}{3}(2\mathbf{i} - \mathbf{j} - 2\mathbf{k})$$

$$\mathbf{r}_{G_1/A} = 2\mathbf{i} - \mathbf{j}$$

$$\mathbf{r}_{G_2/A} = 4\mathbf{i} - \mathbf{j} - 2\mathbf{k}$$

$$\mathbf{r}_{B/A} = 4\mathbf{i}$$

$$\Sigma M_{AF} = 0: \quad \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{G_1/A} \times (-12\mathbf{j}) + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{G_2/A} \times (-12\mathbf{j})) + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times T) = 0$$

$$\begin{vmatrix} 2 & -1 & -2 \\ 2 & -1 & 0 \\ 0 & -12 & 0 \end{vmatrix} \frac{1}{3} + \begin{vmatrix} 2 & -1 & -2 \\ 4 & -1 & -2 \\ 0 & -12 & 0 \end{vmatrix} \frac{1}{3} + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}) = 0$$

$$(2 \times 2 \times 12)\frac{1}{3} + (-2 \times 2 \times 12 + 2 \times 4 \times 12)\frac{1}{3} + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}) = 0$$

$$\boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}) = -32 \quad \text{or} \quad \mathbf{T} \cdot (\boldsymbol{\lambda}_{A/F} \times \mathbf{r}_{B/A}) = -32 \qquad (1)$$

PROBLEM 4.140 (Continued)

Projection of **T** on $(\boldsymbol{\lambda}_{AF} \times \mathbf{r}_{B/A})$ is constant. Thus, $T_{\min}$ is parallel to

$$\boldsymbol{\lambda}_{AF} \times \mathbf{r}_{B/A} = \frac{1}{3}(2\mathbf{i} - \mathbf{j} - 2\mathbf{k}) \times 4\mathbf{i} = \frac{1}{3}(-8\mathbf{j} + 4\mathbf{k})$$

Corresponding unit vector is $\frac{1}{\sqrt{5}}(-2\mathbf{j} + \mathbf{k})$.

$$T_{\min} = T(-2\mathbf{j} + \mathbf{k})\frac{1}{\sqrt{5}} \qquad (2)$$

From Eq. (1):

$$\frac{T}{\sqrt{5}}(-2\mathbf{j} + \mathbf{k}) \cdot \left[\frac{1}{3}(2\mathbf{i} - \mathbf{j} - 2\mathbf{k}) \times 4\mathbf{i}\right] = -32$$

$$\frac{T}{\sqrt{5}}(-2\mathbf{j} + \mathbf{k}) \cdot \frac{1}{3}(-8\mathbf{j} + 4\mathbf{k}) = -32$$

$$\frac{T}{3\sqrt{5}}(16 + 4) = -32 \qquad T = -\frac{3\sqrt{5}(32)}{20} = 4.8\sqrt{5}$$

$$T = 10.7331 \text{ lb}$$

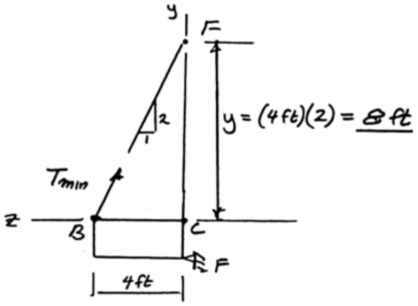
From Eq. (2):

$$T_{\min} = T(-2\mathbf{j} + \mathbf{k})\frac{1}{\sqrt{5}}$$

$$= 4.8\sqrt{5}(-2\mathbf{j} + \mathbf{k})\frac{1}{\sqrt{5}}$$

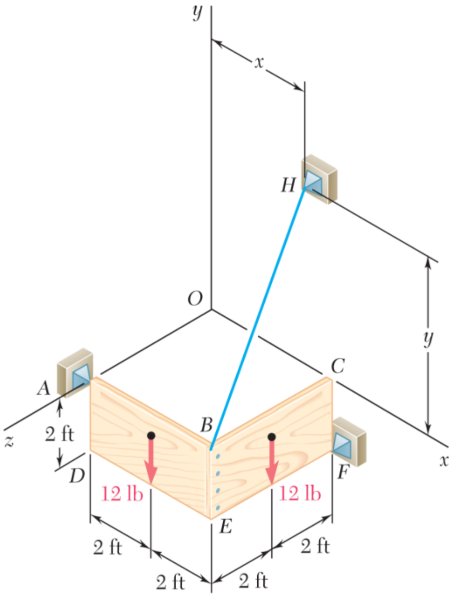
$$\mathbf{T}_{\min} = -(9.6 \text{ lb})\mathbf{j} + (4.8 \text{ lb } \mathbf{k})$$

Since $T_{\min}$ has no **i** component, wire *BH* is parallel to the *yz* plane, and $x = 4$ ft.



(*a*) $x = 4.00$ ft; $y = 8.00$ ft ◀

(*b*) $T_{\min} = 10.73$ lb ◀



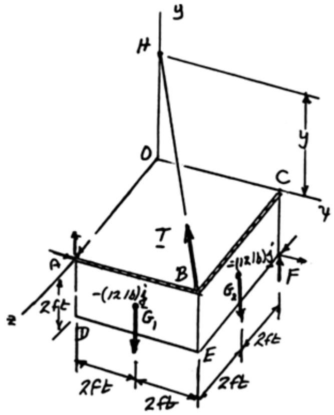
PROBLEM 4.141

Solve Problem 4.140, subject to the restriction that *H* must lie on the *y*-axis.

PROBLEM 4.140 Two 2×4-ft plywood panels, each of weight 12 lb, are nailed together as shown. The panels are supported by ball-and-socket joints at *A* and *F* and by the wire *BH*. Determine (*a*) the location of *H* in the *xy* plane if the tension in the wire is to be minimum, (*b*) the corresponding minimum tension.

SOLUTION

Free-Body Diagram:



$$\overrightarrow{AF} = 4\mathbf{i} - 2\mathbf{j} - 4\mathbf{k}$$

$$\boldsymbol{\lambda}_{AF} = \frac{1}{3}(2\mathbf{i} - \mathbf{j} - 2\mathbf{k})$$

$$\mathbf{r}_{G_1/A} = 2\mathbf{i} - \mathbf{j}$$

$$\mathbf{r}_{G_2/A} = 4\mathbf{i} - \mathbf{j} - 2\mathbf{k}$$

$$\mathbf{r}_{B/A} = 4\mathbf{i}$$

$$\Sigma M_{AF} = 0: \quad \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{G/A} \times (-12\mathbf{j}) + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{G_2/A} \times (-12\mathbf{j})) + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times T) = 0$$

$$\begin{vmatrix} 2 & -1 & 2 \\ 2 & -1 & 0 \\ 0 & -12 & 0 \end{vmatrix} \frac{1}{3} + \begin{vmatrix} 2 & -1 & -2 \\ 4 & -1 & -2 \\ 0 & -12 & 0 \end{vmatrix} \frac{1}{3} + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}) = 0$$

$$(2 \times 2 \times 12)\frac{1}{3} + (-2 \times 2 \times 12 + 2 \times 4 \times 12)\frac{1}{3} + \boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}) = 0$$

$$\boldsymbol{\lambda}_{AF} \cdot (\mathbf{r}_{B/A} \times \mathbf{T}) = -32 \qquad (1)$$

$$\overrightarrow{BH} = -4\mathbf{i} + y\mathbf{j} - 4\mathbf{k} \qquad BH = (32 + y^2)^{1/2}$$

$$\mathbf{T} = T\frac{\overrightarrow{BH}}{BH} = T\frac{-4\mathbf{i} + y\mathbf{j} - 4\mathbf{k}}{(32 + y^2)^{1/2}}$$

PROBLEM 4.141 (Continued)

From Eq. (1):

$$\boldsymbol{\lambda}_{AF}\cdot(\mathbf{r}_{B/A}\times T)=\begin{vmatrix}2 & -1 & -2\\ 4 & 0 & 0\\ -4 & y & -4\end{vmatrix}\frac{T}{3(32+y^2)^{1/2}}=-32$$

$$(-16-8y)T=-3\times 32(32+y^2)^{1/2}\qquad T=96\frac{(32+y^2)^{1/2}}{8y+16}\tag{2}$$

$$\frac{dT}{dy}=0:\quad 96\frac{(8y+16)\frac{1}{2}(32+y^2)^{-1/2}(2y)+(32+y^2)^{1/2}(8)}{(8y+16)^2}$$

Numerator = 0: $(8y+16)y=(32+y^2)8$

$$8y^2+16y=32\times 8+8y^2$$

$x=0$ ft; $y=16.00$ ft ◀

From Eq. (2): $T=96\dfrac{(32+16^2)^{1/2}}{8\times 16+16}=11.3137$ lb

$T_{\min}=11.31$ lb ◀

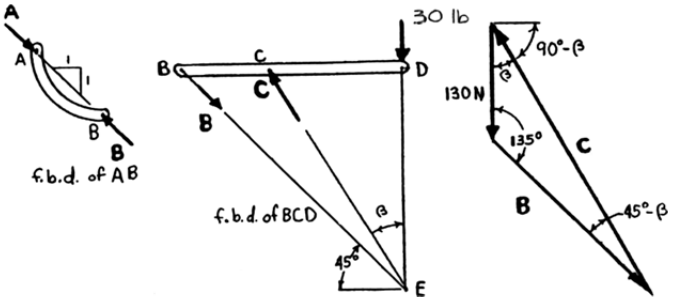
PROBLEM 4.149

For the frame and loading shown, determine the reactions at *A* and *C*.

SOLUTION



Since member *AB* is acted upon by two forces, **A** and **B**, they must be colinear, have the same magnitude, and be opposite in direction for *AB* to be in equilibrium. The force **B** acting at *B* of member *BCD* will be equal in magnitude but opposite in direction to force **B** acting on member *AB*. Member *BCD* is a three-force body with member forces intersecting at *E*. The F.B.D.'s of members *AB* and *BCD* illustrate the above conditions. The force triangle for member *BCD* is also shown. The angle β is found from the member dimensions:

$$\beta = \tan^{-1}\left(\frac{6 \text{ in.}}{10 \text{ in.}}\right) = 30.964°$$

Applying the law of sines to the force triangle for member *BCD*,

$$\frac{30 \text{ lb}}{\sin(45° - \beta)} = \frac{B}{\sin\beta} = \frac{C}{\sin 135°}$$

or

$$\frac{30 \text{ lb}}{\sin 14.036°} = \frac{B}{\sin 30.964°} = \frac{C}{\sin 135°}$$

$$A = B = \frac{(30 \text{ lb})\sin 30.964°}{\sin 14.036°} = 63.641 \text{ lb}$$

or **A** = 63.6 lb ↘ 45.0° ◀

and

$$C = \frac{(30 \text{ lb})\sin 135°}{\sin 14.036°} = 87.466 \text{ lb}$$

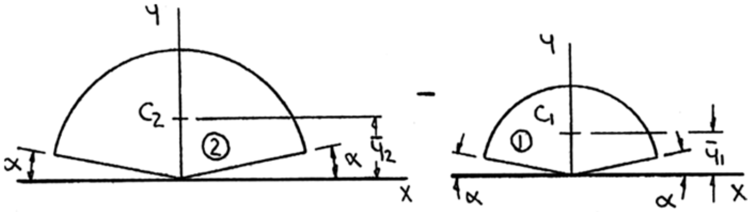
PROBLEM 5.16

Determine the y coordinate of the centroid of the shaded area in terms of r_1, r_2, and α.

SOLUTION



First, determine the location of the centroid.

From Figure 5.8A:
$$\bar{y}_2 = \frac{2}{3}r_2\frac{\sin\left(\frac{\pi}{2}-\alpha\right)}{\left(\frac{\pi}{2}-\alpha\right)} \qquad A_2 = \left(\frac{\pi}{2}-\alpha\right)r_2^2$$
$$= \frac{2}{3}r_2\frac{\cos\alpha}{\left(\frac{\pi}{2}-\alpha\right)}$$

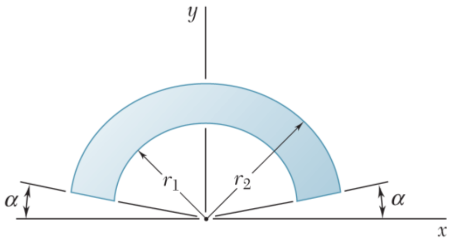
Similarly,
$$\bar{y}_1 = \frac{2}{3}r_1\frac{\cos\alpha}{\left(\frac{\pi}{2}-\alpha\right)} \qquad A_1 = \left(\frac{\pi}{2}-\alpha\right)r_1^2$$

Then
$$\Sigma\bar{y}A = \frac{2}{3}r_2\frac{\cos\alpha}{\left(\frac{\pi}{2}-\alpha\right)}\left[\left(\frac{\pi}{2}-\alpha\right)r_2^2\right] - \frac{2}{3}r_1\frac{\cos\alpha}{\left(\frac{\pi}{2}-\alpha\right)}\left[\left(\frac{\pi}{2}-\alpha\right)r_1^2\right]$$
$$= \frac{2}{3}\left(r_2^3 - r_1^3\right)\cos\alpha$$

and
$$\Sigma A = \left(\frac{\pi}{2}-\alpha\right)r_2^2 - \left(\frac{\pi}{2}-\alpha\right)r_1^2$$
$$= \left(\frac{\pi}{2}-\alpha\right)\left(r_2^2 - r_1^2\right)$$

Now
$$\bar{Y}\Sigma A = \Sigma\bar{y}A$$

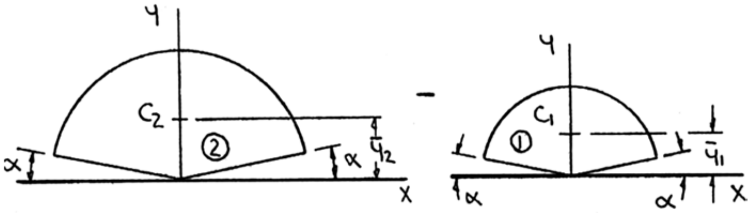
$$\bar{Y}\left[\left(\frac{\pi}{2}-\alpha\right)\left(r_2^2-r_1^2\right)\right] = \frac{2}{3}\left(r_2^3-r_1^3\right)\cos\alpha \qquad \bar{Y} = \frac{2}{3}\left(\frac{r_2^3-r_1^3}{r_2^2-r_1^2}\right)\left(\frac{2\cos\alpha}{\pi-2\alpha}\right) \blacktriangleleft$$



PROBLEM 5.17

Show that as r_1 approaches r_2, the location of the centroid approaches that for an arc of circle of radius $(r_1 + r_2)/2$.

SOLUTION



First, determine the location of the centroid.

From Figure 5.8A:

$$\bar{y}_2 = \frac{2}{3}r_2 \frac{\sin\left(\frac{\pi}{2} - \alpha\right)}{\left(\frac{\pi}{2} - \alpha\right)} \qquad A_2 = \left(\frac{\pi}{2} - \alpha\right)r_2^2$$

$$= \frac{2}{3}r_2 \frac{\cos\alpha}{\left(\frac{\pi}{2} - \alpha\right)}$$

Similarly,

$$\bar{y}_1 = \frac{2}{3}r_1 \frac{\cos\alpha}{\left(\frac{\pi}{2} - \alpha\right)} \qquad A_1 = \left(\frac{\pi}{2} - \alpha\right)r_1^2$$

Then

$$\Sigma\bar{y}A = \frac{2}{3}r_2 \frac{\cos\alpha}{\left(\frac{\pi}{2} - \alpha\right)}\left[\left(\frac{\pi}{2} - \alpha\right)r_2^2\right] - \frac{2}{3}r_1 \frac{\cos\alpha}{\left(\frac{\pi}{2} - \alpha\right)}\left[\left(\frac{\pi}{2} - \alpha\right)r_1^2\right]$$

$$= \frac{2}{3}\left(r_2^3 - r_1^3\right)\cos\alpha$$

and

$$\Sigma A = \left(\frac{\pi}{2} - \alpha\right)r_2^2 - \left(\frac{\pi}{2} - \alpha\right)r_1^2$$

$$= \left(\frac{\pi}{2} - \alpha\right)\left(r_2^2 - r_1^2\right)$$

Now

$$\bar{Y}\Sigma A = \Sigma\,\bar{y}A$$

$$\bar{Y}\left[\left(\frac{\pi}{2} - \alpha\right)\left(r_2^2 - r_1^2\right)\right] = \frac{2}{3}\left(r_2^3 - r_1^3\right)\cos\alpha$$

$$\bar{Y} = \frac{2}{3}\left(\frac{r_2^3 - r_1^3}{r_2^2 - r_1^2}\right)\left(\frac{2\cos\alpha}{\pi - 2\alpha}\right)$$

PROBLEM 5.17 (Continued)

Using Figure 5.8B, $\overline{Y}$ of an arc of radius $\frac{1}{2}(r_1 + r_2)$ is

$$\overline{Y} = \frac{1}{2}(r_1 + r_2)\frac{\sin(\frac{\pi}{2} - \alpha)}{(\frac{\pi}{2} - \alpha)}$$

$$= \frac{1}{2}(r_1 + r_2)\frac{\cos\alpha}{(\frac{\pi}{2} - \alpha)} \qquad (1)$$

Now
$$\frac{r_2^3 - r_1^3}{r_2^2 - r_1^2} = \frac{(r_2 - r_1)\left(r_2^2 + r_1 r_2 + r_1^2\right)}{(r_2 - r_1)(r_2 + r_1)}$$

$$= \frac{r_2^2 + r_1 r_2 + r_1^2}{r_2 + r_1}$$

Let
$$r_2 = r + \Delta$$
$$r_1 = r - \Delta$$

Then
$$r = \frac{1}{2}(r_1 + r_2)$$

and
$$\frac{r_2^3 - r_1^3}{r_2^2 - r_1^2} = \frac{(r + \Delta)^2 + (r + \Delta)(r - \Delta)(r - \Delta)^2}{(r + \Delta) + (r - \Delta)}$$

$$= \frac{3r^2 + \Delta^2}{2r}$$

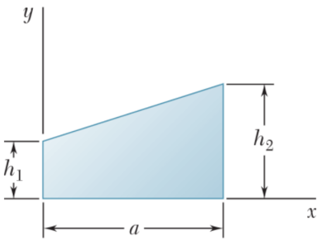
In the limit as $\Delta \longrightarrow 0$ (i.e., $r_1 = r_2$), then

$$\frac{r_2^3 - r_1^3}{r_2^2 - r_1^2} = \frac{3}{2}r$$

$$= \frac{3}{2} \times \frac{1}{2}(r_1 + r_2)$$

So that
$$\overline{Y} = \frac{2}{3} \times \frac{3}{4}(r_1 + r_2)\frac{\cos\alpha}{\frac{\pi}{2} - \alpha}$$
or $\overline{Y} = (r_1 + r_2)\dfrac{\cos\alpha}{\pi - 2\alpha}$ ◀

which agrees with Equation (1).



PROBLEM 5.18

Determine the *x* coordinate of the centroid of the trapezoid shown in terms of h_1, h_2, and *a*.

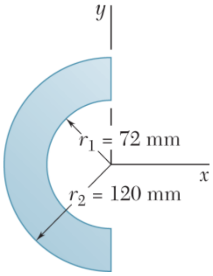
SOLUTION

Area 1:

	A	$\overline{x}$	$\overline{x}A$
1	$\frac{1}{2}h_1a$	$\frac{1}{3}a$	$\frac{1}{6}h_1a^2$
2	$\frac{1}{2}h_2a$	$\frac{2}{3}a$	$\frac{2}{6}h_2a^2$
Σ	$\frac{1}{2}a(h_1+h_2)$		$\frac{1}{6}a^2(h_1+2h_2)$

$$\overline{X} = \frac{\Sigma\overline{x}A}{\Sigma A} = \frac{\frac{1}{6}a^2(h_1+2h_2)}{\frac{1}{2}a(h_1+h_2)}$$

$$\overline{X} = \left(\frac{a}{3}\right)\frac{h_1+2h_2}{h_1+h_2} \blacktriangleleft$$



PROBLEM 5.19

For the semiannular area of Prob. 5.12, determine the ratio r_1 to r_2 so that the centroid of the area is located at $x = -\frac{1}{2}r_2$ and $y = 0$.

SOLUTION

First, determine the location of the centroid.

$$\bar{x}_2 = -\frac{4}{3\pi}r_2$$

Similarly, $$\bar{x}_1 = -\frac{4}{3\pi}r_1$$

$$\Sigma A = \frac{\pi}{2}\left(r_2^{\,2} - r_1^{\,2}\right)$$

Then $$\Sigma\bar{x}A = \frac{\pi}{2}r_2^{\,2}\left(\frac{-4r_2}{3\pi}\right) - \frac{\pi}{2}r_1^{\,2}\left(\frac{-4r_1}{3\pi}\right)$$

$$= -\frac{2}{3}\left(r_2^3 - r_1^3\right)$$

Now $$\bar{X}\Sigma A = \Sigma\bar{x}A$$

$$\bar{X}\left[\frac{\pi}{2}\left(r_2^2 - r_1^2\right)\right] = -\frac{2}{3}\left(r_2^3 - r_1^3\right) \text{ ; Dividing by } \left(r_2 - r_1\right)$$

$$\bar{X}\left(\frac{\pi}{2}\right)\left(r_2 + r_1\right) = -\frac{2}{3}\left(r_2^{\,2} + r_2r_1 + r_1^{\,2}\right) \quad (1)$$

$$\bar{X} = -\left(\frac{4}{3\pi}\right)\left(\frac{r_2^{\,2} + r_2r_1 + r_1^{\,2}}{r_2 + r_1}\right)$$

By symmetry, $\bar{Y} = 0$

PROBLEM 5.19 (Continued)

Now substituting for $\overline{X} = -\frac{1}{2}r_2$ in equation (1) gives.

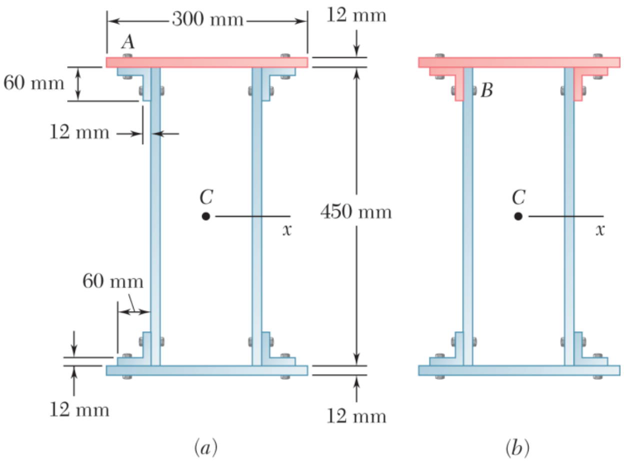
$$\left(-\frac{1}{2}r_2\right)\left(\frac{\pi}{2}\right)(r_2 + r_1) = -\frac{2}{3}(r_2{}^2 + r_1 r_2 + \mathrm{r}_1{}^2) \qquad (1)$$

Dividing through by $-r_2$ and 2/3,

$$\left(\frac{3}{2}\right)\left(\frac{\pi}{4}\right)\left(1 + \frac{r_1}{r_2}\right) = 1 + \frac{r_1}{r_2} + \left(\frac{r_1}{r_2}\right)^2$$

Then $$\left(\frac{r_1}{r_2}\right)^2 - 0.1781\left(\frac{r_1}{r_2}\right) - 0.1781 = 0$$

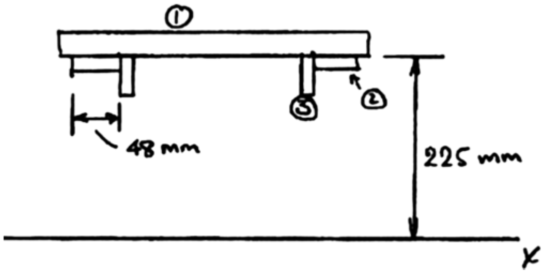
Solving the quadratic yields, $$\left(\frac{r_1}{r_2}\right) = 0.520 \blacktriangleleft$$



PROBLEM 5.20

A composite beam is constructed by bolting four plates to four 60 × 60 × 12-mm angles as shown. The bolts are equally spaced along the beam, and the beam supports a vertical load. As proved in mechanics of materials, the shearing forces exerted on the bolts at *A* and *B* are proportional to the first moments with respect to the centroidal *x*-axis of the red-shaded areas shown, respectively, in parts *a* and *b* of the figure. Knowing that the force exerted on the bolt at *A* is 280 N, determine the force exerted on the bolt at *B*.

SOLUTION



From the problem statement, *F* is proportional to Q_x.

Therefore, $$\frac{F_A}{(Q_x)_A} = \frac{F_B}{(Q_x)_B}, \quad \text{or} \quad F_B = \frac{(Q_x)_B}{(Q_x)_A} F_A$$

For the first moments, $$(Q_x)_A = \left(225 + \frac{12}{2}\right)(300 \times 12)$$

$$= 831{,}600 \text{ mm}^3$$

$$(Q_x)_B = (Q_x)A + 2\left(225 - \frac{12}{2}\right)(48 \times 12) + 2(225 - 30)(12 \times 60)$$

$$= 1{,}364{,}688 \text{ mm}^3$$

Then $$F_B = \frac{1{,}364{,}688}{831{,}600}(280 \text{ N})$$ or $F_B = 459$ N ◀

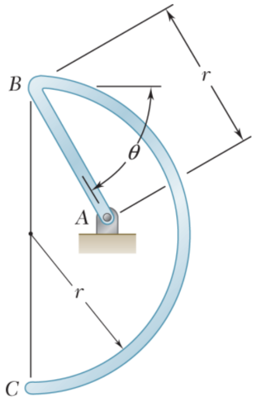
Then $\bar{X} = \frac{\Sigma \bar{x} L}{\Sigma L} = \frac{-320}{227.38}$ $\bar{X} = -1.407$ in. ◀

$\bar{Y} = \frac{\Sigma \bar{y} L}{\Sigma L} = \frac{3464.1}{227.38}$ $\bar{Y} = 15.23$ in. ◀

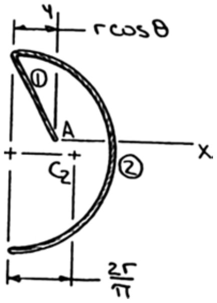


PROBLEM 5.28

The homogeneous wire *ABC* is bent into a semicircular arc and a straight section as shown and is attached to a hinge at *A*. Determine the value of θ for which the wire is in equilibrium for the indicated position.

SOLUTION

First note that for equilibrium, the center of gravity of the wire must lie on a vertical line through *A*. Further, because the wire is homogeneous, its center of gravity will coincide with the centroid of the corresponding line. Thus,



$$\overline{X} = 0$$

so that

$$\Sigma \overline{x} L = 0$$

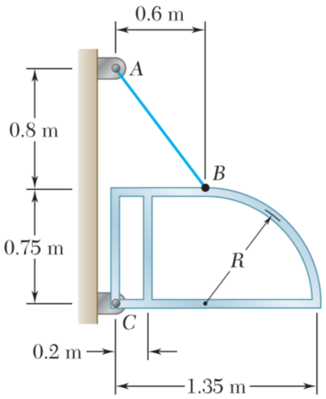
Then

$$\left(-\frac{1}{2} r\cos\theta\right)(r) + \left(\frac{2r}{\pi} - r\cos\theta\right)(\pi r) = 0$$

or

$$\cos\theta = \frac{4}{1+2\pi}$$
$$= 0.54921$$

or $\theta = 56.7°$ ◀



PROBLEM 5.29

The frame for a sign is fabricated from thin, flat steel bar stock of mass per unit length 4.73 kg/m. The frame is supported by a pin at *C* and by a cable *AB*. Determine (*a*) the tension in the cable, (*b*) the reaction at *C*.

SOLUTION

First note that because the frame is fabricated from uniform bar stock, its center of gravity will coincide with the centroid of the corresponding line.

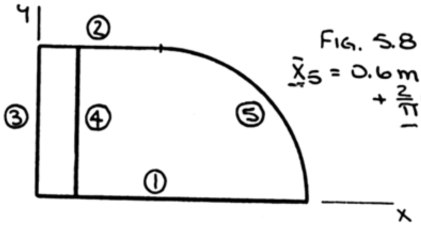


Fig. 5.8B

$\bar{x}_5 = 0.6\text{ m} + \frac{2}{\pi}(0.75\text{ m})$

	L, m	$\bar{x}$, m	$\bar{x}L$, m^2
1	1.35	0.675	0.91125
2	0.6	0.3	0.18
3	0.75	0	0
4	0.75	0.2	0.15
5	$\frac{\pi}{2}(0.75) = 1.17810$	1.07746	1.26936
Σ	4.62810		2.5106

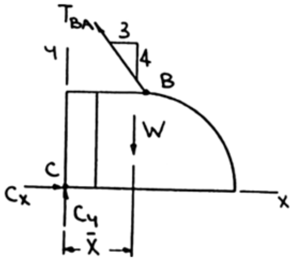
Then

$$\bar{X}\Sigma L = \Sigma \bar{x} L$$

$$\bar{X}(4.62810) = 2.5106$$

or

$$\bar{X} = 0.54247 \text{ m}$$



The free-body diagram of the frame is then

where

$$W = (m'\Sigma L)g$$

$$= 4.73 \text{ kg/m} \times 4.62810 \text{ m} \times 9.81 \text{ m/s}^2$$

$$= 214.75 \text{ N}$$

PROBLEM 5.29 (Continued)

Equilibrium then requires

(*a*) $$\Sigma M_C = 0: \quad (1.55\text{ m})\left(\frac{3}{5}T_{BA}\right) - (0.54247\text{ m})(214.75\text{ N}) = 0$$

or $$T_{BA} = 125.264\text{ N} \text{ or } T_{BA} = 125.3\text{ N} \blacktriangleleft$$

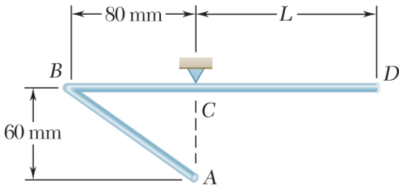
(*b*) $$\Sigma F_x = 0: \quad C_x - \frac{3}{5}(125.264\text{ N}) = 0$$

or $$\mathbf{C}_x = 75.158\text{ N} \longrightarrow$$

$$\Sigma F_y = 0: \quad C_y + \frac{4}{5}(125.264\text{ N}) - (214.75\text{ N}) = 0$$

or $$\mathbf{C}_y = 114.539\text{ N} \uparrow$$

Then $$\mathbf{C} = 137.0\text{ N} \measuredangle 56.7° \blacktriangleleft$$



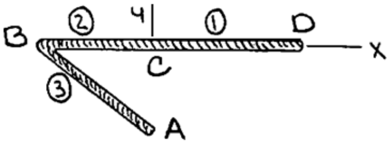
PROBLEM 5.30

The homogeneous wire *ABCD* is bent as shown and is attached to a hinge at *C*. Determine the length *L* for which portion *BCD* of the wire is horizontal.

SOLUTION

First note that for equilibrium, the center of gravity of the wire must lie on a vertical line through *C*. Further, because the wire is homogeneous, the center of gravity of the wire will coincide with the centroid of the corresponding line. Thus,

$$\bar{X} = 0 \text{ so that } \Sigma \bar{X} L = 0$$



Then
$$\frac{L}{2} + (-40\text{ mm})(80\text{ mm}) + (-40\text{ mm})(100\text{ mm}) = 0$$

$$L^2 = 14,400\text{ mm}^2 \qquad L = 120.0\text{ mm} \blacktriangleleft$$

$\frac{1}{2}L$
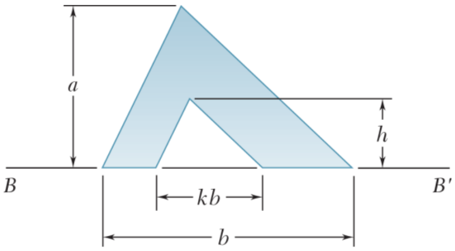
50 mm
64 − 50 = 14 mm
LET w = WEIGHT PER UNIT LENGTH

$$W_{\mathrm{I}} = 80w \qquad W_{\mathrm{II}} = 100w \qquad W_{\mathrm{III}} = Lw$$

$$+\circlearrowleft \Sigma M_C = 0: \quad (80w)(32) + (100w)(14) - (Lw)(0.4L) = 0$$

$$L^2 = 9900 \qquad L = 99.5 \text{ mm} \blacktriangleleft$$



PROBLEM 5.32

Determine the distance h for which the centroid of the shaded area is as far above line BB' as possible when (*a*) $k = 0.10$, (*b*) $k = 0.80$.

SOLUTION

	A	$\bar{y}$	$\bar{y}A$
1	$\frac{1}{2}ba$	$\frac{1}{3}a$	$\frac{1}{6}a^2b$
2	$-\frac{1}{2}(kb)h$	$\frac{1}{3}h$	$-\frac{1}{6}kbh^2$
Σ	$\frac{b}{2}(a-kh)$		$\frac{b}{6}(a^2-kh^2)$

Then $\bar{Y}\Sigma A = \Sigma\bar{y}A$

$$\bar{Y}\left[\frac{b}{2}(a-kh)\right] = \frac{b}{6}(a^2-kh^2)$$

or $\bar{Y} = \dfrac{a^2-kh^2}{3(a-kh)}$ (1)

and $\dfrac{d\bar{Y}}{dh} = \dfrac{1}{3}\dfrac{-2kh(a-kh)-(a^2-kh^2)(-k)}{(a-kh)^2} = 0$

or $2h(a-kh) - a^2 + kh^2 = 0$ (2)

Simplifying Eq. (2) yields $kh^2 - 2ah + a^2 = 0$

PROBLEM 5.32 (Continued)

Then $h = \dfrac{2a \pm \sqrt{(-2a)^2 - 4(k)(a^2)}}{2k}$

$$= \frac{a}{k}\left[1 \pm \sqrt{1-k}\right]$$

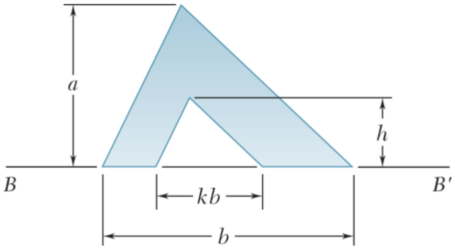
Note that only the negative root is acceptable since $h < a$. Then

(*a*) $k = 0.10$

$$h = \frac{a}{0.10}\left[1 - \sqrt{1-0.10}\right] \qquad \text{or } h = 0.513a \blacktriangleleft$$

(*b*) $k = 0.80$

$$h = \frac{a}{0.80}\left[1 - \sqrt{1-0.80}\right] \qquad \text{or } h = 0.691a \blacktriangleleft$$



PROBLEM 5.33

Knowing that the distance h has been selected to maximize the distance $\overline{y}$ from line BB' to the centroid of the shaded area, show that $\overline{y} = 2h/3$.

SOLUTION

See solution to Problem 5.32 for analysis leading to the following equations:

$$\overline{Y} = \frac{a^2 - kh^2}{3(a - kh)} \qquad (1)$$

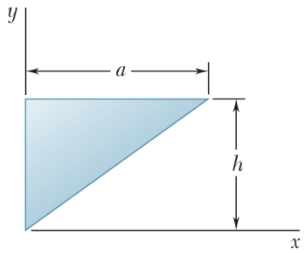
$$2h(a - kh) - a^2 + kh^2 = 0 \qquad (2)$$

Rearranging Eq. (2) (which defines the value of h which maximizes $\overline{Y}$) yields

$$a^2 - kh^2 = 2h(a - kh)$$

Then substituting into Eq. (1) (which defines $\overline{Y}$),

$$\overline{Y} = \frac{1}{3(a - kh)} \times 2h(a - kh) \qquad \text{or } \overline{Y} = \frac{2}{3}h \blacktriangleleft$$

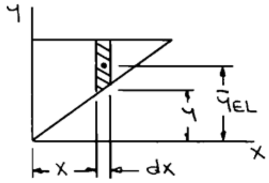


PROBLEM 5.34

Determine by direct integration the centroid of the area shown. Express your answer in terms of *a* and *h*.

SOLUTION

We have $y = \frac{h}{a}x$



and $dA = (h-y)dx$

$$= h\left(1-\frac{x}{a}\right)dx$$

$$\bar{x}_{EL} = x$$

$$\bar{y}_{EL} = \frac{1}{2}(h+y)$$

$$= \frac{h}{2}\left(1+\frac{x}{a}\right)$$

Then $A = \int dA = \int_0^a h\left(1-\frac{x}{a}\right)dx = h\left[x-\frac{x^2}{2a}\right]_0^a = \frac{1}{2}ah$

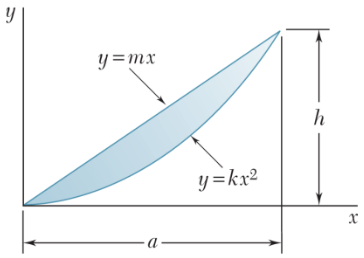
and $\int \bar{x}_{EL}\,dA = \int_0^a x\left[h\left(1-\frac{x}{a}\right)dx\right] = h\left[\frac{x^2}{2}-\frac{x^3}{3a}\right]_0^a = \frac{1}{6}a^2h$

$$\int \bar{y}_{EL}\,dA = \int_0^a \frac{h}{2}\left(1+\frac{x}{a}\right)\left[h\left(1-\frac{x}{a}\right)dx\right]$$

$$= \frac{h^2}{2}\int_0^a\left(1-\frac{x^2}{a^2}\right)dx = \frac{h^2}{2}\left[x-\frac{x^3}{3a^2}\right]_0^a = \frac{1}{3}ah^2$$

$\bar{x}A = \int \bar{x}_{EL}\,dA$: $\quad \bar{x}\left(\frac{1}{2}ah\right) = \frac{1}{6}a^2h$ $\qquad \bar{x} = \frac{2}{3}a$ ◀

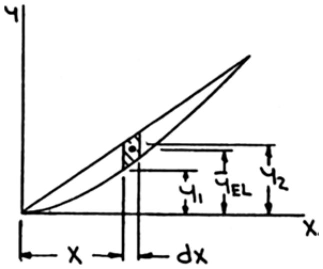
$\bar{y}A = \int \bar{y}_{EL}\,dA$: $\quad \bar{y}\left(\frac{1}{2}ah\right) = \frac{1}{3}ah^2$ $\qquad \bar{y} = \frac{2}{3}h$ ◀



PROBLEM 5.35

Determine by direct integration the centroid of the area shown. Express your answer in terms of *a* and *h*.

SOLUTION



At (a, h), $\quad y_1: \quad h = ka^2$

or $\quad k = \dfrac{h}{a^2}$

$y_2: \quad h = ma$

or $\quad m = \dfrac{h}{a}$

Now $\quad \overline{x}_{EL} = x$

$$\overline{y}_{EL} = \frac{1}{2}(y_1 + y_2)$$

and $$dA = (y_2 - y_1)dx = \left[\frac{h}{a}x - \frac{h}{a^2}x^2\right]dx$$

$$= \frac{h}{a^2}(ax - x^2)dx$$

Then $$A = \int dA = \int_0^a \frac{h}{a^2}(ax - x^2)dx = \frac{h}{a^2}\left[\frac{a}{2}x^2 - \frac{1}{3}x^3\right]_0^a = \frac{1}{6}ah$$

and $$\int \overline{x}_{EL}\, dA = \int_0^a x\left[\frac{h}{a^2}(ax - x^2)dx = \frac{h}{a^2}\left[\frac{a}{3}x^3 - \frac{1}{4}x^4\right]_0^a = \frac{1}{12}a^2h\right.$$

$$\int \overline{y}_{EL}\, dA = \int \frac{1}{2}(y_1 + y_2)[(y_2 - y_1)dx] = \int \frac{1}{2}\left(y_2^2 - y_1^2\right)dx$$

PROBLEM 5.35 (Continued)

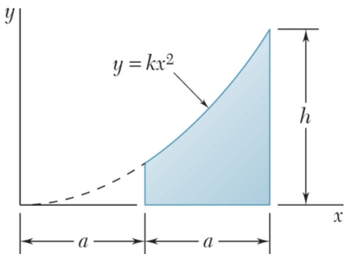
$$= \frac{1}{2}\int_0^a \left(\frac{h^2}{a^2}x^2 - \frac{h^2}{a^4}x^4\right)dx$$

$$= \frac{1}{2}\frac{h^2}{a^4}\left[\frac{a^2}{3}x^3 - \frac{1}{5}x^5\right]_0^a$$

$$= \frac{1}{15}ah^2$$

$\bar{x}A = \int \bar{x}_{EL}\,dA$: $\quad \bar{x}\left(\frac{1}{6}ah\right) = \frac{1}{12}a^2h$ $\qquad \bar{x} = \frac{1}{2}a$ ◀

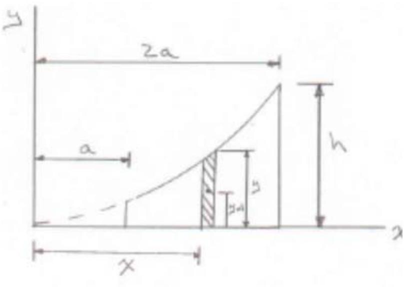
$\bar{y}A = \int \bar{y}_{EL}\,dA$: $\quad \bar{y}\left(\frac{1}{6}ah\right) = \frac{1}{15}ah^2$ $\qquad \bar{y} = \frac{2}{5}h$ ◀



PROBLEM 5.36

Determine by direct integration the centroid of the area shown. Express your answer in terms of *a* and *h*.

SOLUTION



For the element (el) shown at

$$x = 2a,\ y = h \qquad \text{or} \qquad h = k(2a)^2$$

$$\therefore\ k = \frac{h}{4a^2}$$

$$x_{el} = x$$

$$y_{el} = \frac{1}{2}y$$

$$dA = y\,dx$$

Then $$A = \int dA = \frac{h}{4a^2}\int_0^{2a} x^2\,dx = \frac{h}{4a^2}\left(\frac{x^3}{3}\right)\Bigg|_0^{2a}$$

$$= \frac{7}{12}ah$$

and $$\int \bar{x}_{el}dA = \int_a^{2a} x\left(\frac{h}{4a^2}\right)x^2\,dx = \frac{h}{4a^2}\left(\frac{x^4}{4}\right)\Bigg|_a^{2a}$$

$$= \frac{15}{16}ha^2$$

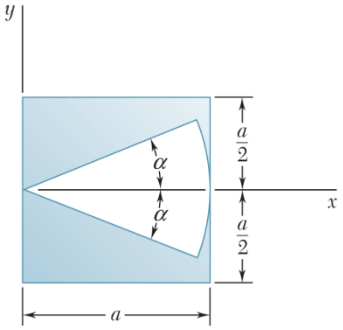
$$\int \bar{y}_{el}dA = \int_a^{2a}\frac{1}{2}\left(y^2\right)dx$$

$$= \frac{1}{2}\int\left(\frac{hx^2}{4a^2}\right)^2 dx = \frac{h^2}{32a^4}\int_a^{2a} x^4dx\Bigg|$$

$$= \frac{h^2}{32a^4}\left[\frac{x^5}{5}\right]_a^{2a} = \frac{31}{160}ah^2$$

Then $\bar{x}A = \int \bar{x}_{el}dA$: $\bar{x}\left(\frac{7}{12}ah\right) = \frac{15}{16}a^2h$ or $\bar{x} = 1.607a$ ◀

$\bar{y}A = \int \bar{y}_{EL}dA$: $\bar{y}\left(\frac{7}{12}ah\right) = \frac{31}{160}ah^2$ or $\bar{y} = 0.332h$ ◀

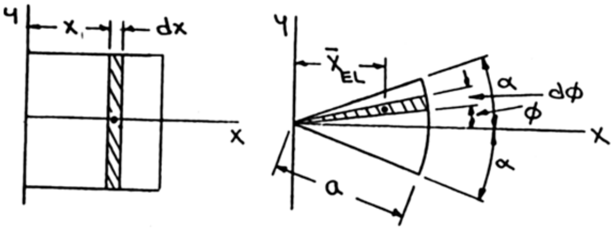


PROBLEM 5.37

Determine by direct integration the centroid of the area shown.

SOLUTION

First note that symmetry implies $\bar{y} = 0$ ◀



$$dA = \frac{1}{2}a(a\,d\phi)$$

$$dA = a\,dx \qquad \bar{x}_{EL} = \frac{2}{3}a\cos\phi$$

$$\bar{x}_{EL} = x$$

$$A = \int dA = \int_0^a a\,dx - \int_{-\alpha}^{\alpha} \frac{1}{2}a^2\,d\phi$$

$$= a[x]_0^a - \frac{a^2}{2}[\phi]_{\alpha}^{\alpha} = a^2(1-\alpha)$$

Then

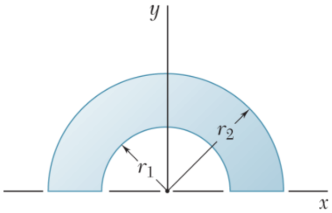
$$\int \bar{x}_{EL}\,dA = \int_0^a x(a\,dx) - \int_{-\alpha}^{\alpha} \frac{2}{3}a\cos\phi\left(\frac{1}{2}a^2\,d\phi\right)$$

$$= a\left[\frac{x^2}{2}\right]_0^a - \frac{1}{3}a^3[\sin\phi]_{-\alpha}^{\alpha}$$

$$= a^3\left(\frac{1}{2} - \frac{2}{3}\sin\alpha\right)$$

and

$$\bar{x}A = \int \bar{x}_{EL}\,dA: \quad \bar{x}[a^2(1-\alpha)] = a^3\left(\frac{1}{2} - \frac{2}{3}\sin\alpha\right) \qquad \text{or} \qquad \bar{x} = \frac{3-4\sin\alpha}{6(1-\alpha)}a$$ ◀



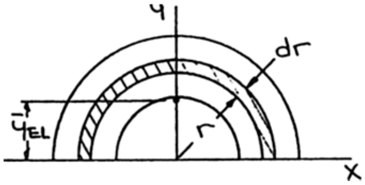
PROBLEM 5.38

Determine by direct integration the centroid of the area shown.

SOLUTION

First note that symmetry implies $\bar{x} = 0$ ◀

For the element (EL) shown



$$\bar{y}_{EL} = \frac{2r}{\pi} \quad \text{(Figure 5.8B)}$$

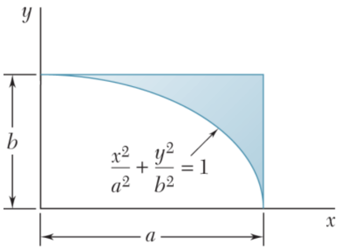
$$dA = \pi r dr$$

Then $A = \int dA = \int_{r_1}^{r_2} \pi r\, d r = \pi \left(\frac{r^2}{2} \right) \Bigg|_{r_1}^{r_2} = \frac{\pi}{2}\left(r_2^2 - r_1^2\right)$

and $\int \bar{y}_{EL} dA = \int_{r_1}^{r_2} \frac{2r}{\pi} (\pi r dr) = 2\left(\frac{1}{3} r^3 \right) \Bigg|_{r_1}^{r_2} = \frac{2}{3}\left(r_2^3 - r_1^3\right)$

So $\bar{y}A = \int \bar{y}_{EL} dA$: $\bar{y}\left[\frac{\pi}{2}\left(r_2^2 - r_1^2\right)\right] = \frac{2}{3}\left(r_2^3 - r_1^3\right)$

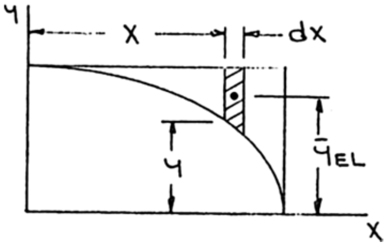
or $\bar{y} = \frac{4}{3\pi} \frac{r_2^3 - r_1^3}{r_2^2 - r_1^2}$ ◀



PROBLEM 5.39

Determine by direct integration the centroid of the area shown.

SOLUTION



For the element (EL) shown, $y=\frac{b}{a}\sqrt{a^2-x^2}$

and $dA=(b-y)dx$

$$=\frac{b}{a}\left(a-\sqrt{a^2-x^2}\right)dx$$

$$\bar{x}_{EL}=x$$

$$\bar{y}_{EL}=\frac{1}{2}(y+b)$$

$$=\frac{b}{2a}\left(a+\sqrt{a^2-x^2}\right)$$

Then $A=\int dA=\int_0^a\frac{b}{a}\left(a-\sqrt{a^2-x^2}\right)dx$

To integrate, let $x=a\sin\theta$: $\sqrt{a^2-x^2}=a\cos\theta,\ dx=a\cos\theta\, d\theta$

Then $A=\int_0^{\pi/2}\frac{b}{a}(a-a\cos\theta)(a\cos\theta d\theta)$

$$=\frac{b}{a}\left[a^2\sin\theta-a^2\left(\frac{\theta}{2}+\sin\frac{2\theta}{4}\right)\right]\Bigg|_0^{\pi/2}$$

$$=ab\left(1-\frac{\pi}{4}\right)$$

and $\int\bar{x}_{EL}dA=\int_0^a x\left[\frac{b}{a}\left(a-\sqrt{a^2-x^2}\right)dx\right]$

$$=\frac{b}{a}\left[\left(\frac{a}{2}x^2+\frac{1}{3}(a^2-x^2)^{3/2}\right)\right]\Bigg|_0^{\pi/2}$$

$$=\frac{1}{6}a^3b$$

PROBLEM 5.39 (Continued)

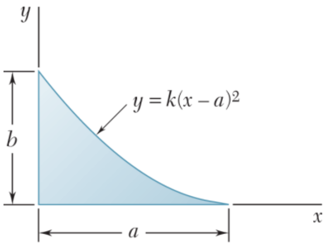
$$\int \overline{y}_{EL}\,dA = \int_0^a \frac{b}{2a}\left(a+\sqrt{a^2-x^2}\right)\left[\frac{b}{a}\left(a-\sqrt{a^2-x^2}\right)dx\right]$$

$$= \frac{b^2}{2a^2}\int_0^a (x^2)\;dx = \frac{b^2}{2a^2}\left(\frac{x^3}{3}\right)\Bigg|_0^a$$

$$= \frac{1}{6}ab^2$$

$\overline{x}A = \int \overline{x}_{EL}\,dA\text{:}\quad \overline{x}\left[ab\left(1-\frac{\pi}{4}\right)\right] = \frac{1}{6}a^2b$ or $\overline{x} = \frac{2a}{3(4-\pi)}$ ◀

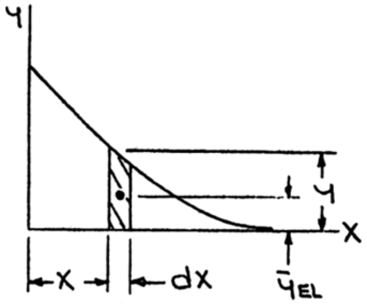
$\overline{y}A = \int \overline{y}_{EL}\,dA\text{:}\quad \overline{y}\left[ab\left(1-\frac{\pi}{4}\right)\right] = \frac{1}{6}ab^2$ or $\overline{y} = \frac{2b}{3(4-\pi)}$ ◀



PROBLEM 5.40

Determine by direct integration the centroid of the area shown. Express your answer in terms of *a* and *b*.

SOLUTION



At $x = 0, \quad y = b$

$$b = k(0-a)^2 \quad \text{or} \quad k = \frac{b}{a^2}$$

Then $y = \frac{b}{a^2}(x-a)^2$

Now $\bar{x}_{EL} = x$

$$\bar{y}_{EL} = \frac{y}{2} = \frac{b}{2a^2}(x-a)^2$$

and $dA = ydx = \frac{b}{a^2}(x-a)^2\,dx$

Then $A = \int dA = \int_0^a \frac{b}{a^2}(x-a)^2\,dx = \frac{b}{3a^2}\left[(x-a)^3\right]_0^a = \frac{1}{3}ab$

and $\int \bar{x}_{EL}\,dA = \int_0^a x\left[\frac{b}{a^2}(x-a)^2\,dx\right] = \frac{b}{a^2}\int_0^a \left(x^3 - 2ax^2 + a^2x\right)dx$

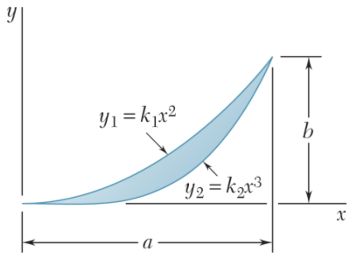
$$= \frac{b}{a^2}\left(\frac{x^4}{4} - \frac{2}{3}ax^3 + \frac{a^2}{2}x^2\right) = \frac{1}{12}a^2b$$

$$\int \bar{y}_{EL}\,dA = \int_0^a \frac{b}{2a^2}(x-a)^2\left[\frac{b}{a^2}(x-a)^2\,dx\right] = \frac{b^2}{2a^4}\left[\frac{1}{5}(x-a)^5\right]_0^a$$

$$= \frac{1}{10}ab^2$$

Hence $\bar{x}A = \int \bar{x}_{EL}\,dA: \quad \bar{x}\left(\frac{1}{3}ab\right) = \frac{1}{12}a^2b$ $\qquad \bar{x} = \frac{1}{4}a$ ◀

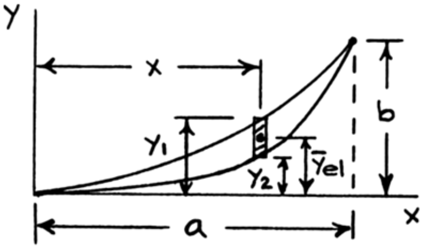
$\bar{y}A = \int \bar{y}_{EL}\,dA: \quad \bar{y}\left(\frac{1}{3}ab\right) = \frac{1}{10}ab^2$ $\qquad \bar{y} = \frac{3}{10}b$ ◀



PROBLEM 5.41

Determine by direct integration the centroid of the area shown. Express your answer in terms of *a* and *b*.

SOLUTION



$$y_1 = k_1x^2 \quad \text{but} \quad b = k_1a^2 \qquad y_1 = \frac{b}{a^2}x^2$$

$$y_2 = k_2x^3 \quad \text{but} \quad b = k_2a^3 \qquad y_2 = \frac{b}{a^3}x^3$$

$$dA = (y_2 - y_1)dx = \frac{b}{a^2}\left(x^2 - \frac{x^3}{a}\right)dx$$

$$\overline{x}_{EL} = x$$

$$\overline{y}_{EL} = \frac{1}{2}(y_1 + y_2)$$

$$= \frac{b}{2a^2}\left(x^2 + \frac{x^3}{a}\right)$$

$$A = \int dA = \frac{b}{a^2}\int_0^a\left(x^2 - \frac{x^3}{a}\right)dx$$

$$= \frac{b}{a^2}\left[\frac{x^3}{3} - \frac{x^4}{4a}\right]_0^a$$

$$= \frac{1}{12}ba$$

$$\int \overline{x}_{EL}\,dA = \int_0^a x\frac{b}{a^2}\left(x^2 - \frac{x^3}{a}\right)dx$$

$$= \frac{b}{a^2}\int_0^a\left(x^3 - \frac{x^4}{a}\right)dx$$

$$= \frac{b}{a^2}\left[\frac{x^4}{4} - \frac{x^5}{5a}\right]_0^a$$

$$= \frac{1}{20}a^2b$$

PROBLEM 5.41 (Continued)

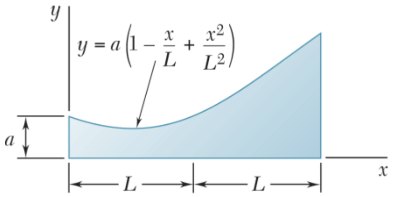
$$\int \bar{y}_{EL}\, dA = \int_0^a \frac{b}{2a^2}\left(x^2 + \frac{x^3}{a}\right)\frac{b}{a^2}\left(x^2 - \frac{x^3}{a}\right)dx$$

$$= \frac{b^2}{2a^4}\int_0^a \left(x^4 - \frac{x^6}{a^2}\right)dx$$

$$= \frac{b^2}{2a^4}\left[\frac{x^5}{5} - \frac{x^7}{7a^2}\right]_0^a = \frac{1}{35}ab^2$$

$\bar{x}A = \int \bar{x}_{EL}\, dA\text{:} \quad \bar{x}\left(\frac{1}{12}ba\right) = \frac{1}{20}a^2b$ $\qquad \bar{x} = \frac{3}{5}a$ ◀

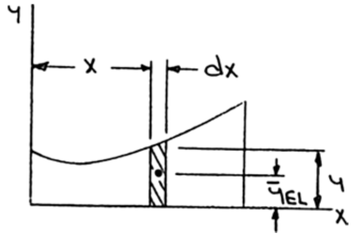
$\bar{y}A = \int \bar{y}_{EL}\, dA\text{:} \quad \bar{y}\left(\frac{1}{12}ba\right) = \frac{1}{35}ab^2$ $\qquad \bar{y} = \frac{12}{35}b$ ◀



PROBLEM 5.42

Determine by direct integration the centroid of the area shown.

SOLUTION



We have

$$\bar{x}_{EL} = x$$

$$\bar{y}_{EL} = \frac{1}{2}y = \frac{a}{2}\left(1 - \frac{x}{L} + \frac{x^2}{L^2}\right)$$

$$dA = y\,dx = a\left(1 - \frac{x}{L} + \frac{x^2}{L^2}\right)dx$$

Then

$$A = \int dA = \int_0^{2L} a\left(1 - \frac{x}{L} + \frac{x^2}{L^2}\right)dx = a\left[x - \frac{x^2}{2L} + \frac{x^3}{3L^2}\right]_0^{2L}$$

$$= \frac{8}{3}aL$$

and

$$\int \bar{x}_{EL}\,dA = \int_0^{2L} x\left[a\left(1 - \frac{x}{L} + \frac{x^2}{L^2}\right)dx\right] = a\left[\frac{x^2}{2} - \frac{x^3}{3L} + \frac{x^4}{4L^2}\right]_0^{2L}$$

$$= \frac{10}{3}aL^2$$

$$\int \bar{y}_{EL}\,dA = \int_0^{2L} \frac{a}{2}\left(1 - \frac{x}{L} + \frac{x^2}{L^2}\right)\left[a\left(1 - \frac{x}{L} + \frac{x^2}{L^2}\right)dx\right]$$

$$= \frac{a^2}{2}\int_0^{EL}\left(1 - 2\frac{x}{L} + 3\frac{x^2}{L^2} - 2\frac{x^3}{L^3} + \frac{x^4}{L^4}\right)dx$$

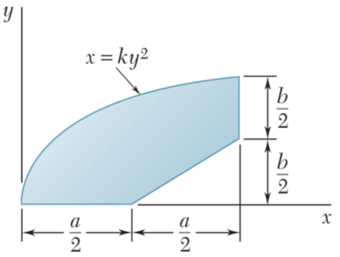
$$= \frac{a^2}{2}\left[x - \frac{x^2}{L} + \frac{x^3}{L^2} - \frac{x^4}{2L^3} + \frac{x^5}{5L^4}\right]_0^{2L}$$

$$= \frac{11}{5}a^2L$$

Hence,

$$\bar{x}A = \int \bar{x}_{EL}\,dA: \quad \bar{x}\left(\frac{8}{3}aL\right) = \frac{10}{3}aL^2 \qquad \bar{x} = \frac{5}{4}L \blacktriangleleft$$

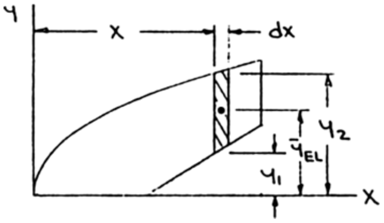
$$\bar{y}A = \int \bar{y}_{EL}\,dA: \quad \bar{y}\left(\frac{1}{8}a\right) = \frac{11}{5}a^2 \qquad \bar{y} = \frac{33}{40}a \blacktriangleleft$$



PROBLEM 5.43

Determine by direct integration the centroid of the area shown. Express your answer in terms of *a* and *b*.

SOLUTION



For y_2 at $x = a$, $y = b$, $a = kb^2$, or $k = \frac{a}{b^2}$

Then $y_2 = \frac{b}{\sqrt{a}} x^{1/2}$

Now $\overline{x}_{EL} = x$

and for $0 \leq x \leq \frac{a}{2}$, $\overline{y}_{EL} = \frac{y_2}{2} = \frac{b}{2} \frac{x^{1/2}}{\sqrt{a}}$

$$dA = y_2\,dx = b\frac{x^{1/2}}{\sqrt{a}}dx$$

For $\frac{a}{2} \leq x \leq a$, $\overline{y}_{EL} = \frac{1}{2}(y_1 + y_2) = \frac{b}{2}\left(\frac{x}{a} - \frac{1}{2} + \frac{x^{1/2}}{\sqrt{a}}\right)$

$$dA = (y_2 - y_1)dx = b\left(\frac{x^{1/2}}{\sqrt{a}} - \frac{x}{a} + \frac{1}{2}\right)dx$$

Then
$$\begin{aligned} A = \int dA = \int_0^{a/2} b\frac{x^{1/2}}{\sqrt{a}}dx + \int_{a/2}^{a} b\left(\frac{x^{1/2}}{\sqrt{a}} - \frac{x}{a} + \frac{1}{2}\right)dx &= \frac{b}{\sqrt{a}}\left[\frac{2}{3}x^{3/2}\right]_0^{a/2} + b\left[\frac{2}{3}\frac{x^{3/2}}{\sqrt{a}} - \frac{x^2}{2a} + \frac{1}{2}x\right]_{a/2}^{a} \\ &= \frac{2}{3}\frac{b}{\sqrt{a}}\left[\left(\frac{a}{2}\right)^{3/2} + (a)^{3/2} - \left(\frac{a}{2}\right)^{3/2}\right] \\ &\quad + b\left\{-\frac{1}{2a}\left[(a^2) - \left(\frac{a}{2}\right)^2\right] + \frac{1}{2}\left[(a) - \left(\frac{a}{2}\right)\right]\right\} \\ &= \frac{13}{24}ab \end{aligned}$$

PROBLEM 5.43 (Continued)

and $$\int \bar{x}_{EL}\,dA = \int_0^{a/2} x\left(b\frac{x^{1/2}}{\sqrt{a}}dx\right) + \int_{a/2}^{a} x\left[b\left(\frac{x^{1/2}}{\sqrt{a}} - \frac{x}{a} + \frac{1}{2}\right)\right]dx$$

$$= \frac{b}{\sqrt{a}}\left[\frac{2}{5}x^{5/2}\right]_0^{a/2} + b\left[\frac{2}{5}\frac{x^{5/2}}{\sqrt{a}} - \frac{x^3}{3a} + \frac{x^4}{4}\right]_{a/2}^{a}$$

$$= \frac{2}{5}\frac{b}{\sqrt{a}}\left[\left(\frac{a}{2}\right)^{5/2} + (a)^{5/2} - \left(\frac{a}{2}\right)^{5/2}\right]$$

$$+ b\left\{-\frac{1}{3a}\left[(a)^3 - \left(\frac{a}{2}\right)^3\right] + \frac{1}{4}\left[(a)^2 - \left(\frac{a}{2}\right)^2\right]\right\}$$

$$= \frac{71}{240}a^2b$$

$$\int \bar{y}_{EL}\,dA = \int_0^{a/2} \frac{b}{2}\frac{x^{1/2}}{\sqrt{a}}\left[b\frac{x^{1/2}}{\sqrt{a}}dx\right]$$

$$+ \int_{a/2}^{a} \frac{b}{2}\left(\frac{x}{a} - \frac{1}{2} + \frac{x^{1/2}}{\sqrt{a}}\right)\left[b\left(\frac{x^{1/2}}{\sqrt{a}} - \frac{x}{a} + \frac{1}{2}\right)dx\right]$$

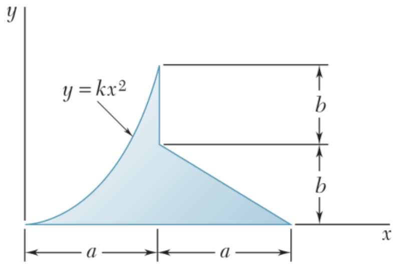
$$= \frac{b^2}{2a}\left[\frac{1}{2}x^2\right]_0^{a/2} + \frac{b^2}{2}\left[\left(\frac{x^2}{2a} - \frac{1}{3a}\left(\frac{x}{a} - \frac{1}{2}\right)^3\right)\right]_{a/2}^{a}$$

$$= \frac{b}{4a}\left[\left(\frac{a}{2}\right)^2 + (a)^2 - \left(\frac{a}{2}\right)^2\right] - \frac{b^2}{6a}\left(\frac{a}{2} - \frac{1}{2}\right)^3$$

$$= \frac{11}{48}ab^2$$

Hence, $\bar{x}A = \int \bar{x}_{EL}\,dA$: $\bar{x}\left(\frac{13}{24}ab\right) = \frac{71}{240}a^2b$ $\qquad \bar{x} = \frac{17}{130}a$ ◀

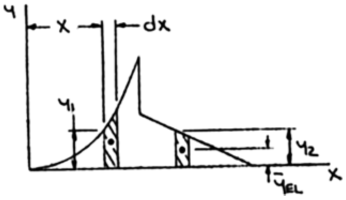
$\bar{y}A = \int \bar{y}_{EL}\,dA$: $\bar{y}\left(\frac{13}{24}ab\right) = \frac{11}{48}ab^2$ $\qquad \bar{y} = \frac{11}{26}b$ ◀



PROBLEM 5.44

Determine by direct integration the centroid of the area shown. Express your answer in terms of *a* and *b*.

SOLUTION



For y_1 at $x = a$, $\quad y = 2b, \quad 2b = ka^2, \quad$ or $\quad k = \dfrac{2b}{a^2}$

Then $\quad y_1 = \dfrac{2b}{a^2}x^2$

By observation, $\quad y_2 = -\dfrac{b}{a}(x + 2b) = b\left(2 - \dfrac{x}{a}\right)$

Now $\quad \overline{x}_{EL} = x$

and for $0 \le x \le a$, $\quad \overline{y}_{EL} = \dfrac{1}{2}y_1 = \dfrac{b}{a^2}x^2 \quad$ and $\quad dA = y_1\,dx = \dfrac{2b}{a^2}x^2dx$

For $a \le x \le 2a$, $\quad \overline{y}_{EL} = \dfrac{1}{2}y_2 = \dfrac{b}{2}\left(2 - \dfrac{x}{a}\right) \quad$ and $\quad dA = y_2\,dx = b\left(2 - \dfrac{x}{a}\right)dx$

Then $\quad A = \displaystyle\int dA = \int_0^a \frac{2b}{a^2}x^2dx + \int_a^{2a} b\left(2 - \frac{x}{a}\right)dx$

$$= \frac{2b}{a^2}\left[\frac{x^3}{3}\right]_0^a + b\left[-\frac{a}{2}\left(2 - \frac{x}{a}\right)^2\right]_0^{2a} = \frac{7}{6}ab$$

and $\quad \displaystyle\int \overline{x}_{EL}\,dA = \int_0^a x\left(\frac{2b}{a^2}x^2dx\right) + \int_a^{2a} x\left[b\left(2 - \frac{x}{a}\right)dx\right]$

$$= \frac{2b}{a^2}\left[\frac{x^4}{4}\right]_0^a + b\left[x^2 - \frac{x^3}{3a}\right]_0^{2a}$$

$$= \frac{1}{2}a^2b + b\left\{\left[(2a)^2 - (a)^2\right] + \frac{1}{3a}\left[(2a^2) - (a)^3\right]\right\}$$

$$= \frac{7}{6}a^2b$$

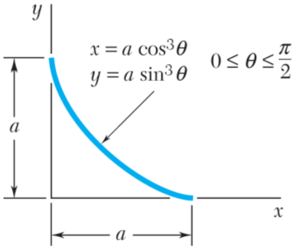
$$\int \bar{y}_{EL}\,dA = \int_0^a \frac{b}{a^2}x^2\left[\frac{2b}{a^2}x^2dx\right] + \int_0^{2a} \frac{b}{2}\left(2-\frac{x}{a}\right)\left[b\left(2-\frac{x}{a}\right)dx\right]$$

$$= \frac{2b^2}{a^4}\left[\frac{x^5}{5}\right]_0^a + \frac{b^2}{2}\left[-\frac{a}{3}\left(2-\frac{x}{a}\right)^3\right]_a^{2a}$$

$$= \frac{17}{30}ab^2$$

Hence, $\bar{x}A = \int \bar{x}_{EL}\,dA$: $\bar{x}\left(\frac{7}{6}ab\right) = \frac{7}{6}a^2b$ $\bar{x} = a$ ◀

$\bar{y}A = \int \bar{y}_{EL}\,dA$: $\bar{y}\left(\frac{7}{6}ab\right) = \frac{17}{30}ab^2$ $\bar{y} = \frac{17}{35}b$ ◀

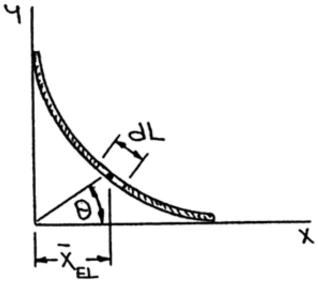


PROBLEM 5.45

A homogeneous wire is bent into the shape shown. Determine by direct integration the *x* coordinate of its centroid.

SOLUTION

First note that because the wire is homogeneous, its center of gravity coincides with the centroid of the corresponding line.



Now $\bar{x}_{EL} = a\cos^3\theta$ and $dL = \sqrt{dx^2 + dy^2}$

where $x = a\cos^3\theta: \quad dx = -3a\cos^2\theta\sin\theta d\theta$

$y = a\sin^3\theta: \quad dy = 3a\sin^2\theta\cos\theta d\theta$

Then
$$\begin{aligned} dL &= [(-3a\cos^2\theta\sin\theta d\theta)^2 + (3a\sin^2\theta\cos\theta d\theta)^2]^{1/2} \\ &= 3a\cos\theta\sin\theta(\cos^2\theta + \sin^2\theta)^{1/2} d\theta \\ &= 3a\cos\theta\sin\theta d\theta \end{aligned}$$

$$\begin{aligned} L &= \int dL = \int_0^{\pi/2} 3a\cos\theta\sin\theta d\theta = 3a\left[\frac{1}{2}\sin^2\theta\right]_0^{\pi/2} \\ &= \frac{3}{2}a \end{aligned}$$

and
$$\begin{aligned} \int \bar{x}_{EL}\, dL &= \int_0^{\pi/2} a\cos^3\theta(3a\cos\theta\sin\theta d\theta) \\ &= 3a^2\left[-\frac{1}{5}\cos^5\theta\right]_0^{\pi/2} = \frac{3}{5}a^2 \end{aligned}$$

Hence, $\bar{x}L = \int \bar{x}_{EL}\, dL: \quad \bar{x}\left(\frac{3}{2}a\right) = \frac{3}{5}a^2$ $\qquad \bar{x} = \frac{2}{5}a$ ◀

Alternative Solution:

$$x = a\cos^3\theta \Rightarrow \cos^2\theta = \left(\frac{x}{a}\right)^{2/3}$$

$$y = a\sin^3\theta \Rightarrow \sin^2\theta = \left(\frac{y}{a}\right)^{2/3}$$

PROBLEM 5.45 (Continued)

$$\left(\frac{x}{a}\right)^{2/3} + \left(\frac{y}{a}\right)^{2/3} = 1 \quad \text{or} \quad y = (a^{2/3} - x^{2/3})^{3/2}$$

$$\text{Then} \quad \frac{dy}{dx} = (a^{2/3} - x^{2/3})^{1/2}(-x^{-1/3})$$

$$\text{Now} \quad \overline{x}_{EL} = x$$

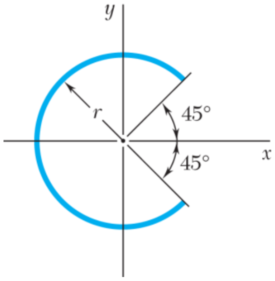
$$\text{and} \quad dL = \sqrt{1 + \left(\frac{dy}{dx}\right)^2}$$

$$dx = \left\{1 + \left[(a^{2/3} - x^{2/3})^{1/2}(-x^{-1/3})\right]^2\right\}^{1/2} dx$$

$$\text{Then} \quad L = \int dL = \int_0^a \frac{a^{1/3}}{x^{1/3}}\,dx = a^{1/3}\left[\frac{3}{2}x^{2/3}\right]_0^a = \frac{3}{2}a$$

$$\text{and} \quad \int \overline{x}_{EL}\,dL = \int_0^a x\left(\frac{a^{1/3}}{x^{1/3}}\,dx\right) = a^{1/3}\left[\frac{3}{5}x^{5/3}\right]_0^a = \frac{3}{5}a^2$$

Hence $\quad \overline{x}L = \int \overline{x}_{EL}\,dL: \quad \overline{x}\left(\frac{3}{2}a\right) = \frac{3}{5}a^2$ $\qquad \overline{x} = \frac{2}{5}a$ ◀



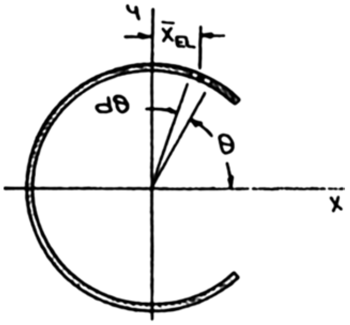
PROBLEM 5.46

A homogeneous wire is bent into the shape shown. Determine by direct integration the *x* coordinate of its centroid.

SOLUTION

First note that because the wire is homogeneous, its center of gravity coincides with the centroid of the corresponding line.

Now $\bar{x}_{EL} = r\cos\theta$ and $dL = r\,d\theta$



Then $L = \int dL = \int_{\pi/4}^{7\pi/4} r\,d\theta = r[\theta]_{\pi/4}^{7\pi/4} = \frac{3}{2}\pi r$

and $\int \bar{x}_{EL}\,dL = \int_{\pi/4}^{7\pi/4} r\cos\theta(r\,d\theta)$

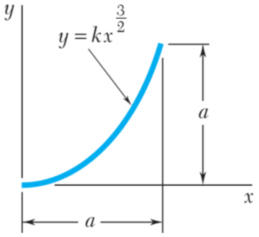
$$= r^2[\sin\theta]_{\pi/4}^{7\pi/4}$$

$$= r^2\left(-\frac{1}{\sqrt{2}} - \frac{1}{\sqrt{2}}\right)$$

$$= -r^2\sqrt{2}$$

Thus $\bar{x}L = \int \bar{x}\,dL: \quad \bar{x}\left(\frac{3}{2}\pi r\right) = -r^2\sqrt{2}$

$\bar{x} = -\frac{2\sqrt{2}}{3\pi}r$ ◀

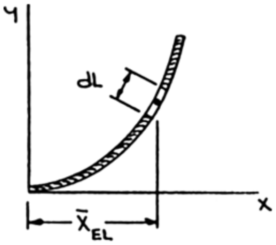


PROBLEM 5.47*

A homogeneous wire is bent into the shape shown. Determine by direct integration the *x* coordinate of its centroid. Express your answer in terms of *a*.

SOLUTION

First note that because the wire is homogeneous, its center of gravity will coincide with the centroid of the corresponding line.



We have at $x = a$, $y = a$, $a = ka^{3/2}$, or $k = \dfrac{1}{\sqrt{a}}$

Then $y = \dfrac{1}{\sqrt{a}}x^{3/2}$

and $\dfrac{dy}{dx} = \dfrac{3}{2\sqrt{a}}x^{1/2}$

Now $\bar{x}_{EL} = x$

and
$$dL = \sqrt{1+\left(\frac{dy}{dx}\right)^2}\,dx$$
$$= \left[1+\left(\frac{3}{2\sqrt{a}}x^{1/2}\right)^2\right]^{1/2} dx$$
$$= \frac{1}{2\sqrt{a}}\sqrt{4a+9x}\,dx$$

Then
$$L = \int dL = \int_0^a \frac{1}{2\sqrt{a}}\sqrt{4a+9x}\,dx$$
$$= \frac{1}{2\sqrt{a}}\left[\frac{2}{3}\times\frac{1}{9}(4a+9x)^{3/2}\right]_0^a$$
$$= \frac{a}{27}[(13)^{3/2}-8]$$
$$= 1.43971a$$

and
$$\int \bar{x}_{EL}\,dL = \int_0^a x\left[\frac{1}{2\sqrt{a}}\sqrt{4a+9x}\,dx\right]$$

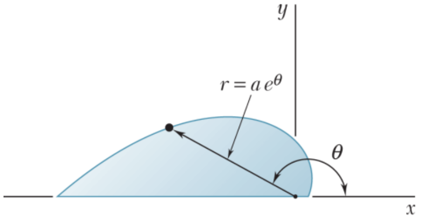
Use integration by parts with

$$u = x \qquad dv = \sqrt{4a+9x}\,dx$$
$$du = dx \qquad v = \frac{2}{27}(4a+9x)^{3/2}$$

Then $\displaystyle\int \overline{x}_{EL}\,dL = \frac{1}{2\sqrt{a}}\left\{\left[x\times\frac{2}{27}(4a+9x)^{3/2}\right]_0^a - \int_0^a \frac{2}{27}(4a+9x)^{3/2}\,dx\right\}$

$$= \frac{(13)^{3/2}}{27}a^2 - \frac{1}{27\sqrt{a}}\left[\frac{2}{45}(4a+9x)^{5/2}\right]_0^a$$
$$= \frac{a^2}{27}\left\{(13)^{3/2} - \frac{2}{45}[(13)^{5/2}-32]\right\}$$
$$= 0.78566a^2$$

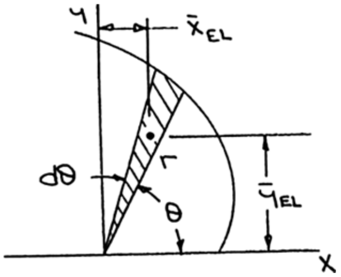
$\overline{x}L = \int x_{EL}\,dL$: $\quad \overline{x}(1.43971a) = 0.78566a^2$ or $\overline{x} = 0.546a$ ◀



PROBLEM 5.48*

Determine by direct integration the centroid of the area shown.

SOLUTION



We have $\bar{x}_{EL} = \frac{2}{3}r\cos\theta = \frac{2}{3}ae^{\theta}\cos\theta$

$$\bar{y}_{EL} = \frac{2}{3}r\sin\theta = \frac{2}{3}ae^{\theta}\sin\theta$$

and $dA = \frac{1}{2}(r)(rd\theta) = \frac{1}{2}a^2e^{2\theta}d\theta$

Then $A = \int dA = \int_0^{\pi}\frac{1}{2}a^2e^{2\theta}d\theta = \frac{1}{2}a^2\left[\frac{1}{2}e^{2\theta}\right]_0^{\pi}$

$$= \frac{1}{4}a^2(e^{2\pi} - 1)$$

$$= 133.623a^2$$

and $\int \bar{x}_{EL}dA = \int_0^{\pi}\frac{2}{3}ae^{\theta}\cos\theta\left(\frac{1}{2}a^2e^{2\theta}d\theta\right)$

$$= \frac{1}{3}a^3\int_0^{\pi}e^{3\theta}\cos\theta d\theta$$

To proceed, use integration by parts, with

$u = e^{3\theta}$ and $du = 3e^{3\theta}d\theta$

$dv = \cos\theta\, d\theta$ and $v = \sin\theta$

Then $\int e^{3\theta}\cos\theta d\theta = e^{3\theta}\sin\theta - \int \sin\theta(3e^{3\theta}d\theta)$

Now let $u = e^{3\theta}$ then $du = 3e^{3\theta}d\theta$

$dv = \sin\theta d\theta$, then $v = -\cos\theta$

Then $\int e^{3\theta}\cos\theta d\theta = e^{3\theta}\sin\theta - 3\left[-e^{3\theta}\cos\theta - \int(-\cos\theta)(3e^{3\theta}d\theta)\right]$

PROBLEM 5.48* (Continued)

so that $$\int e^{3\theta}\cos\theta d\theta = \frac{e^{3\theta}}{10}(\sin\theta + 3\cos\theta)$$

$$\int x_{EL} dA = \frac{1}{3}a^3\left[\frac{e^{3\theta}}{10}(\sin\theta + 3\cos\theta)\right]_0^{\pi}$$

$$= \frac{a^3}{30}(-3e^{3\pi} - 3) = -1239.26a^3$$

Also, $$\int \overline{y}_{EL} dA = \int_0^{\pi}\frac{2}{3}ae^{\theta}\sin\theta\left(\frac{1}{2}a^2e^{2\theta}d\theta\right)$$

$$= \frac{1}{3}a^3\int_0^{\pi}e^{3\theta}\sin\theta d\theta$$

Use integration by parts, as above, with

$$u = e^{3\theta} \quad \text{and} \quad du = 3e^{3\theta}d\theta$$

$$dv = \int\sin\theta d\theta \quad \text{and} \quad v = -\cos\theta$$

Then $$\int e^{3\theta}\sin\theta d\theta = -e^{3\theta}\cos\theta - \int(-\cos\theta)(3e^{3\theta}d\theta)$$

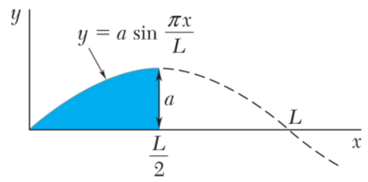
so that $$\int e^{3\theta}\sin\theta d\theta = \frac{e^{3\theta}}{10}(-\cos\theta + 3\sin\theta)$$

$$\int \overline{y}_{EL} dA = \frac{1}{3}a^3\left[\frac{e^{3\theta}}{10}(-\cos\theta + 3\sin\theta)\right]_0^{\pi}$$

$$= \frac{a^3}{30}(e^{3\pi} + 1) = 413.09a^3$$

Hence, $\overline{x}A = \int x_{EL} dA$: $\overline{x}(133.623a^2) = -1239.26a^3$ or $\overline{x} = -9.27a$ ◀

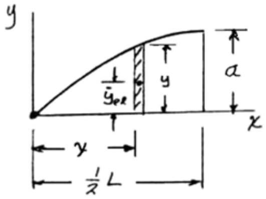
$\overline{y}A = \int \overline{y}_{EL} dA$: $\overline{y}(133.623a^2) = 413.09a^3$ or $\overline{y} = 3.09a$ ◀



PROBLEM 5.49*

Determine by direct integration the centroid of the area shown.

SOLUTION



$$y = a\sin\frac{\pi x}{L}$$

$$\bar{x}_{EL} = x, \quad \bar{y}_{EL} = \frac{1}{2}y, \quad dA = y\,dx$$

$$A = \int_0^{L/2} y\,dx = a\int_0^{L/2} \sin\frac{\pi x}{L}dx$$

$$A = a\left[\frac{L}{\pi}\left(-\cos\frac{\pi x}{L}\right)\right]_0^{L/2} = \frac{aL}{\pi}$$

$$\int \bar{x}_{EL}\,dA = \int_0^{L/2} xydx = \int_0^{L/2} xa\sin\frac{\pi x}{L}dx$$

Setting $u = \frac{\pi x}{L}$, we have $x = \frac{L}{\pi}u$, $dx = \frac{L}{\pi}du$,

$$\int \bar{x}_{EL}\,dA = \int_0^{\pi/2}\left(\frac{L}{\pi}u\right)a\sin u\left(\frac{L}{\pi}du\right) = a\left(\frac{L}{\pi}\right)^2\int_0^{\pi/2} u\sin x\,du$$

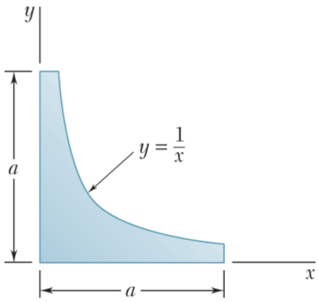
Integrating by parts, $\int \bar{x}_{EL}\,dA = a\left(\frac{L}{\pi}\right)^2\left\{[-u\cos u]_0^{\pi/2} + \int_0^{\pi/2}\cos u\,du\right\} = \frac{aL^2}{\pi^2}$

$$\int \bar{y}_{EL}\,dA = \int_0^{L/2}\frac{1}{2}y^2dx = \frac{1}{2}a^2\int_0^{L/2}\sin^2\frac{\pi x}{L}dx = \frac{a^2L}{2\pi}\int_0^{\pi/2}\sin^2 u\,du$$

$$= \frac{a^2L}{2\pi^2}\int_0^{\pi/2}\frac{1}{2}(1-\cos 2u)du = \frac{a^2L}{4\pi}\left[u - \frac{1}{2}\sin 2u\right]_0^{\pi/2} = \frac{1}{8}a^2L$$

$\bar{x}A = \int \bar{x}_{EL}\,dA$: $\quad \bar{x}\left(\frac{aL}{\pi}\right) = \frac{aL^2}{\pi^2}$ $\qquad \bar{x} = \frac{L}{\pi}$ ◀

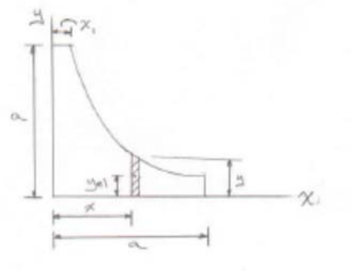
$\bar{y}A = \int \bar{y}_{EL}\,dA$: $\quad \bar{y}\left(\frac{aL}{\pi}\right) = \frac{1}{8}a^2L$ $\qquad \bar{y} = \frac{\pi}{8}a$ ◀



PROBLEM 5.50

Determine the centroid of the area shown in terms of *a*.

SOLUTION



We have $\bar{x}_{EL} = x$

$$\bar{y}_{EL} = \frac{1}{2}y = \frac{1}{2}\left(1 - \frac{1}{x}\right)$$

and $dA = y\,dx = \left(1 - \frac{1}{x}\right)dx$

Then $A = \int dA = \int_0^{\frac{1}{a}} a\,dx + \int_{\frac{1}{a}}^{a} \frac{dx}{x} = \left(ax\right)\Big|_0^{1/a} + \left(\ln x\right)\Big|_{1/a}^{a} = (1 + 2\ln a)$

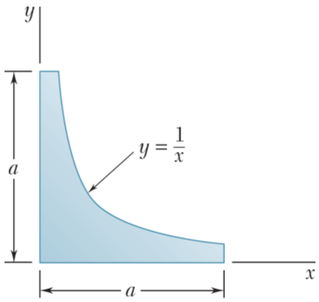
and $\int \bar{x}_{EL}\,dA = \int_0^{\frac{1}{a}} x\,dx + \int_{\frac{1}{a}}^{a} x\frac{dx}{x} = \left[\frac{ax^2}{2}\right]_0^{\frac{1}{a}} + \left[x\right]_{\frac{1}{a}}^{a} = \frac{1}{2a} + a - \frac{1}{a} = \frac{2a^2 - 1}{2a}$

$$\int \bar{y}_{EL}\,dA = \int_0^a \frac{1}{2}y^2\,dx = \frac{1}{2}\int_0^{\frac{1}{a}} a^2\,dx + \int_{\frac{1}{a}}^{a} \frac{dx}{2x^2} = \frac{a^2}{2}\left[x\right]_0^{1/a} - \frac{1}{2}\left(\frac{1}{x}\right)_{1/a}^{a} = \frac{a}{2} - \frac{1}{2a} + \frac{a}{2} = \frac{2a^2 - 1}{2a}$$

Because of symmetry, computation of only one coordinate was necessary.

$\bar{x}A = \int \bar{x}_{EL}\,dA$: $\bar{x}\left(1 + 2\ln a\right) = \frac{2a^2 - 1}{2a}$

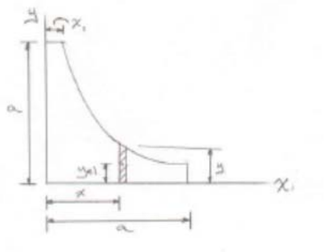
$$\bar{x} = \bar{y} = \frac{2a^2 - 1}{2a\left(1 + 2\ln a\right)} \blacktriangleleft$$



PROBLEM 5.51

Determine the centroid of the area shown when *a* = 4 in.

SOLUTION



We have $\bar{x}_{EL} = x$

$$\bar{y}_{EL} = \frac{1}{2}y = \frac{1}{2}\left(1 - \frac{1}{x}\right)$$

and $dA = y\,dx = \left(1 - \frac{1}{x}\right)dx$

Then $A = \int dA = \int_0^{\frac{1}{a}} a\,dx + \int_{\frac{1}{a}}^{a} \frac{dx}{x} = (ax)\Big|_0^{1/a} + (\ln x)\Big|_{1/a}^{a} = (1 + 2\ln a)$

and $\int \bar{x}_{EL}\,dA = \int_0^{\frac{1}{a}} x\,dx + \int_{\frac{1}{a}}^{a} x\frac{dx}{x} = \left[\frac{ax^2}{2}\right]_0^{\frac{1}{a}} + [x]_{\frac{1}{a}}^{a} = \frac{1}{2a} + a - \frac{1}{a} = \frac{2a^2 - 1}{2a}$

$$\int \bar{y}_{EL}\,dA = \int_0^a \frac{1}{2}y^2\,dx = \frac{1}{2}\int_0^{\frac{1}{a}} a^2\,dx + \int_{\frac{1}{a}}^{a} \frac{dx}{2x^2} = \frac{a^2}{2}[x]_0^{1/a} - \frac{1}{2}\left(\frac{1}{x}\right)_{1/a}^{a} = \frac{a}{2} - \frac{1}{2a} + \frac{a}{2} = \frac{2a^2 - 1}{2a}$$

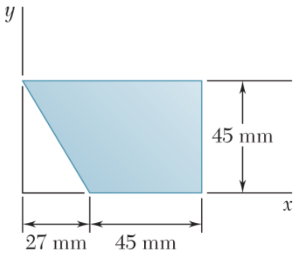
Because of symmetry, computation of only one coordinate was necessary.

$$\bar{x}A = \int \bar{x}_{EL}\,dA: \quad \bar{x}(1 + 2\ln a) = \frac{2a^2 - 1}{2a}$$

$$\bar{x} = \bar{y} = \frac{2a^2 - 1}{2a(1 + 2\ln a)}$$

Find $\bar{x}$ and $\bar{y}$ when $a = 4$ in.

We have $\bar{x} = \bar{y} = \frac{2(4)^2 - 1}{2(4)(1 + 2\ln 4)}$ or $\bar{x} = \bar{y} = 1.027$ in. ◀



PROBLEM 5.52

Determine the volume and the surface area of the solid obtained by rotating the area of Prob. 5.1 about (*a*) the *x* axis, (*b*) the line $x = 72$ mm.

SOLUTION

From the solution of Problem 5.1, we have

$$A = 2632.5 \text{ mm}^2$$
$$\Sigma \bar{x}A = 111{,}172.5 \text{ mm}^3$$
$$\Sigma \bar{y}A = 63{,}787.5 \text{ mm}^3$$

Applying the theorems of Pappus-Guldinus, we have

(*a*) Rotation about the *x*-axis:

$$\text{Volume} = 2\pi \bar{y}_{\text{area}} A = 2\pi \Sigma \bar{y}A$$
$$= 2\pi(63{,}787.5 \text{ mm}^3) \qquad \text{or Volume} = 401\times 10^3 \text{ mm}^3 \blacktriangleleft$$

$$\text{Area} = 2\pi\, \bar{y}_{\text{line}} L = 2\pi\, \Sigma(\bar{y}_{\text{line}})L$$
$$= 2\pi(\bar{y}_2 L_2 + \bar{y}_3 L_3 + \bar{y}_4 L_4)$$
$$= 2\pi[(22.5)(45) + (45)(72) + (22.5)\sqrt{27^2 + 45^2}\,]$$

$$\text{or Area} = 34.1\times 10^3 \text{ mm}^2 \blacktriangleleft$$

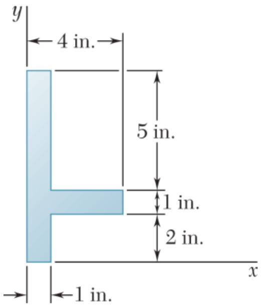
(*b*) Rotation about the line $x=72$ mm:

$$\text{Volume} = 2\pi(72 - \bar{x}_{\text{area}})A = 2\pi(72A - \Sigma\bar{x}A)$$
$$= 2\pi\left[(72 \text{ mm})(2632.5 \text{ mm}^2) - (111{,}172.5 \text{ mm}^3)\right] \qquad \text{or Volume} = 492\times 10^3 \text{ mm}^3 \blacktriangleleft$$

$\text{Area} = 2\pi\, \bar{x}_{\text{line}} L = 2\pi\, \Sigma(\bar{x}_{\text{line}})L$ where $\bar{x}_1$, $\bar{x}_3$ and $\bar{x}_4$ are measured wrt $x = 72$ mm

$$= 2\pi(\bar{x}_1 L_1 + \bar{x}_3 L_3 + \bar{x}_4 L_4)$$
$$= 2\pi[(22.5)(45) + (36)(72) + \left(\frac{45+72}{2}\right)\left(\sqrt{27^2 + 45^2}\right)]$$

$$\text{or Area} = 41.9\times 10^3 \text{ mm}^2 \blacktriangleleft$$



PROBLEM 5.53

Determine the volume and the surface area of the solid obtained by rotating the area of Problem 5.2 about (*a*) the *x*-axis, (*b*) the *y*-axis.

SOLUTION

From the solution of Problem 5.2, we have

$$A = 11\text{ in}^2$$
$$\Sigma \bar{x}A = 11.5\text{ in}^3$$
$$\Sigma \bar{y}A = 39.5\text{ in}^3$$

Applying the theorems of Pappus-Guldinus, we have

(*a*) Rotation about the *x*-axis:

$$\text{Volume} = 2\pi \bar{y}_{\text{area}} A = 2\pi \Sigma \bar{y}A$$
$$= 2\pi(39.5\text{ in}^3)$$

or $\text{Volume} = 248\text{ in}^3$ ◀

$$\text{Area} = 2\pi\,\bar{y}_{\text{line}}L = 2\pi\,\Sigma(\bar{y}_{\text{line}})L$$
$$= 2\pi(\bar{y}_2L_2 + \bar{y}_3L_3 + \bar{y}_4L_4 + \bar{y}_5L_5 + \bar{y}_6L_6 + \bar{y}_7L_7 + \bar{y}_8L_8)$$
$$= 2\pi[(1)(2) + (2)(3) + (2.5)(1) + (3)(3) + (5.5)(5) + (8)(1) + (4)(8)]$$

or $\text{Area} = 547\text{ in}^2$ ◀

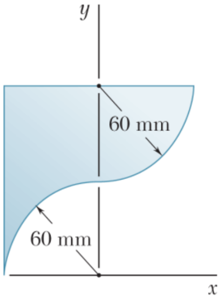
(*b*) Rotation about the *y*-axis:

$$\text{Volume} = 2\pi \bar{x}_{\text{area}} A = 2\pi \Sigma \bar{x}A$$
$$= 2\pi(11.5\text{ in}^3)$$

or $\text{Volume} = 72.3\text{ in}^3$ ◀

$$\text{Area} = 2\pi\,\bar{x}_{\text{line}}L = 2\pi\,\Sigma(\bar{x}_{\text{line}})L$$
$$= 2\pi(\bar{x}_1L_1 + \bar{x}_2L_2 + \bar{x}_3L_3 + \bar{x}_4L_4 + \bar{x}_5L_5 + \bar{x}_6L_6 + \bar{x}_7L_7)$$
$$= 2\pi[(0.5)(1) + (1)(2) + (2.5)(3) + (4)(1) + (2.5)(3) + (1)(5) + (0.5)(1)]$$

or $\text{Area} = 169.6\text{ in}^2$ ◀



PROBLEM 5.54

Determine the volume and the surface area of the solid obtained by rotating the area of Problem 5.6 about (*a*) the line $x = -60$ mm, (*b*) the line $y = 120$ mm.

SOLUTION

From the solution of Problem 5.6, we have

$$A = 7200 \text{ mm}^2$$
$$\Sigma \bar{x} A = -72 \times 10^3 \text{ mm}^3$$
$$\Sigma \bar{y} A = 629.83 \times 10^3 \text{ mm}^3$$

Applying the theorems of Pappus-Guldinus, we have

(*a*) Rotation about line $x = -60$ mm:

$$\text{Volume} = 2\pi(\bar{x} + 60)A = 2\pi(\Sigma \bar{x} A + 60A)$$
$$= 2\pi[-72 \times 10^3 + 60(7200)]$$

$\text{Volume} = 2.26 \times 10^6 \text{ mm}^3$ ◀

$$\text{Area} = 2\pi \bar{x}_{\text{line}} L = 2\pi \Sigma(\bar{x}_{\text{line}})L$$
$$= 2\pi(\bar{x}_1 L_1 + \bar{x}_2 L_2 + \bar{x}_3 L_3)$$
$$= 2\pi\left[\left(60 - \frac{2(60)}{\pi}\right)\left(\frac{\pi(60)}{2}\right) + \left(60 + \frac{2(60)}{\pi}\right)\left(\frac{\pi(60)}{2}\right) + (60)(120)\right]$$

where $\bar{x}_1, \bar{x}_2, \bar{x}_3$ are measured with respect to line $x = -60$ mm.

$\text{Area} = 116.3 \times 10^3 \text{ mm}^2$ ◀

(*b*) Rotation about line $y = 120$ mm:

$$\text{Volume} = 2\pi(120 - \bar{y})A = 2\pi(120A - \Sigma \bar{y} A)$$
$$= 2\pi[120(7200) - 629.83 \times 10^3]$$

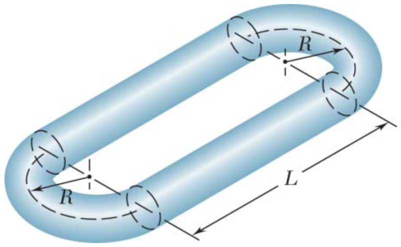
$\text{Volume} = 1.471 \times 10^6 \text{ mm}^3$ ◀

$$\text{Area} = 2\pi \bar{y}_{\text{line}} L = 2\pi \Sigma(\bar{y}_{\text{line}})L$$
$$= 2\pi(\bar{y}_1 L_1 + \bar{y}_2 L_2 + \bar{y}_4 L_4)$$

where $\bar{y}_1, \bar{y}_2, \bar{y}_4$ are measured with respect to line $y = 120$ mm.

$$\text{Area} = 2\pi\left[\left(120 - \frac{2(60)}{\pi}\right)\left(\frac{\pi(60)}{2}\right) + \left(\frac{2(60)}{\pi}\right)\left(\frac{\pi(60)}{2}\right) + (60)(120)\right]$$

$\text{Area} = 116.3 \times 10^3 \text{ mm}^2$ ◀



PROBLEM 5.55

Determine the volume and the surface area of the chain link shown, which is made from a 6-mm-diameter bar, if $R = 10$ mm and $L = 30$ mm.

SOLUTION

The area A and circumference C of the cross section of the bar are

$$A = \frac{\pi}{4}d^2 \quad \text{and} \quad C = \pi d.$$

Also, the semicircular ends of the link can be obtained by rotating the cross section through a horizontal semicircular arc of radius R. Now, applying the theorems of Pappus-Guldinus, we have for the volume V,

$$\begin{aligned} V &= 2(V_{\text{side}}) + 2(V_{\text{end}}) \\ &= 2(AL) + 2(\pi RA) \\ &= 2(L + \pi R)A \end{aligned}$$

or $$V = 2[30 \text{ mm} + \pi(10 \text{ mm})]\left[\frac{\pi}{4}(6 \text{ mm})^2\right]$$

$$= 3470 \text{ mm}^3$$

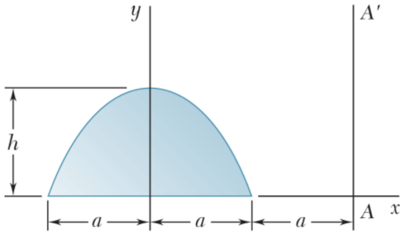
or $V = 3470 \text{ mm}^3$ ◀

For the area A, $$\begin{aligned} A &= 2(A_{\text{side}}) + 2(A_{\text{end}}) \\ &= 2(CL) + 2(\pi RC) \\ &= 2(L + \pi R)C \end{aligned}$$

or $$A = 2[30 \text{ mm} + \pi(10 \text{ mm})][\pi(6 \text{ mm})]$$

$$= 2320 \text{ mm}^2$$

or $A = 2320 \text{ mm}^2$ ◀



PROBLEM 5.56

Determine the volume of the solid generated by rotating the parabolic area shown about (*a*) the *x*-axis, (*b*) the axis *AA*′.

SOLUTION

First, from Figure 5.8a, we have $A = \frac{4}{3}ah$

$$\bar{y} = \frac{2}{5}h$$

Applying the second theorem of Pappus-Guldinus, we have

(*a*) Rotation about the *x*-axis:

$$\text{Volume} = 2\pi\bar{y}A$$

$$= 2\pi\left(\frac{2}{5}h\right)\left(\frac{4}{3}ah\right)$$

or $\text{Volume} = \frac{16}{15}\pi ah^2$ ◀

(*b*) Rotation about the line *AA*′:

$$\text{Volume} = 2\pi(2a)A$$

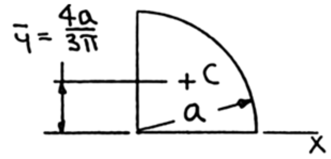
$$= 2\pi(2a)\left(\frac{4}{3}ah\right)$$

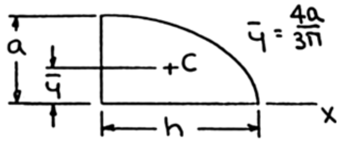
or $\text{Volume} = \frac{16}{3}\pi a^2 h$ ◀

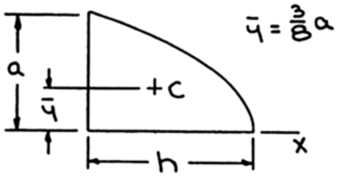
PROBLEM 5.57

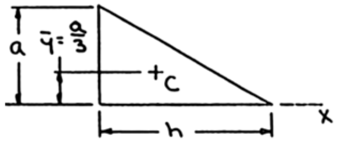
Verify that the expressions for the volumes of the first four shapes in Fig. 5.21 are correct.

SOLUTION









Following the second theorem of Pappus-Guldinus, in each case, a specific generating area *A* will be rotated about the *x*-axis to produce the given shape. Values of $\overline{y}$ are from Figure 5.8a.

(1) Hemisphere: the generating area is a quarter circle.

We have $$V = 2\pi \overline{y} A = 2\pi\left(\frac{4a}{3\pi}\right)\left(\frac{\pi}{4}a^2\right) \quad \text{or} \quad V = \frac{2}{3}\pi a^3 \blacktriangleleft$$

(2) Semiellipsoid of revolution: the generating area is a quarter ellipse.

We have $$V = 2\pi \overline{y} A = 2\pi\left(\frac{4a}{3\pi}\right)\left(\frac{\pi}{4}ha\right) \quad \text{or} \quad V = \frac{2}{3}\pi a^2 h \blacktriangleleft$$

(3) Paraboloid of revolution: the generating area is a quarter parabola.

We have $$V = 2\pi \overline{y} A = 2\pi\left(\frac{3}{8}a\right)\left(\frac{2}{3}ah\right) \quad \text{or} \quad V = \frac{1}{2}\pi a^2 h \blacktriangleleft$$

(4) Cone: the generating area is a triangle.

We have $$V = 2\pi \overline{y} A = 2\pi\left(\frac{a}{3}\right)\left(\frac{1}{2}ha\right) \quad \text{or} \quad V = \frac{1}{3}\pi a^2 h \blacktriangleleft$$

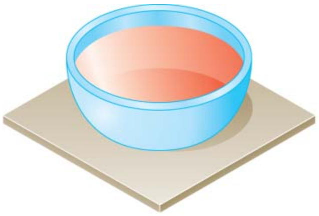
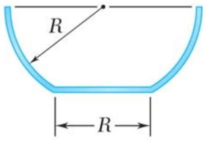
or $$A_C = 7.01\text{ in}^2 \blacktriangleleft$$





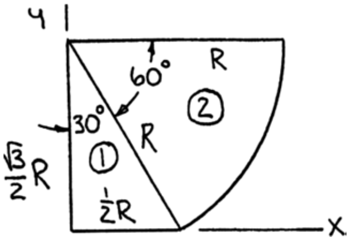
PROBLEM 5.60

Determine the capacity, in liters, of the punch bowl shown if $R = 250$ mm.

SOLUTION

The volume can be generated by rotating the triangle and circular sector shown about the *y*-axis. Applying the second theorem of Pappus-Guldinus and using Figure 5.8a, we have

$$
\begin{aligned}
V &= 2\pi \bar{x} A = 2\pi \Sigma \bar{x} A \\
&= 2\pi(\bar{x}_1 A_1 + \bar{x}_2 A_2) \\
&= 2\pi\left[\left(\frac{1}{3}\times\frac{1}{2}R\right)\left(\frac{1}{2}\times\frac{1}{2}R\times\frac{\sqrt{3}}{2}R\right)+\left(\frac{2R\sin 30^\circ}{3\times\frac{\pi}{6}}\right)\left(\frac{\pi}{6}R^2\right)\right] \\
&= 2\pi\left(\frac{R^3}{16\sqrt{3}}+\frac{R^3}{2\sqrt{3}}\right) \\
&= \frac{3\sqrt{3}}{8}\pi R^3 \\
&= \frac{3\sqrt{3}}{8}\pi(0.25\text{ m})^3 \\
&= 0.031883\text{ m}^3
\end{aligned}
$$



Since $10^3\text{ l} = 1\text{ m}^3$

$$V = 0.031883\text{ m}^3 \times \frac{10^3\text{ l}}{1\text{ m}^3}$$

$V = 31.9$ liters ◀

22mm
26mm
26mm
D
C_3
E
C_1
C_2
60mm
B

Considering each line BD, DE, and BE separately:

Line BD: $L_1 = \sqrt{22^2 + 60^2} = 63.906$ mm $\qquad \overline{x}_1 = 20 + \frac{22}{2} = 31$ mm

Line DE: $L_2 = 52$ mm $\qquad \overline{x}_2 = 20 + 22 + 26 = 68$ mm

Line BE: $L_3 = \sqrt{74^2 + 60^2} = 95.268$ mm $\qquad \overline{x}_1 = 20 + \frac{74}{2} = 57$ mm

PROBLEM 5.61 (Continued)

Then applying the theorems of Pappus-Guldinus for the part of the surface area generated by the lines:

$$A_L = \pi\Sigma\bar{x}A = \pi\left[(31)(63.906) + (68)(52) + (57)(95.268)\right] = \pi[10947.6] = 34.392 \times 10^3 \text{mm}^2$$

The area of the "end triangles":

$$A_E = 2\left[\frac{1}{2}(52)(60)\right] = 3.12 \times 10^3 \text{ mm}^2$$

Total surface area is therefore:

$$A = A_L + A_E = (34.392 + 3.12) \times 10^3 \text{ mm}^2$$

or $A = 37.5 \times 10^3 \text{ mm}^2$ ◀

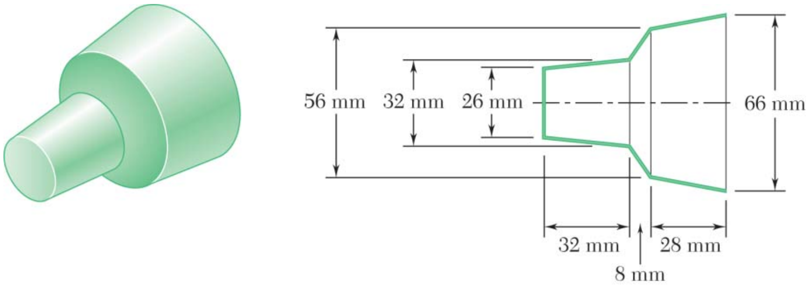
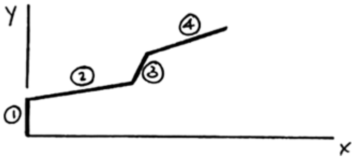
PROBLEM 5.64

The aluminum shade for the small high-intensity lamp shown has a uniform thickness of 1 mm. Knowing that the density of aluminum is 2800 kg/m^3, determine the mass of the shade.



SOLUTION



The mass of the lamp shade is given by

$$m = \rho V = \rho A t$$

where A is the surface area and t is the thickness of the shade. The area can be generated by rotating the line shown about the x-axis. Applying the first theorem of Pappus Guldinus, we have

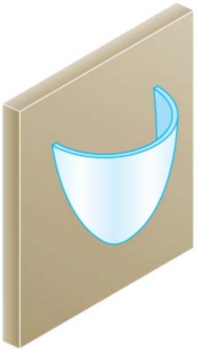
$$\begin{aligned} A &= 2\pi \bar{y} L = 2\pi \Sigma \bar{y} L \\ &= 2\pi(\bar{y}_1 L_1 + \bar{y}_2 L_2 + \bar{y}_3 L_3 + \bar{y}_4 L_4) \end{aligned}$$

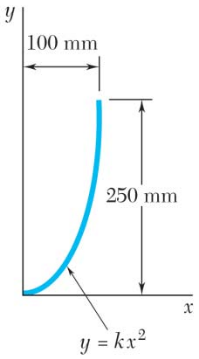
or
$$\begin{aligned} A = 2\pi\Bigg[&\frac{13 \text{ mm}}{2}(13 \text{ mm}) + \left(\frac{13+16}{2}\right)\text{mm} \times \sqrt{(32 \text{ mm})^2 + (3 \text{ mm})^2} \\ &+ \left(\frac{16+28}{2}\right)\text{mm} \times \sqrt{(8 \text{ mm})^2 + (12 \text{ mm})^2} \\ &+ \left(\frac{28+33}{2}\right)\text{mm} \times \sqrt{(28 \text{ mm})^2 + (5 \text{ mm})^2}\Bigg] \\ &= 2\pi(84.5 + 466.03 + 317.29 + 867.51) \\ &= 10{,}903.4 \text{ mm}^2 \end{aligned}$$

Then $m = \rho A t$ or

$$= (2800 \text{ kg/m}^3)(10.9034 \times 10^{-3} \text{ m}^2)(0.001 \text{ m})$$

$m = 0.0305$ kg ◀





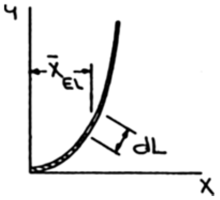
PROBLEM 5.65*

The shade for a wall-mounted light is formed from a thin sheet of translucent plastic. Determine the surface area of the outside of the shade, knowing that it has the parabolic cross section shown.

SOLUTION

First note that the required surface area A can be generated by rotating the parabolic cross section through π radians about the y-axis. Applying the first theorem of Pappus-Guldinus, we have

$$A = \pi \bar{x} L$$



Now at $x = 100\text{ mm}, \quad y = 250\text{ mm}$

$$250 = k(100)^2 \quad \text{or} \quad k = 0.025\text{ mm}^{-1}$$

and $x_{EL} = x$

$$dL = \sqrt{1 + \left(\frac{dy}{dx}\right)^2}\, dx$$

where $\dfrac{dy}{dx} = 2kx$

Then $dL = \sqrt{1 + 4k^2x^2}\, dx$

We have $\quad \bar{x}L = \int x_{EL}\, dL = \int_0^{100} x\left(\sqrt{1 + 4k^2x^2}\, dx\right)$

$$\bar{x}L = \left[\frac{1}{3}\frac{1}{4k^2}(1 + 4k^2x^2)^{3/2}\right]_0^{100}$$

$$= \frac{1}{12}\frac{1}{(0.025)^2}\left\{[1 + 4(0.025)^2(100)^2]^{3/2} - (1)^{3/2}\right\}$$

$$= 17{,}543.3\text{ mm}^2$$

Finally, $\quad A = \pi(17{,}543.3\text{ mm}^2) \qquad$ or $\quad A = 55.1 \times 10^3\text{ mm}^2$ ◀

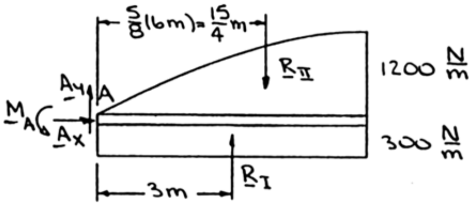
PROBLEM 5.73

Determine the reactions at the beam supports for the given loading.

SOLUTION

First replace the given loading with the loading shown below. The two loadings are equivalent because both are defined by a parabolic relation between load and distance and the values at the end points are the same.



$\frac{5}{8}(6\text{m}) = \frac{15}{4}\text{m}$
R_{II}
1200 N/m
A_y
A
M_A
A_x
300 N/m
3m
R_I

We have $R_\text{I} = (6\text{ m})(300\text{ N/m}) = 1800\text{ N}$

$$R_\text{II} = \frac{2}{3}(6\text{ m})(1200\text{ N/m}) = 4800\text{ N}$$

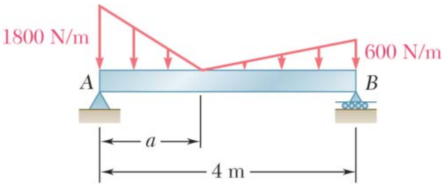
Then $\xrightarrow{+} \Sigma F_x = 0\text{:} \quad A_x = 0$

$$+\!\uparrow \Sigma F_y = 0\text{:} \quad A_y + 1800\text{ N} - 4800\text{ N} = 0$$

or $A_y = 3000\text{ N}$ **A** $= 3.00\text{ kN}\uparrow$ ◀

$$\overset{+}{\circlearrowleft} \Sigma M_A = 0\text{:} \quad M_A + (3\text{ m})(1800\text{ N}) - \left(\frac{15}{4}\text{ m}\right)(4800\text{ N}) = 0$$

or $M_A = 12.6\text{ kN}\cdot\text{m}$ $\mathbf{M}_A = 12.60\text{ kN}\cdot\text{m}\ \circlearrowleft$ ◀

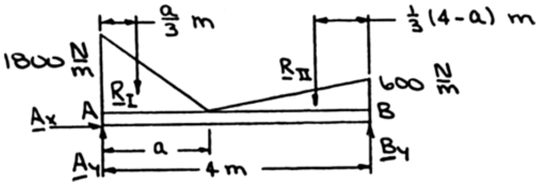


PROBLEM 5.74

Determine (*a*) the distance *a* so that the vertical reactions at supports *A* and *B* are equal, (*b*) the corresponding reactions at the supports.

SOLUTION

(*a*)



We have $R_{\text{I}} = \frac{1}{2}(a \text{ m})(1800 \text{ N/m}) = 900a \text{ N}$

$R_{\text{II}} = \frac{1}{2}[(4-a) \text{ m}](600 \text{ N/m}) = 300(4-a) \text{ N}$

Then $\Sigma F_y = 0\text{:} \quad A_y - 900a \overset{+\uparrow}{} - 300(4-a) + B_y = 0$

or $A_y + B_y = 1200 + 600a$

Now $A_y = B_y \Rightarrow A_y = B_y = 600 + 300a \text{ (N)} \qquad (1)$

Also, $+\circlearrowleft \Sigma M_B = 0\text{:} \quad -(4 \text{ m})A_y + \left[\left(4 - \frac{a}{3}\right) \text{m}\right][(900a) \text{ N}]$

$+\left[\frac{1}{3}(4-a) \text{ m}\right][300(4-a) \text{ N}] = 0$

or $A_y = 400 + 700a - 50a^2 \quad (2)$

Equating Eqs. (1) and (2), $600 + 300a = 400 + 700a - 50a^2$

or $a^2 - 8a + 4 = 0$

Then $a = \dfrac{8 \pm \sqrt{(-8)^2 - 4(1)(4)}}{2}$

or $a = 0.53590 \text{ m} \qquad a = 7.4641 \text{ m} \qquad$ Now $a \le 4 \text{ m} \Rightarrow \qquad a = 0.536 \text{ m}$ ◀

PROBLEM 5.74 (Continued)

(*b*) We have $\xrightarrow{+} \Sigma F_x = 0\text{:} \quad A_x = 0$

From Eq. (1):
$$\begin{aligned} A_y &= B_y \\ &= 600 + 300(0.53590) \\ &= 761\ \text{N} \end{aligned}$$

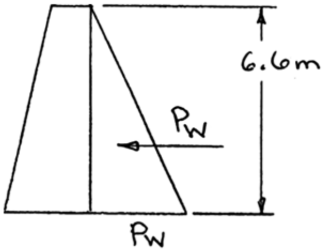
PROBLEM 5.82

The dam for a lake is designed to withstand the additional force caused by silt that has settled on the lake bottom. Assuming that silt is equivalent to a liquid of density $\rho_s = 1.76 \times 10^3\ \text{kg/m}^3$ and considering a 1-m-wide section of dam, determine the percentage increase in the force acting on the dam face for a silt accumulation of depth 2 m.

SOLUTION

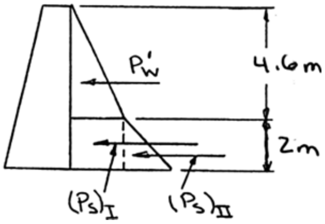
First, determine the force on the dam face without the silt.

We have
$$P_w = \frac{1}{2}Ap_w = \frac{1}{2}A(\rho g h)$$
$$= \frac{1}{2}[(6.6\ \text{m})(1\ \text{m})][(10^3\ \text{kg/m}^3)(9.81\ \text{m/s}^2)(6.6\ \text{m})]$$
$$= 213.66\ \text{kN}$$



Next, determine the force on the dam face with silt

We have
$$P'_w = \frac{1}{2}[(4.6\ \text{m})(1\ \text{m})][(10^3\ \text{kg/m}^3)(9.81\ \text{m/s}^2)(4.6\ \text{m})]$$
$$= 103.790\ \text{kN}$$
$$(P_s)_\text{I} = [(2.0\ \text{m})(1\ \text{m})][(10^3\ \text{kg/m}^3)(9.81\ \text{m/s}^2)(4.6\ \text{m})]$$
$$= 90.252\ \text{kN}$$
$$(P_s)_\text{II} = \frac{1}{2}[(2.0\ \text{m})(1\ \text{m})][(1.76 \times 10^3\ \text{kg/m}^3)(9.81\ \text{m/s}^2)(2.0\ \text{m})]$$
$$= 34.531\ \text{kN}$$

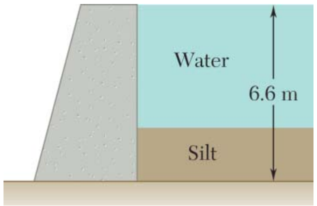


Then
$$P' = P'_w + (P_s)_\text{I} + (P_s)_\text{II} = 228.57\ \text{kN}$$

The percentage increase, % inc., is then given by

$$\%\ \text{inc.} = \frac{P' - P_w}{P_w} \times 100\%$$
$$= \frac{(228.57 - 213.66)}{213.66} \times 100\%$$
$$= 6.9874\%$$

$\%\ \text{inc.} = 6.98\%$ ◀

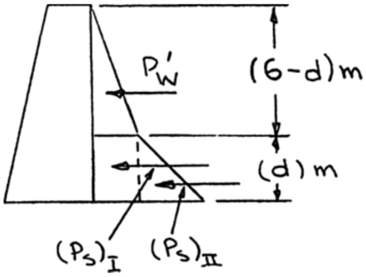


PROBLEM 5.83

The base of a dam for a lake is designed to resist up to 120 percent of the horizontal force of the water. After construction, it is found that silt (that is equivalent to a liquid of density $\rho_s = 1.76\times10^3\ \text{kg/m}^3$) is settling on the lake bottom at the rate of 12 mm/year. Considering a 1-m-wide section of dam, determine the number of years until the dam becomes unsafe.

SOLUTION

First determine force on dam without the silt,



$$\begin{aligned} P_w &= \frac{1}{2}A_{p_w} = \frac{1}{2}A(\rho g h) \\ &= \frac{1}{2}[(6.6\text{ m})(1\text{ m})][(10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(6.6\text{ m})] \\ &= 213.66\text{ kN} \\ P_{\text{allow}} &= 1.2P_w = (1.5)(213.66\text{ kN}) = 256.39\text{ kN} \end{aligned}$$

Next determine the force P' on the dam face after a depth d of silt has settled.

We have
$$\begin{aligned} P_w' &= \frac{1}{2}[(6.6-d)\text{ m}\times(1\text{ m})][(10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(6.6-d)\text{ m}] \\ &= 4.905(6.6-d)^2\text{ kN} \\ (P_s)_{\text{I}} &= [d(1\text{ m})][(10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(6.6-d)\text{ m}] \\ &= 9.81(6.6d-d^2)\text{ kN} \\ (P_s)_{\text{II}} &= \frac{1}{2}[d(1\text{ m})][(1.76\times10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(d)\text{ m}] \\ &= 8.6328d^2\text{ kN} \end{aligned}$$

$$\begin{aligned} P' = P_w' + (P_s)_{\text{I}} + (P_s)_{\text{II}} &= [4.905(43.560 - 13.2000d + d^2) \\ &\quad + 9.81(6.6d - d^2) + 8.6328d^2]\text{ kN} \\ &= [3.7278d^2 + 213.66]\text{ kN} \end{aligned}$$

Now it's required that $P' = P_{\text{allow}}$ to determine the maximum value of d.

$$(3.7278d^2 + 213.66)\text{ kN} = 256.39\text{ kN}$$

or
$$d = 3.3856\text{ m}$$

Finally,
$$3.3856\text{ m} = 12\times10^{-3}\,\frac{\text{m}}{\text{year}}\times N$$
or $N = 282$ years ◀

PROBLEM 5.84

An automatic valve consists of a 9 × 9-in. square plate that is pivoted about a horizontal axis through *A* located at a distance *h* = 3.6 in. above the lower edge. Determine the depth of water *d* for which the valve will open.

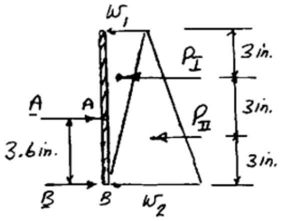
SOLUTION

Since valve is 9 in. wide, $w = 9p = 9\gamma h$, where all dimensions are in inches.

$$w_1 = 9\gamma(d-9), \quad w_2 = 9\gamma d$$

$$P_{\text{I}} = \frac{1}{2}(9\text{ in.})w_1 = \frac{1}{2}(9)(9\gamma)(d-9)$$

$$P_{\text{II}} = \frac{1}{2}(9\text{ in.})w_2 = \frac{1}{2}(9)(9\gamma d)$$



Valve opens when $B = 0$.

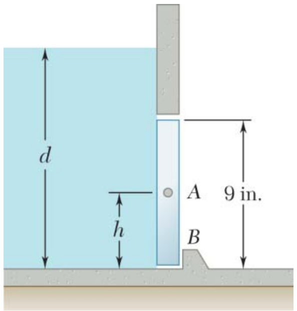
$$+\circlearrowleft \Sigma M_A = 0: \quad P_{\text{I}}(6\text{ in.} - 3.6\text{ in.}) - P_{\text{II}}(3.6\text{ in.} - 3\text{ in.}) = 0$$

$$\left[\frac{1}{2}(9)(9\gamma)(d-9)\right](2.4) - \left[\frac{1}{2}(9)(9\gamma d)\right](0.6) = 0$$

$$(d-9)(2.4) - d(0.6) = 0$$

$$1.8d - 21.6 = 0$$

$d = 12.00$ in. ◀



PROBLEM 5.85

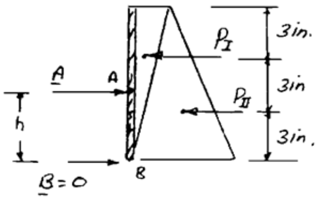
An automatic valve consists of a 9 × 9-in. square plate that is pivoted about a horizontal axis through *A*. If the valve is to open when the depth of water is $d = 18$ in., determine the distance *h* from the bottom of the valve to the pivot *A*.

SOLUTION

Since valve is 9 in. wide, $w = 9p = 9\gamma h$, where all dimensions are in inches.

$$w_1 = 9\gamma(d-9)$$
$$w_2 = 9\gamma d$$

For $d = 18$ in.,



$$w_1 = 9\gamma(18-9) = 81\gamma$$
$$w_2 = 9\gamma(18) = 162\gamma$$
$$P_I = \frac{1}{2}(9)(9\gamma)(18-9) = \frac{1}{2}(729\gamma)$$
$$P_{II} = \frac{1}{2}(9)(9\gamma)(18) = 729\gamma$$

Valve opens when $B = 0$.

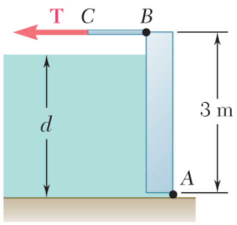
$$\circlearrowleft + \Sigma M_A = 0: \quad P_I(6-h) - P_{II}(h-3) = 0$$

$$\frac{1}{2}729\gamma(6-h) - 729(h-3) = 0$$

$$3 - \frac{1}{2}h - h + 3 = 0$$

$$6 - 1.5h = 0$$

$h = 4.00$ in. ◀

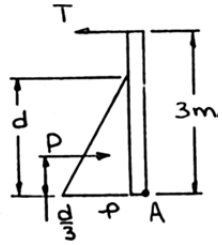


PROBLEM 5.86

The 3 × 4-m side *AB* of a tank is hinged at its bottom *A* and is held in place by a thin rod *BC*. The maximum tensile force the rod can withstand without breaking is 200 kN, and the design specifications require the force in the rod not to exceed 20 percent of this value. If the tank is slowly filled with water, determine the maximum allowable depth of water *d* in the tank.

SOLUTION

Consider the free-body diagram of the side.



We have $P = \frac{1}{2}Ap = \frac{1}{2}A(\rho g d)$

Now $+\circlearrowleft \Sigma M_A = 0$: $hT - \frac{d}{3}P = 0$

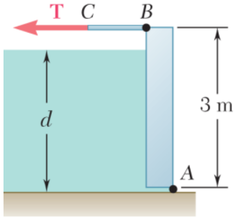
where $h = 3\text{ m}$

Then for d_{max},

$$(3\text{ m})(0.2 \times 200\times 10^3\text{N}) - \frac{d_{max}}{3}\left[\frac{1}{2}(4\text{ m}\times d_{max})\times(10^3\text{ kg/m}^3\times 9.81\text{ m/s}^2\times d_{max})\right] = 0$$

or $120\text{ N}\cdot\text{m} - 6.54 d_{max}^3\text{N/m}^2 = 0$

or $d_{max} = 2.64\text{ m}$ ◀

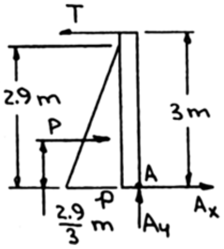


PROBLEM 5.87

The 3 × 4-m side of an open tank is hinged at its bottom *A* and is held in place by a thin rod *BC*. The tank is to be filled with glycerine, whose density is 1263 kg/m^3. Determine the force **T** in the rod and the reactions at the hinge after the tank is filled to a depth of 2.9 m.

SOLUTION

Consider the free-body diagram of the side.



We have $$P = \frac{1}{2}Ap = \frac{1}{2}A(\rho g d)$$

$$= \frac{1}{2}[(2.9\text{ m})(4\text{ m})]\,[(1263\text{ kg/m}^3)(9.81\text{ m/s}^2)(2.9\text{ m})]$$

$$= 208.40\text{ kN}$$

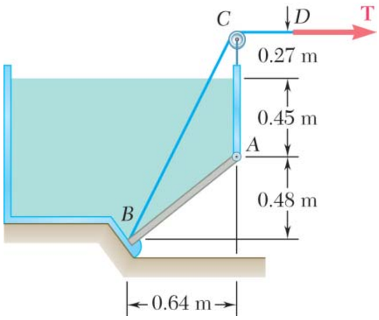
Then $$+\!\uparrow \Sigma F_y = 0: \quad A_y = 0$$

$$+\!\circlearrowleft \Sigma M_A = 0: \quad (3\text{ m})T - \left(\frac{2.9}{3}\text{m}\right)(208.4\text{ kN}) = 0$$

or $T = 67.151\text{ kN}$ $\quad$ $\mathbf{T} = 67.2\text{ kN} \longleftarrow$ ◀

$$\xrightarrow{+} \Sigma F_x = 0: \quad A_x + 208.40\text{ kN} - 67.151\text{ kN} = 0$$

or $A_x = -141.249\text{ kN}$ $\quad$ $\mathbf{A} = 141.2\text{ kN} \longleftarrow$ ◀



PROBLEM 5.88

A 0.5 × 0.8-m gate *AB* is located at the bottom of a tank filled with water. The gate is hinged along its top edge *A* and rests on a frictionless stop at *B*. Determine the reactions at *A* and *B* when cable *BCD* is slack.

SOLUTION

First consider the force of the water on the gate.

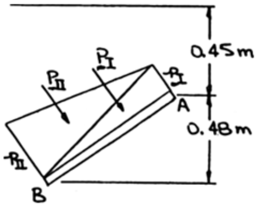
We have $P = \frac{1}{2}Ap = \frac{1}{2}A(\rho gh)$

so that $P_{\text{I}} = \frac{1}{2}[(0.5\text{ m})(0.8\text{ m})] \times [(10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(0.45\text{ m})]$

$= 882.9\text{ N}$

$P_{\text{II}} = \frac{1}{2}[(0.5\text{ m})(0.8\text{ m})] \times [(10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(0.93\text{ m})]$

$= 1824.66\text{ N}$

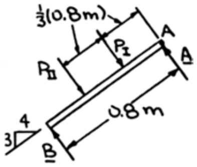


Reactions at *A* and *B* when *T* = 0:

We have

$$+\circlearrowright \Sigma M_A = 0: \quad \frac{1}{3}(0.8\text{ m})(882.9\text{ N}) + \frac{2}{3}(0.8\text{ m})(1824.66\text{ N}) - (0.8\text{ m})B = 0$$

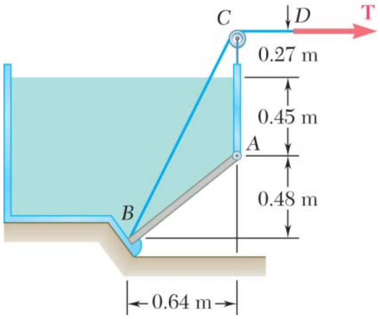
or $B = 1510.74\text{ N}$



or **B** $= 1511\text{ N} \measuredangle 53.1°$ ◀

$$+\nwarrow \Sigma F = 0: \quad A + 1510.74\text{ N} - 882.9\text{ N} - 1824.66\text{ N} = 0$$

or **A** $= 1197\text{ N} \measuredangle 53.1°$ ◀

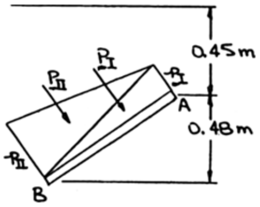


PROBLEM 5.89

A 0.5 × 0.8-m gate *AB* is located at the bottom of a tank filled with water. The gate is hinged along its top edge *A* and rests on a frictionless stop at *B*. Determine the minimum tension required in cable *BCD* to open the gate.

SOLUTION

First consider the force of the water on the gate.



We have $P = \frac{1}{2}Ap = \frac{1}{2}A(\rho g h)$

so that $P_{\mathrm{I}} = \frac{1}{2}[(0.5\text{ m})(0.8\text{ m})] \times [(10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(0.45\text{ m})]$

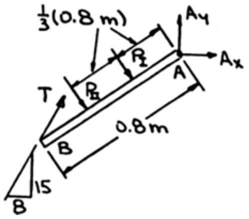
$= 882.9\text{ N}$

$P_{\mathrm{II}} = \frac{1}{2}[(0.5\text{ m})(0.8\text{ m})] \times [(10^3\text{ kg/m}^3)(9.81\text{ m/s}^2)(0.93\text{ m})]$

$= 1824.66\text{ N}$

T to open gate:

First note that when the gate begins to open, the reaction at $B \longrightarrow 0$.



Then $+\circlearrowleft \Sigma M_A = 0$: $\frac{1}{3}(0.8\text{ m})(882.9\text{ N}) + \frac{2}{3}(0.8\text{ m})(1824.66\text{ N})$

$-(0.45 + 0.27)\text{m} \times \left(\frac{8}{17}T\right) = 0$

PROBLEM 5.94

A long trough is supported by a continuous hinge along its lower edge and by a series of horizontal cables attached to its upper edge. Determine the tension in each of the cables, at a time when the trough is completely full of water.

SOLUTION

Consider free body consisting of 20-in. length of the trough and water.

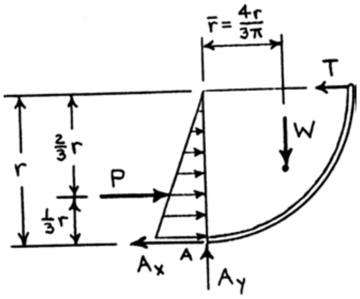
$$W = \gamma V = \gamma\left[\frac{\pi}{4}r^2 l\right]$$

l = 20-in. length of free body

$$P_A = \gamma r$$

$$P = \frac{1}{2}P_A r l = \frac{1}{2}(\gamma r) r l = \frac{1}{2}\gamma r^2 l$$

$$+\circlearrowleft \Sigma M_A = 0: \quad Tr - Wr - P\left(\frac{1}{3}r\right) = 0$$



$$Tr - \left(\gamma\frac{\pi}{4}r^2 l\right)\left(\frac{4r}{3\pi}\right) - \left(\frac{1}{2}\gamma r^2 l\right)\left(\frac{1}{3}r\right) = 0$$

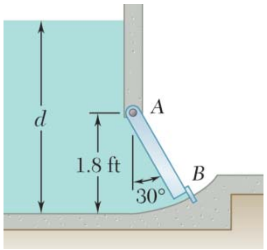
$$T = \frac{1}{3}\gamma r^2 l + \frac{1}{6}\gamma r^2 l = \frac{1}{2}\gamma r^2 l$$

Data: $\gamma = 62.4 \text{ lb/ft}^3 \quad r = \frac{24}{12} \text{ ft} = 2 \text{ ft} \quad l = \frac{20}{12} \text{ ft}$

Then $T = \frac{1}{2}(62.4 \text{ lb/ft}^3)(2 \text{ ft})^2\left(\frac{20}{12} \text{ ft}\right)$

$= 208.00$ lb

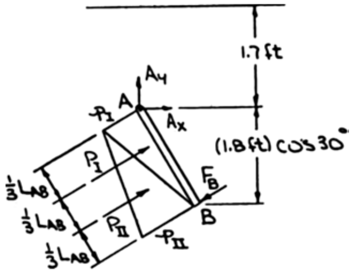
$T = 208$ lb ◀



PROBLEM 5.95

The square gate *AB* is held in the position shown by hinges along its top edge *A* and by a shear pin at *B*. For a depth of water $d = 3.5$ ft, determine the force exerted on the gate by the shear pin.

SOLUTION



1.7 ft
A_y
A
A_x
P_I
(1.8 ft) cos 30°
F_B
B
P_I
P_{II}
P_{II}
$\frac{1}{3}L_{AB}$
$\frac{1}{3}L_{AB}$
$\frac{1}{3}L_{AB}$

First consider the force of the water on the gate. We have

$$P = \frac{1}{2}Ap$$

$$= \frac{1}{2}A(\gamma h)$$

Then $P_{\text{I}} = \frac{1}{2}(1.8 \text{ ft})^2(62.4 \text{ lb/ft}^3)(1.7 \text{ ft})$

$$= 171.850 \text{ lb}$$

$$P_{\text{II}} = \frac{1}{2}(1.8 \text{ ft})^2(62.4 \text{ lb/ft}^3) \times (1.7 + 1.8\cos 30°) \text{ ft}$$

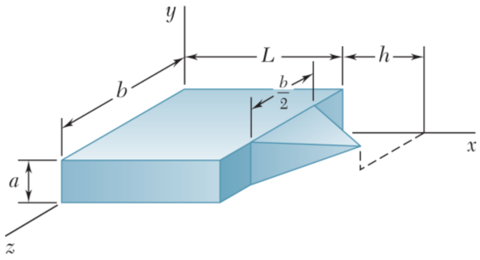
$$= 329.43 \text{ lb}$$

Now $\Sigma M_A = 0\text{:} \quad \left(\frac{1}{3}L_{AB}\right)P_{\text{I}} + \left(\frac{2}{3}L_{AB}\right)P_{\text{II}} - L_{AB}F_B = 0$

or $\frac{1}{3}(171.850 \text{ lb}) + \frac{2}{3}(329.43 \text{ lb}) - F_B = 0$

or $F_B = 276.90 \text{ lb}$ $\qquad$ $\mathbf{F}_B = 277 \text{ lb}$ ↗ 30.0° ◀

PROBLEM 5.96



Consider the composite body shown. Determine (*a*) the value of $\bar{x}$ when $h = L/2$, (*b*) the ratio h/L for which $\bar{x} = L$.

SOLUTION

	V	$\bar{x}$	$\bar{x}V$
Rectangular prism	Lab	$\frac{1}{2}L$	$\frac{1}{2}L^2ab$
Pyramid	$\frac{1}{3}a\left(\frac{b}{2}\right)h$	$L+\frac{1}{4}h$	$\frac{1}{6}abh\left(L+\frac{1}{4}h\right)$

Then $\quad \Sigma V = ab\left(L+\frac{1}{6}h\right)$

$$\Sigma\bar{x}V = \frac{1}{6}ab\left[3L^2 + h\left(L+\frac{1}{4}h\right)\right]$$

Now $$\bar{X}\Sigma V = \Sigma\bar{x}V$$

so that $$\bar{X}\left[ab\left(L+\frac{1}{6}h\right)\right] = \frac{1}{6}ab\left(3L^2 + hL + \frac{1}{4}h^2\right)$$

or $$\bar{X}\left(1+\frac{1}{6}\frac{h}{L}\right) = \frac{1}{6}L\left(3+\frac{h}{L}+\frac{1}{4}\frac{h^2}{L^2}\right) \qquad (1)$$

(*a*) $\quad \bar{X} = ?$ when $h = \frac{1}{2}L.$

Substituting $\frac{h}{L} = \frac{1}{2}$ into Eq. (1),

$$\bar{X}\left[1+\frac{1}{6}\left(\frac{1}{2}\right)\right] = \frac{1}{6}L\left[3+\left(\frac{1}{2}\right)+\frac{1}{4}\left(\frac{1}{2}\right)^2\right]$$

or $$\bar{X} = \frac{57}{104}L$$

$\bar{X} = 0.548L$ ◀

PROBLEM 5.96 (Continued)

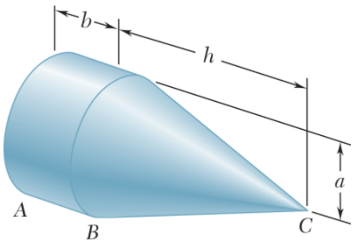
(b) $\frac{h}{L} = ?$ when $\bar{X} = L.$

Substituting into Eq. (1), $L\left(1+\frac{1}{6}\frac{h}{L}\right)=\frac{1}{6}L\left(3+\frac{h}{L}+\frac{1}{4}\frac{h^2}{L^2}\right)$

or $$1+\frac{1}{6}\frac{h}{L}=\frac{1}{2}+\frac{1}{6}\frac{h}{L}+\frac{1}{24}\frac{h^2}{L^2}$$

or $$\frac{h^2}{L^2}=12$$

$\frac{h}{L}=2\sqrt{3}$ ◀



PROBLEM 5.97

Determine the location of the centroid of the composite body shown when (*a*) $h = 2b$, (*b*) $h = 2.5b$.

SOLUTION

	V	$\bar{x}$	$\bar{x}V$
Cylinder I	$\pi a^2 b$	$\frac{1}{2}b$	$\frac{1}{2}\pi a^2 b^2$
Cone II	$\frac{1}{3}\pi a^2 h$	$b+\frac{1}{4}h$	$\frac{1}{3}\pi a^2 h\left(b+\frac{1}{4}h\right)$

$$V = \pi a^2\left(b + \frac{1}{3}h\right)$$

$$\Sigma\bar{x}V = \pi a^2\left(\frac{1}{2}b^2 + \frac{1}{3}hb + \frac{1}{12}h^2\right)$$

(*a*) For $h = 2b$,

$$V = \pi a^2\left[b + \frac{1}{3}(2b)\right] = \frac{5}{3}\pi a^2 b$$

$$\Sigma\bar{x}V = \pi a^2\left[\frac{1}{2}b^2 + \frac{1}{3}(2b)b + \frac{1}{12}(2b)^2\right]$$

$$= \pi a^2 b^2\left[\frac{1}{2} + \frac{2}{3} + \frac{1}{3}\right] = \frac{3}{2}\pi a^2 b^2$$

$$\bar{X}V = \Sigma\bar{x}V: \quad \bar{X}\left(\frac{5}{3}\pi a^2 b\right) = \frac{3}{2}\pi a^2 b^2 \quad \bar{X} = \frac{9}{10}b$$

Centroid is $\frac{1}{10}b$ to the left of base of cone. ◀

PROBLEM 5.97 (Continued)

(*b*) For $h = 2.5b,$

$$V = \pi a^2\left[b + \frac{1}{3}(2.5b)\right] = 1.8333\pi a^2 b$$

$$\Sigma\bar{x}V = \pi a^2\left[\frac{1}{2}b^2 + \frac{1}{3}(2.5b)b + \frac{1}{12}(2.5b)^2\right]$$

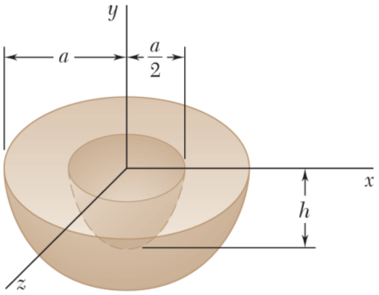
$$= \pi a^2 b^2[0.5 + 0.8333 + 0.52083]$$

$$= 1.85416\pi a^2 b^2$$

$$\bar{X}V = \Sigma\bar{x}V: \quad \bar{X}(1.8333\pi a^2 b) = 1.85416\pi a^2 b^2 \quad \bar{X} = 1.01136b$$

Centroid is 0.01136b to the right of base of cone. ◀

Note: Centroid is at base of cone for $h = \sqrt{6}b = 2.449b.$



PROBLEM 5.98

The composite body shown is formed by removing a semiellipsoid of revolution of semimajor axis h and semiminor axis $a/2$ from a hemisphere of radius a. Determine (*a*) the y coordinate of the centroid when $h = a/2$, (*b*) the ratio h/a for which $\bar{y} = -0.4a$.

SOLUTION

	V	$\bar{y}$	$\bar{y}V$
Hemisphere	$\frac{2}{3}\pi a^3$	$-\frac{3}{8}a$	$-\frac{1}{4}\pi a^4$
Semiellipsoid	$-\frac{2}{3}\pi\left(\frac{a}{2}\right)^2 h = -\frac{1}{6}\pi a^2 h$	$-\frac{3}{8}h$	$+\frac{1}{16}\pi a^2 h^2$

Then
$$\Sigma V = \frac{\pi}{6}a^2(4a - h)$$
$$\Sigma \bar{y}V = -\frac{\pi}{16}a^2(4a^2 - h^2)$$

Now
$$\bar{Y}\Sigma V = \Sigma \bar{y}V$$

So that
$$\bar{Y}\left[\frac{\pi}{6}a^2(4a-h)\right] = -\frac{\pi}{16}a^2(4a^2 - h^2)$$

or
$$\bar{Y}\left(4 - \frac{h}{a}\right) = -\frac{3}{8}a\left[4 - \left(\frac{h}{a}\right)^2\right] \qquad (1)$$

(*a*)
$$\bar{Y} = ? \quad \text{when} \quad h = \frac{a}{2}$$

Substituting $\frac{h}{a} = \frac{1}{2}$ into Eq. (1)

$$\bar{Y}\left(4 - \frac{1}{2}\right) = -\frac{3}{8}a\left[4 - \left(\frac{1}{2}\right)^2\right]$$

or
$$\bar{Y} = -\frac{45}{112}a$$

$\bar{Y} = -0.402a$ ◀

(*b*) $$\frac{h}{a} = ? \quad \text{when} \quad \overline{Y} = -0.4a$$

Substituting into Eq. (1)

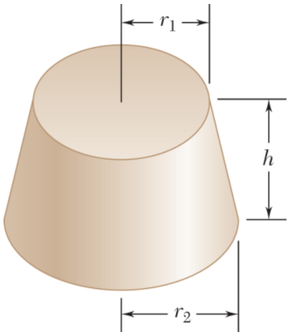
$$(-0.4a)\left(4 - \frac{h}{a}\right) = -\frac{3}{8}a\left[4 - \left(\frac{h}{a}\right)^2\right]$$

or $$3\left(\frac{h}{a}\right)^2 - 3.2\left(\frac{h}{a}\right) + 0.8 = 0$$

Then $$\frac{h}{a} = \frac{3.2 \pm \sqrt{(-3.2)^2 - 4(3)(0.8)}}{2(3)}$$

$$= \frac{3.2 \pm 0.8}{6}$$

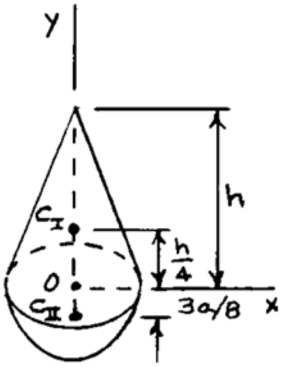
or $\frac{h}{a} = \frac{2}{5}$ and $\frac{h}{a} = \frac{2}{3}$ ◀



PROBLEM 5.99

Locate the centroid of the frustum of a right circular cone when $r_1 = 40$ mm, $r_2 = 50$ mm, and $h = 60$ mm.

SOLUTION



By similar triangles:

$$\frac{h_1}{40} = \frac{h_1 + 60}{50} \qquad h_1 = 240 \text{ mm, therefore } h_2 = 240 + 60 = 300 \text{ mm}$$

$$\bar{y}_1 = \frac{1}{4}h_2 = \frac{300}{4} = 75 \text{ mm} \qquad \bar{y}_2 = 60 + \frac{1}{4}h_1 = 60 + \frac{240}{4} = 120 \text{ mm}$$

$$V_1 = \frac{\pi}{3}(50)^2(300) = 250 \times 10^3 \pi \qquad V_2 = \frac{\pi}{3}(40)^2(240) = 128 \times 10^3 \pi$$

	V mm^3	$\bar{y}$ mm	$\bar{y}V$ mm^4
Triangle 1	$250 \times 10^3 \pi$	75	$18.75 \times 10^6 \pi$
Triangle 2	$-128 \times 10^3 \pi$	120	$-15.36 \times 10^6 \pi$
Σ	$122 \times 10^3 \pi$		$3.39 \times 10^6 \pi$

$$\bar{Y}\Sigma V = \Sigma \bar{y} V$$

$$\bar{Y}\left(122 \times 10^3 \pi\right) = 3.39 \times 10^6 \pi$$

$$\bar{Y} = 27.787 \text{ mm}$$

Centroid is 27.8 mm above base of cone. ◀

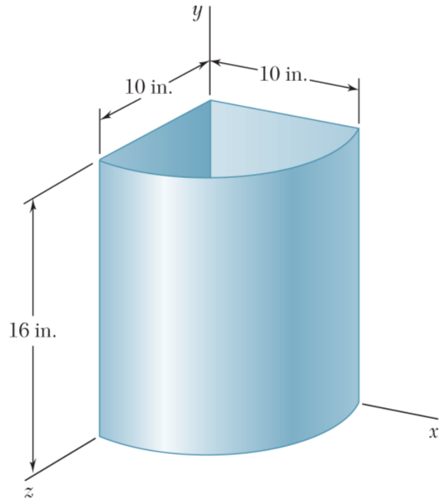
$\bar{Y}\Sigma A = \Sigma \bar{y} A$: $\bar{Y}(465.93 \text{ in}^2) = 2250.0 \text{ in}^3$

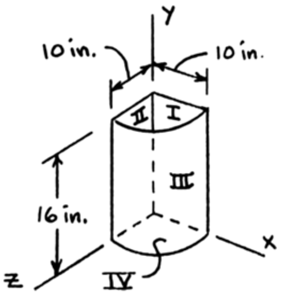
$\bar{Y} = 4.83 \text{ in.}$ ◀



PROBLEM 5.109

A wastebasket, designed to fit in the corner of a room, is 16 in. high and has a base in the shape of a quarter circle of radius 10 in. Locate the center of gravity of the wastebasket, knowing that it is made of sheet metal of uniform thickness.

SOLUTION



By symmetry, $\bar{X} = \bar{Z}$

For III (Cylindrical surface), $\bar{x} = \dfrac{2r}{\pi} = \dfrac{2(10)}{\pi} = 6.3662 \text{ in.}$

$$A = \frac{\pi}{2} rh = \frac{\pi}{2}(10)(16) = 251.33 \text{ in}^2$$

For IV (Quarter-circle bottom), $\bar{x} = \dfrac{4r}{3\pi} = \dfrac{4(10)}{3\pi} = 4.2441 \text{ in.}$

$$A = \frac{\pi}{4} r^2 = \frac{\pi}{4}(10)^2 = 78.540 \text{ in}^2$$

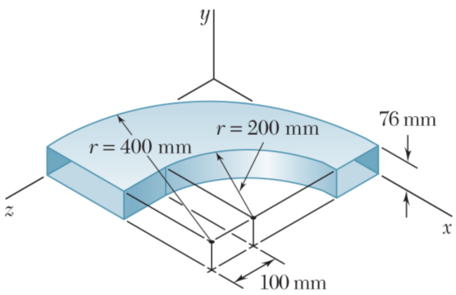
	A, in^2	$\bar{x}$, in.	$\bar{x}$, in.	$\bar{x}A$, in^3	$\bar{y}A$, in^3
I	$(10)(16) = 160$	5	8	800	1280
II	$(10)(16) = 160$	0	8	0	1280
III	251.33	6.3662	8	1600.0	2010.6
IV	78.540	4.2441	0	333.33	0
Σ	649.87			2733.3	4570.6

$\bar{X}\Sigma A = \Sigma \bar{x}A$: $\bar{X}(649.87 \text{ in}^2) = 2733.3 \text{ in}^3$

$\bar{X} = 4.2059 \text{ in.}$ $\bar{X} = \bar{Z} = 4.21 \text{ in.}$ ◀

$\bar{Y}\Sigma A = \Sigma \bar{y}A$: $\bar{Y}(649.87 \text{ in}^2) = 4570.6 \text{ in}^3$

$\bar{Y} = 7.0331 \text{ in.}$ $\bar{Y} = 7.03 \text{ in.}$ ◀



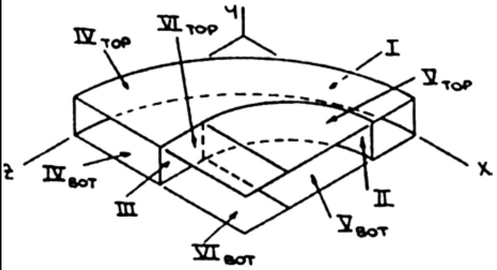
PROBLEM 5.110

An elbow for the duct of a ventilating system is made of sheet metal of uniform thickness. Locate the center of gravity of the elbow.

SOLUTION

First, assume that the sheet metal is homogeneous so that the center of gravity of the duct coincides with the centroid of the corresponding area. Also, note that the shape of the duct implies

$$\overline{Y} = 38.0 \text{ mm} \blacktriangleleft$$



Note that

$$\overline{x}_{\text{I}} = \overline{z}_{\text{I}} = 400 - \frac{2}{\pi}(400) = 145.352 \text{ mm}$$

$$\overline{x}_{\text{II}} = 400 - \frac{2}{\pi}(200) = 272.68 \text{ mm}$$

$$\overline{z}_{\text{II}} = 300 - \frac{2}{\pi}(200) = 172.676 \text{ mm}$$

$$\overline{x}_{\text{IV}} = \overline{z}_{\text{IV}} = 400 - \frac{4}{3\pi}(400) = 230.23 \text{ mm}$$

$$\overline{x}_{\text{V}} = 400 - \frac{4}{3\pi}(200) = 315.12 \text{ mm}$$

$$\overline{z}_{\text{V}} = 300 - \frac{4}{3\pi}(200) = 215.12 \text{ mm}$$

Also note that the corresponding top and bottom areas will contribute equally when determining $\overline{x}$ and $\overline{z}$.

Thus,

	A, mm^2	$\overline{x}$, mm	$\overline{z}$, mm	$\overline{x}A$, mm^3	$\overline{z}A$, mm^3
I	$\frac{\pi}{2}(400)(76) = 47{,}752$	145.352	145.352	6,940,850	6,940,850

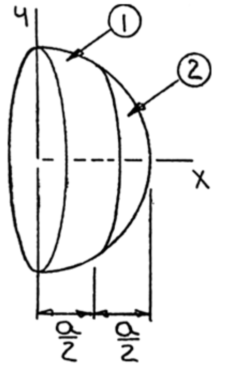
PROBLEM 5.122

Determine by direct integration the values of $\bar{x}$ for the two volumes obtained by passing a vertical cutting plane through the given shape of Figure 5.21. The cutting plane is parallel to the base of the given shape and divides the shape into two volumes of equal height.

A hemisphere

SOLUTION

Choose as the element of volume a disk of radius r and thickness dx. Then



$$dV = \pi r^2 dx, \quad \bar{x}_{EL} = x$$

The equation of the generating curve is $x^2 + y^2 = a^2$ so that $r^2 = a^2 - x^2$ and then

$$dV = \pi(a^2 - x^2)dx$$

Component 1:

$$V_1 = \int_0^{a/2} \pi(a^2 - x^2)dx = \pi\left[a^2 x - \frac{x^3}{3}\right]_0^{a/2}$$

$$= \frac{11}{24}\pi a^3$$

and

$$\int_1 \bar{x}_{EL} dV = \int_0^{a/2} x\left[\pi(a^2 - x^2)dx\right]$$

$$= \pi\left[a^2 \frac{x^2}{2} - \frac{x^4}{4}\right]_0^{a/2}$$

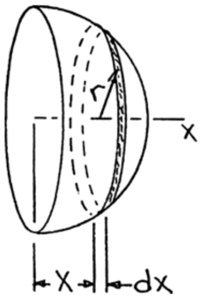
$$= \frac{7}{64}\pi a^4$$

Now

$$\bar{x}_1 V_1 = \int_1 \bar{x}_{EL} dV: \quad \bar{x}_1\left(\frac{11}{24}\pi a^3\right) = \frac{7}{64}\pi a^4$$

or $\bar{x}_1 = \dfrac{21}{88}a$ ◀

Component 2:



$$V_2 = \int_{a/2}^{a} \pi(a^2 - x^2)dx = \pi\left[a^2 x - \frac{x^3}{3}\right]_{a/2}^{a}$$

$$= \pi\left\{\left[a^2(a) - \frac{a^3}{3}\right] - \left[a^2\left(\frac{a}{2}\right) - \frac{\left(\frac{a}{2}\right)^3}{3}\right]\right\}$$

$$= \frac{5}{24}\pi a^3$$

and
$$\int_2 \overline{x}_{EL}\,dV = \int_{a/2}^{a} x\left[\pi(a^2 - x^2)dx\right] = \pi\left[a^2\frac{x^2}{2} - \frac{x^4}{4}\right]_{a/2}^{a}$$

$$= \pi\left\{\left[a^2\frac{(a)^2}{2} - \frac{(a)^4}{4}\right] - \left[a^2\frac{\left(\frac{a}{2}\right)^2}{2} - \frac{\left(\frac{a}{2}\right)^4}{4}\right]\right\}$$

$$= \frac{9}{64}\pi a^4$$

Now
$$\overline{x}_2 V_2 = \int_2 \overline{x}_{EL}\,dV: \quad \overline{x}_2\left(\frac{5}{24}\pi a^3\right) = \frac{9}{64}\pi a^4$$

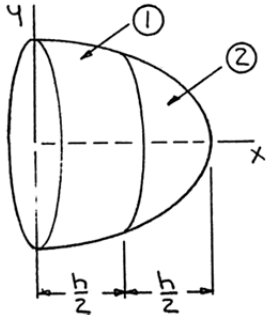
or $\overline{x}_2 = \frac{27}{40}a$ ◀

PROBLEM 5.123

Determine by direct integration the values of $\bar{x}$ for the two volumes obtained by passing a vertical cutting plane through the given shape of Figure 5.21. The cutting plane is parallel to the base of the given shape and divides the shape into two volumes of equal height.

A semiellipsoid of revolution

SOLUTION



Choose as the element of volume a disk of radius *r* and thickness *dx*. Then

$$dV = \pi r^2 dx, \quad \bar{x}_{EL} = x$$

The equation of the generating curve is $\dfrac{x^2}{h^2} + \dfrac{y^2}{a^2} = 1$ so that

$$r^2 = \frac{a^2}{h^2}(h^2 - x^2)$$

and then
$$dV = \pi \frac{a^2}{h^2}(h^2 - x^2)dx$$

Component 1:
$$V_1 = \int_0^{h/2} \pi \frac{a^2}{h^2}(h^2 - x^2)dx = \pi \frac{a^2}{h^2}\left[h^2 x - \frac{x^3}{3}\right]_0^{h/2}$$

$$= \frac{11}{24}\pi a^2 h$$

and
$$\int_1 \bar{x}_{EL} dV = \int_0^{h/2} x\left[\pi \frac{a^2}{h^2}(h^2 - x^2)dx\right]$$

$$= \pi \frac{a^2}{h^2}\left[h^2 \frac{x^2}{2} - \frac{x^4}{4}\right]_0^{h/2}$$

$$= \frac{7}{64}\pi a^2 h^2$$

Now
$$\bar{x}_1 V_1 = \int_1 \bar{x}_{EL} dV: \quad \bar{x}_1\left(\frac{11}{24}\pi a^2 h\right) = \frac{7}{64}\pi a^2 h^2$$

or $\bar{x}_1 = \dfrac{21}{88}h$ ◀

Component 2:
$$V_2 = \int_{h/2}^{h} \pi \frac{a^2}{h^2}(h^2 - x^2)dx = \pi \frac{a^2}{h^2}\left[h^2 x - \frac{x^3}{3}\right]_{h/2}^{h}$$

$$= \pi \frac{a^2}{h^2}\left\{\left[h^2(h) - \frac{(h)^3}{3}\right] - \left[h^2\left(\frac{h}{2}\right) - \frac{\left(\frac{h}{2}\right)^3}{3}\right]\right\}$$

$$= \frac{5}{24}\pi a^2 h$$

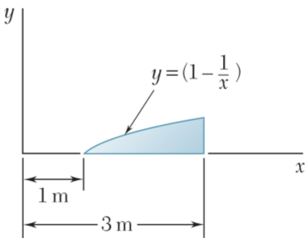
or $\overline{x}_2 = \frac{2}{3}h$ ◀



PROBLEM 5.125

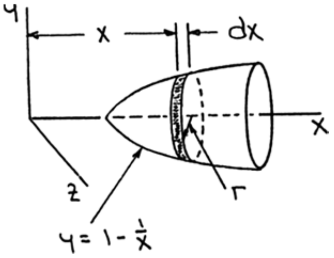
Locate the centroid of the volume obtained by rotating the shaded area about the *x*-axis.

SOLUTION

First, note that symmetry implies $\bar{y} = 0$ ◀

$\bar{z} = 0$ ◀

Choose as the element of volume a disk of radius *r* and thickness *dx*.



Then $dV = \pi r^2 dx, \quad \bar{x}_{EL} = x$

Now $r = 1 - \dfrac{1}{x}$ so that

$$dV = \pi\left(1 - \frac{1}{x}\right)^2 dx$$

$$= \pi\left(1 - \frac{2}{x} + \frac{1}{x^2}\right)dx$$

Then

$$V = \int_1^3 \pi\left(1 - \frac{2}{x} + \frac{1}{x^2}\right)dx = \pi\left[x - 2\ln x - \frac{1}{x}\right]_1^3$$

$$= \pi\left[\left(3 - 2\ln 3 - \frac{1}{3}\right) - \left(1 - 2\ln 1 - \frac{1}{1}\right)\right]$$

$$= (0.46944\pi)\ \text{m}^3$$

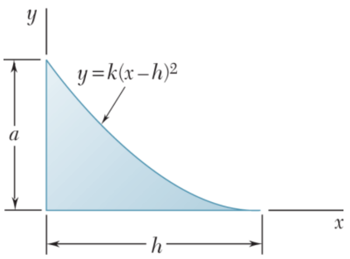
and

$$\int \bar{x}_{EL}\,dV = \int_1^3 x\left[\pi\left(1 - \frac{2}{x} + \frac{1}{x^2}\right)dx\right] = \pi\left[\frac{x^2}{2} - 2x + \ln x\right]_1^3$$

$$= \pi\left\{\left[\frac{3^2}{2} - 2(3) + \ln 3\right] - \left[\frac{1^3}{2} - 2(1) + \ln 1\right]\right\}$$

$$= (1.09861\pi)\ \text{m}$$

Now $\bar{x}V = \int \bar{x}_{EL}\,dV: \quad \bar{x}(0.46944\pi\ \text{m}^3) = 1.09861\pi\ \text{m}^4$ or $\bar{x} = 2.34\ \text{m}$ ◀



PROBLEM 5.126

Locate the centroid of the volume obtained by rotating the shaded area about the *x*-axis.

SOLUTION

First note that symmetry implies $\bar{y} = 0$ ◀

and $\bar{z} = 0$ ◀

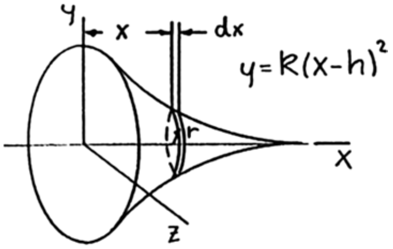
We have $$y = k(X - h)^2$$

At $x = 0$, $y = a$, $$a = k(-h)^2$$

or $$k = \frac{a}{h^2}$$

Choose as the element of volume a disk of radius *r* and thickness *dx*. Then

$$dV = \pi r^2 dx, \quad \bar{X}_{EL} = x$$



Now $$r = \frac{a}{h^2}(x-h)^2$$

so that $$dV = \pi \frac{a^2}{h^4}(x-h)^4 dx$$

Then $$V = \int_0^h \pi \frac{a^2}{h^4}(x-h)^4 dx = \frac{\pi}{5}\frac{a^2}{h^4}[(x-h)^5]_0^h$$

$$= \frac{1}{5}\pi a^2 h$$

and $$\int \bar{x}_{EL} dV = \int_0^h x\left[\pi \frac{a^2}{h^4}(x-h)^4 dx\right]$$

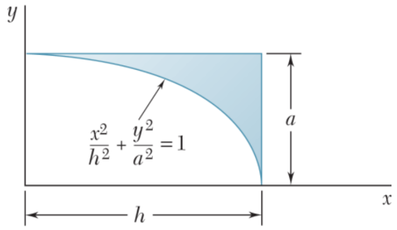
$$= \pi \frac{a^2}{h^4}\int_0^h (x^5 - 4hx^4 + 6h^2x^3 - 4h^3x^2 + h^4x)dx$$

$$= \pi \frac{a^2}{h^4}\left[\frac{1}{6}x^6 - \frac{4}{5}hx^5 + \frac{3}{2}h^2x^4 - \frac{4}{3}h^3x^3 + \frac{1}{2}h^4x^2\right]_0^h$$

$$= \frac{1}{30}\pi a^2 h^2$$

Now $$\bar{x}V = \int \bar{x}_{EL} dV: \quad \bar{x}\left(\frac{\pi}{5}a^2 h\right) = \frac{\pi}{30}a^2h^2$$

or $\bar{x} = \frac{1}{6}h$ ◀



PROBLEM 5.127

Locate the centroid of the volume obtained by rotating the shaded area about the line $x = h$.

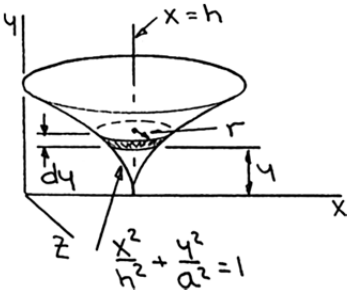
SOLUTION

First, note that symmetry implies $\bar{x} = h$ ◀

$\bar{z} = 0$ ◀

Choose as the element of volume a disk of radius r and thickness dx. Then

$$dV = \pi r^2 dy, \quad \bar{y}_{EL} = y$$



Now $x^2 = \frac{h^2}{a^2}(a^2 - y^2)$ so that $r = h - \frac{h}{a}\sqrt{a^2 - y^2}$.

Then
$$dV = \pi \frac{h^2}{a^2}\left(a - \sqrt{a^2 - y^2}\right)^2 dy$$

and
$$V = \int_0^a \pi \frac{h^2}{a^2}\left(a - \sqrt{a^2 - y^2}\right)^2 dy$$

Let
$$y = a \sin\theta \Rightarrow dy = a\cos\theta\, d\theta$$

Then
$$\begin{aligned}
V &= \pi \frac{h^2}{a^2}\int_0^{\pi/2}\left(a - \sqrt{a^2 - a^2\sin^2\theta}\right)^2 a\cos\theta\, d\theta \\
&= \pi \frac{h^2}{a^2}\int_0^{\pi/2}\left[a^2 - 2a(a\cos\theta) + (a^2 - a^2\sin^2\theta)\right] a\cos\theta\, d\theta \\
&= \pi a h^2 \int_0^{\pi/2}(2\cos\theta - 2\cos^2\theta - \sin^2\theta\cos\theta)\, d\theta \\
&= \pi a h^2 \left[2\sin\theta - 2\left(\frac{\theta}{2} + \frac{\sin 2\theta}{4}\right) - \frac{1}{3}\sin^3\theta\right]_0^{\pi/2} \\
&= \pi a h^2 \left[2 - 2\left(\frac{\frac{\pi}{2}}{2}\right) - \frac{1}{3}\right] \\
&= 0.095870\pi a h^2
\end{aligned}$$

and

$$\int \bar{y}_{EL}\,dV = \int_0^a y\left[\pi\frac{h^2}{a^2}\left(a-\sqrt{a^2-y^2}\right)^2 dy\right]$$

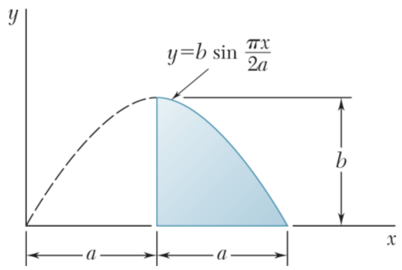
$$= \pi\frac{h^2}{a^2}\int_0^a\left(2a^2y - 2ay\sqrt{a^2-y^2} - y^3\right)dy$$

$$= \pi\frac{h^2}{a^2}\left[a^2y^2 + \frac{2}{3}a(a^2-y^2)^{3/2} - \frac{1}{4}y^4\right]_0^a$$

$$= \pi\frac{h^2}{a^2}\left\{\left[a^2(a)^2 - \frac{1}{4}a^4\right] - \left[\frac{2}{3}a(a^2)^{3/2}\right]\right\}$$

$$= \frac{1}{12}\pi a^2h^2$$

Now $\bar{y}V = \int \bar{y}_{EL}\,dV$: $\bar{y}(0.095870\pi ah^2) = \frac{1}{12}\pi a^2h^2$ or $\bar{y} = 0.869a$ ◀



PROBLEM 5.128*

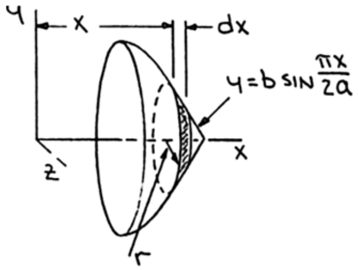
Locate the centroid of the volume generated by revolving the portion of the sine curve shown about the *x*-axis.

SOLUTION

First, note that symmetry implies $\bar{y} = 0$ ◀

$\bar{z} = 0$ ◀

Choose as the element of volume a disk of radius *r* and thickness *dx*.



Then $dV = \pi r^2 dx, \quad \bar{x}_{EL} = x$

Now $r = b\sin\dfrac{\pi x}{2a}$

so that $dV = \pi b^2 \sin^2\dfrac{\pi x}{2a}dx$

Then
$$V = \int_a^{2a} \pi b^2 \sin^2\frac{\pi x}{2a}dx$$
$$= \pi b^2\left[\frac{x}{2} - \frac{\sin\frac{\pi x}{2a}}{2\frac{\pi}{a}}\right]_a^{2a}$$
$$= \pi b^2\left[\left(\tfrac{2a}{2}\right) - \left(\tfrac{a}{2}\right)\right]$$
$$= \frac{1}{2}\pi ab^2$$

and
$$\int \bar{x}_{EL}dV = \int_a^{2a} x\left(\pi b^2 \sin^2\frac{\pi x}{2a}dx\right)$$

Use integration by parts with

$$u = x \qquad dV = \sin^2\frac{\pi x}{2a}$$
$$du = dx \qquad V = \frac{x}{2} - \frac{\sin\frac{\pi x}{a}}{\frac{2\pi}{a}}$$

PROBLEM 5.128* (Continued)

Then
$$\int \overline{x}_{EL}\,dV = \pi b^2\left\{\left[x\left(\frac{x}{2}-\frac{\sin\frac{\pi x}{a}}{\frac{2\pi}{a}}\right)\right]_a^{2a} - \int_a^{2a}\left(\frac{x}{2}-\frac{\sin\frac{\pi x}{a}}{\frac{2\pi}{a}}\right)dx\right\}$$

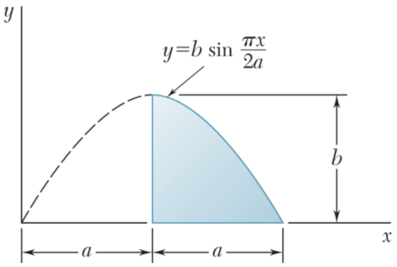
$$= \pi b^2\left\{\left[2a\left(\frac{2a}{2}\right)-a\left(\frac{a}{2}\right)\right]-\left[\frac{1}{4}x^2+\frac{a^2}{2\pi^2}\cos\frac{\pi x}{a}\right]_a^{2a}\right\}$$

$$= \pi b^2\left\{\left(\frac{3}{2}a^2\right)-\left[\frac{1}{4}(2a)^2+\frac{a^2}{2\pi^2}-\frac{1}{4}(a)^2+\frac{a^2}{2\pi^2}\right]\right\}$$

$$= \pi a^2 b^2\left(\frac{3}{4}-\frac{1}{\pi^2}\right)$$

$$= 0.64868\pi a^2 b^2$$

Now
$$\overline{x}V = \int \overline{x}_{EL}\,dV: \quad \overline{x}\left(\frac{1}{2}\pi a b^2\right) = 0.64868\pi a^2 b^2 \qquad \text{or} \quad \overline{x} = 1.297a \blacktriangleleft$$



PROBLEM 5.129*

Locate the centroid of the volume generated by revolving the portion of the sine curve shown about the *y*-axis. (*Hint:* Use a thin cylindrical shell of radius *r* and thickness *dr* as the element of volume.)

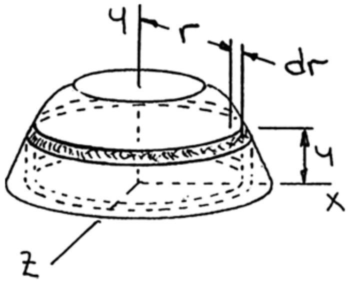
SOLUTION

First note that symmetry implies $\bar{x} = 0$ ◀

$\bar{z} = 0$ ◀

Choose as the element of volume a cylindrical shell of radius *r* and thickness *dr*.

Then $dV = (2\pi r)(y)(dr), \quad \bar{y}_{EL} = \frac{1}{2}y$



Now $y = b\sin\frac{\pi r}{2a}$

so that $dV = 2\pi br\sin\frac{\pi r}{2a}dr$

Then $V = \int_a^{2a} 2\pi br\sin\frac{\pi r}{2a}dr$

Use integration by parts with

$$u = rd \qquad dv = \sin\frac{\pi r}{2a}dr$$

$$du = dr \qquad v = -\frac{2a}{\pi}\cos\frac{\pi r}{2a}$$

Then

$$V = 2\pi b\left\{\left[(r)\left(-\frac{2a}{\pi}\cos\frac{\pi r}{2a}\right)\right]_a^{2a} - \int_a^{2a}\left(\frac{2a}{\pi}\cos\frac{\pi r}{2a}\right)dr\right\}$$

$$= 2\pi b\left\{-\frac{2a}{\pi}\left[(2a)(-1)\right] + \left[\frac{4a^2}{\pi^2}\sin\frac{\pi r}{2a}\right]_a^{2a}\right\}$$

$$V = 2\pi b\left(\frac{4a^2}{\pi} - \frac{4a^2}{\pi^2}\right)$$

$$= 8a^2b\left(1 - \frac{1}{\pi}\right)$$

$$= 5.4535a^2b$$

PROBLEM 5.129* (Continued)

Also
$$\int \bar{y}_{EL}\,dV = \int_a^{2a}\left(\tfrac{1}{2}b\sin\frac{\pi r}{2a}\right)\left(2\pi br\sin\frac{\pi r}{2a}dr\right)$$
$$= \pi b^2\int_a^{2a} r\sin^2\frac{\pi r}{2a}dr$$

Use integration by parts with

$$u = r \qquad dv = \sin^2\frac{\pi r}{2a}dr$$
$$du = dr \qquad v = \frac{r}{2} - \frac{\sin\frac{\pi r}{a}}{\frac{2\pi}{a}}$$

Then
$$\int \bar{y}_{EL}\,dV = \pi b^2\left\{\left[(r)\left(\frac{r}{2}-\frac{\sin\frac{\pi r}{a}}{\frac{2\pi}{a}}\right)\right]_a^{2a} - \int_a^{2a}\left(\frac{r}{2}-\frac{\sin\frac{\pi r}{a}}{\frac{2\pi}{a}}\right)dr\right\}$$
$$= \pi b^2\left\{\left[(2a)\left(\frac{2a}{2}\right)-(a)\left(\frac{a}{2}\right)\right]-\left[\frac{r^2}{4}+\frac{a^2}{2\pi^2}\cos\frac{\pi r}{a}\right]_a^{2a}\right\}$$
$$= \pi b^2\left\{\frac{3}{2}a^2 - \left[\frac{(2a)^2}{4}+\frac{a^2}{2\pi^2}-\frac{(a)^2}{4}+\frac{a^2}{2\pi^2}\right]\right\}$$
$$= \pi a^2b^2\left(\frac{3}{4}-\frac{1}{\pi^2}\right)$$
$$= 2.0379a^2b^2$$

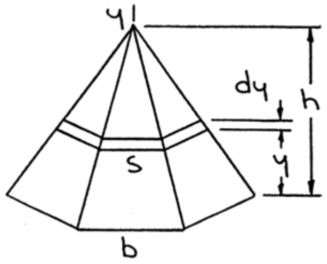
Now $\bar{y}V = \int \bar{y}_{EL}\,dV\colon \quad \bar{y}(5.4535a^2b) = 2.0379a^2b^2$ or $\bar{y} = 0.374b$ ◀

PROBLEM 5.130*

Show that for a regular pyramid of height h and n sides $(n = 3, 4, \ldots)$ the centroid of the volume of the pyramid is located at a distance $h/4$ above the base.

SOLUTION

Choose as the element of a horizontal slice of thickness dy. For any number N of sides, the area of the base of the pyramid is given by



$$A_{\text{base}} = kb^2$$

where $k = k(N);$ see note below. Using similar triangles, we have

$$\frac{s}{b} = \frac{h-y}{h}$$

or $$s = \frac{b}{h}(h-y)$$

Then $$dV = A_{\text{slice}}dy = ks^2dy = k\frac{b^2}{h^2}(h-y)^2\,dy$$

and $$V = \int_0^h k\frac{b^2}{h^2}(h-y)^2\,dy = k\frac{b^2}{h^2}\left[-\frac{1}{3}(h-y)^3\right]_0^h$$

$$= \frac{1}{3}kb^2h$$

Also, $$\overline{y}_{EL} = y$$

so that $$\int \overline{y}_{EL}dV = \int_0^h y\left[k\frac{b^2}{h^2}(h-y)^2\,dy\right] = k\frac{b^2}{h^2}\int_0^h (h^2y - 2hy^2 + y^3)\,dy$$

$$= k\frac{b^2}{h^2}\left[\frac{1}{2}h^2y^2 - \frac{2}{3}hy^3 + \frac{1}{4}y^4\right]_0^h = \frac{1}{12}kb^2h^2$$

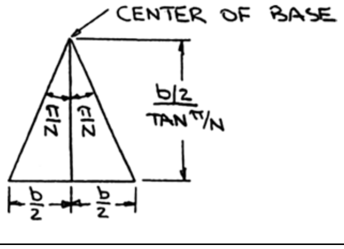
Now $$\overline{y}V = \int \overline{y}_{EL}dV: \quad \overline{y}\left(\frac{1}{3}kb^2h\right) = \frac{1}{12}kb^2h^2$$

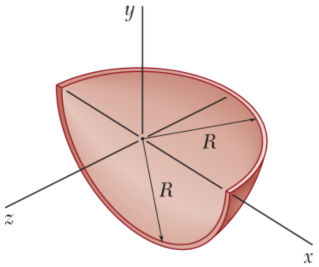
or $y = \dfrac{1}{4}h$ Q.E.D. ◀

Note: $$A_{\text{base}} = N\left(\frac{1}{2}\times b\times\frac{\frac{b}{2}}{\tan\frac{\pi}{N}}\right)$$

$$= \frac{N}{4\tan\frac{\pi}{N}}b^2$$

$$= k(N)b^2$$





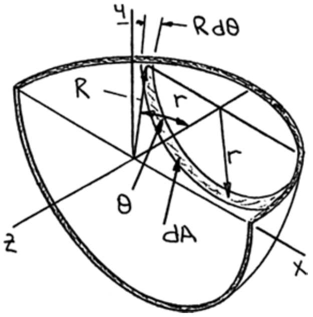
PROBLEM 5.131

Determine by direct integration the location of the centroid of one-half of a thin, uniform hemispherical shell of radius *R*.

SOLUTION

First note that symmetry implies $\bar{x} = 0$ ◀

The element of area *dA* of the shell shown is obtained by cutting the shell with two planes parallel to the *xy* plane. Now



$$dA = (\pi r)(R\,d\theta)$$

$$\bar{y}_{EL} = -\frac{2r}{\pi}$$

where $r = R\sin\theta$

so that $dA = \pi R^2 \sin\theta\, d\theta$

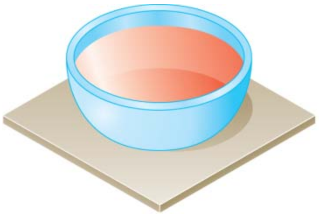
$$\bar{y}_{EL} = -\frac{2R}{\pi}\sin\theta$$

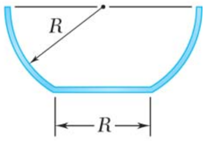
Then
$$A = \int_0^{\pi/2} \pi R^2 \sin\theta\, d\theta = \pi R^2[-\cos\theta]_0^{\pi/2}$$
$$= \pi R^2$$

and
$$\int \bar{y}_{EL}\, dA = \int_0^{\pi/2}\left(-\frac{2R}{\pi}\sin\theta\right)(\pi R^2 \sin\theta\, d\theta)$$
$$= -2R^3\left[\frac{\theta}{2} - \frac{\sin 2\theta}{4}\right]_0^{\pi/2}$$
$$= -\frac{\pi}{2}R^3$$

Now $\bar{y}A = \int \bar{y}_{EL}\, dA$: $\bar{y}(\pi R^2) = -\frac{\pi}{2}R^3$ or $\bar{y} = -\frac{1}{2}R$ ◀

Symmetry implies $\bar{z} = \bar{y}$ $\bar{z} = -\frac{1}{2}R$ ◀





PROBLEM 5.132

The sides and the base of a punch bowl are of uniform thickness t. If $t << R$ and $R = 250$ mm, determine the location of the center of gravity of (*a*) the bowl, (*b*) the punch.

SOLUTION

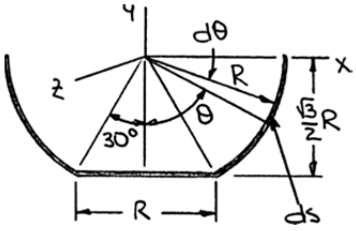
(*a*) Bowl:

First note that symmetry implies $\bar{x} = 0$ ◀

$\bar{z} = 0$ ◀

for the coordinate axes shown below. Now assume that the bowl may be treated as a shell; the center of gravity of the bowl will coincide with the centroid of the shell. For the walls of the bowl, an element of area is obtained by rotating the arc ds about the y-axis. Then

$$dA_{\text{wall}} = (2\pi R\sin\theta)(R\,d\theta)$$



and $$(\bar{y}_{EL})_{\text{wall}} = -R\cos\theta$$

Then
$$A_{\text{wall}} = \int_{\pi/6}^{\pi/2} 2\pi R^2 \sin\theta\,d\theta$$
$$= 2\pi R^2[-\cos\theta]_{\pi/6}^{\pi/2}$$
$$= \pi\sqrt{3}R^2$$

and
$$\bar{y}_{\text{wall}}A_{\text{wall}} = \int(\bar{y}_{EL})_{\text{wall}}\,dA$$
$$= \int_{\pi/6}^{\pi/2}(-R\cos\theta)(2\pi R^2\sin\theta d\theta)$$
$$= \pi R^3[\cos^2\theta]_{\pi/6}^{\pi/2}$$
$$= -\frac{3}{4}\pi R^3$$

By observation,
$$A_{\text{base}} = \frac{\pi}{4}R^2, \quad \bar{y}_{\text{base}} = -\frac{\sqrt{3}}{2}R$$

Now
$$\bar{y}\Sigma A = \Sigma\bar{y}A$$

or
$$\bar{y}\left(\pi\sqrt{3}R^2 + \frac{\pi}{4}R^2\right) = -\frac{3}{4}\pi R^3 + \frac{\pi}{4}R^2\left(-\frac{\sqrt{3}}{2}R\right)$$

or $\bar{y} = -0.48763R \quad R = 250$ mm $\qquad \bar{y} = -121.9$ mm ◀

PROBLEM 5.132 (Continued)

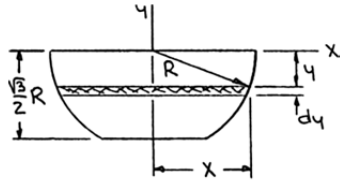
(*b*) Punch:

First note that symmetry implies $\overline{x} = 0$ ◀

$\overline{z} = 0$ ◀

and that because the punch is homogeneous, its center of gravity will coincide with the centroid of the corresponding volume. Choose as the element of volume a disk of radius *x* and thickness *dy*. Then

$$dV = \pi x^2 dy, \quad \overline{y}_{EL} = y$$



Now $x^2 + y^2 = R^2$

so that $dV = \pi(R^2 - y^2)dy$

Then

$$V = \int_{-\sqrt{3}/2R}^{0} \pi(R^2 - y^2)\,dy$$

$$= \pi\left[R^2 y - \frac{1}{3}y^3\right]_{-\sqrt{3}/2R}^{0}$$

$$= -\pi\left[R^2\left(-\frac{\sqrt{3}}{2}R\right) - \frac{1}{3}\left(-\frac{\sqrt{3}}{2}R\right)^3\right] = \frac{3}{8}\pi\sqrt{3}R^3$$

and

$$\int \overline{y}_{EL}\,dV = \int_{-\sqrt{3}/2R}^{0} (y)\left[\pi\left(R^2 - y^2\right)dy\right]$$

$$= \pi\left[\frac{1}{2}R^2 y^2 - \frac{1}{4}y^4\right]_{-\sqrt{3}/2R}^{0}$$

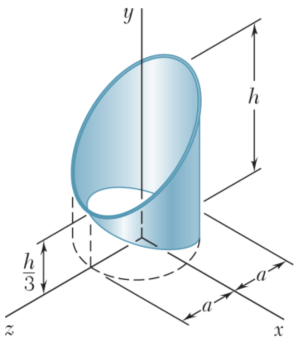
$$= -\pi\left[\frac{1}{2}R^2\left(-\frac{\sqrt{3}}{2}R\right)^2 - \frac{1}{4}\left(-\frac{\sqrt{3}}{2}R\right)^4\right] = -\frac{15}{64}\pi R^4$$

Now

$$\overline{y}V = \int \overline{y}_{EL}\,dV: \quad \overline{y}\left(\frac{3}{8}\pi\sqrt{3}R^3\right) = -\frac{15}{64}\pi R^4$$

or

$$\overline{y} = -\frac{5}{8\sqrt{3}}R \quad R = 250\text{ mm} \quad \overline{y} = -90.2\text{ mm}$$ ◀



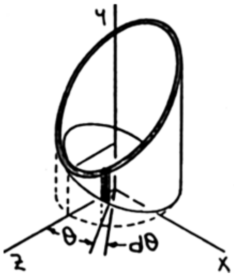
PROBLEM 5.133

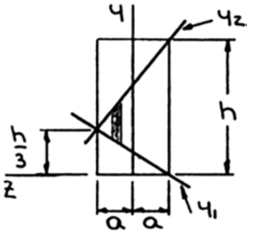
Locate the centroid of the section shown, which was cut from a thin circular pipe by two oblique planes.

SOLUTION

First note that symmetry implies $\overline{x} = 0$ ◀

Assume that the pipe has a uniform wall thickness t and choose as the element of volume a vertical strip of width $a\,d\theta$ and height $(y_2 - y_1)$. Then





$$dV = (y_2 - y_1)ta\,d\theta, \quad \overline{y}_{EL} = \frac{1}{2}(y_1 + \overline{y}_2)\,\overline{z}_{EL} = z$$

Now
$$y_1 = \frac{\frac{h}{3}}{2a}z + \frac{h}{6} \qquad y_2 = -\frac{\frac{2h}{3}}{2a}z + \frac{2}{3}h$$
$$= \frac{h}{6a}(z + a) \qquad = \frac{h}{3a}(-z + 2a)$$

and
$$z = a\cos\theta$$

Then
$$(y_2 - y_1) = \frac{h}{3a}(-a\cos\theta + 2a) - \frac{h}{6a}(a\cos\theta + a)$$
$$= \frac{h}{2}(1 - \cos\theta)$$

and
$$(y_1 + y_2) = \frac{h}{6a}(a\cos\theta + a) + \frac{h}{3a}(-a\cos\theta + 2a)$$
$$= \frac{h}{6}(5 - \cos\theta)$$
$$dV = \frac{aht}{2}(1 - \cos\theta)d\theta \quad \overline{y}_{EL} = \frac{h}{12}(5 - \cos\theta), \quad \overline{z}_{EL} = a\cos\theta$$

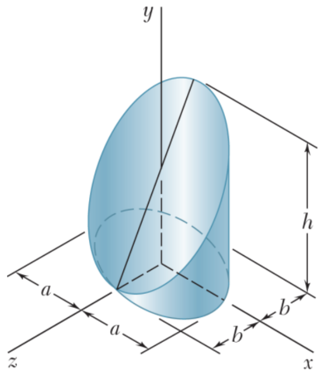
Then
$$V = 2\int_0^{\pi} \frac{aht}{2}(1-\cos\theta)d\theta = aht[\theta - \sin\theta]_0^{\pi}$$
$$= \pi aht$$

and
$$\int \overline{y}_{EL}dV = 2\int_0^{\pi} \frac{h}{12}(5-\cos\theta)\left[\frac{aht}{2}(1-\cos\theta)d\theta\right]$$
$$= \frac{ah^2t}{12}\int_0^{\pi}(5 - 6\cos\theta + \cos^2\theta)d\theta$$
$$= \frac{ah^2t}{12}\left[5\theta - 6\sin\theta + \frac{\theta}{2} + \frac{\sin 2\theta}{4}\right]_0^{\pi}$$
$$= \frac{11}{24}\pi ah^2t$$

$$\int \overline{z}_{EL}dV = 2\int_0^{\pi} a\cos\theta\left[\frac{aht}{2}(1-\cos\theta)d\theta\right]$$
$$= a^2ht\left[\sin\theta - \frac{\theta}{2} - \frac{\sin 2\theta}{4}\right]_0^{\pi}$$
$$= -\frac{1}{2}\pi a^2ht$$

Now
$$\overline{y}V = \int \overline{y}_{EL}dV: \quad \overline{y}(\pi aht) = \frac{11}{24}\pi ah^2t$$
or $\overline{y} = \frac{11}{24}h$ ◀

and
$$\overline{z}V = \int \overline{z}_{EL}dV: \quad \overline{z}(\pi aht) = -\frac{1}{2}\pi a^2ht$$
or $\overline{z} = -\frac{1}{2}a$ ◀

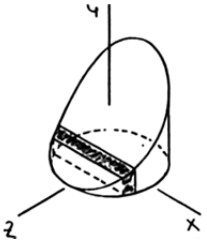


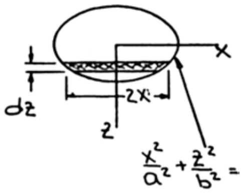
PROBLEM 5.134*

Locate the centroid of the section shown, which was cut from an elliptical cylinder by an oblique plane.

SOLUTION

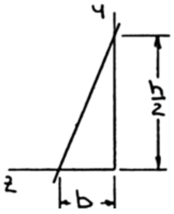
First note that symmetry implies $x = 0$ ◀





Choose as the element of volume a vertical slice of width *zx*, thickness *dz*, and height *y*. Then

$$dV = 2xy\,dz, \quad \overline{y}_{EL} = \frac{1}{24}, \quad \overline{z}_{EL} = z$$



Now

$$x = \frac{a}{b}\sqrt{b^2 - z^2}$$

and

$$y = -\frac{h/2}{b}z + \frac{h}{2} = \frac{h}{2b}(b - z)$$

Then

$$V = \int_{-b}^{b}\left(2\frac{a}{b}\sqrt{b^2 - z^2}\right)\left[\frac{h}{2b}(b - z)\right]dz$$

Let

$$z = b\sin\theta \quad dz = b\cos\theta\, d\theta$$

Then

$$V = \frac{ah}{b^2}\int_{\pi/2}^{\pi/2}(b\cos\theta)[b(1 - \sin\theta)]b\cos\theta\, d\theta$$

$$= abh\int_{-\pi/2}^{\pi/2}(\cos^2\theta - \sin\theta\cos^2\theta)\,d\theta$$

$$= abh\left[\frac{\theta}{2} + \frac{\sin 2\theta}{4} + \frac{1}{3}\cos^3\theta\right]_{-\pi/2}^{\pi/2}$$

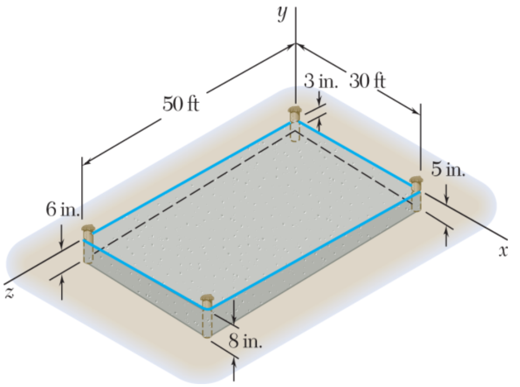
Now $$\bar{y}V = \int \bar{y}_{EL}\,dV: \quad \bar{y}\left(\frac{4}{9}abh\right) = \frac{32}{225}abh^2$$ or $\bar{y} = \dfrac{8}{25}h$ ◀

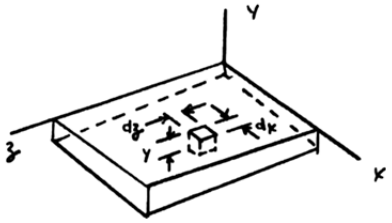


PROBLEM 5.136

After grading a lot, a builder places four stakes to designate the corners of the slab for a house. To provide a firm, level base for the slab, the builder places a minimum of 3 in. of gravel beneath the slab. Determine the volume of gravel needed and the x coordinate of the centroid of the volume of the gravel. (*Hint:* The bottom surface of the gravel is an oblique plane, which can be represented by the equation $y = a + bx + cz$.)

SOLUTION

The centroid can be found by integration. The equation for the bottom of the gravel is $y = a + bx + cz$, where the constants a, b, and c can be determined as follows:



For $x = 0$ and $z = 0$, $y = -3$ in., and therefore,

$$-\frac{3}{12}\text{ ft} = a, \quad \text{or} \quad a = -\frac{1}{4}\text{ ft}$$

For $x = 30$ ft and $z = 0$, $y = -5$ in., and therefore,

$$-\frac{5}{12}\text{ ft} = -\frac{1}{4}\text{ ft} + b(30\text{ ft}), \quad \text{or} \quad b = -\frac{1}{180}$$

For $x = 0$ and $z = 50$ ft, $y = -6$ in., and therefore,

$$-\frac{6}{12}\text{ ft} = -\frac{1}{4}\text{ ft} + c(50\text{ ft}), \quad \text{or} \quad c = -\frac{1}{200}$$

Therefore,

$$y = -\frac{1}{4}\text{ ft} - \frac{1}{180}x - \frac{1}{200}z$$

Now

$$\overline{x} = \frac{\int x_{EL}\,dV}{V}$$

A volume element can be chosen as

$$dV = |y|\,dx\,dz$$

or

$$dV = \frac{1}{4}\left(1 + \frac{1}{45}x + \frac{1}{50}z\right)dx\,dz$$

and

$$\overline{x}_{EL} = x$$

PROBLEM 5.136 (Continued)

Then
$$\int x_{EL}\,dV = \int_0^{50}\int_0^{30}\frac{x}{4}\left(1+\frac{1}{45}x+\frac{1}{50}z\right)dx\,dz$$

$$=\frac{1}{4}\int_0^{50}\left[\frac{x^2}{2}+\frac{1}{135}x^3+\frac{z}{100}x^2\right]_0^{30}dz$$

$$=\frac{1}{4}\int_0^{50}(650+9z)\,dz$$

$$=\frac{1}{4}\left[650\,z+\frac{9}{2}z^2\right]_0^{50}$$

$$=10937.5\text{ ft}^4$$

The volume is
$$V\int dV = \int_0^{50}\int_0^{30}\frac{1}{4}\left(1+\frac{1}{45}x+\frac{1}{50}z\right)dx\,dz$$

$$=\frac{1}{4}\int_0^{50}\left[x+\frac{1}{90}x^2+\frac{z}{50}x\right]_0^{30}dz$$

$$=\frac{1}{4}\int_0^{50}\left(40+\frac{3}{5}z\right)dz$$

$$=\frac{1}{4}\left[40z+\frac{3}{10}z^2\right]_0^{50}$$

$$=687.50\text{ ft}^3$$

Then
$$\bar{x}=\frac{\int \bar{x}_{EL}\,dV}{V}=\frac{10937.5\,\text{ft}^4}{687.5\text{ ft}^3}=15.9091\text{ ft}$$

Therefore,

$V = 688\text{ ft}^3$ ◀

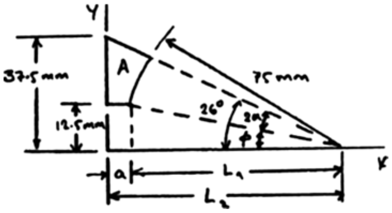
PROBLEM 5.142

The escutcheon (a decorative plate placed on a pipe where the pipe exits from a wall) shown is cast from brass. Knowing that the density of brass is 8470 kg/m^3, determine the mass of the escutcheon.

SOLUTION

The mass of the escutcheon is given by $m = (\text{density})V$, where V is the volume. V can be generated by rotating the area A about the x-axis.



From the figure:

$$L_1 = \sqrt{75^2 - 12.5^2} = 73.9510 \text{ m}$$

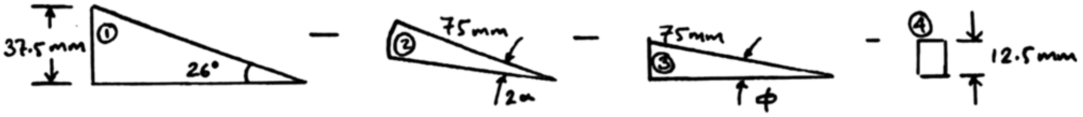
$$L_2 = \frac{37.5}{\tan 26°} = 76.8864 \text{ mm}$$

$$a = L_2 - L_1 = 2.9324 \text{ mm}$$

$$\phi = \sin^{-1}\frac{12.5}{75} = 9.5941°$$

$$\alpha = \frac{26° - 9.5941°}{2} = 8.2030° = 0.143168 \text{ rad}$$

Area A can be obtained by combining the following four areas:



Applying the second theorem of Pappus-Guldinus and using Figure 5.8a, we have

$$V = 2\pi\bar{y}A = 2\pi\Sigma\bar{y}A$$

Seg.	A, mm^2	$\bar{y}$, mm	$\bar{y}A$, mm^3
1	$\frac{1}{2}(76.886)(37.5) = 1441.61$	$\frac{1}{3}(37.5) = 12.5$	18,020.1
2	$-\alpha(75)^2 = -805.32$	$\frac{2(75)\sin\alpha}{3\alpha}\sin(\alpha+\phi) = 15.2303$	−12,265.3
3	$-\frac{1}{2}(73.951)(12.5) = -462.19$	$\frac{1}{3}(12.5) = 4.1667$	−1925.81

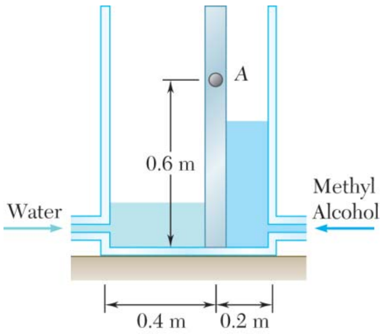
and $$+\uparrow \Sigma F_y = 0: \quad (0.8w_{BC})\text{ N} - 1800\text{ N} - 3600\text{ N} + 3150\text{ N} = 0$$

or $$w_{BC} = 2812.5\text{ N/m} \qquad w_{BC} = 2810\text{ N/m} \blacktriangleleft$$



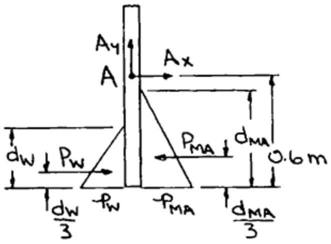
PROBLEM 5.145

A tank is divided into two sections by a 1 × 1-m square gate that is hinged at *A*. A couple of magnitude 490 N · m is required for the gate to rotate. If one side of the tank is filled with water at the rate of 0.1 $\mathrm{m^3}$/min and the other side is filled simultaneously with methyl alcohol (density ρ_{ma} = 789 kg/$\mathrm{m^3}$) at the rate of 0.2 $\mathrm{m^3}$/min, determine at what time and in which direction the gate will rotate.

SOLUTION

Consider the free-body diagram of the gate.

First note $V = A_{\text{base}}d$ and $V = rt$.



Then
$$d_W = \frac{0.1\ \mathrm{m^3/min} \times t(\mathrm{min})}{(0.4\ \mathrm{m})(1\ \mathrm{m})} = 0.25t(\mathrm{m})$$

$$d_{MA} = \frac{0.2\ \mathrm{m^3/min} \times t(\mathrm{min})}{(0.2\ \mathrm{m})(1\ \mathrm{m})} = t(\mathrm{m})$$

Now
$$P = \frac{1}{2}Ap = \frac{1}{2}A(\rho g h) \text{ so that}$$

$$P_W = \frac{1}{2}[(0.25t)\ \mathrm{m} \times (1\ \mathrm{m})][(10^3\ \mathrm{kg/m^3})(9.81\ \mathrm{m/s^2})(0.25t)\ \mathrm{m}]$$
$$= 306.56t^2\ \mathrm{N}$$

$$P_{MA} = \frac{1}{2}[(t)\ \mathrm{m} \times (1\ \mathrm{m})][(789\ \mathrm{kg/m^3})(9.81\ \mathrm{m/s^2})(t)\ \mathrm{m}]$$
$$= 3870t^2\ \mathrm{N}$$

Now assume that the gate will rotate clockwise and when $d_{MA} \le 0.6$ m. When rotation of the gate is impending, we require

$$\Sigma M_A: \quad M_R = \left(0.6\ \mathrm{m} - \frac{1}{3}d_{MA}\right)P_{MA} - \left(0.6\ \mathrm{m} - \frac{1}{3}d_W\right)P_W$$

Substituting

$$490\ \mathrm{N \cdot m} = \left(0.6 - \frac{1}{3}t\right)\mathrm{m} \times (3870t^2)\ \mathrm{N} - \left(0.6 - \frac{1}{3} \times 0.25t\right)\mathrm{m} \times (306.56t^2)\ \mathrm{N}$$

PROBLEM 5.145 (Continued)

Simplifying $$1264.45t^3 - 2138.1t^2 + 490 = 0$$

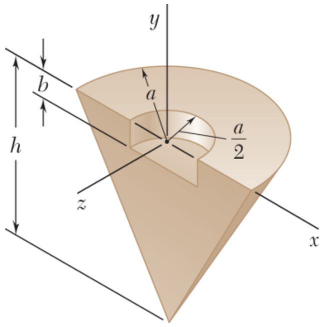
Solving (positive roots only)

$$t = 0.59451 \text{ min} \quad \text{and} \quad t = 1.52411 \text{ min}$$

Now check assumption using the smaller root. We have

$$d_{MA} = (t) \text{ m} = 0.59451 \text{ m} < 0.6 \text{ m} \qquad \therefore \quad t = 0.59451 \text{min} = 35.7 \text{ s} \blacktriangleleft$$

and the gate rotates clockwise. ◀



PROBLEM 5.146

Determine the *y* coordinate of the centroid of the body shown.

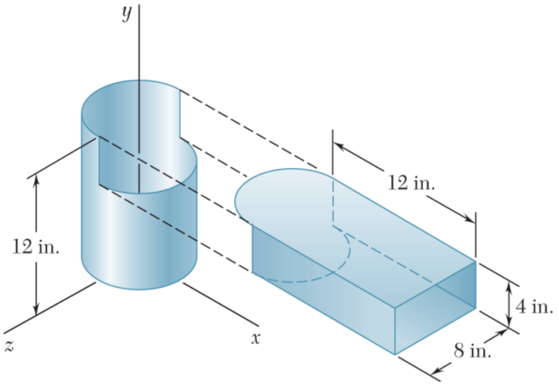
SOLUTION

First note that the values of $\bar{Y}$ will be the same for the given body and the body shown below. Then

	V	$\bar{y}$	$\bar{y}V$
Cone	$\frac{1}{3}\pi a^2 h$	$-\frac{1}{4}h$	$-\frac{1}{12}\pi a^2 h^2$
Cylinder	$-\pi\left(\frac{a}{2}\right)^2 b = -\frac{1}{4}\pi a^2 b$	$-\frac{1}{2}b$	$\frac{1}{8}\pi a^2 b^2$
Σ	$\frac{\pi}{12}a^2(4h-3b)$		$-\frac{\pi}{24}a^2(2h^2-3b^2)$

We have $$\bar{Y}\Sigma V = \Sigma\bar{y}V$$

Then $$\bar{Y}\left[\frac{\pi}{12}a^2(4h-3b)\right] = -\frac{\pi}{24}a^2(2h^2-3b^2)$$ or $$\bar{Y} = -\frac{2h^2-3b^2}{2(4h-3b)}$$ ◀



PROBLEM 5.147

An 8-in.-diameter cylindrical duct and a 4 × 8-in. rectangular duct are to be joined as indicated. Knowing that the ducts were fabricated from the same sheet metal, which is of uniform thickness, locate the center of gravity of the assembly.

SOLUTION

Assume that the body is homogeneous so that its center of gravity coincides with the centroid of the area.

By symmetry, $\overline{Z} = 0$.

	A, in^2	$\overline{x}$, in.	$\overline{y}$, in.	$\overline{x}A$, in^3	$\overline{y}A$, in^3
1	$\pi(8)(12) = 96\pi$	0	6	0	576π

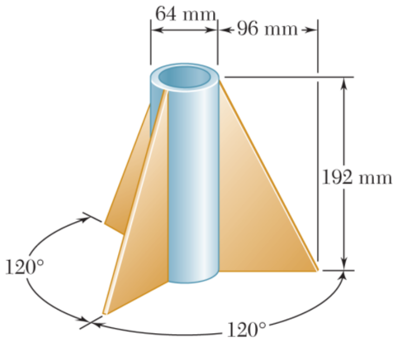
8	$(4)(12) = 48$	6	10	288	480
Σ	539.33			1514.6	4287.4

Then $$\overline{X} = \frac{\Sigma \overline{x}A}{\Sigma A} = \frac{1514.67}{539.33}\text{ in.}$$ or $\overline{X} = 2.81$ in. ◀

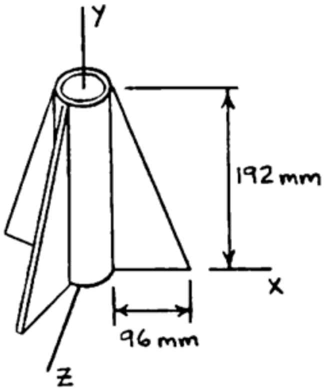
$$\overline{Y} = \frac{\Sigma \overline{y}A}{\Sigma A} = \frac{4287.4}{539.33}\text{ in.}$$ or $\overline{Y} = 7.95$ in. ◀



PROBLEM 5.148

Three brass plates are brazed to a steel pipe to form the flagpole base shown. Knowing that the pipe has a wall thickness of 8 mm and that each plate is 6 mm thick, determine the location of the center of gravity of the base. (Densities: brass = 8470 kg/m^3; steel = 7860 kg/m^3.)

SOLUTION



Since brass plates are equally spaced, we note that the center of gravity lies on the *y*-axis.

Thus, $\bar{X} = \bar{Z} = 0$ ◀

Steel pipe:

$$V = \frac{\pi}{4}[(0.064\text{ m})^2 - (0.048\text{ m})^2](0.192\text{ m})$$

$$= 270.22 \times 10^{-6}\text{ m}^3$$

$$m = \rho V = (7860\text{ kg/m}^3)(270.22 \times 10^{-6}\text{ m}^3)$$

$$= 2.1239\text{ kg}$$

Each brass plate:

$$V = \frac{1}{2}(0.096\text{ m})(0.192\text{ m})(0.006\text{ m}) = 55.296 \times 10^{-6}\text{ m}^3$$

$$m = \rho V = (8470\text{ kg/m}^3)(55.296 \times 10^{-6}\text{ m}^3) = 0.46836\text{ kg}$$

Flagpole base:

$$\Sigma m = 2.1239\text{ kg} + 3(0.46836\text{ kg}) = 3.5290\text{ kg}$$

$$\Sigma \bar{y} m = (0.096\text{ m})(2.1239\text{ kg}) + 3[(0.064\text{ m})(0.46836\text{ kg})] = 0.29382\text{ kg} \cdot \text{m}$$

$$\bar{Y}\Sigma m = \Sigma \bar{y} m: \qquad \bar{Y}(3.5290\text{ kg}) = 0.29382\text{ kg} \cdot \text{m}$$

$$\bar{Y} = 0.083259\text{ m} \qquad \bar{Y} = 83.3\text{ mm above the base} ◀$$

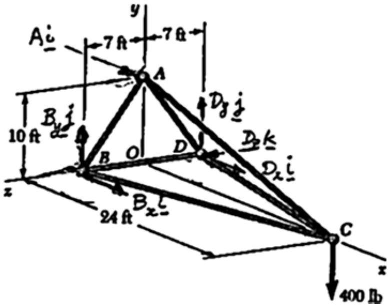
PROBLEM 6.35*

The truss shown consists of six members and is supported by a short link at *A*, two short links at *B*, and a ball and socket at *D*. Determine the force in each of the members for the given loading.

SOLUTION

Free body: Truss:

From symmetry:



$A\mathbf{i}$
y
7 ft
7 ft
A
$B_y\mathbf{j}$
$D_y\mathbf{j}$
10 ft
B
O
D
$D_z\mathbf{k}$
$D_x\mathbf{i}$
z
$B_x\mathbf{i}$
24 ft
C
x
400 lb

$$D_x = B_x \quad \text{and} \quad D_y = B_y$$

$$\Sigma M_z = 0: \quad -A(10\text{ ft}) - (400\text{ lb})(24\text{ ft}) = 0$$

$$A = -960\text{ lb}$$

$$\Sigma F_x = 0: \quad B_x + D_x + A = 0$$

$$2B_x - 960\text{ lb} = 0, \quad B_x = 480\text{ lb}$$

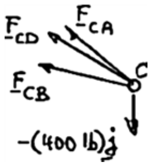
$$\Sigma F_y = 0: \quad B_y + D_y - 400\text{ lb} = 0$$

$$2B_y = 400\text{ lb}$$

$$B_y = +200\text{ lb}$$

Thus, $\mathbf{B} = (480\text{ lb})\mathbf{i} + (200\text{ lb})\mathbf{j}$ $\triangleleft$

Free body: *C*:



F_{CD}
F_{CA}
C
F_{CB}
$-(400\text{ lb})\mathbf{j}$

$$F_{CA} = F_{AC}\frac{\overrightarrow{CA}}{CA} = \frac{F_{AC}}{26}(-24\mathbf{i} + 10\mathbf{j})$$

$$F_{CB} = F_{BC}\frac{\overrightarrow{CB}}{CB} = \frac{F_{BC}}{25}(-24\mathbf{i} + 7\mathbf{k})$$

$$F_{CD} = F_{CD}\frac{\overrightarrow{CD}}{CD} = \frac{F_{CD}}{25}(-24\mathbf{i} - 7\mathbf{k})$$

$$\Sigma\mathbf{F} = 0: \quad \mathbf{F}_{CA} + \mathbf{F}_{CB} + \mathbf{F}_{CD} - (400\text{ lb})\mathbf{j} = 0$$

Substituting for $\mathbf{F}_{CA}, \mathbf{F}_{CB}, \mathbf{F}_{CD}$, and equating to zero the coefficients of $\mathbf{i}, \mathbf{j}, \mathbf{k}$:

i: $$-\frac{24}{26}F_{AC} - \frac{24}{25}(F_{BC} + F_{CD}) = 0 \qquad (1)$$

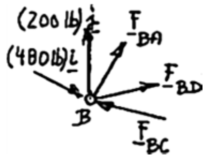
j: $$\frac{10}{26}F_{AC} - 400 \text{ lb} = 0 \qquad F_{AC} = 1040 \text{ lb} \quad T \blacktriangleleft$$

k: $$\frac{7}{25}(F_{BC} - F_{CD}) = 0 \quad F_{CD} = F_{BC}$$

Substitute for F_{AC} and F_{CD} in Eq. (1):

$$-\frac{24}{26}(10.40 \text{ lb}) - \frac{24}{25}(2F_{BC}) = 0 \quad F_{BC} = -500 \text{ lb} \qquad F_{BC} = F_{CD} = 500 \text{ lb} \quad C \blacktriangleleft$$

Free body: *B*:



$$F_{BC} = (500 \text{ lb})\frac{\overline{CB}}{CB} = -(480 \text{ lb})\mathbf{i} + (140 \text{ lb})\mathbf{k}$$

$$F_{BA} = F_{AB}\frac{\overrightarrow{BA}}{BA} = \frac{F_{AB}}{12.21}(10\mathbf{j} - 7\mathbf{k})$$

$$F_{BD} = -F_{BD}\mathbf{k}$$

$$\Sigma\mathbf{F} = 0: \quad \mathbf{F}_{BA} + \mathbf{F}_{BD} + \mathbf{F}_{BC} + (480 \text{ lb})\mathbf{i} + (200 \text{ lb})\mathbf{j} = 0$$

Substituting for $\mathbf{F}_{BA}, \mathbf{F}_{BD}, \mathbf{F}_{BC}$ and equating to zero the coefficients of $\mathbf{j}$ and $\mathbf{k}$:

j: $$\frac{10}{12.21}F_{AB} + 200 \text{ lb} = 0 \quad F_{AB} = -244.2 \text{ lb} \qquad F_{AB} = 244 \text{ lb} \quad C \blacktriangleleft$$

k: $$-\frac{7}{12.21}F_{AB} - F_{BD} + 140 \text{ lb} = 0$$

$$F_{BD} = -\frac{7}{12.21}(-244.2 \text{ lb}) + 140 \text{ lb} = +280 \text{ lb} \quad F_{BD} = 280 \text{ lb} \quad T \blacktriangleleft$$

From symmetry: $$F_{AD} = F_{AB} \qquad F_{AD} = 244 \text{ lb} \quad C \blacktriangleleft$$

$$\Sigma\mathbf{F} = 0: \quad \mathbf{F}_{BA} + \mathbf{F}_{BC} + \mathbf{F}_{BD} + \mathbf{F}_{BE} + (1800\text{ lb})\mathbf{j} = 0$$

Substituting for $\mathbf{F}_{BA}, \mathbf{F}_{BC}, \mathbf{F}_{BD}$, and $\mathbf{F}_{BE}$ and equating to zero the coefficients of **i**, **j**, **k**,

i: $750\text{ lb} + \left(\frac{7.5}{12.5}\right)F_{BE} = 0, \quad F_{BE} = -1250\text{ lb}$ $\qquad F_{BE} = 1250\text{ lb} \quad C \blacktriangleleft$

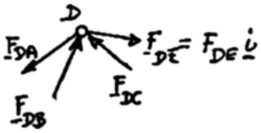
j: $0.8\,F_{BD} + \left(\frac{8}{12.5}\right)(-1250\text{ lb}) + 1800\text{ lb} = 0$ $\qquad F_{BD} = 1250\text{ lb} \quad C \blacktriangleleft$

k: $750\text{ lb} - F_{BC} - 0.6(-1250\text{ lb}) - \frac{6}{12.5}(-1250\text{ lb}) = 0$

$$F_{BC} = 2100\text{ lb} \quad T \blacktriangleleft$$

From symmetry: $\qquad F_{BD} = F_{CD} = 1250\text{ lb} \quad C \blacktriangleleft$

Free body: *D*:

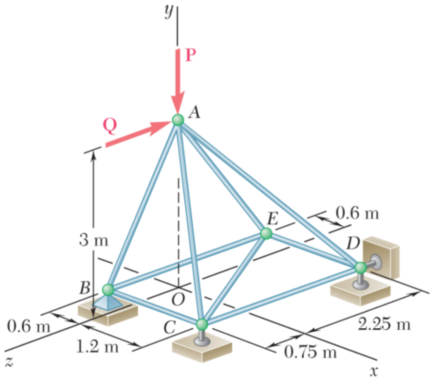


$$\Sigma\mathbf{F} = 0: \ \mathbf{F}_{DA} + \mathbf{F}_{DB} + \mathbf{F}_{DC} + F_{DE}\mathbf{i} = 0$$

We now substitute for $\mathbf{F}_{DA}, \mathbf{F}_{DB}, \mathbf{F}_{DC}$ and equate to zero the coefficient of **i**. Only $\mathbf{F}_{DA}$ contains **i** and its coefficient is

$$-0.6\,F_{AD} = -0.6(2500\text{ lb}) = -1500\text{ lb}$$

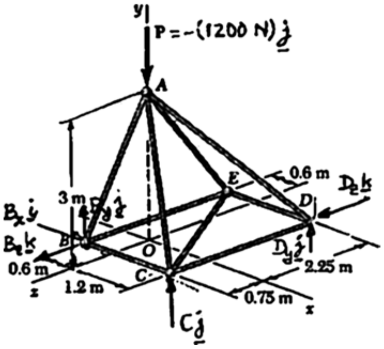
i: $-1500\text{ lb} + F_{DE} = 0$ $\qquad F_{DE} = 1500\text{ lb} \quad T \blacktriangleleft$



PROBLEM 6.39*

The truss shown consists of nine members and is supported by a ball and socket at *B*, a short link at *C*, and two short links at *D*. (*a*) Check that this truss is a simple truss, that it is completely constrained, and that the reactions at its supports are statically determinate. (*b*) Determine the force in each member for $\mathbf{P} = (-1200\text{ N})\mathbf{j}$ and $\mathbf{Q} = 0$.

SOLUTION



Free body: Truss:

$$\Sigma\mathbf{M}_B = 0:\quad 1.8\mathbf{i}\times C\mathbf{j} + (1.8\mathbf{i} - 3\mathbf{k})\times(D_y\mathbf{j} + D\mathbf{k})$$

$$+(0.6\mathbf{i} - 0.75\mathbf{k})\times(-1200\mathbf{j}) = 0$$

$$-1.8\,C\mathbf{k} + 1.8\,D_y\mathbf{k} - 1.8\,D_z\mathbf{j}$$

$$+3D_y\mathbf{i} - 720\mathbf{k} - 900\mathbf{i} = 0$$

Equate to zero the coefficients of **i**, **j**, **k**:

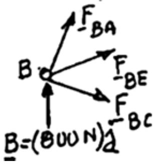
$$\mathbf{i}:\quad 3D_y - 900 = 0,\quad D_y = 300\text{ N}$$

$$\mathbf{j}:\quad D_z = 0, \qquad \mathbf{D} = (300\text{ N})\mathbf{j}\ \triangleleft$$

$$\mathbf{k}:\quad 1.8C + 1.8(300) - 720 = 0 \qquad \mathbf{C} = (100\text{ N})\mathbf{j}\ \triangleleft$$

$$\Sigma\mathbf{F} = 0:\quad \mathbf{B} + 300\mathbf{j} + 100\mathbf{j} - 1200\mathbf{j} = 0 \qquad \mathbf{B} = (800\text{ N})\mathbf{j}\ \triangleleft$$

Free body: *B*:



$$\Sigma\mathbf{F} = 0:\quad \mathbf{F}_{BA} + \mathbf{F}_{BC} + \mathbf{F}_{BE} + (800\text{ N})\mathbf{j} = 0,\ \text{with}$$

$$\mathbf{F}_{BA} = \mathbf{F}_{AB}\frac{\overrightarrow{BA}}{BA} = \frac{F_{AB}}{3.15}(0.6\mathbf{i} + 3\mathbf{j} - 0.75\mathbf{k})$$

$$\mathbf{F}_{BC} = F_{BC}\mathbf{i} \qquad \mathbf{F}_{BE} = -F_{BE}\mathbf{k}$$

Substitute and equate to zero the coefficient of **j**, **i**, **k**:

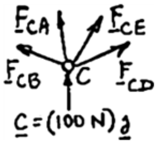
$$\mathbf{j}:\quad \left(\frac{3}{3.315}\right)F_{AB} + 800\text{ N} = 0,\quad F_{AB} = -840\text{ N}, \qquad F_{AB} = 840\text{ N}\quad C\ \blacktriangleleft$$

$$\mathbf{i}:\quad \left(\frac{0.6}{3.15}\right)(-840\text{ N}) + F_{BC} = 0 \qquad F_{BC} = 160.0\text{ N}\quad T\ \blacktriangleleft$$

$$\mathbf{k}:\quad \left(-\frac{0.75}{3.15}\right)(-840\text{ N}) - F_{BE} = 0 \qquad F_{BE} = 200\text{ N}\quad T\ \blacktriangleleft$$

PROBLEM 6.39* (Continued)

Free body: *C*:



$$\Sigma\mathbf{F} = 0: \quad \mathbf{F}_{CA} + \mathbf{F}_{CB} + \mathbf{F}_{CD} + \mathbf{F}_{CE} + (100\text{ N})\mathbf{j} = 0, \text{ with}$$

$$\mathbf{F}_{CA} = F_{AC}\frac{\overrightarrow{CA}}{CA} = \frac{F_{AC}}{3.317}(-1.2\mathbf{i} + 3\mathbf{j} - 0.75\mathbf{k})$$

$$F_{CB} = -(160\,\text{N})\,\mathbf{i}$$

$$\mathbf{F}_{CD} = -F_{CD}\mathbf{k} \quad \mathbf{F}_{CE} = \mathbf{F}_{CE}\frac{\overrightarrow{CE}}{CE} = \frac{F_{CE}}{3,499}(-1.8\mathbf{i} - 3\mathbf{k})$$

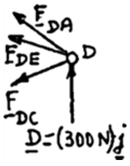
Substitute and equate to zero the coefficient of $\mathbf{j}, \mathbf{i}, \mathbf{k}$:

$\mathbf{j}$: $$\left(\frac{3}{3.317}\right)F_{AC} + 100\text{ N} = 0, \quad F_{AC} = -110.57\text{ N} \qquad F_{AC} = 110.6\text{ N} \quad C \blacktriangleleft$$

$\mathbf{i}$: $$-\frac{1.2}{3.317}(-110.57) - 160 - \frac{1.8}{3.499}F_{CE} = 0, \quad F_{CE} = -233.3 \qquad F_{CE} = 233\text{ N} \quad C \blacktriangleleft$$

$\mathbf{k}$: $$-\frac{0.75}{3.317}(-110.57) - F_{CD} - \frac{3}{3.499}(-233.3) = 0 \qquad F_{CD} = 225\text{ N} \quad T \blacktriangleleft$$

Free body: *D*:



$$\Sigma\mathbf{F} = 0: \quad \mathbf{F}_{DA} + \mathbf{F}_{DC} + \mathbf{F}_{DE} + (300\text{ N})\mathbf{j} = 0, \text{ with}$$

$$\mathbf{F}_{DA} = F_{AD}\frac{\overrightarrow{DA}}{DA} = \frac{F_{AD}}{3.937}(-1.2\mathbf{i} + 3\mathbf{j} + 2.25\mathbf{k})$$

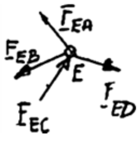
$$\mathbf{F}_{DC} = F_{CD}\mathbf{k} = (225\text{ N})\mathbf{k} \qquad F_{DE} = -F_{DE}\mathbf{i}$$

Substitute and equate to zero the coefficient of $\mathbf{j}, \mathbf{i}, \mathbf{k}$:

$\mathbf{j}$: $$\left(\frac{3}{3.937}\right)F_{AD} + 300\text{ N} = 0, \qquad F_{AD} = -393.7\text{ N}, \qquad F_{AD} = 394\text{ N} \quad C \blacktriangleleft$$

$\mathbf{i}$: $$\left(-\frac{1.2}{3.937}\right)(-393.7\text{ N}) - F_{DE} = 0 \qquad F_{DE} = 120.0\text{ N} \quad T \blacktriangleleft$$

$\mathbf{k}$: $$\left(\frac{2.25}{3.937}\right)(-393.7\text{ N}) + 225\text{ N} = 0 \quad \text{(Checks)}$$



Free body: *E*:

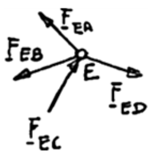
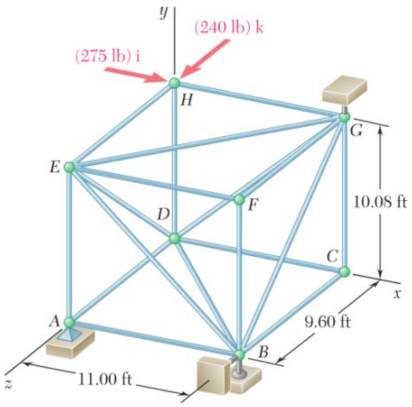
Free body: *E*:

Member *AE* is the only member at *E* which does not lie in the *xz* plane. Therefore, it is a zero-force member.



$F_{AE} = 0$ ◀



PROBLEM 6.41*

The truss shown consists of 18 members and is supported by a ball and socket at *A*, two short links at *B*, and one short link at *G*. (*a*) Check that this truss is a simple truss, that it is completely constrained, and that the reactions at its supports are statically determinate. (*b*) For the given loading, determine the force in each of the six members joined at *E*.

SOLUTION

(*a*) Check simple truss.

(1) Start with tetrahedron *BEFG*.

(2) Add members *BD*, *ED*, *GD* joining at *D*.

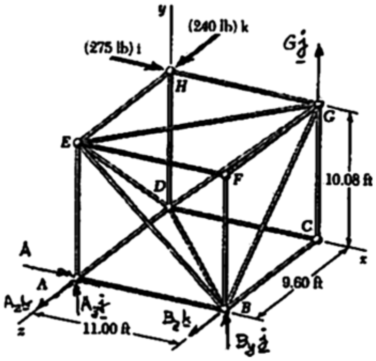
(3) Add members *BA*, *DA*, *EA* joining at *A*.

(4) Add members *DH*, *EH*, *GH* joining at *H*.

(5) Add members *BC*, *DC*, *GC* joining at *C*.

Truss has been completed: It is a simple truss.

Free body: Truss:



Check constraints and reactions.

Six unknown reactions—ok; however, supports at *A* and *B* constrain truss to rotate about *AB* and support at *G* prevents such a rotation. Thus,

Truss is completely constrained and reactions are statically determinate.

Determination of reactions:

$$\Sigma \mathbf{M}_A = 0: \quad 11\mathbf{i} \times (B_y\mathbf{j} + B_z\mathbf{k}) + (11\mathbf{i} - 9.6\mathbf{k}) \times G\mathbf{j} + (10.08\mathbf{j} - 9.6\mathbf{k}) \times (275\mathbf{i} + 240\mathbf{k}) = 0$$

$$11B_y\mathbf{k} - 11B_y\mathbf{j} + 11G\mathbf{k} + 9.6G\mathbf{i} - (10.08)(275)\mathbf{k} + (10.08)(240)\mathbf{i} - (9.6)(275)\mathbf{j} = 0$$

Equate to zero the coefficient of **i**, **j**, **k**:

$\mathbf{i}: \quad 9.6G + (10.08)(240) = 0 \quad G = -252 \text{ lb}$ $\qquad \mathbf{G} = (-252 \text{ lb})\mathbf{j}$ ◁

$\mathbf{j}: \quad -11B_z - (9.6)(275) = 0 \quad B_z = -240 \text{ lb}$

$\mathbf{k}: \quad 11B_y + 11(-252) - (10.08)(275) = 0, \quad B_y = 504 \text{ lb}$ $\qquad \mathbf{B} = (504 \text{ lb})\mathbf{j} - (240 \text{ lb})\mathbf{k}$ ◁

PROBLEM 6.41* (Continued)

$$\Sigma \mathbf{F} = 0: \quad \mathbf{A} + (504 \text{ lb})\mathbf{j} - (240 \text{ lb})\mathbf{k} - (252 \text{ lb})\mathbf{j}$$
$$+ (275 \text{ lb})\mathbf{i} + (240 \text{ lb})\mathbf{k} = 0$$

$\mathbf{A} = -(275 \text{ lb})\mathbf{i} - (252 \text{ lb})\mathbf{j}$ ◁

Zero-force members.

The determination of these members will facilitate our solution.

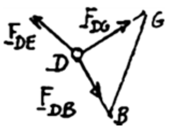
FB: C: Writing $\Sigma F_x = 0, \quad \Sigma F_y = 0, \quad \Sigma F_z = 0$ yields $F_{BC} = F_{CD} = F_{CG} = 0$ ◁

FB: F: Writing $\Sigma F_x = 0, \quad \Sigma F_y = 0, \quad \Sigma F_z = 0$ yields $F_{BF} = F_{EF} = F_{FG} = 0$ ◁

FB: A: Since $A_z = 0$, writing $\Sigma F_z = 0$ yields $F_{AD} = 0$ ◁

FB: H: Writing $\Sigma F_y = 0$ yields $F_{DH} = 0$ ◁

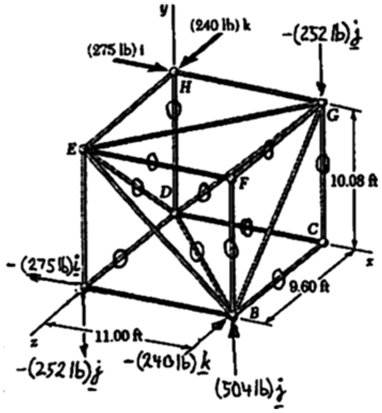
FB: D: Since $F_{AD} = F_{CD} = F_{DH} = 0$, we need consider only members DB, DE, and DG.



Since F_{DE} is the only force not contained in plane BDG, it must be zero. Simple reasonings show that the other two forces are also zero.

$F_{BD} = F_{DE} = F_{DG} = 0$ ◁

The results obtained for the reactions at the supports and for the zero-force members are shown on the figure below. Zero-force members are indicated by a zero ("0").



(*b*) Force in each of the members joined at *E*.

We already found that $F_{DE} = F_{EF} = 0$ ◀

Free body: *A*: $\Sigma F_y = 0$ yields $F_{AE} = 252 \text{ lb} \quad T$ ◀

Free body: *H*: $\Sigma F_z = 0$ yields $F_{EH} = 240 \text{ lb} \quad C$ ◀

PROBLEM 6.41* (Continued)

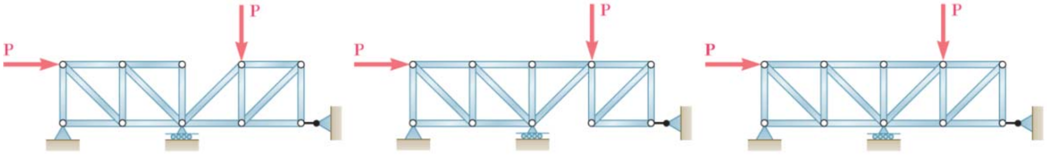
PROBLEM 6.69

Classify each of the structures shown as completely, partially, or improperly constrained; if completely constrained, further classify as determinate or indeterminate. (All members can act both in tension and in compression.)



(a) (b) (c)

SOLUTION

Structure (a)

Number of members:

$$m = 16$$

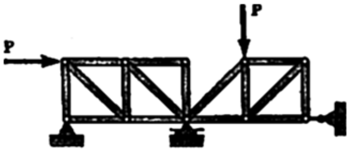
Number of joints:

$$n = 10$$

Reaction components:

$$r = 4$$

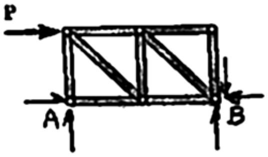
$$m + r = 20, \quad 2n = 20$$



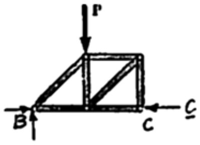
(a)

Thus, $m + r = 2n$ ◁

To determine whether the structure is actually completely constrained and determinate, we must try to find the reactions at the supports. We divide the structure into two simple trusses and draw the free-body diagram of each truss.



This is a properly supported simple truss – O.K.

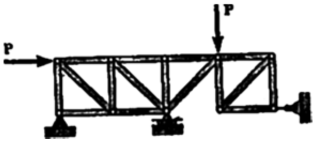


This is an improperly supported simple truss. (Reaction at *C* passes through *B*. Thus, Eq. $\Sigma M_B = 0$ cannot be satisfied.)

Structure is improperly constrained. ◀

Structure (b)

$$m = 16$$
$$n = 10$$
$$r = 4$$
$$m + r = 20, \quad 2n = 20$$

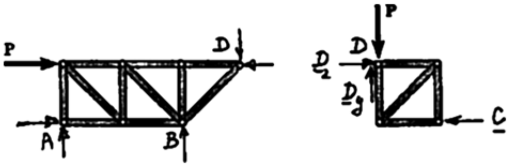


(b)

Thus, $m + r = 2n$ ◁

PROBLEM 6.69 (Continued)

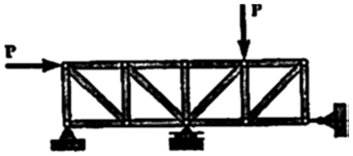
We must again try to find the reactions at the supports dividing the structure as shown.



Both portions are simply supported simple trusses.

Structure is completely constrained and determinate. ◀

Structure (c)



(c)

$$m = 17$$
$$n = 10$$
$$r = 4$$
$$m + r = 21, \quad 2n = 20$$

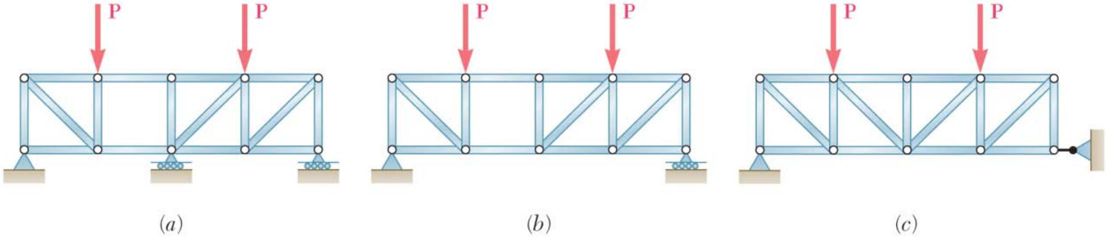
Thus, $m + r > 2n$ ◁

This is a simple truss with an extra support which causes reactions (and forces in members) to be indeterminate.

Structure is completely constrained and indeterminate. ◀

PROBLEM 6.70

Classify each of the structures shown as completely, partially, or improperly constrained; if completely constrained, further classify as determinate or indeterminate. (All members can act both in tension and in compression.)



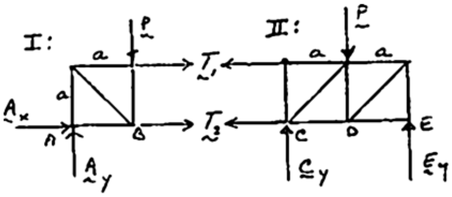
SOLUTION

Structure (a):

Nonsimple truss with $r = 4,\ \ m = 16,\ \ n = 10,$

so $m + r = 20 = 2n,$ but we must examine further.

FBD Sections:



FBD I: $\Sigma M_A = 0 \quad \Rightarrow \quad T_1$

II: $\Sigma F_x = 0 \quad \Rightarrow \quad T_2$

I: $\Sigma F_x = 0 \quad \Rightarrow \quad A_x$

I: $\Sigma F_y = 0 \quad \Rightarrow \quad A_y$

II: $\Sigma M_E = 0 \quad \Rightarrow \quad C_y$

II: $\Sigma F_y = 0 \quad \Rightarrow \quad E_y$

Since each section is a simple truss with reactions determined,

structure is completely constrained and determinate. ◀

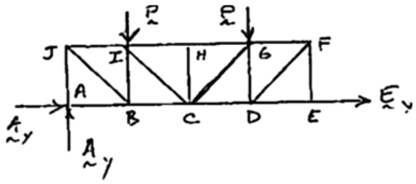
Structure (b):

Nonsimple truss with $r = 3,\ \ m = 16,\ \ n = 10,$

so $m + r = 19 < 2n = 20$ Structure is partially constrained. ◀

PROBLEM 6.70 (Continued)

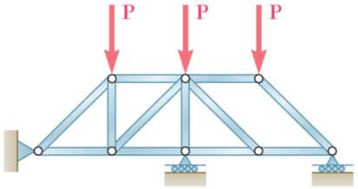
Structure (c):



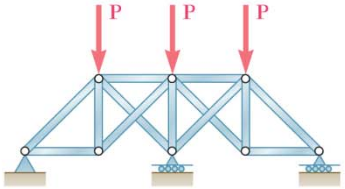
Simple truss with $r = 3$, $m = 17$, $n = 10$, $m + r = 20 = 2n$, but the horizontal reaction forces A_x and E_x are collinear and no equilibrium equation will resolve them, so the structure is improperly constrained and indeterminate. ◀

PROBLEM 6.71

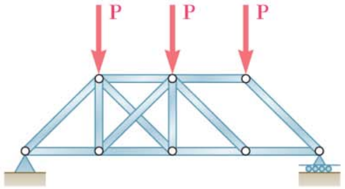
Classify each of the structures shown as completely, partially, or improperly constrained; if completely constrained, further classify as determinate or indeterminate. (All members can act both in tension and in compression.)



(a)



(b)



(c)

SOLUTION

Structure (a):

A
F_{DE}
B
C
D
A_y
C_y

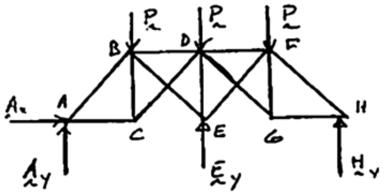
Nonsimple truss with $r = 4,\ m = 12,\ n = 8$ so $r + m = 16 = 2n.$
Check for determinacy:

One can solve joint *F* for forces in *EF*, *FG* and then solve joint *E* for $\mathbf{E}_y$ and force in *DE*.

This leaves a simple truss *ABCDGH* with

$r = 3, m = 9, n = 6$ so $r + m = 12 = 2n$ Structure is completely constrained and determinate. ◀

Structure (b):

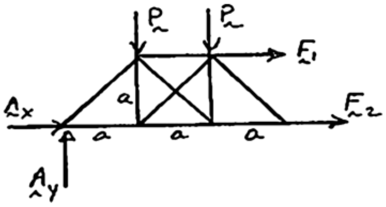


P
P
P
B
D
F
A_x
A
H
C
E
G
A_y
E_y
H_y

Simple truss (start with *ABC* and add joints alphabetically to complete truss) with $r = 4,\ m = 13,\ n = 8$

so $r + m = 17 > 2n = 16$ Constrained but indeterminate ◀

Structure (c):



Nonsimple truss with $r = 3$, $m = 13$, $n = 8$ so $r + m = 16 = 2n$. To further examine, follow procedure in part (a) above to get truss at left.

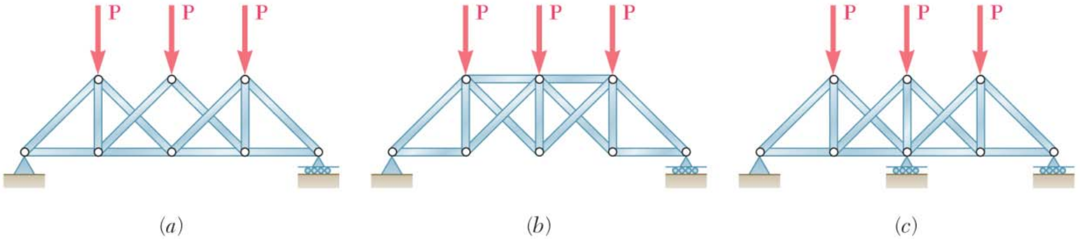
Since $\mathbf{F}_1 \neq 0$ (from solution of joint F),

$\Sigma M_A = aF_1 \circlearrowright \neq 0$ and there is no equilibrium.

Structure is improperly constrained. ◀

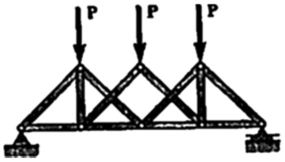
PROBLEM 6.72

Classify each of the structures shown as completely, partially, or improperly constrained; if completely constrained, further classify as determinate or indeterminate. (All members can act both in tension and in compression.)



SOLUTION

Structure (a)



Number of members:

$$m = 12$$

Number of joints:

$$n = 8$$

Reaction components:

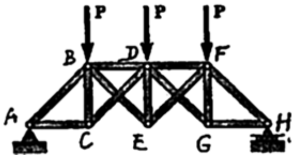
$$r = 3$$

$$m + r = 15, \quad 2n = 16$$

Thus, $m + r < 2n$ ◁

Structure is partially constrained. ◀

Structure (b)



$$m = 13, \; n = 8$$

$$r = 3$$

$$m + r = 16, \quad 2n = 16$$

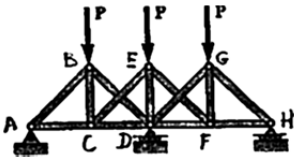
Thus, $m + r = 2n$ ◁

To verify that the structure is actually completely constrained and determinate, we observe that it is a simple truss (follow lettering to check this) and that it is simply supported by a pin-and-bracket and a roller. Thus,

structure is completely constrained and determinate. ◀

PROBLEM 6.72 (Continued)

Structure (c)



$$m = 13, \quad n = 8$$
$$r = 4$$
$$m + r = 17, \quad 2n = 16$$

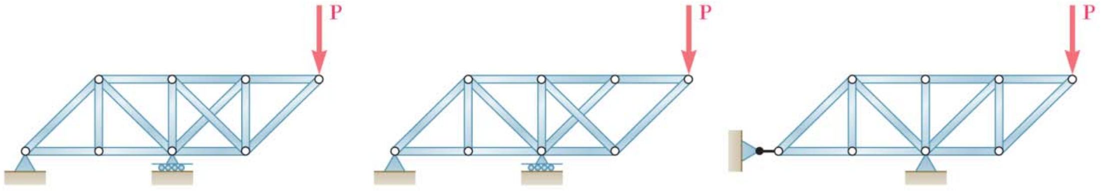
Thus, $m + r > 2n$ ◁

Structure is completely constrained and indeterminate. ◀

This result can be verified by observing that the structure is a simple truss (follow lettering to check this), therefore it is rigid, and that its supports involve four unknowns.

PROBLEM 6.73

Classify each of the structures shown as completely, partially, or improperly constrained; if completely constrained, further classify as determinate or indeterminate. (All members can act both in tension and in compression.)



(*a*) (*b*) (*c*)

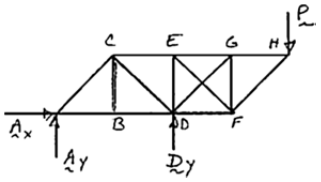
SOLUTION

Structure (a): Rigid truss with $r = 3, \quad m = 14, \quad n = 8,$

so $r + m = 17 > 2n = 16$

so completely constrained but indeterminate ◀

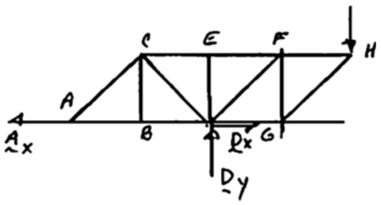
Structure (b): Simple truss (start with *ABC* and add joints alphabetically), with



$r = 3, m = 13, n = 8,$ so $r + m = 16 = 2n$

so completely constrained and determinate ◀

Structure (c):

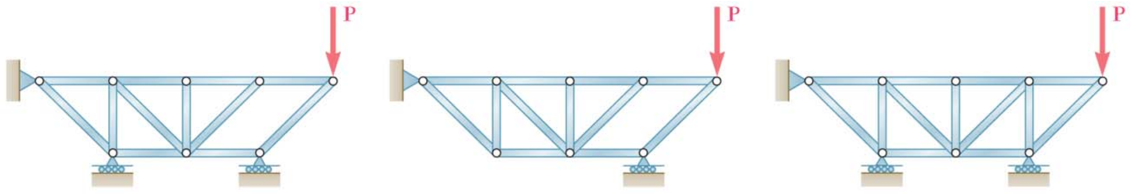


Simple truss with $r = 3, \quad m = 13, \quad n = 8,$ so $r + m = 16 = 2n,$ but horizontal reactions $(A_x$ and $D_x)$ are collinear, so cannot be resolved by any equilibrium equation.

Structure is improperly constrained. ◀

PROBLEM 6.74

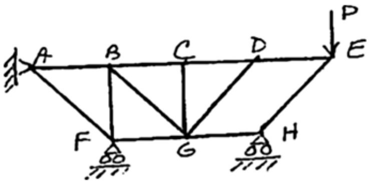
Classify each of the structures shown as completely, partially, or improperly constrained; if completely constrained, further classify as determinate or indeterminate. (All members can act both in tension and in compression.)



(*a*) (*b*) (*c*)

SOLUTION

Structure (a):

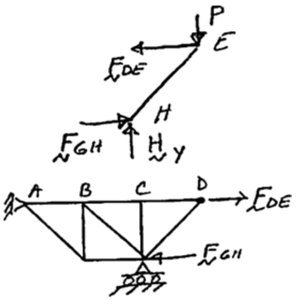


No. of members $m = 12$

No. of joints $n = 8$ $m + r = 16 = 2n$

No. of reaction components $r = 4$ unknows = equations

FBD of EH:

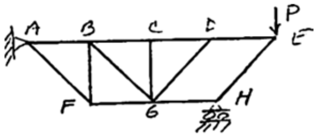


$$\Sigma M_H = 0 \longrightarrow F_{DE};\ \Sigma F_x = 0 \longrightarrow F_{GH};\ \Sigma F_y = 0 \longrightarrow H_y$$

Then *ABCDGF* is a simple truss and all forces can be determined.

This example is completely constrained and determinate. ◀

Structure (b):



No. of members $m = 12$

No. of joints $n = 8$ $m + r = 15 < 2n = 16$

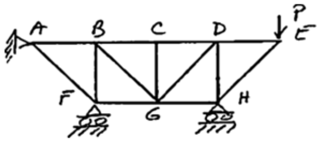
No. of reaction components $r = 3$ unknows < equations

partially constrained ◀

Note: Quadrilateral *DEHG* can collapse with joint *D* moving downward; in (a), the roller at *F* prevents this action.

PROBLEM 6.74 (Continued)

Structure (c):

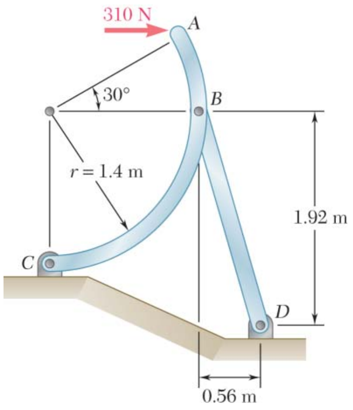


No. of members $m = 13$

No. of joints $n = 8$ $m + r = 17 > 2n = 16$

No. of reaction components $r = 4$ unknows > equations

completely constrained but indeterminate ◀



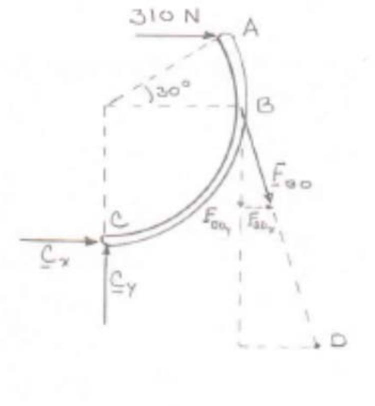
PROBLEM 6.75

Determine the force in member *BD* and the components of the reaction at *C*.

SOLUTION

We note that *BD* is a two-force member. The force it exerts on *ABC*, therefore, is directed along line *BD*.

Free body: *ABC*:



We have $BD = \sqrt{(1.92^2 + 0.56^2)} = 2\text{ m}$

$$+\circlearrowright \Sigma M_C = 0: \qquad (310\text{ N})(2.1\text{ m}) + \left(\frac{0.56}{2}F_{BD}\right)(1.4\text{ m}) + \left(\frac{1.92}{2}F_{BD}\right)(1.4\text{ m}) = 0$$

$$F_{BD} = -375\text{ N} \qquad F_{BD} = 375\text{ N}\quad C \;◀$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad C_x + 310\text{ N} + \frac{0.56}{2}(-375\text{ N}) = 0$$

$$C_x = -205\text{ N} \qquad \mathbf{C}_x = 205\text{ N} \longleftarrow \;◀$$

$$+\!\uparrow \Sigma F_y = 0: \quad C_y - \frac{1.92}{2}(-375\text{ N}) = 0$$

$$C_y = -360\text{ N} \qquad \mathbf{C}_y = 360\text{ N}\downarrow \;◀$$

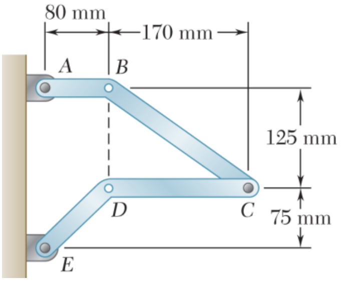
$$E_x = -375\ \mathrm{N} \qquad \mathbf{E}_x = 375\ \mathrm{N} \leftarrow \blacktriangleleft$$



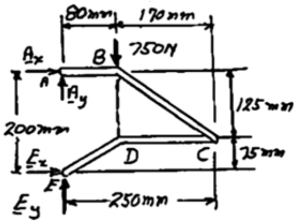
PROBLEM 6.85

Determine the components of the reactions at *A* and *E* if a 750-N force directed vertically downward is applied (*a*) at *B*, (*b*) at *D*.

SOLUTION

Free body: Entire frame:

The following analysis is valid for both parts (*a*) and (*b*) since position of load on its line of action is immaterial.



$$+\circlearrowleft \Sigma M_E = 0: \quad -(750\text{ N})(80\text{ mm}) - A_x(200\text{ mm}) = 0$$

$$A_x = -300\text{ N} \quad \mathbf{A}_x = 300\text{ N} \longleftarrow$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad E_x - 300\text{ N} = 0 \quad E_x = 300\text{ N} \quad \mathbf{E}_x = 300\text{ N} \longrightarrow$$

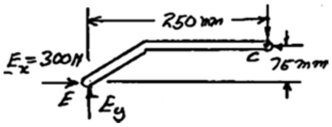
$$+\uparrow \Sigma F_y = 0: \quad A_y + E_y - 750\text{ N} = 0 \qquad (1)$$

(*a*) Load applied at *B*.

Free body: Member *CE*:

CE is a two-force member. Thus, the reaction at *E* must be directed along *CE*.

$$\frac{E_y}{300\text{ N}} = \frac{75\text{ mm}}{250\text{ mm}} \qquad E_y = 90\text{ N}\uparrow$$



From Eq. (1): $A_y + 90\text{ N} - 750\text{ N} = 0 \qquad A_y = 660\text{ N}\uparrow$

Thus, reactions are

$$\mathbf{A}_x = 300\text{ N} \longleftarrow, \ \mathbf{A}_y = 660\text{ N}\uparrow \blacktriangleleft$$

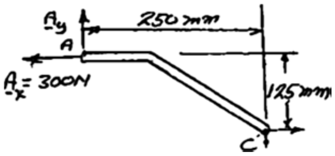
$$\mathbf{E}_x = 300\text{ N} \longrightarrow, \ \mathbf{E}_y = 90.0\text{ N}\uparrow \blacktriangleleft$$

(*b*) Load applied at *D*.

Free body: Member *AC*:

AC is a two-force member. Thus, the reaction at *A* must be directed along *AC*.

$$\frac{A_y}{300\text{ N}} = \frac{125\text{ mm}}{250\text{ mm}} \qquad A_y = 150\text{ N}\uparrow$$



Copyright © McGraw-Hill Education. Permission required for reproduction or display.

PROBLEM 6.85 (Continued)

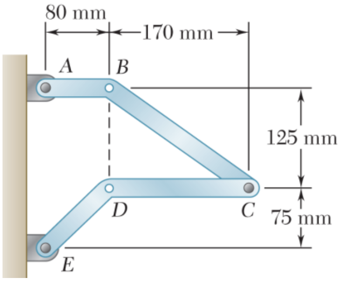
From Eq. (1): $A_y + E_y - 750\text{ N} = 0$

$$150\text{ N} + E_y - 750\text{ N} = 0$$

$$E_y = 600\text{ N} \quad \mathbf{E}_y = 600\text{ N}\uparrow$$

Thus, reactions are $\mathbf{A}_x = 300\text{ N} \longleftarrow, \quad \mathbf{A}_y = 150.0\text{ N}\uparrow$ ◀

$\mathbf{E}_x = 300\text{ N} \longrightarrow, \quad \mathbf{E}_y = 600\text{ N}\uparrow$ ◀



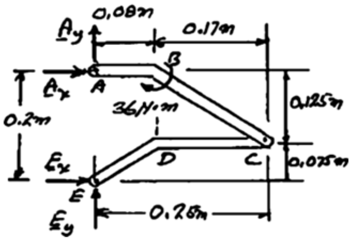
PROBLEM 6.86

Determine the components of the reactions at *A* and *E* if the frame is loaded by a clockwise couple of magnitude 36 N · m applied (*a*) at *B*, (*b*) at *D*.

SOLUTION

Free body: Entire frame:

The following analysis is valid for both parts (*a*) and (*b*) since the point of application of the couple is immaterial.



$$+\circlearrowleft \Sigma M_E = 0: \quad -36\ \text{N}\cdot\text{m} - A_x(0.2\ \text{m}) = 0$$

$$A_x = -180\ \text{N} \qquad \mathbf{A}_x = 180\ \text{N} \longleftarrow$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad -180\ \text{N} + E_x = 0$$

$$E_x = 180\ \text{N} \qquad \mathbf{E}_x = 180\ \text{N} \longrightarrow$$

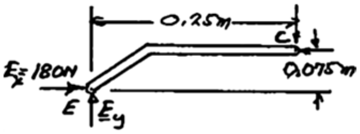
$$+\uparrow \Sigma F_y = 0: \quad A_y + E_y = 0 \tag{1}$$

(*a*) Couple applied at *B*.

Free body: Member *CE*:

AC is a two-force member. Thus, the reaction at *E* must be directed along *EC*.

$$\frac{E_y}{180\ \text{N}} = \frac{0.075\ \text{m}}{0.25\ \text{m}} \qquad \mathbf{E}_y = 54\ \text{N}\uparrow$$



From Eq. (1): $A_y + 54\ \text{N} = 0$

$$A_y = -54\ \text{N} \qquad \mathbf{A}_y = 54.0\ \text{N}\downarrow$$

Thus, reactions are

$$\mathbf{A}_x = 180.0\ \text{N} \longleftarrow, \quad \mathbf{A}_y = 54.0\ \text{N}\downarrow \blacktriangleleft$$

$$\mathbf{E}_x = 180.0\ \text{N} \longrightarrow, \quad \mathbf{E}_y = 54.0\ \text{N}\uparrow \blacktriangleleft$$

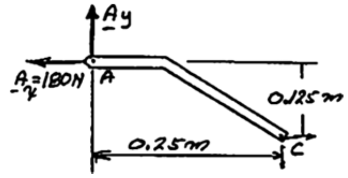
(*b*) Couple applied at *D*.

Free body: Member *AC*:

AC is a two-force member. Thus, the reaction at *A* must be directed along *EC*.

PROBLEM 6.86 (Continued)

$$\frac{A_y}{180\text{ N}} = \frac{0.125\text{ m}}{0.25\text{ m}} \quad A_y = 90\text{ N}\uparrow$$



From Eq. (1):

$$A_y + E_y = 0$$

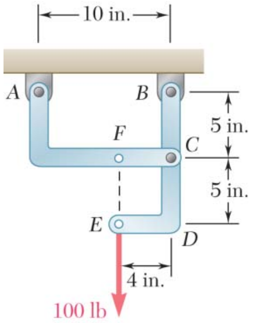
$$90\text{ N} + E_y = 0$$

$$E_y = -90\text{ N} \quad \mathbf{E}_y = 90\text{ N}\downarrow$$

Thus, reactions are

$$\mathbf{A}_x = 180.0\text{ N}\longleftarrow, \quad \mathbf{A}_y = 90.0\text{ N}\uparrow \blacktriangleleft$$

$$\mathbf{E}_x = -180.0\text{ N}\longrightarrow, \quad \mathbf{E}_y = 90.0\text{ N}\downarrow \blacktriangleleft$$

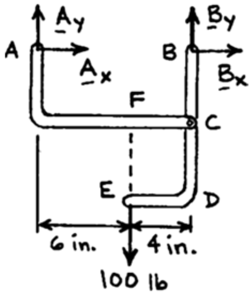


PROBLEM 6.87

Determine the components of the reactions at *A* and *B*, (*a*) if the 500-N load is applied as shown, (*b*) if the 500-N load is moved along its line of action and is applied at Point *F*.

SOLUTION

Free body: Entire frame:



Analysis is valid for either parts (*a*) or (*b*), since position of 100-lb load on its line of action is immatERIAL.

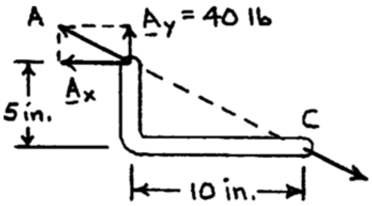
$$+\circlearrowleft \Sigma M_A = 0: \quad B_y(10) - (100\text{ lb})(6) = 0 \qquad B_y = +60\text{ lb}$$

$$+\uparrow \Sigma F_y = 0: \quad A_y + 60 - 100 = 0 \qquad A_y = +40\text{ lb}$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad A_x + B_x = 0 \tag{1}$$

(*a*) Load applied at *E*.

Free body: Member *AC*:



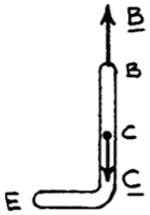
Since *AC* is a two-force member, the reaction at *A* must be directed along *CA*. We have

$$\frac{A_x}{10\text{ in.}} = \frac{40\text{ lb}}{5\text{ in.}} \qquad \mathbf{A}_x = 80.0\text{ lb} \longleftarrow, \quad \mathbf{A}_y = 40.0\text{ lb}\uparrow \blacktriangleleft$$

From Eq. (1): $-80 + B_x = 0 \quad B_x = +80\text{ lb}$

Thus, $\mathbf{B}_x = 80.0\text{ lb} \longrightarrow, \quad \mathbf{B}_y = 60.0\text{ lb}\uparrow \blacktriangleleft$

PROBLEM 6.87 (Continued)



(*b*) Load applied at *F*.

Free body: Member *BCD*:

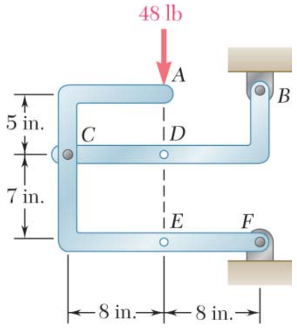
Since *BCD* is a two-force member (with forces applied at *B* and *C* only), the reaction at *B* must be directed along *CB*. We have, therefore,

$$B_x = 0$$

The reaction at *B* is $\mathbf{B}_x = 0$ $\mathbf{B}_y = 60.0\text{ lb}\uparrow$ ◀

From Eq. (1): $A_x + 0 = 0 \quad A_x = 0$

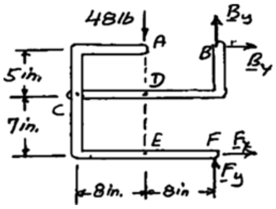
The reaction at *A* is $\mathbf{A}_x = 0$ $\mathbf{A}_y = 40.0\text{ lb}\uparrow$ ◀



PROBLEM 6.88

The 48-lb load can be moved along the line of action shown and applied at *A*, *D*, or *E*. Determine the components of the reactions at *B* and *F* if the 48-lb load is applied (*a*) at *A*, (*b*) at *D*, (*c*) at *E*.

SOLUTION



Free body: Entire frame

The following analysis is valid for (*a*), (*b*) and (*c*) since the position of the load along its line of action is immaterial.

$$+\circlearrowleft \Sigma M_F = 0: \quad (48\,\text{lb})(8\text{ in.}) - B_x(12\text{ in.}) = 0$$

$$B_x = 32\text{ lb} \quad \mathbf{B}_x = 32\text{ lb} \longrightarrow$$

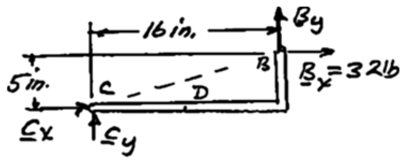
$$\xrightarrow{+} \Sigma F_x = 0: \quad 32\text{ lb} + F_x = 0$$

$$F_x = -32\text{ lb} \quad \mathbf{F}_x = 32\text{ lb} \longleftarrow$$

$$+\uparrow \Sigma F_y = 0: \quad B_y + F_y - 48\text{ lb} = 0 \qquad (1)$$

(*a*) Load applied at *A*.

Free body: Member *CDB*



CDB is a two-force member. Thus, the reaction at *B* must be directed along *BC*.

$$\frac{B_y}{32\text{ lb}} = \frac{5\text{ in.}}{16\text{ in.}} \qquad \mathbf{B}_y = 10\text{ lb}\uparrow$$

From Eq. (1): $10\text{ lb} + F_y - 48\text{ lb} = 0$

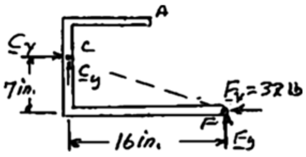
$$F_y = 38\text{ lb} \quad \mathbf{F}_y = 38\text{ lb}\uparrow$$

Thus reactions are:

$\mathbf{B}_x = 32.0\text{ lb} \longrightarrow, \ \mathbf{B}_y = 10.00\text{ lb}\uparrow$ ◀

$\mathbf{F}_x = 32.0\text{ lb} \longleftarrow, \ \mathbf{F}_y = 38.0\text{ lb}\uparrow$ ◀

PROBLEM 6.88 (Continued)



(*b*) Load applied at *D*.

Free body: Member *ACF*.

ACF is a two-force member. Thus, the reaction at *F* must be directed along *CF*.

$$\frac{F_y}{32 \text{ lb}} = \frac{7 \text{ in.}}{16 \text{ in.}} \qquad \mathbf{F}_y = 14 \text{ lb}\uparrow$$

From Eq. (1): $B_y + 14 \text{ lb} - 48 \text{ lb} = 0$

$$B_y = 34 \text{ lb} \quad B_y = 34 \text{ lb}\uparrow$$

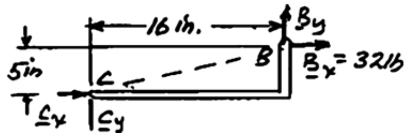
Thus, reactions are:

$\mathbf{B}_x = 32.0 \text{ lb} \leftarrow,\ \mathbf{B}_y = 34.0 \text{ lb}\uparrow$ ◀

$\mathbf{F}_x = 32.0 \text{ lb} \rightarrow,\ \mathbf{F}_y = 14.00 \text{ lb}\uparrow$ ◀

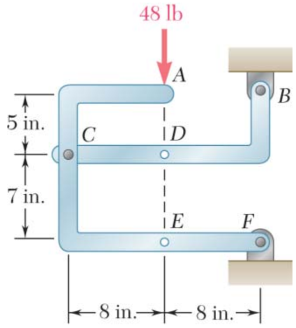
(*c*) Load applied at *E*.

Free body: Member *CDB*



This is the same free body as in Part (*a*).

Reactions are same as (*a*) ◀



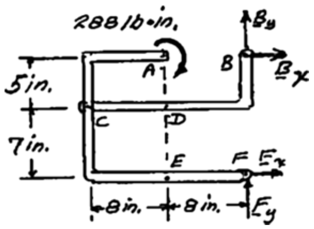
PROBLEM 6.89

The 48-lb load is removed and a 288-lb · in. clockwise couple is applied successively at *A*, *D*, and *E*. Determine the components of the reactions at *B* and *F* if the couple is applied (*a*) at *A*, (*b*) at *D*, (*c*) at *E*.

SOLUTION

Free body: Entire frame

The following analysis is valid for (*a*), (*b*), and (*c*), since the point of application of the couple is immaterial.



$$+\circlearrowleft \Sigma M_F = 0: \quad -288 \text{ lb}\cdot\text{in.} - B_x(12 \text{ in.}) = 0$$

$$B_x = -24 \text{ lb} \quad \mathbf{B}_x = 24 \text{ lb} \longleftarrow$$

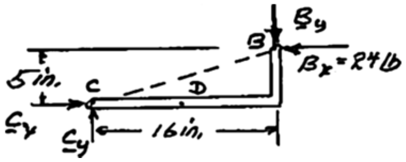
$$\xrightarrow{+} \Sigma F_x = 0: \quad -24 \text{ lb} + F_x = 0$$

$$F_x = 24 \text{ lb} \quad \mathbf{F}_x = 24 \text{ lb} \longrightarrow$$

$$+\!\uparrow \Sigma F_y = 0: \quad B_y + F_y = 0 \qquad (1)$$

(*a*) Couple applied at *A*.

Free body: Member *CDB*



CDB is a two-force member. Thus, reaction at *B* must be directed along *BC*.

$$\frac{B_y}{24 \text{ lb}} = \frac{5 \text{ in.}}{16 \text{ in.}} \qquad \mathbf{B}_y = 7.5 \text{ lb}\downarrow$$

From Eq. (1): $-7.5 \text{ lb} + F_y = 0$

$$F_y = 7.5 \text{ lb} \quad \mathbf{F}_y = 7.5 \text{ lb}\uparrow$$

Thus, reactions are:

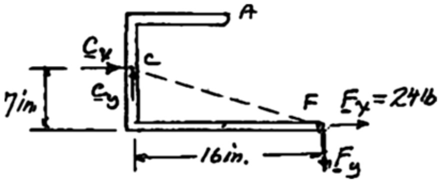
$\mathbf{B}_x = 24.0 \text{ lb} \longleftarrow, \ \mathbf{B}_y = 7.50 \text{ lb}\downarrow$ ◀

$\mathbf{F}_x = 24.0 \text{ lb} \longrightarrow, \mathbf{F}_y = 7.50 \text{ lb}\uparrow$ ◀

PROBLEM 6.89 (Continued)

(*b*) Couple applied at *D*.

Free body: Member *ACF*.



ACF is a two-force member. Thus, the reaction at *F* must be directed along *CF*.

$$\frac{F_y}{24 \text{ lb}} = \frac{7 \text{ in.}}{16 \text{ in.}} \qquad \mathbf{F}_y = 10.5 \text{ lb}\downarrow$$

From Eq. (1): $B_y - 10.5$ lb:

$$B_y = +10.5 \text{ lb} \quad \mathbf{B}_y = 10.5 \text{ lb}\uparrow$$

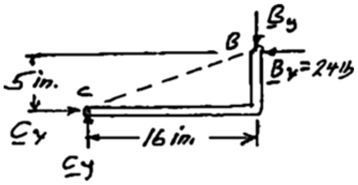
Thus, reactions are:

$\mathbf{B}_x = 24.0 \text{ lb} \longleftarrow,\ \mathbf{B}_y = 10.50 \text{ lb}\uparrow$ ◀

$\mathbf{F}_x = 24.0 \text{ lb} \longrightarrow, \mathbf{F}_y = 10.50 \text{ lb}\downarrow$ ◀

(*c*) Couple applied at *E*.

Free body: Member *CDB*

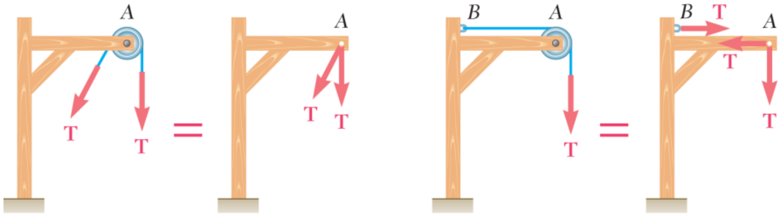


This is the same free body as in Part (*a*).

Reactions are same as in (*a*) ◀

PROBLEM 6.90

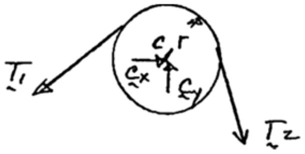
(*a*) Show that when a frame supports a pulley at *A*, an equivalent loading of the frame and of each of its component parts can be obtained by removing the pulley and applying at *A* two forces equal and parallel to the forces that the cable exerted on the pulley. (*b*) Show that if one end of the cable is attached to the frame at a Point *B*, a force of magnitude equal to the tension in the cable should also be applied at *B*.



(*a*) (*b*)

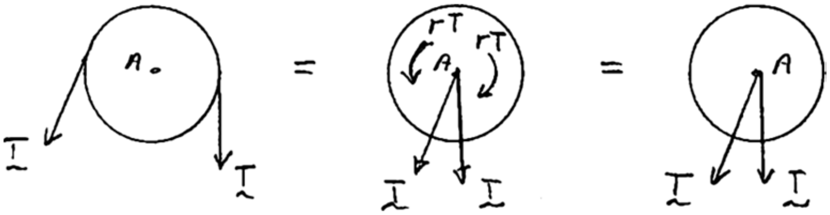
SOLUTION

First note that, when a cable or cord passes over a *frictionless, motionless* pulley, the tension is unchanged.



$$\circlearrowleft + \Sigma M_C = 0: \quad rT_1 - rT_2 = 0 \quad T_1 = T_2$$

(*a*) Replace each force with an equivalent force-couple.



(*b*) Cut the cable and replace the forces on pulley with equivalent pair of forces at *A* as above.

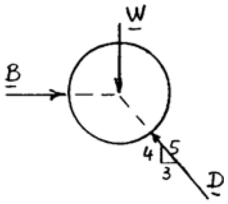
PROBLEM 6.93

A 3-ft-diameter pipe is supported every 16 ft by a small frame like that shown. Knowing that the combined weight of the pipe and its contents is 500 lb/ft and assuming frictionless surfaces, determine the components (*a*) of the reaction at *E*, (*b*) of the force exerted at *C* on member *CDE*.

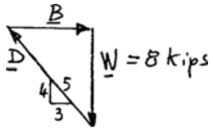
SOLUTION

Free body: 16-ft length of pipe:

$$W = (500\text{ lb/ft})(16\text{ ft}) = 8\text{ kips}$$



Force Triangle



$$\frac{B}{3} = \frac{D}{5} = \frac{8\text{ kips}}{4}$$

$$B = 6\text{ kips} \qquad D = 10\text{ kips}$$

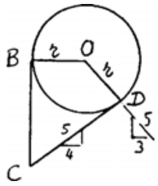
Determination of *CB* = *CD*.

We note that horizontal projection of $\overrightarrow{\mathbf{BO}} + \overrightarrow{\mathbf{OD}}$ = horizontal projection of $\overrightarrow{\mathbf{CD}}$

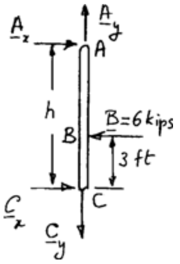
$$r + \frac{3}{5}r = \frac{4}{5}(CD)$$

Thus,

$$CB = CD = \frac{8}{4}r = 2(1.5\text{ ft}) = 3\text{ ft}$$



Free body: Member *ABC*:



$$+\circlearrowleft \Sigma M_A = 0: \quad C_x h - (6\text{ kips})(h-3)$$

$$C_x = \frac{h-3}{h}(6\text{ kips}) \qquad (1)$$

For $h = 9$ ft,

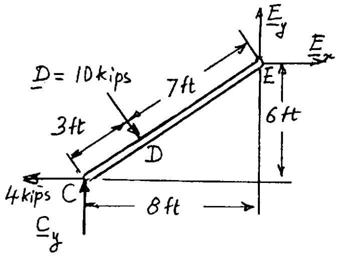
$$C_x = \frac{9-3}{9}(6\text{ kips}) = 4\text{ kips}$$

PROBLEM 6.93 (Continued)

Free body: Member *CDE*:

From above, we have

$$\mathbf{C}_x = 4.00 \text{ kips} \longleftarrow \blacktriangleleft$$



$$+\circlearrowleft \Sigma M_E = 0: \quad (10 \text{ kips})(7 \text{ ft}) - (4 \text{ kips})(6 \text{ ft}) - C_y(8 \text{ ft}) = 0$$

$$C_y = +5.75 \text{ kips}, \qquad \mathbf{C}_y = 5.75 \text{ kips} \uparrow \blacktriangleleft$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad -4 \text{ kips} + \frac{3}{5}(10 \text{ kips}) + E_x = 0$$

(*b*) Additional load on truck wheels.

Use free body diagram of truck without 2900 lb.

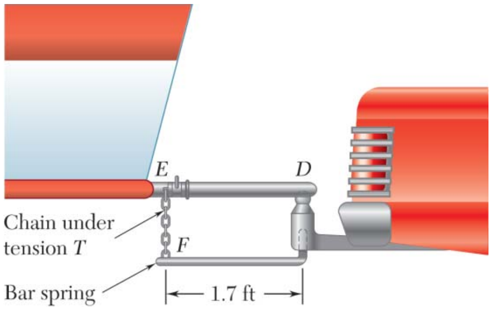
$$+\circlearrowleft \Sigma M_B = 0: \quad (436.36 \text{ lb})(3 \text{ ft}) + 2C(9 \text{ ft}) = 0$$

$C = -72.73 \text{ lb}$ $\quad\quad$ $\Delta C = -72.7 \text{ lb}$ ◀

$$+\uparrow \Sigma F_y = 0: \quad 2B - 436.36 \text{ lb} - 2(72.73 \text{ lb}) = 0$$

$B = 290.9 \text{ lb}$ $\quad\quad$ $\Delta B = +291 \text{ lb}$ ◀

PROBLEM 6.96



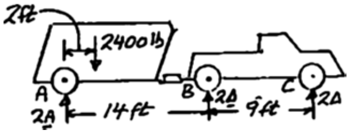
In order to obtain a better weight distribution over the four wheels of the pickup truck of Problem 6.95, a compensating hitch of the type shown is used to attach the trailer to the truck. The hitch consists of two bar springs (only one is shown in the figure) that fit into bearings inside a support rigidly attached to the truck. The springs are also connected by chains to the trailer frame, and specially designed hooks make it possible to place both chains in tension. (*a*) Determine the tension *T* required in each of the two chains if the additional load due to the trailer is to be evenly distributed over the four wheels of the truck. (*b*) What are the resulting reactions at each of the six wheels of the trailer-truck combination?

PROBLEM 6.95 A trailer weighing 2400 lb is attached to a 2900-lb pickup truck by a ball-and-socket truck hitch at *D*. Determine (*a*) the reactions at each of the six wheels when the truck and trailer are at rest, (*b*) the additional load on each of the truck wheels due to the trailer.

SOLUTION

(*a*) We small first find the additional reaction Δ at each wheel due to the trailer.

Free body diagram: (Same Δ at each truck wheel)



$$+\circlearrowleft \Sigma M_A = 0: \quad -(2400 \text{ lb})(2 \text{ ft}) + 2\Delta(14 \text{ ft}) + 2\Delta(23 \text{ ft}) = 0$$

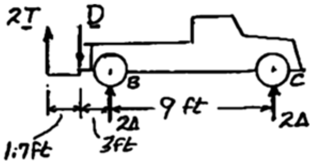
$$\Delta = 64.86 \text{ lb}$$

$$+\uparrow \Sigma F_y = 0: \quad 2A - 2400 \text{ lb} + 4(64.86 \text{ lb}) = 0;$$

$$A = 1070 \text{ lb}; \qquad \mathbf{A} = 1070 \text{ lb} \uparrow$$

Free body: Truck:

(Trailer loading only)



$$+\circlearrowleft \Sigma M_D = 0: \quad 2\Delta(12 \text{ ft}) + 2\Delta(3 \text{ ft}) - 2T(1.7 \text{ ft}) = 0$$

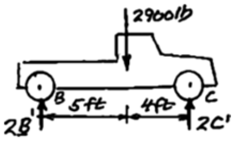
$$T = 8.824\Delta$$

$$= 8.824(64.86 \text{ lb})$$

$$T = 572.3 \text{ lb} \qquad T = 572 \text{ lb} \blacktriangleleft$$

Free body: Truck:

(Truck weight only)



$$+\circlearrowleft \Sigma M_B = 0: \quad -(2900 \text{ lb})(5 \text{ ft}) + 2C'(9 \text{ ft}) = 0$$

$$C' = 805.6 \text{ lb} \qquad \mathbf{C}' = 805.6 \text{ lb} \uparrow$$

PROBLEM 6.96 (Continued)

$$+\uparrow \Sigma F_y = 0: \quad 2B' - 2900\text{ lb} + 2(805.6\text{ lb}) = 0$$

$B' = 644.4\text{ lb}$ $\qquad$ $\mathbf{B}' = 644.4\text{ lb}\uparrow$

Actual reactions:

$B = B' + \Delta = 644.4\text{ lb} + 64.86 = 709.2\text{ lb}$ $\qquad$ $\mathbf{B} = 709\text{ lb}\uparrow$ ◀

$C = C' + \Delta = 805.6\text{ lb} + 64.86 = 870.46\text{ lb}$ $\qquad$ $\mathbf{C} = 870\text{ lb}\uparrow$ ◀

From part *a*: $\qquad$ $\mathbf{A} = 1070\text{ lb}\uparrow$ ◀

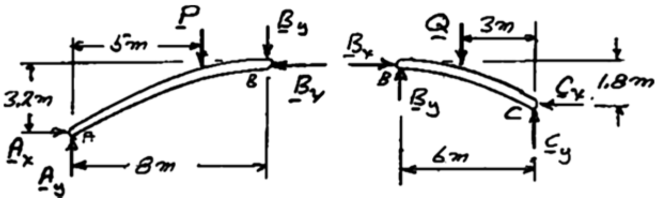
PROBLEM 6.107

The axis of the three-hinge arch *ABC* is a parabola with the vertex at *B*. Knowing that *P* = 112 kN and *Q* = 140 kN, determine (*a*) the components of the reaction at *A*, (*b*) the components of the force exerted at *B* on segment *AB*.

SOLUTION



Free body: Segment *AB*:

$$+\circlearrowleft \Sigma M_A = 0: \quad B_x(3.2\text{ m}) - B_y(8\text{ m}) - P(5\text{ m}) = 0 \tag{1}$$

0.75 (Eq. 1): $$B_x(2.4\text{ m}) - B_y(6\text{ m}) - P(3.75\text{ m}) = 0 \tag{2}$$

Free body: Segment *BC*:

$$+\circlearrowleft \Sigma M_C = 0: \quad B_x(1.8\text{ m}) + B_y(6\text{ m}) - Q(3\text{ m}) = 0 \tag{3}$$

Add Eqs. (2) and (3): $$4.2B_x - 3.75P - 3Q = 0$$

$$B_x = (3.75P + 3Q)/4.2 \tag{4}$$

From Eq. (1): $$(3.75P + 3Q)\frac{3.2}{4.2} - 8B_y - 5P = 0$$

$$B_y = (-9P + 9.6Q)/33.6 \tag{5}$$

given that $P = 112$ kN and $Q = 140$ kN.

(*a*) Reaction at *A*.

Considering again *AB* as a free body,

$$\xrightarrow{+} \Sigma F_x = 0: \quad A_x - B_x = 0; \quad A_x = B_x = 200\text{ kN} \qquad \mathbf{A}_x = 200\text{ kN} \longrightarrow ◀$$

$$+\uparrow \Sigma F_y = 0: \quad A_y - P - B_y = 0$$

$$A_y - 112\text{ kN} - 10\text{ kN} = 0$$

$$A_y = +122\text{ kN} \qquad \mathbf{A}_y = 122.0\text{ kN} \uparrow ◀$$

PROBLEM 6.107 (Continued)

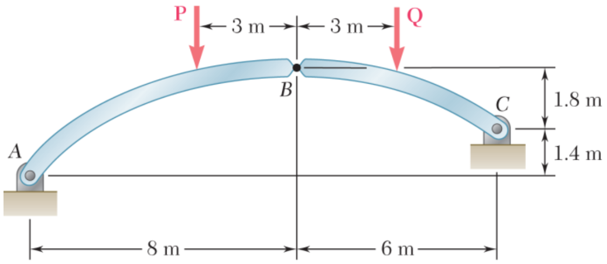
(*b*) Force exerted at *B* on *AB*.

From Eq. (4): $B_x = (3.75 \times 112 + 3 \times 140)/4.2 = 200 \text{ kN}$

$$\mathbf{B}_x = 200 \text{ kN} \longleftarrow \blacktriangleleft$$

From Eq. (5): $B_y = (-9 \times 112 + 9.6 \times 140)/33.6 = +10 \text{ kN}$

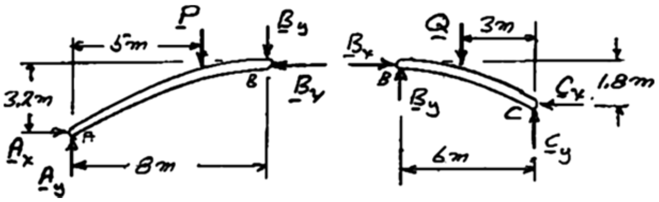
$$\mathbf{B}_y = 10.00 \text{ kN} \downarrow \blacktriangleleft$$



PROBLEM 6.108

The axis of the three-hinge arch *ABC* is a parabola with the vertex at *B*. Knowing that $P = 140$ kN and $Q = 112$ kN, determine (*a*) the components of the reaction at *A*, (*b*) the components of the force exerted at *B* on segment *AB*.

SOLUTION



Free body: Segment *AB*:

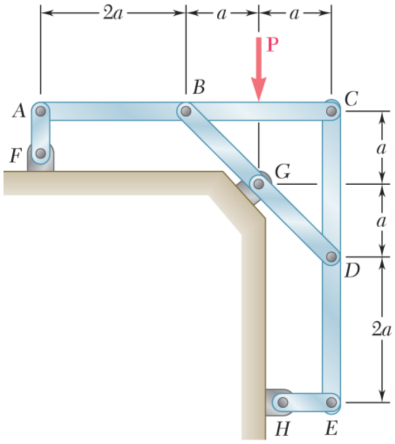
$$A = -\frac{M_0}{4a} \qquad F_{AF} = \frac{M_0}{4a} \quad C$$ ◀



PROBLEM 6.116

Solve Problem 6.114 assuming that the force **P** is replaced by a clockwise couple of moment $\mathbf{M}_0$ applied at the same point.

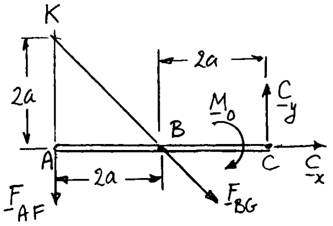
PROBLEM 6.114 Members *ABC* and *CDE* are pin-connected at *C* and supported by the four links *AF*, *BG*, *DG*, and *EH*. For the loading shown, determine the force in each link.

SOLUTION

Free body: *CDE*: (same as for Problem 6.114)

$$+\circlearrowleft \Sigma M_J = 0: \quad C_x(4a) + C_y(2a) = 0 \qquad C_y = -2C_x \qquad (1)$$

Free body: *ABC*:



$$+\circlearrowleft \Sigma M_K = 0: \quad C_x(2a) + C_y(4a) - M_0 = 0$$

Substituting for C_y from Eq. (1): $C_x(2a) - 2C_x(4a) - M_0 = 0$

$$C_x = -\frac{M_0}{6a}$$

$$C_y = -2\left(-\frac{M_0}{6a}\right) = +\frac{M_0}{3a}$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad \frac{1}{\sqrt{2}} F_{BG} + C_x = 0$$

$$F_{BG} = -\sqrt{2}C_x = +\frac{\sqrt{2}M_0}{6a} \qquad F_{BG} = \frac{\sqrt{2}M_0}{6a} \quad T \ ◀$$

$$+\uparrow \Sigma F_y = 0: \quad -F_{AF} - \frac{1}{\sqrt{2}} F_{BG} + C_y = 0$$

$$F_{AF} = -\frac{1}{\sqrt{2}} \frac{\sqrt{2}M_0}{6a} + \frac{M_0}{3a} = +\frac{M_0}{6a} \qquad F_{AF} = \frac{M_0}{6a} \quad T \ ◀$$

PROBLEM 6.116 (Continued)

Free body: *CDE*: (Use F.B. diagram of Problem 6.114.)

$$+\uparrow \Sigma F_y = 0: \quad \frac{1}{\sqrt{2}} F_{DG} - C_y = 0$$

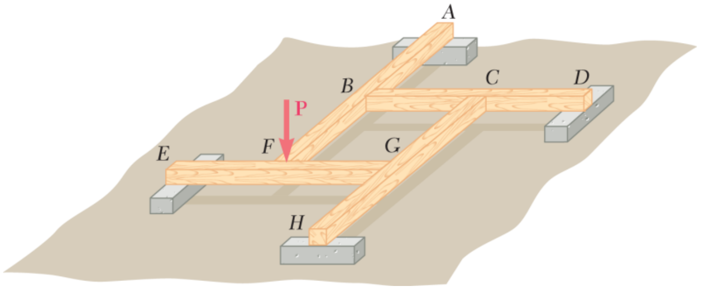
$$F_{DG} = \sqrt{2} C_y = +\frac{\sqrt{2} M_0}{3a} \qquad F_{DG} = \frac{\sqrt{2} M_0}{3a} \quad T \blacktriangleleft$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad -F_{EH} - C_x - \frac{1}{\sqrt{2}} F_{DG} = 0$$

$$F_{EH} = -\left(-\frac{M_0}{6a}\right) - \left(\frac{1}{\sqrt{2}}\right)\left(\frac{\sqrt{2} M_0}{3a}\right) = -\frac{M_0}{6a}, \quad F_{EH} = \frac{M_0}{6a} \quad C \blacktriangleleft$$

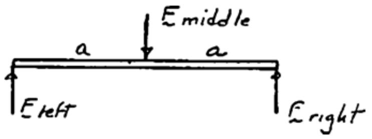
PROBLEM 6.117

Four beams, each of length $2a$, are nailed together at their midpoints to form the support system shown. Assuming that only vertical forces are exerted at the connections, determine the vertical reactions at A, D, E, and H.



SOLUTION

Note that, if we assume P is applied to EG, each individual member FBD looks like



so $$2F_{\text{left}} = 2F_{\text{right}} = F_{\text{middle}}$$

Labeling each interaction force with the letter corresponding to the joint of its application, we see that

$$B = 2A = 2F$$

$$C = 2B = 2D$$

$$G = 2C = 2H$$

$$P + F = 2G(= 4C = 8B = 16F) = 2E$$

From $P + F = 16F$, $$F = \frac{P}{15}$$ so $\mathbf{A} = \dfrac{P}{15}\uparrow$ ◀

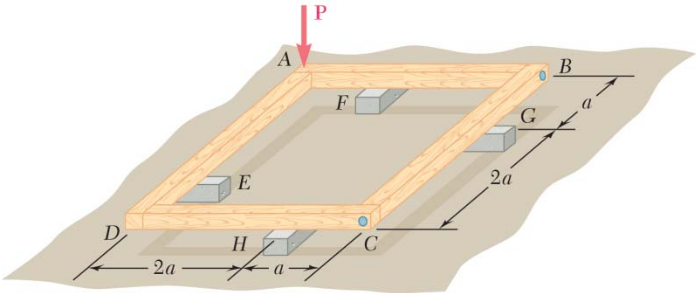
$\mathbf{D} = \dfrac{2P}{15}\uparrow$ ◀

$\mathbf{H} = \dfrac{4P}{15}\uparrow$ ◀

$\mathbf{E} = \dfrac{8P}{15}\uparrow$ ◀

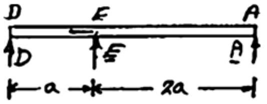
PROBLEM 6.118

Four beams, each of length 3*a*, are held together by single nails at *A*, *B*, *C*, and *D*. Each beam is attached to a support located at a distance *a* from an end of the beam as shown. Assuming that only vertical forces are exerted at the connections, determine the vertical reactions at *E*, *F*, *G*, and *H*.



SOLUTION

We shall draw the free body of each member. Force **P** will be applied to member *AFB*. Starting with member *AED*, we shall express all forces in terms of reaction *E*.



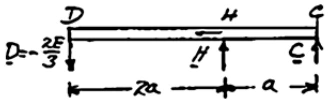
Member *AED*:

$$+\circlearrowleft \Sigma M_D = 0: \quad A(3a) + E(a) = 0$$

$$A = -\frac{E}{3}$$

$$+\circlearrowleft \Sigma M_A = 0: \quad -D(3a) - E(2a) = 0$$

$$D = -\frac{2E}{3}$$



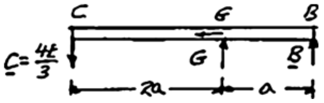
Member *DHC*:

$$+\circlearrowleft \Sigma M_C = 0: \quad \left(-\frac{2E}{3}\right)(3a) - H(a) = 0$$

$$H = -2E \qquad (1)$$

$$+\circlearrowleft \Sigma M_H = 0: \quad \left(-\frac{2E}{3}\right)(2a) + C(a) = 0$$

$$C = +\frac{4E}{3}$$



Member *CGB*:

$$+\circlearrowleft \Sigma M_B = 0: \quad +\left(\frac{4E}{3}\right)(3a) - G(a) = 0$$

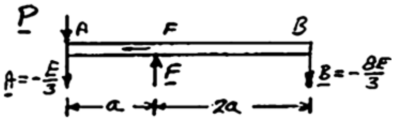
$$G = +4E \qquad (2)$$

$$+\circlearrowleft \Sigma M_G = 0: \quad +\left(\frac{4E}{3}\right)(2a) + B(a) = 0$$

$$B = -\frac{8E}{3}$$

PROBLEM 6.118 (Continued)

Member *AFB*:



$$+\uparrow \Sigma F_y = 0: \quad F - A - B - P = 0$$

$$F - \left(-\frac{E}{3}\right) - \left(-\frac{8E}{3}\right) - P = 0$$

$$F = P - 3E \tag{3}$$

$$+\circlearrowleft \Sigma M_A = 0: \quad F(a) - B(3a) = 0$$

$$(P - 3E)(a) - \left(-\frac{8E}{3}\right)(3a) = 0$$

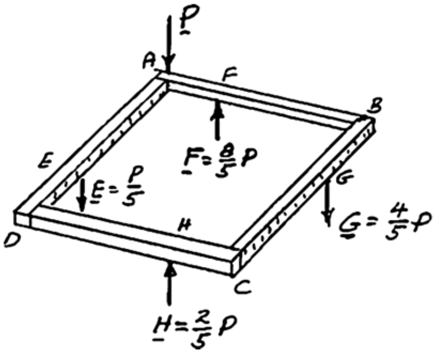
$$P - 3E + 8E = 0; \quad E = -\frac{P}{5} \qquad \mathbf{E} = \frac{P}{5}\downarrow \blacktriangleleft$$

Substitute $E = -\frac{P}{5}$ into Eqs. (1), (2), and (3).

$$H = -2E = -2\left(-\frac{P}{5}\right) \qquad H = +\frac{2P}{5} \qquad \mathbf{H} = \frac{2P}{5}\uparrow \blacktriangleleft$$

$$G = +4E = 4\left(-\frac{P}{5}\right) \qquad G = -\frac{4P}{5} \qquad \mathbf{G} = \frac{4P}{5}\downarrow \blacktriangleleft$$

$$F = P - 3E = P - 3\left(-\frac{P}{5}\right) \qquad F = +\frac{8P}{5} \qquad \mathbf{F} = \frac{8P}{5}\uparrow \blacktriangleleft$$



PROBLEM 6.119

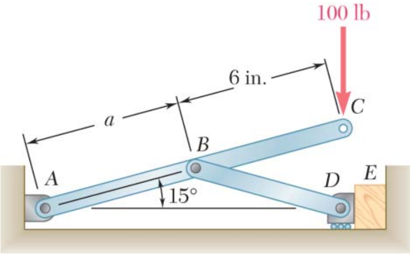
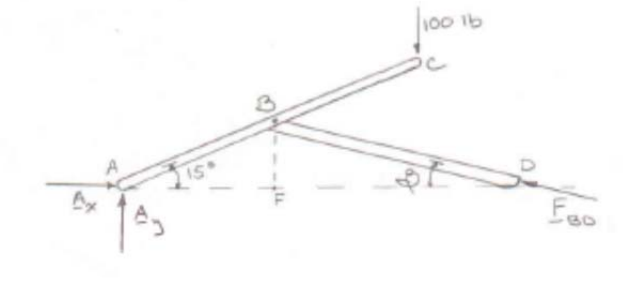
PROBLEM 6.123



A 100-lb force directed vertically downward is applied to the toggle vise at *C*. Knowing that link *BD* is 6 in. long and that *a* = 4 in., determine the horizontal force exerted on block *E*.

SOLUTION

Free body: Entire Frame



We have

$$BF = (4\text{ in.})\sin 15^\circ = 1.03528\text{ in.}$$

$$\sin\beta = \frac{1.03528\text{ in.}}{6\text{ in.}} \qquad \beta = 9.9359^\circ$$

$$AD = AG + FD = 4\cos 15^\circ + 6\cos 9.9359^\circ = 9.7737\text{ in.}$$

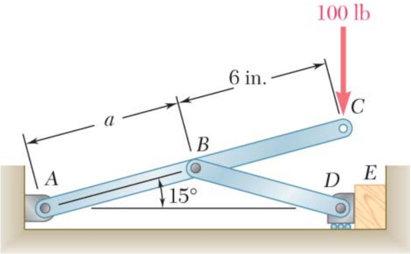
$$+\circlearrowleft \Sigma M_A = 0: \quad (100\text{ lb})(10\text{ in.})\cos(15^\circ) - (F_{BD})\sin\beta(9.7737\text{ in.}) = 0$$

$$F_{BD} = 572.77\text{ lb}$$

Horizontal force exerted on block.

$$(F_{BD})_x = F_{BD}\cos\beta = (572.77\text{ lb})\cos(9.9359^\circ)$$

$$(\mathbf{F}_{BD})_x = 564\text{ lb} \longrightarrow \blacktriangleleft$$

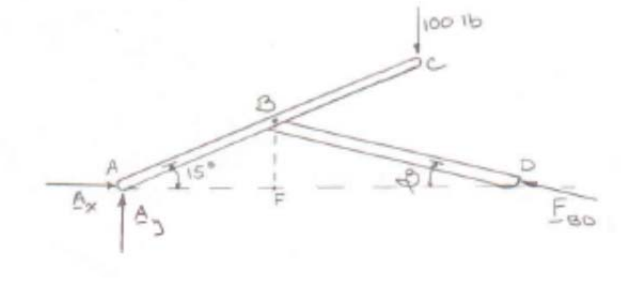


PROBLEM 6.124

A 100-lb force directed vertically downward is applied to the toggle vise at *C*. Knowing that link *BD* is 6 in. long and that $a = 8$ in., determine the horizontal force exerted on block *E*.

SOLUTION

Free body: Entire Frame



$$BF = (8 \text{ in.})\sin 15^\circ = 2.0706 \text{ in.}$$

We have

$$\sin\beta = \frac{2.0706 \text{ in.}}{6 \text{ in.}} \qquad \beta = 20.188^\circ$$

$$AF = (8 \text{ in.})\cos 15^\circ = 7.7274 \text{ in.}$$

$$FD = (6 \text{ in.})\cos 20.188^\circ = 5.6314 \text{ in.}$$

$$AD = AF + FD = 13.359 \text{ in.}$$

$$+\circlearrowleft \Sigma M_A = 0: \quad (100 \text{ lb})(14 \text{ in.})\cos(15^\circ) - (F_{BD})\sin\beta(13.359 \text{ in.}) = 0$$

$$F_{BD} = 293.33 \text{ lb}$$

Horizontal force exerted on block.

$$(F_{BD})_x = F_{BD}\cos\beta = (293.33 \text{ lb})\cos(20.188^\circ)$$

$$(\mathbf{F}_{BD})_x = 275 \text{ lb} \longrightarrow \blacktriangleleft$$

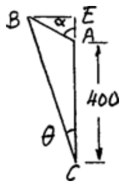
PROBLEM 6.134

Solve Problem 6.133 when (*a*) $\alpha = 60°$, (*b*) $\alpha = 90°$.

PROBLEM 6.133 The Whitworth mechanism shown is used to produce a quick-return motion of Point *D*. The block at *B* is pinned to the crank *AB* and is free to slide in a slot cut in member *CD*. Determine the couple **M** that must be applied to the crank *AB* to hold the mechanism in equilibrium when (*a*) $\alpha = 0$, (*b*) $\alpha = 30°$.

SOLUTION

(*a*) Geometry:



$$AB = 100 \text{ mm}, \quad \alpha = 60°$$

$$BE = 100\cos 60° = 86.60$$

$$CE = 400 + 100\sin 60° = 450$$

$$\tan\theta = \frac{86.60}{450} \qquad \theta = 10.89°$$

$$BC = \sqrt{(86.60)^2 + (450)^2} = 458.26 \text{ mm}$$

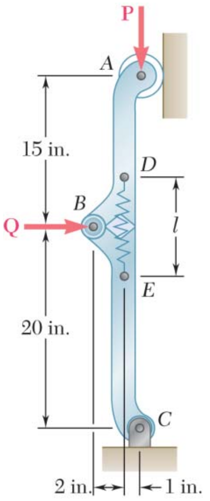
$$(750 - 225)P = (910 \text{ N})(150)$$

$P = 260$ N ◀

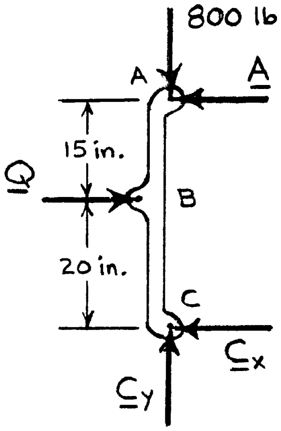


PROBLEM 6.151

Since the brace shown must remain in position even when the magnitude of **P** is very small, a single safety spring is attached at *D* and *E*. The spring *DE* has a constant of 50 lb/in. and an unstretched length of 7 in. Knowing that *l* = 10 in. and that the magnitude of **P** is 800 lb, determine the force **Q** required to release the brace.

SOLUTION

Free body:



$$+\circlearrowright \Sigma M_A = 0: \quad Q(15 \text{ in.}) - C_x(35 \text{ in.}) = 0$$

$$Q = \frac{7}{3}C_x \quad (1)$$

$$+\uparrow \Sigma F_y = 0: \quad C_y - 800 \text{ lb} = 0 \quad \text{or} \quad C_y = 800 \text{ lb}$$

Spring force.

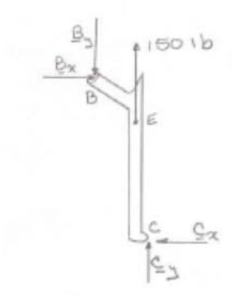
Unstretched length: $\ell_0 = 7$ in.

Stretched length: $\ell = 10$ in.

$k = 50$ lb/in.

$$F = kx = k(\ell - \ell_0)$$
$$= 50(10-7) = 150 \text{ lb}$$

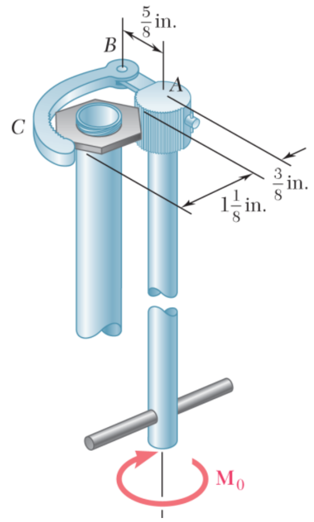
Free body: Portion *BC*



$$+\circlearrowright \Sigma M_B = 0: \quad (150 \text{ lb})(2 \text{ in.}) + (800 \text{ lb})(3 \text{ in.}) - C_x(20 \text{ in.}) = 0$$

$$C_x = 135.0 \text{ lb}$$

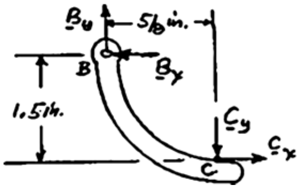
Substituting into equation (1) gives $\mathbf{Q} = 315$ lb ◀



PROBLEM 6.152

The specialized plumbing wrench shown is used in confined areas (e.g., under a basin or sink). It consists essentially of a jaw *BC* pinned at *B* to a long rod. Knowing that the forces exerted on the nut are equivalent to a clockwise (when viewed from above) couple of magnitude 135 lb · in., determine (*a*) the magnitude of the force exerted by pin *B* on jaw *BC*, (*b*) the couple $\mathbf{M}_0$ that is applied to the wrench.

SOLUTION



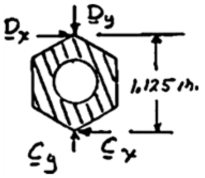
Free body: Jaw *BC*:

This is a two-force member.

$$\frac{C_y}{1.5\text{ in.}} = \frac{C_x}{\frac{5}{8}\text{ in.}} \qquad C_y = 2.4C_x$$

$$\Sigma F_x = 0: \quad B_x = C_x \qquad (1)$$

$$\Sigma F_y = 0: \quad B_y = C_y = 2.4\,C_x \qquad (2)$$



Free body: Nut: $\Sigma F_x = 0: \quad C_x = D_x$

$$\circlearrowright \Sigma M = 135\text{ lb}\cdot\text{in.}$$

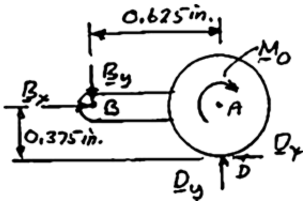
$$C_x(1.125\text{ in.}) = 135\text{ lb}\cdot\text{in.}$$

$$C_x = 120\text{ lb}$$

(*a*) Eq. (1): $B_x = C_x = 120\text{ lb}$

Eq. (2): $B_y = C_y = 2.4(120\text{ lb}) = 288\text{ lb}$

$$B = \left(B_x^2 + B_y^2\right)^{1/2} = (120^2 + 288^2)^{1/2} \qquad B = 312\text{ lb} \blacktriangleleft$$



(*b*) Free body: Rod:

$$+\circlearrowright \Sigma M_D = 0: \quad -M_0 + B_y(0.625\text{ in.}) - B_x(0.375\text{ in.}) = 0$$

PROBLEM 6.158

Solve Problem 6.157 assuming that the 2-kip force **P** acts horizontally to the right ($\theta = 0$).

PROBLEM 6.157 The motion of the backhoe bucket shown is controlled by the hydraulic cylinders *AD*, *CG*, and *EF*. As a result of an attempt to dislodge a portion of a slab, a 2-kip force **P** is exerted on the bucket teeth at *J*. Knowing that $\theta = 45°$, determine the force exerted by each cylinder.

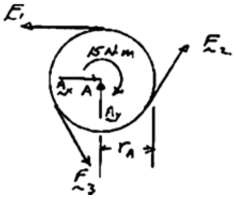
PROBLEM 6.160

In the planetary gear system shown, the radius of the central gear A is a = 18 mm, the radius of each planetary gear is b, and the radius of the outer gear E is $(a + 2b)$. A clockwise couple of magnitude $M_A = 10\ \text{N}\cdot\text{m}$ is applied to the central gear A and a counterclockwise couple of magnitude $M_S = 50\ \text{N}\cdot\text{m}$ is applied to the spider BCD. If the system is to be in equilibrium, determine (a) the required radius b of the planetary gears, (b) the magnitude M_E of the couple that must be applied to the outer gear E.

SOLUTION

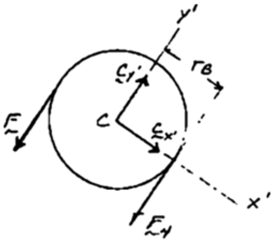
FBD Central Gear:



By symmetry, $F_1 = F_2 = F_3 = F$

$$\circlearrowleft \Sigma M_A = 0{:}\quad 3(r_A F) - 10\ \text{N}\cdot\text{m} = 0, \qquad F = \frac{10}{3r_A}\text{N}\cdot\text{m}$$

FBD Gear *C*:



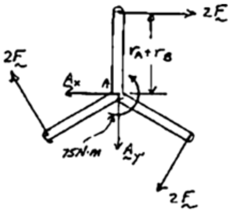
$$\circlearrowleft \Sigma M_C = 0{:}\quad r_B(F - F_4) = 0, \quad F_4 = F$$

$$\searrow \Sigma F_{x'} = 0{:}\quad C_{x'} = 0$$

$$\nearrow \Sigma F_{y'} = 0{:}\quad C_{y'} - 2F = 0, \qquad C_{y'} = 2F$$

Gears B and D are analogous, each having a central force of $2F$.

FBD Spider:



$$\circlearrowleft \Sigma M_A = 0{:}\quad 50\ \text{N}\cdot\text{m} - 3(r_A + r_B)2F = 0$$

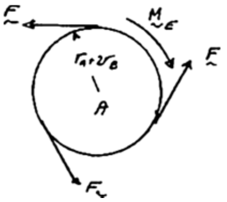
$$50\ \text{N}\cdot\text{m} - 3(r_A + r_B)\frac{20}{r_A}\text{N}\cdot\text{m} = 0$$

$$\frac{r_A + r_B}{r_A} = 2.5 = 1 + \frac{r_B}{r_A}, \qquad r_B = 1.5r_A$$

Since $r_A = 18$ mm,

(a) $r_B = 27.0$ mm ◀

FBD Outer Gear:



$$\circlearrowleft \Sigma M_A = 0{:}\quad 3(r_A + 2r_B)F - M_E = 0$$

$$3(18\ \text{mm} + 54\ \text{mm})\frac{10\ \text{N}\cdot\text{m}}{54\ \text{mm}} - M_E = 0$$

(b) $\mathbf{M}_E = 40.0\ \text{N}\cdot\text{m} \circlearrowright$ ◀

PROBLEM 6.161*

Two shafts *AC* and *CF*, which lie in the vertical *xy* plane, are connected by a universal joint at *C*. The bearings at *B* and *D* do not exert any axial force. A couple of magnitude 500 lb · in. (clockwise when viewed from the positive *x*-axis) is applied to shaft *CF* at *F*. At a time when the arm of the crosspiece attached to shaft *CF* is horizontal, determine (*a*) the magnitude of the couple that must be applied to shaft *AC* at *A* to maintain equilibrium, (*b*) the reactions at *B*, *D*, and *E*. Free body: Member *CDF*:

$$\overset{+}{\circlearrowleft}\Sigma M_D = 0: \quad W(0.3) + \frac{1}{2}W(2.3) - F_x(1.8) - F_y(0.5\text{ m}) = 0$$

or

$$1.8F_x + 0.5F_y = 1.45W \qquad (1)$$

PROBLEM 6.163* (Continued)

$$\xrightarrow{+}\Sigma F_x = 0:\quad D_x - F_x - W = 0$$

or $$E_x - F_x = W \qquad (2)$$

$$+\!\uparrow\Sigma F_y = 0:\quad F_y - D_y + \frac{1}{2}W = 0$$

or $$E_y - F_y = \frac{1}{2}W \qquad (3)$$

Free body: Member *EFH*:

$$+\circlearrowright\Sigma M_E = 0:\quad F_x(1.8) + F_y(1.5) - H_x(2.3) + \frac{1}{2}W(1.8\text{ m}) = 0$$

or $$1.8F_x + 1.5F_y = 2.3H_x - 0.9W \qquad (4)$$

$$\xrightarrow{+}\Sigma F_x = 0:\quad E_x + F_x - H_x = 0$$

or $$E_x + F_x = H_x \qquad (5)$$

Subtract Eq. (2) from Eq. (5): $$2F_x = H_x - W \qquad (6)$$

Subtract Eq. (4) from 3 × (1): $$3.6F_x = 5.25W - 2.3H_x \qquad (7)$$

Add Eq. (7) to 2.3 × Eq. (6): $$8.2F_x = 2.95W$$

$$F_x = 0.35976W \qquad (8)$$

Substitute from Eq. (8) into Eq. (1):

$$(1.8)(0.35976W) + 0.5F_y = 1.45W$$

$$0.5F_y = 1.45W - 0.64756W = 0.80244W$$

$$F_y = 1.6049W \qquad (9)$$

Substitute from Eq. (8) into Eq. (2): $E_x - 0.35976W = W;\quad E_x = 1.35976W$

Substitute from Eq. (9) into Eq. (3): $E_y - 1.6049W = \frac{1}{2}W \quad E_y = 2.1049W$

From Eq. (5): $H_x = E_x + F_x = 1.35976W + 0.35976W = 1.71952W$

Recall that $H_y = \frac{1}{2}W$

PROBLEM 6.163* (Continued)

Since all expressions obtained are positive, all forces are directed as shown on the free-body diagrams.

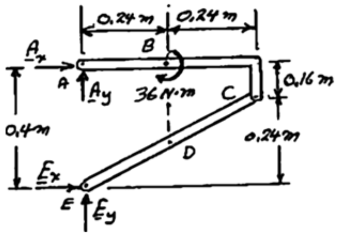
PROBLEM 6.169

Determine the components of the reactions at *A* and *E* if the frame is loaded by a clockwise couple of magnitude 36 N · m applied (*a*) at *B*, (*b*) at *D*.

SOLUTION

Free body: Entire frame:

The following analysis is valid for both parts (*a*) and (*b*) since the point of application of the couple is immaterial.



$$+\circlearrowright \Sigma M_E = 0: \quad -36\ \text{N}\cdot\text{m} - A_x(0.4\ \text{m}) = 0$$

$$A_x = -90\ \text{N} \qquad \mathbf{A}_x = 90.0\ \text{N} \longleftarrow$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad -90 + E_x = 0$$

$$E_x = 90\ \text{N} \qquad \mathbf{E}_x = 90.0\ \text{N} \longrightarrow$$

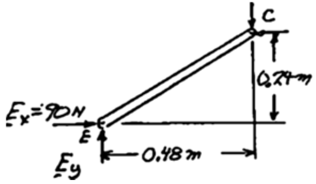
$$+\uparrow \Sigma F_y = 0: \quad A_y + E_y = 0 \qquad (1)$$

(*a*) Couple applied at *B*.

Free body: Member *CE*:

AC is a two-force member. Thus, the reaction at *E* must be directed along *EC*.

$$\frac{E_y}{90\ \text{N}} = \frac{0.24\ \text{m}}{0.48\ \text{m}}; \quad \mathbf{E}_y = 45.0\ \text{N}\uparrow$$



From Eq. (1): $A_y + 45\ \text{N} = 0$

$$A_y = -45\ \text{N} \qquad \mathbf{A}_y = 45.0\ \text{N}\downarrow$$

Thus, reactions are

$\mathbf{A}_x = 90.0\ \text{N} \longleftarrow, \quad \mathbf{A}_y = 45.0\ \text{N}\downarrow$ ◀

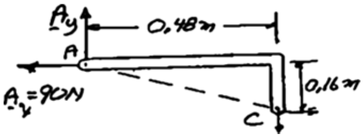
$\mathbf{E}_x = 90.0\ \text{N} \longrightarrow, \quad \mathbf{E}_y = 45.0\ \text{N}\uparrow$ ◀

(*b*) Couple applied at *D*.

Free body: Member *AC*:

AC is a two-force member. Thus, the reaction at *A* must be directed along *AC*.

$$\frac{A_y}{90\ \text{N}} = \frac{0.16\ \text{m}}{0.48\ \text{m}}; \quad \mathbf{A}_y = 30\ \text{N}\uparrow$$



PROBLEM 6.169 (Continued)

From Eq. (1): $$A_y + E_y = 0$$

$$30\text{ N} + E_y = 0$$

$$E_y = -30\text{ N} \quad \mathbf{E}_y = 30\text{ N}\downarrow$$

Thus, reactions are $\mathbf{A}_x = 90.0\text{ N} \leftarrow, \quad \mathbf{A}_y = 30.0\text{ N}\uparrow$ ◀

$\mathbf{E}_x = -90.0\text{ N} \rightarrow, \quad \mathbf{E}_y = 30.0\text{ N}\downarrow$ ◀

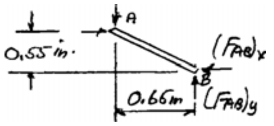
PROBLEM 6.175

The compound-lever pruning shears shown can be adjusted by placing pin A at various ratchet positions on blade ACE. Knowing that 300-lb vertical forces are required to complete the pruning of a small branch, determine the magnitude P of the forces that must be applied to the handles when the shears are adjusted as shown.

SOLUTION

We note that AB is a two-force member.

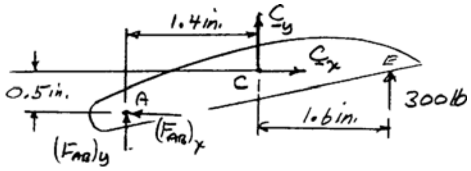


A
0.55 in.
$(F_{AB})_x$
B
0.65 in
$(F_{AB})_y$

$$\frac{(F_{AB})_x}{0.65\text{ in.}} = \frac{(F_{AB})_y}{0.55\text{ in.}}$$

$$(F_{AB})_y = \frac{11}{13}(F_{AB})_x \qquad (1)$$

Free body: Blade *ACE*:



1.4 in.
C_y
C_x
E
0.5 in.
C
A
300 lb
1.6 in.
$(F_{AB})_x$
$(F_{AB})_y$

$$+\circlearrowleft \Sigma M_C = 0\text{:}\quad (300\text{ lb})(1.6\text{ in.}) - (F_{AB})_x(0.5\text{ in.}) - (F_{AB})_y(1.4\text{ in.}) = 0$$

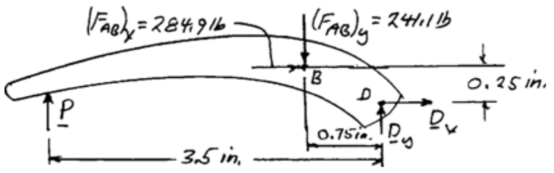
Use Eq. (1):

$$(F_{AB})_x(0.5\text{ in.}) + \frac{11}{13}(F_{AB})_x(1.4\text{ in.}) = 480\text{ lb}\cdot\text{in.}$$

$$1.6846(F_{AB})_x = 480 \qquad (F_{AB})_x = 284.9\text{ lb}$$

$$(F_{AB})_y = \frac{11}{13}(284.9\text{ lb}) \qquad (F_{AB})_y = 241.1\text{ lb}$$

Free body: Lower handle:



$(F_{AB})_x = 284.9$ lb
$(F_{AB})_y = 241.1$ lb
B
D
0.25 in.
P
0.75 in.

3
45 lb
x = ay²
16 in.
V
x′
θJ
J
M
E
16 in.
y
C
y′

At B: $x = 8\text{ in.}$ $\qquad y = 32\text{ in.}$

$$a = \frac{8\text{ in.}}{(32\text{ in.})^2} = \frac{1}{128\text{ in.}}$$

$$x = \frac{y^2}{128}$$

$$\text{Slope of parabola} = \tan\theta = \frac{dx}{dy} = \frac{2y}{128} = \frac{y}{64}$$

At *J*: $$\theta_J = \tan^{-1}\left[\frac{16}{64}\right] = 14.036°$$

So $$\alpha = \tan^{-1}\frac{4}{3} - 14.036° = 39.094°$$

$$\nearrow \Sigma F_{x'} = 0:\quad V - (37.5\text{ lb})\cos(39.094°) = 0$$

$\mathbf{V} = 29.1\text{ lb} \measuredangle 14.04°$ ◀

PROBLEM 7.7 (Continued)

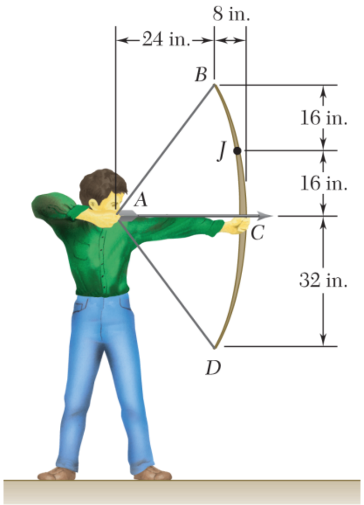
$$\searrow \Sigma F_{y'} = 0: \quad F + (37.5 \text{ lb}) \sin(39.094°) = 0$$

$$F = -23.647$$

$\mathbf{F} = 23.6 \text{ lb} \measuredangle 76.0°$ ◀

$$\circlearrowleft \Sigma M_J = 0: \quad M + (16 \text{ in.})\left[\frac{3}{5}(37.5 \text{ lb})\right] + [(8-2) \text{ in.}]\left[\frac{4}{5}(37.5 \text{ lb})\right] = 0$$

$\mathbf{M} = 540 \text{ lb} \cdot \text{in.} \circlearrowright$ ◀



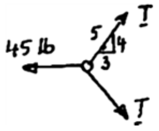
PROBLEM 7.8

For the bow of Problem 7.7, determine the magnitude and location of the maximum (*a*) axial force, (*b*) shearing force, (*c*) bending moment.

PROBLEM 7.7 An archer aiming at a target is pulling with a 45-lb force on the bowstring. Assuming that the shape of the bow can be approximated by a parabola, determine the internal forces at Point *J*.

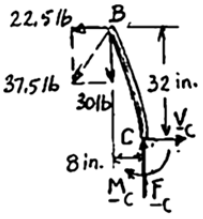
SOLUTION

Free body: Point *A*



$\xrightarrow{+} \Sigma F_x = 0: \quad 2\left(\frac{3}{5}T\right) - 45 \text{ lb} = 0$ $\qquad T = 37.5 \text{ lb}$ ◁

Free body: Portion of bow *BC*



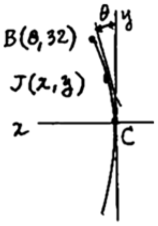
$+\uparrow \Sigma F_y = 0: \quad F_C - 30 \text{ lb} = 0$ $\qquad \mathbf{F}_C = 30 \text{ lb} \uparrow$ ◁

$\xrightarrow{+} \Sigma F_x = 0: \quad V_C - 22.5 \text{ lb} = 0$ $\qquad \mathbf{V}_C = 22.5 \text{ lb} \longrightarrow$ ◁

$\uparrow \Sigma M_C = 0: \quad (22.5 \text{ lb})(32 \text{ in.}) + (30 \text{ lb})(8 \text{ in.}) - M_C = 0$

$\mathbf{M}_C = 960 \text{ lb} \cdot \text{in.}$ ↻ ◁

Equation of parabola



$$x = ky^2$$

At *B*: $\qquad 8 = k(32)^2 \quad k = \frac{1}{128}$

Therefore, equation is $\qquad x = \frac{y^2}{128} \qquad (1)$

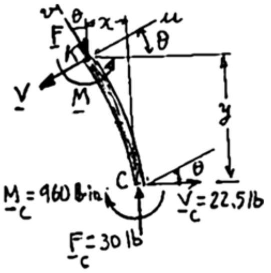
The slope at *J* is obtained by differentiating (1):

$$d_x = \frac{2y\,dy}{128}, \quad \tan\theta = \frac{dx}{dy} = \frac{y}{64} \qquad (2)$$

PROBLEM 7.8 (Continued)

(*a*) Maximum axial force

$$+\nwarrow \Sigma F_V = 0: \quad -F + (30\text{ lb})\cos\theta - (22.5\text{ lb})\sin\theta = 0$$



Free body: Portion bow *CK*

$$F = 30\cos\theta - 22.5\sin\theta$$

F is largest at $C(\theta = 0)$

$F_m = 30.0$ lb at *C* ◀

(*b*) Maximum shearing force

$$+\nearrow \Sigma F_V = 0: \quad -V + (30\text{ lb})\sin\theta + (22.5\text{ lb})\cos\theta = 0$$

$$V = 30\sin\theta + 22.5\cos\theta$$

V is largest at *B* (and *D*)

Where $\theta = \theta_{\max} = \tan^{-1}\left(\frac{1}{2}\right) = 26.56°$

$$V_m = 30\sin 26.56° + 22.5\cos 26.56°$$

$V_m = 33.5$ lb at *B* and *D* ◀

(*c*) Maximum bending moment

$$+\circlearrowleft \Sigma M_K = 0: \quad M - 960\text{ lb}\cdot\text{in.} + (30\text{ lb})x + (22.5\text{ lb})y = 0$$

$$M = 960 - 30x - 22.5y$$

M is largest at *C*, where $x = y = 0$.

$M_m = 960$ lb·in. at *C* ◀

$$M_{\max} = 150.0\text{ lb}\cdot\text{in. at } D \quad \triangleleft$$

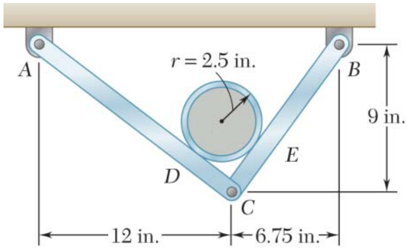
For $x > 12.5$ in. $(AJ > AD)$:

$$+\circlearrowleft \Sigma M_J = 0: \quad (26.4\text{ lb})\frac{3}{5}x - (34.8\text{ lb})\frac{4}{5}x + (72\text{ lb})(x - 12.5) + M = 0$$

$$M = 900 - 60x$$

$$M_{\max} = 150\text{ lb}\cdot\text{in. for } x = 12.5\text{ in.}$$

Thus: $M_{\max} = 150.0\text{ lb}\cdot\text{in. at } D$ ◀



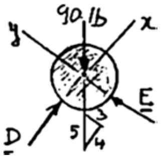
PROBLEM 7.18

For the frame of Problem 7.17, determine the magnitude and location of the maximum bending moment in member *BC*.

PROBLEM 7.17 A 5-in.-diameter pipe is supported every 9 ft by a small frame consisting of two members as shown. Knowing that the combined weight of the pipe and its contents is 10 lb/ft and neglecting the effect of friction, determine the magnitude and location of the maximum bending moment in member *AC*.

SOLUTION

Free body: 10-ft section of pipe



$$+\nearrow \Sigma F_x = 0: \quad D - \frac{4}{5}(90 \text{ lb}) = 0 \qquad \mathbf{D} = 72 \text{ lb} \nearrow \quad \triangleleft$$

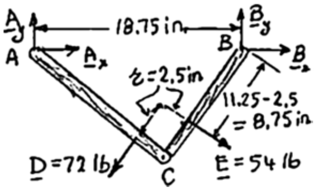
$$\nwarrow + \Sigma F_y = 0: \quad E - \frac{3}{5}(90 \text{ lb}) = 0 \qquad \mathbf{E} = 54 \text{ lb} \nwarrow \quad \triangleleft$$

Free body: Frame

$$+\circlearrowleft \Sigma M_B = 0: \quad -A_y(18.75 \text{ in.}) + (72 \text{ lb})(2.5 \text{ in.})$$

$$+(54 \text{ lb})(8.75 \text{ in.}) = 0$$

$$A_y = +34.8 \text{ lb} \qquad \mathbf{A}_y = 34.8 \text{ lb} \uparrow \quad \triangleleft$$



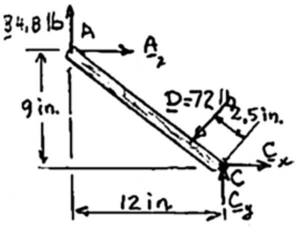
$$+\uparrow \Sigma F_y = 0: \quad B_y + 34.8 \text{ lb} - \frac{4}{5}(72 \text{ lb}) - \frac{3}{5}(54 \text{ lb}) = 0$$

$$B_y = +55.2 \text{ lb} \qquad \mathbf{B}_y = 55.2 \text{ lb} \uparrow \quad \triangleleft$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad A_x + B_x - \frac{3}{5}(72 \text{ lb}) + \frac{4}{5}(54 \text{ lb}) = 0$$

$$A_x + B_x = 0 \qquad (1)$$

Free body: Member *AC*



$$+\circlearrowleft \Sigma M_C = 0: \quad (72 \text{ lb})(2.5 \text{ in.}) - (34.8 \text{ lb})(12 \text{ in.})$$

$$-A_x(9 \text{ in.}) = 0$$

$$A_x = -26.4 \text{ lb} \qquad \mathbf{A}_x = 26.4 \text{ lb} \longleftarrow \quad \triangleleft$$

From (1): $B_x = -A_x = +26.4 \text{ lb}$

$$\mathbf{B}_x = 26.4 \text{ lb} \longrightarrow \quad \triangleleft$$

PROBLEM 7.18 (Continued)

F
M

Free body: Portion *BK*

For $x \le 8.75$ in. $(BK \le BE)$:

$$+\circlearrowleft \Sigma M_K = 0: \quad (55.2 \text{ lb})\frac{3}{5}x - (26.4 \text{ lb})\frac{4}{5}x - M = 0$$

$$M = 12x$$

$$M_{\max} = 105.0 \text{ lb} \cdot \text{in.} \quad \text{for} \quad x = 8.75 \text{ in.}$$

$$M_{\max} = 105.0 \text{ lb} \cdot \text{in. at } E \triangleleft$$

For $x > 8.75$ in. $(BK > BE)$:

$$+\circlearrowleft \Sigma M_K = 0: \quad (55.2 \text{ lb})\frac{3}{5}x - (26.4 \text{ lb})\frac{4}{5}x - (54 \text{ lb})(x - 8.75 \text{ in.}) - M = 0$$

$$M = 472.5 - 42x$$

$$M_{\max} = 105.0 \text{ lb} \cdot \text{in.} \quad \text{for} \quad x = 8.75 \text{ in.}$$

Thus $M_{\max} = 105.0 \text{ lb} \cdot \text{in. at } E$ ◀

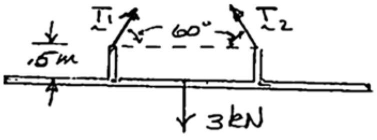
PROBLEM 7.53

Two small channel sections *DF* and *EH* have been welded to the uniform beam *AB* of weight *W*= 3 kN to form the rigid structural member shown. This member is being lifted by two cables attached at *D* and *E*. Knowing that $\theta = 30°$ and neglecting the weight of the channel sections, (*a*) draw the shear and bending-moment diagrams for beam *AB*, (*b*) determine the maximum absolute values of the shear and bending moment in the beam.

SOLUTION

FBD Beam + channels:



(*a*) By symmetry: $T_1 = T_2 = T$

$$+\uparrow \Sigma F_y = 0: \quad 2T \sin 60° - 3 \text{ kN} = 0$$

$$T = \frac{3}{\sqrt{3}} \text{ kN}$$

$$T_{1x} = \frac{3}{2\sqrt{3}}$$

$$T_{1y} = \frac{3}{2} \text{ kN}$$

FBD Beam:

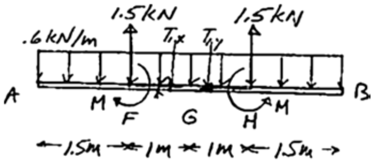
$$M = (0.5 \text{ m})\frac{3}{2\sqrt{3}} \text{ kN}$$

$$= 0.433 \text{ kN} \cdot \text{m}$$

With cable force replaced by equivalent force-couple system at *F* and *G*

Shear Diagram: *V* is piecewise linear

$$\left(\frac{dV}{dx} = -0.6 \text{ kN/m}\right) \text{with } 1.5 \text{ kN}$$



discontinuities at *F* and *H*.

$$V_{F^-} = -(0.6 \text{ kN/m})(1.5 \text{ m}) = 0.9 \text{ kN}$$

V increases by 1.5 kN to $+0.6$ kN at F^+

$$V_G = 0.6 \text{ kN} - (0.6 \text{ kN/m})(1 \text{ m}) = 0$$

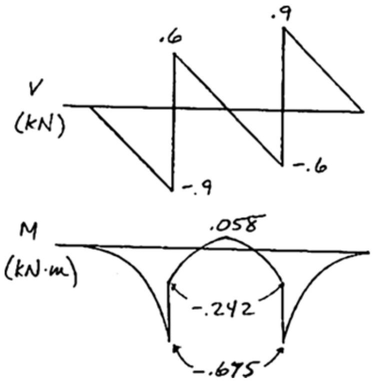
Finish by invoking symmetry

PROBLEM 7.53 (Continued)

Moment diagram: M is piecewise parabolic

$$\left(\frac{dM}{dx}\text{ decreasing with } V\right)$$

with discontinuities of .433 kN at F and H.



$$M_{F^-} = -\frac{1}{2}(0.9\text{ kN})(1.5\text{ m})$$
$$= -0.675\text{ kN}\cdot\text{m}$$

M increases by 0.433 kN m to –0.242 kN · m at F^+

$$M_G = -0.242\text{ kN}\cdot\text{m} + \frac{1}{2}(0.6\text{ kN})(1\text{ m})$$
$$= 0.058\text{ kN}\cdot\text{m}$$

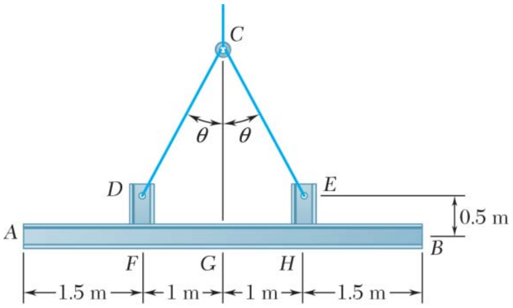
Finish by invoking symmetry

(*b*) $|V|_{\max} = 900\text{ N}$ ◀

at F^- and G^+

$|M|_{\max} = 675\text{ N}\cdot\text{m}$ ◀

at F and G

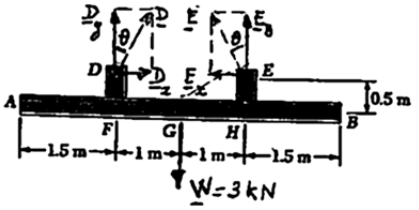


PROBLEM 7.54

Solve Problem 7.53 when $\theta = 60°$.

PROBLEM 7.53 Two small channel sections *DF* and *EH* have been welded to the uniform beam *AB* of weight $W = 3$ kN to form the rigid structural member shown. This member is being lifted by two cables attached at *D* and *E*. Knowing that $\theta = 30°$ and neglecting the weight of the channel sections, (*a*) draw the shear and bending-moment diagrams for beam *AB*, (*b*) determine the maximum absolute values of the shear and bending moment in the beam.

SOLUTION



Free body: Beam and channels

From symmetry:

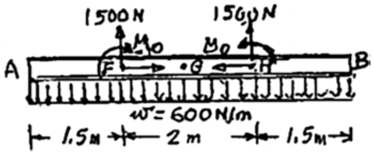
$$E_y = D_y$$

Thus: $$E_x = D_x = D_y \tan\theta \qquad (1)$$

$$+\!\uparrow \Sigma F_y = 0{:}\quad D_y + E_y - 3\text{ kN} = 0 \qquad \mathbf{D}_y = \mathbf{E}_y = 1.5\text{ kN}\uparrow \triangleleft$$

From (1): $$\mathbf{D}_x = (1.5\text{ kN})\tan\theta \longrightarrow \quad \mathbf{E} = (1.5\text{ kN})\tan\theta \longleftarrow \triangleleft$$

We replace the forces at *D* and *E* by equivalent force-couple systems at *F* and *H*, where



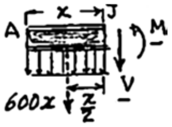
$$M_0 = (1.5\text{ kN}\tan\theta)(0.5\text{ m}) = (750\text{ N}\cdot\text{m})\tan\theta \qquad (2)$$

We note that the weight of the beam per unit length is

$$w = \frac{W}{L} = \frac{3\text{ kN}}{5\text{ m}} = 0.6\text{ kN/m} = 600\text{ N/m}$$

(*a*) Shear and bending moment diagrams

From *A* to *F*:



$$+\!\uparrow \Sigma F_y = 0{:}\quad -V - 600x = 0 \quad V = (-600x)\text{ N}$$

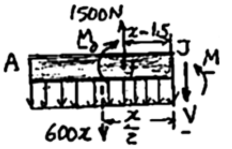
$$+\circlearrowleft \Sigma M_J = 0{:}\quad M + (600x)\frac{x}{2} = 0, \quad M = (-300x^2)\text{ N}\cdot\text{m}$$

For $x = 0$: $$V_A = M_A = 0 \triangleleft$$

For $x = 1.5$ m: $$V_F = -900\text{ N}, \quad M_F = -675\text{ N}\cdot\text{m} \triangleleft$$

PROBLEM 7.54 (Continued)

From *F* to *H*:



$$+\uparrow \Sigma F_y = 0: \quad 1500 - 600x - V = 0$$

$$V = (1500 - 600x)\ \text{N}$$

$$+\circlearrowleft \Sigma M_J = 0: \quad M + (600x)\frac{x}{2} - 1500(x - 1.5) - M_0 = 0$$

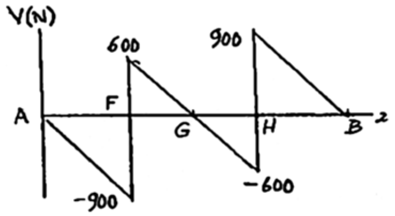
$$M = M_0 - 300x^2 + 1500(x - 1.5)\ \text{N}\cdot\text{m}$$

For $x = 1.5$ m: $V_F = +600$ N, $M_F = (M_0 - 675)$ N·m ◁

For $x = 2.5$ m: $V_G = 0$, $M_G = (M_0 - 375)$ N·m ◁

From *G* to *B*, The *V* and *M* diagrams will be obtained by symmetry,

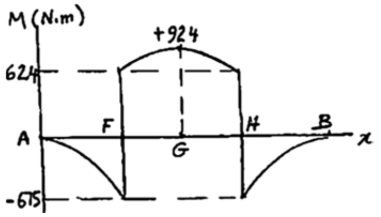
(*b*) $|V|_{\max} = 900$ N ◀



Making $\theta = 60°$ in Eq. (2): $M_0 = 750 \tan 60° = 1299$ N·m

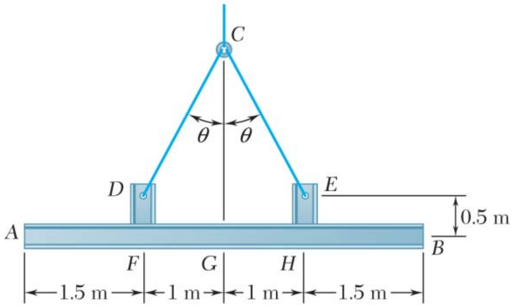
Thus, just to the right of *F*: $M = 1299 - 675 = 624$ N·m ◁

and $M_G = 1299 - 375 = 924$ N·m ◁



(*b*) $|V|_{\max} = 900$ N ◀

$|M|_{\max} = 924$ N·m ◀



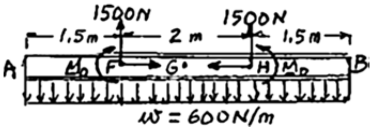
PROBLEM 7.55

For the structural member of Problem 7.53, determine (*a*) the angle θ for which the maximum absolute value of the bending moment in beam *AB* is as small as possible, (*b*) the corresponding value of $|M|_{\max}$. (*Hint:* Draw the bending-moment diagram and then equate the absolute values of the largest positive and negative bending moments obtained.)

PROBLEM 7.53 Two small channel sections *DF* and *EH* have been welded to the uniform beam *AB* of weight $W = 3$ kN to form the rigid structural member shown. This member is being lifted by two cables attached at *D* and *E*. Knowing that $\theta = 30°$ and neglecting the weight of the channel sections, (*a*) draw the shear and bending-moment diagrams for beam *AB*, (*b*) determine the maximum absolute values of the shear and bending moment in the beam.

SOLUTION

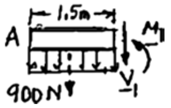
See solution of Problem 7.50 for reduction of loading or beam *AB* to the following:



where $$M_0 = (750\ \text{N}\cdot\text{m})\tan\theta \triangleleft$$

[Equation (2)]

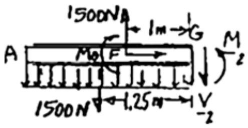
The largest negative bending moment occurs Just to the left of *F*:



$$+\circlearrowleft \Sigma M_1 = 0: \quad M_1 + (900\ \text{N})\left(\frac{1.5\ \text{m}}{2}\right) = 0 \qquad M_1 = -675\ \text{N}\cdot\text{m} \triangleleft$$

The largest positive bending moment occurs

At *G*:



$$+\circlearrowleft \Sigma M_2 = 0: \quad M_2 - M_0 + (1500\ \text{N})(1.25\ \text{m} - 1\ \text{m}) = 0$$

$$M_2 = M_0 - 375\ \text{N}\cdot\text{m} \triangleleft$$

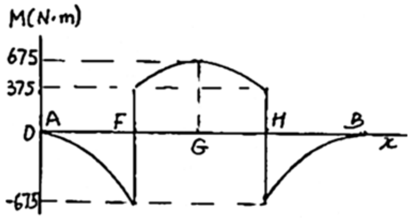
Equating M_2 and $-M_1$:

$$M_0 - 375 = +675$$

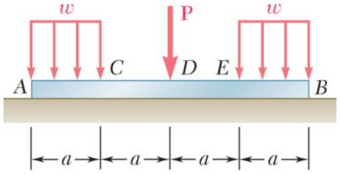
$$M_0 = 1050\ \text{N}\cdot\text{m}$$

PROBLEM 7.55 (Continued)

(*a*) From Equation (2): $\tan\theta = \dfrac{1050}{750} = 1.400$ $\theta = 54.5°$ ◀



(*b*) $|M|_{\max} = 675\ \text{N}\cdot\text{m}$ ◀

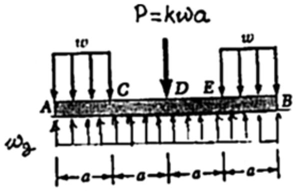


PROBLEM 7.56

For the beam of Problem 7.43, determine (*a*) the ratio *k*=*P*/*wa* for which the maximum absolute value of the bending moment in the beam is as small as possible, (*b*) the corresponding value of $|M|_{\max}$. (See hint for Problem 7.55.)

PROBLEM 7.43 Assuming the upward reaction of the ground on beam *AB* to be uniformly distributed and knowing that *P* =*wa*, (*a*) draw the shear and bending-moment diagrams, (*b*) determine the maximum absolute values of the shear and bending moment.

SOLUTION



Free body: Entire beam

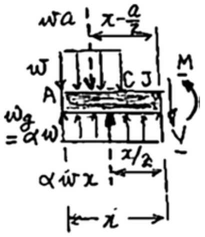
$$+\uparrow \Sigma F_y = 0: \quad w_g(4a) - 2wa - kwa = 0$$

$$w_g = \frac{w}{4}(2+k)$$

Setting $$\frac{w_g}{w} = \alpha \quad (1)$$

We have $$k = 4\alpha - 2 \quad (2)$$

Minimum value of B.M. For *M* to have negative values, we must have $w_g < w$. We verify that *M* will then be negative and keep decreasing in the portion *AC* of the beam. Therefore, $M_{\min}$ will occur between *C* and *D*.



From *C* to *D*:

$$+\circlearrowleft \Sigma M_J = 0: \quad M + wa\left(x - \frac{a}{2}\right) - \alpha wx\left(\frac{x}{2}\right) = 0$$

$$M = \frac{1}{2}w(\alpha x^2 - 2ax + a^2) \quad (3)$$

We differentiate and set $\frac{dM}{dx} = 0$: $$\alpha x - a = 0 \qquad x_{\min} = \frac{a}{\alpha} \quad (4)$$

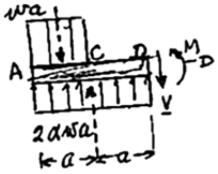
Substituting in (3):

$$M_{\min} = \frac{1}{2}wa^2\left(\frac{1}{\alpha} - \frac{2}{\alpha} + 1\right)$$

$$M_{\min} = -wa^2\frac{1-\alpha}{2\alpha} \quad (5)$$

PROBLEM 7.56 (Continued)

Maximum value of bending moment occurs at D



$$\circlearrowleft + \Sigma M_D = 0: \quad M_D + wa\left(\frac{3a}{2}\right) - (2\alpha wa)a = 0$$

$$M_{\max} = M_D = wa^2\left(2\alpha - \frac{3}{2}\right) \tag{6}$$

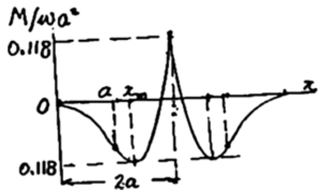
Equating $-M_{\min}$ and $M_{\max}$:

$$wa^2\frac{1-\alpha}{2\alpha} = wa^2\left(2\alpha - \frac{3}{2}\right)$$

$$4\alpha^2 - 2\alpha - 1 = 0$$

$$\alpha = \frac{2+\sqrt{20}}{8} \qquad \alpha = \frac{1+\sqrt{5}}{4} = 0.809$$

(a) Substitute in (2): $k = 4(0.809) - 2$ $k = 1.236$ ◀



(b) Substitute for α in (5):

$$|M|_{\max} = -M_{\min} = -wa^2\frac{1-0.809}{2(0.809)} \qquad |M|_{\max} = 0.1180wa^2$$ ◀

Substitute for α in (4): $x_{\min} = \frac{a}{0.809}1.236a$ ◁

PROBLEM 7.57 (Continued)

$\uparrow \Sigma F_y = 0$: $\quad V = 0$

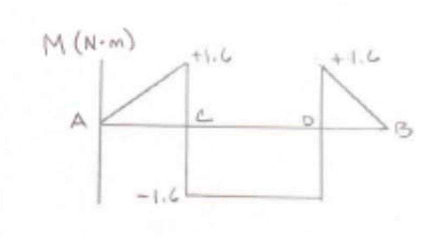
$+\circlearrowleft \Sigma M = 0$: $\quad 3.2\ \text{N}\cdot\text{m} + M_2 - (40\ \text{N})a = 0 \qquad M_2 = 40a - 3.2$

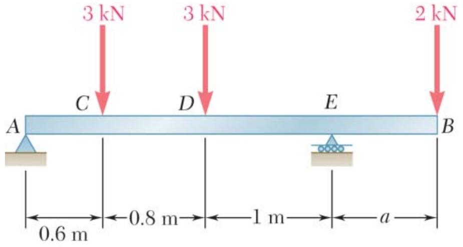
Equating the absolute values of M_1 and M_2 :

$$|40a| = |40a - 3.2|$$
$$|40a| = |-(-40a + 3.2)|$$
$$40a = -40a + 3.2$$
$$80a = 3.2$$
$$a = 0.04\ \text{m}$$

(*a*) $a = 40.0\ \text{mm}$ ◀

(*b*) Substituting: $\quad |M_{\text{max}}| = M_2 = 40\text{N}(.04\ \text{m}) - 3.2\ \text{N}\cdot\text{m} \qquad |M|_{\text{max}} = 1.600\ \text{N}\cdot\text{m}$ ◀



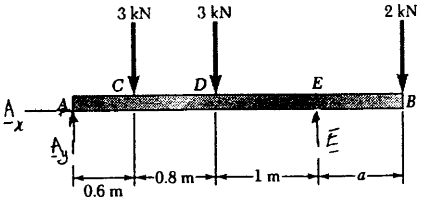


PROBLEM 7.58

For the beam and loading shown, determine (*a*) the distance *a* for which the maximum absolute value of the bending moment in the beam is as small as possible, (*b*) the corresponding value of $|M|_{\max}$. (See hint for Problem 7.55.)

SOLUTION

Free body: Entire beam

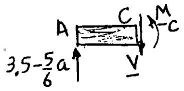


$$\Sigma F_x = 0: \quad A_x = 0$$

$$+\circlearrowleft \Sigma M_E = 0: \quad -A_y(2.4) + (3)(1.8) + 3(1) - (2)a = 0$$

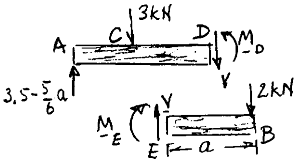
$$A_y = 3.5\text{ kN} - \frac{5}{6}a \qquad \mathbf{A} = 3.5\text{ kN} - \frac{5}{6}a \uparrow \triangleleft$$

Free body: *AC*



$$+\circlearrowleft \Sigma M_C = 0: \quad M_C - \left(3.5 - \frac{5}{6}a\right)(0.6\text{ m}) = 0, \qquad M_C = +2.1 - \frac{a}{2} \triangleleft$$

Free body: *AD*



$$+\circlearrowleft \Sigma M_D = 0: \quad M_D - \left(3.5 - \frac{5}{6}a\right)(1.4\text{ m}) + (3\text{ kN})(0.8\text{ m}) = 0$$

$$M_D = +2.5 - \frac{7}{6}a \triangleleft$$

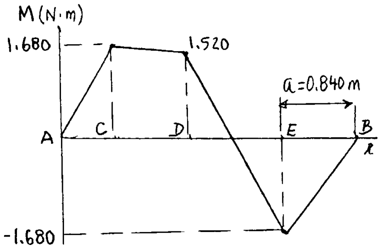
Free body: *EB*

$$+\circlearrowleft \Sigma M_E = 0: \quad -M_E - (2\text{ kN})a = 0 \qquad M_E = -2a \triangleleft$$

We shall assume that $M_C > M_D$ and, thus, that $M_{\max} = M_C$.

We set $M_{\max} = |M_{\min}|$ or $M_C = |M_E| = 2.1 - \frac{a}{2} = 2a$ $\qquad a = 0.840\text{ m} \triangleleft$

$$|M|_{\max} = M_C = |M_E| = 2a = 2(0.840) \qquad |M|_{\max} = 1.680\text{ N}\cdot\text{m} \triangleleft$$



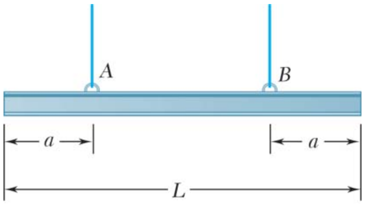
We must check our assumption.

$$M_D = 2.5 - \frac{7}{6}(0.840) = 1.520\text{ N}\cdot\text{m}$$

Thus, $M_C > M_D$, O.K.

The answers are (*a*) $a = 0.840\text{ m} \blacktriangleleft$

(*b*) $|M|_{\max} = 1.680\text{ N}\cdot\text{m} \blacktriangleleft$



PROBLEM 7.59

A uniform beam is to be picked up by crane cables attached at *A* and *B*. Determine the distance *a* from the ends of the beam to the points where the cables should be attached if the maximum absolute value of the bending moment in the beam is to be as small as possible. (*Hint:* Draw the bending-moment diagram in terms of *a*, *L*, and the weight *w* per unit length, and then equate the absolute values of the largest positive and negative bending moments obtained.)

SOLUTION

w= weight per unit length

$$M_C = 13{,}500\left(1 - \frac{40}{a}\right)$$ ◁

Free body: *DB*

$$+\circlearrowleft \Sigma M_D = 0: \quad -M_D - (150)(60-a) = 0$$

$$M_D = -150(60-a)$$ ◁

(*a*) We set

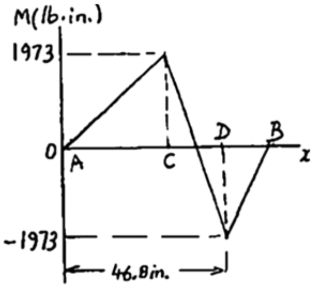
$$M_{\max} = |M_{\min}| \quad \text{or} \quad M_C = -M_D: \quad 13{,}500\left(1 - \frac{40}{a}\right) = 150(60-a)$$

$$90 - \frac{3600}{a} = 60 - a$$

$$a^2 + 30a - 3600 = 0$$

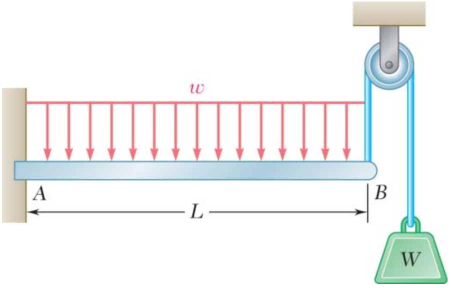
$$a = \frac{-30 + \sqrt{15.300}}{2} = 46.847$$

$$a = 46.8 \text{ in.}$$ ◀



(*b*) $$|M|_{\max} = -M_D = 150(60 - 46.847)$$

$$|M|_{\max} = 1973 \text{ lb} \cdot \text{in.}$$ ◀

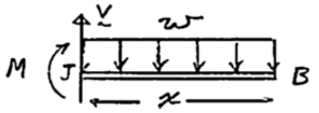


PROBLEM 7.62*

In order to reduce the bending moment in the cantilever beam *AB*, a cable and counterweight are permanently attached at end *B*. Determine the magnitude of the counterweight for which the maximum absolute value of the bending moment in the beam is as small as possible and the corresponding value of $|M|_{\max}$. Consider (*a*) the case when the distributed load is permanently applied to the beam, (*b*) the more general case when the distributed load may either be applied or removed.

SOLUTION

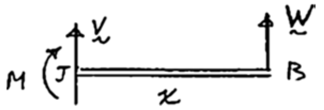
M due to distributed load:



$$\circlearrowleft \Sigma M_J = 0: \quad -M - \frac{x}{2}wx = 0$$

$$M = -\frac{1}{2}wx^2$$

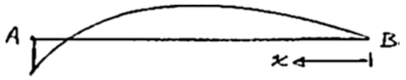
M due to counter weight:



$$\circlearrowleft \Sigma M_J = 0: \quad -M + xw = 0$$

$$M = wx$$

(*a*) **Both applied:**



$$M = W_x - \frac{w}{2}x^2$$

$$\frac{dM}{dx} = W - wx = 0 \text{ at } x = \frac{W}{w}$$

And here $M = \frac{W^2}{2w} > 0$ so $M_{\max}$; $M_{\min}$ must be at $x = L$

So $M_{\min} = WL - \frac{1}{2}wL^2$. For minimum $|M|_{\max}$ set $M_{\max} = -M_{\min}$,

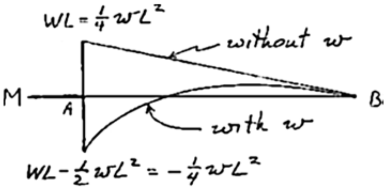
so $$\frac{W^2}{2w} = -WL + \frac{1}{2}wL^2 \quad \text{or} \quad W^2 + 2wLW - w^2L^2 = 0$$

$$W = -wL \pm \sqrt{2w^2L^2} \text{ (need+)} \qquad W = (\sqrt{2} - 1)wL = 0.414\, wL \blacktriangleleft$$

PROBLEM 7.62* (Continued)

(*b*) **w may be removed**

$$M_{\max} = \frac{W^2}{2w} = \frac{(\sqrt{2}-1)^2}{2} wL^2 \qquad M_{\max} = 0.0858\, wL^2 \blacktriangleleft$$



$WL = \frac{1}{4}wL^2$
without w
M
A
B
with w
$WL - \frac{1}{2}wL^2 = -\frac{1}{4}wL^2$

Without w, $M = Wx$

$$M_{\max} = WL \text{ at } A$$

With w (see Part *a*) $M = Wx - \frac{w}{2}x^2$

$$M_{\max} = \frac{W^2}{2w} \text{ at } x = \frac{W}{w}$$

$$M_{\min} = WL - \frac{1}{2}wL^2 \text{ at } x = L$$

For minimum $M_{\max}$, set $M_{\max}(\text{no } w) = -M_{\min}(\text{with } w)$

$$WL = -WL + \frac{1}{2}wL^2 \rightarrow W = \frac{1}{4}wL \rightarrow \qquad M_{\max} = \frac{1}{4}wL^2 \blacktriangleleft$$

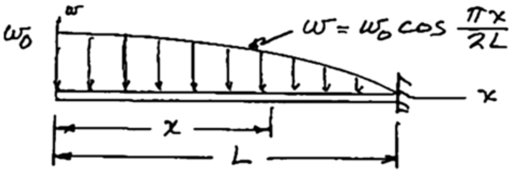
PROBLEM 7.85

For the beam and loading shown, (*a*) write the equations of the shear and bending-moment curves, (*b*) determine the magnitude and location of the maximum bending moment.

SOLUTION



$$\frac{dv}{dx} = -w = w_0 \cos \frac{\pi}{2}\frac{x}{L}$$

$$V = -\int w dx = -w_0 \left(\frac{2L}{\pi}\right) \sin \frac{\pi x}{2L} + C_1 \qquad (1)$$

$$\frac{dM}{dx} = V = -w_0 \left(\frac{2L}{\pi}\right) \sin \frac{\pi x}{2L} + C_1$$

$$M = \int V dx = +w_0 \left(\frac{2L}{\pi}\right)^2 \cos \frac{\pi x}{2L} + C_1 x + C_2 \qquad (2)$$

Boundary conditions

At $x = 0$: $V = C_1 = 0 \quad C_1 = 0$

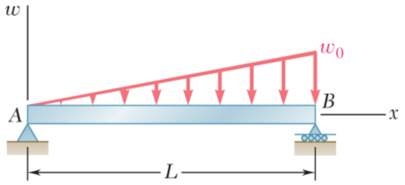
At $x = 0$: $M = +w_0 \left(\frac{2L}{\pi}\right)^2 \cos(0) + C_2 = 0$

$$C_2 = -w_0 \left(\frac{2L}{\pi}\right)^2$$

Eq. (1) $V = -w_0 \left(\frac{2L}{\pi}\right) \sin \frac{\pi x}{2L}$ ◀

$$M = w_0 \left(\frac{2L}{\pi}\right)^2 \left(-1 + \cos \frac{\pi x}{2L}\right) \text{ ◀}$$

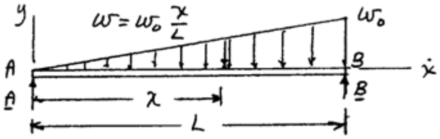
$M_{\max}$ at $x = L$: $|M_{\max}| = w_0 \left(\frac{2L}{\pi}\right)^2 |-1 + 0| = \frac{4}{\pi^2} w_0 L^2$ ◀



PROBLEM 7.86

For the beam and loading shown, (*a*) write the equations of the shear and bending-moment curves, (*b*) determine the magnitude and location of the maximum bending moment.

Solution



Eq. (7.1): $$\frac{dV}{dx} = -w = -w_0 \frac{x}{L}$$

$$V = \int -w_0 \frac{x}{L} dx = -\frac{1}{2} w_0 \frac{x^2}{L} + C_1 \quad (1)$$

Eq. (7.3): $$\frac{dM}{dx} = V = -\frac{1}{2} w_0 \frac{x^2}{L} + C_1$$

$$M = \int \left(-\frac{1}{2} w_0 \frac{x^2}{L} + C_1 \right) dx = -\frac{1}{6} w_0 = \frac{x^3}{L} + C_1 x + C_2 \qquad (2)$$

(*a*) Boundary conditions

At $x = 0$: $M = 0 = 0 + 0 + C_2 \quad C_2 = 0$

$x = L$: $M = 0 = -\frac{1}{6} w_0 L^2 + C_1 L \quad C_1 = \frac{1}{6} w_0 L$

Substituting C_1 and C_2 into (1) and (2):

$$V = -\frac{1}{2} w_0 \frac{x^2}{L} + \frac{1}{6} w_0 L \qquad V = \frac{1}{2} w_0 L \left(\frac{1}{3} - \frac{x^2}{L^2} \right) \blacktriangleleft$$

$$M = -\frac{1}{6} w_0 \frac{x^3}{L} + \frac{1}{6} w_0 L x \qquad M = \frac{1}{6} w_0 L^2 \left(\frac{x}{L} - \frac{x^3}{L^3} \right) \blacktriangleleft$$

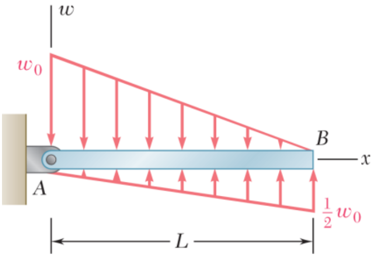
(*b*) Max moment occurs when $V = 0$:

$$1 - 3\frac{x^2}{L^2} = 0 \qquad \frac{x}{L} = \frac{1}{\sqrt{3}} \qquad x = 0.577L \blacktriangleleft$$

PROBLEM 7.86 (Continued)

$$M_{\max} = \frac{1}{6} w_0 L^2 \left[\frac{1}{\sqrt{3}} - \left(\frac{1}{\sqrt{3}} \right)^3 \right] \qquad M_{\max} = 0.0642 w_0 L^2 \blacktriangleleft$$

Note: At $x = 0$, $A = V_A = \frac{1}{2} w_0 L \left(\frac{1}{3} \right)$ $\qquad$ $\mathbf{A} = \frac{1}{6} w_0 L \uparrow$



PROBLEM 7.87

For the beam and loading shown, (*a*) write the equations of the shear and bending-moment curves, (*b*) determine the magnitude and location of the maximum bending moment.

SOLUTION

(*a*) We check that beam is in equilibrium $-\frac{1}{2}(w_0L)\left(\frac{L}{3}\right)+\frac{1}{2}\left(\frac{1}{2}w_0L\right)\left(\frac{2}{3}L\right)=0$ (ok)

Load: $w(x)=w_0\left(1-\frac{x}{L}\right)-\frac{w_0}{2}\left(\frac{x}{L}\right)=w_0\left(1-\frac{3x}{2L}\right)$

Shear: We use Eq. (7.1)

$$\frac{dV}{dx}=-w=-w_0\left(1-\frac{3x}{2L}\right)$$

$$V=-\int w_0(1-\frac{3x}{2L})dx=-w_0\left(x-\frac{3x^2}{4L}\right)+C_1$$

Boundary Condition: at $x=L$, $V=0$ therefore $0=-w_0\left(L-\frac{3}{4}L\right)+C_1$ $\quad C_1=\frac{1}{4}w_0L$

Bending moment: Using Eq. (7.3)

$$\frac{dM}{dx}=V \quad M=\int Vdx=\int\left(-w_0x+\frac{3}{4}w_0\frac{x^2}{L}+\frac{1}{4}w_0L\right)dx$$

$$M(x)=-\frac{1}{2}w_0x^2+\frac{1}{4}w_0\frac{x^3}{L}+\frac{1}{4}w_0Lx+C_2$$

Boundary Condition: at x=0, $M=0=C_2$ therefore $C_2=0$

$$V(x)=\frac{1}{4}w_0L\left[3\left(\frac{x}{L}\right)^2-4\left(\frac{x}{L}\right)+1\right] \blacktriangleleft$$

$$M(x)=\frac{1}{4}w_0L^2\left[\left(\frac{x}{L}\right)^3-2\left(\frac{x}{L}\right)^2+\left(\frac{x}{L}\right)\right] \blacktriangleleft$$

PROBLEM 7.87 (Continued)

(*b*) Maximum bending moment

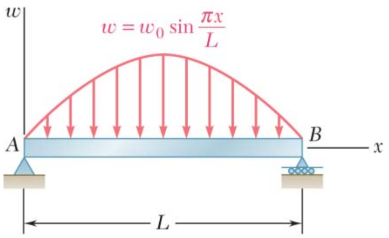
$$\frac{dM}{dx} = V = 0$$

$$0 = \left[3\left(\frac{x}{L}\right)^2 - 4\left(\frac{x}{L}\right) + 1\right]$$

$$0 = \left(3\frac{x}{L} - 1\right)\left(\frac{x}{L} - 1\right); \qquad x = \frac{L}{3} \text{ and } x = L$$

$$M_{\max} = \frac{1}{4} w_0 L^2 \left(\frac{1}{27} - \frac{2}{9} + \frac{1}{3}\right)$$

$$M_{\max} = \frac{1}{27} w_0 L^2, \quad \text{at } x = \frac{L}{3} \blacktriangleleft$$



PROBLEM 7.88

For the beam and loading shown, (*a*) write the equations of the shear and bending-moment curves, (*b*) determine the magnitude and location of the maximum bending moment.

SOLUTION

Eq. (7.1): $$\frac{dV}{dx} = -w = -w_0 \sin \frac{\pi x}{L}$$

$$V = \int -w_0 \frac{\sin \pi x}{L} dx = w_0 \frac{L}{\pi} \cos \frac{\pi x}{L} + C_1 \qquad (1)$$

Eq. (7.3): $$\frac{dM}{dx} = V = w_0 \frac{L}{\pi} \cos \frac{\pi x}{L} + C_1$$

$$M = \int \left(w_0 \frac{L}{\pi} \cos \frac{\pi x}{L} + C_1 \right) dx = w_0 \frac{L^2}{\pi^2} \sin \frac{\pi x}{L} + C_1 x + C_2 \qquad (2)$$

(*a*) Boundary conditions

At $x = 0$: $M = 0$ therefore, $C_2 = 0$

$x = L$: $M = 0$ therefore, $C_1 = 0$

$$V(x) = w_0 \frac{L}{\pi} \cos\left(\frac{\pi x}{L}\right) \blacktriangleleft$$

$$M = w_0 \frac{L^2}{\pi^2} \sin\left(\frac{\pi x}{L}\right) \blacktriangleleft$$

(*b*) Max moment occurs when $V = 0$ at $x = \frac{L}{2}$

$$M_{\max} = w_0 \frac{L^2}{\pi^2} \blacktriangleleft$$

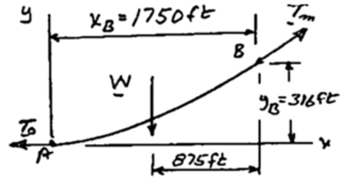
PROBLEM 7.109

The center span of the George Washington Bridge, as originally constructed, consisted of a uniform roadway suspended from four cables. The uniform load supported by each cable was $w = 9.75$ kips/ft along the horizontal. Knowing that the span L is 3500 ft and that the sag h is 316 ft, determine for the original configuration (*a*) the maximum tension in each cable, (*b*) the length of each cable.

SOLUTION



$$W = wx_B = (9.75 \text{ kips/ft})(1750 \text{ ft})$$

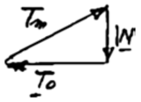
$$W = 17{,}063 \text{ kips}$$

$$+\circlearrowleft \Sigma M_B = 0: \quad T_0(316 \text{ ft}) - (17063 \text{ kips})(875 \text{ ft}) = c$$

$$T_0 = 47{,}247 \text{ kips}$$

(*a*)

$$T_m = \sqrt{T_0^2 + W^2}$$



$$= \sqrt{(47{,}247 \text{ kips})^2 + (17{,}063 \text{ kips})^2}$$

$$T_m = 50{,}200 \text{ kips} \blacktriangleleft$$

(*b*)

$$s_B = x_B\left[1 + \frac{2}{3}\left(\frac{y_B}{x_B}\right)^2 - \frac{2}{5}\left(\frac{y_B}{x_B}\right)^4 + \cdots\right]$$

$$\frac{y_B}{x_B} = \frac{316 \text{ ft}}{1750 \text{ ft}} = 0.18057$$

$$= (1750 \text{ ft})\left[1 + \frac{2}{3}(0.18057)^2 - \frac{2}{5}(0.18057)^4 + \cdots\right]$$

$s_B = 1787.3$ ft; Length $= 2s_B = 3579.6$ ft $\qquad$ Length $= 3580$ ft ◀

PROBLEM 7.110

The center span of the Verrazano-Narrows Bridge consists of two uniform roadways suspended from four cables. The design of the bridge allows for the effect of extreme temperature changes that cause the sag of the center span to vary from $h_w = 386$ ft in winter to $h_s = 394$ ft in summer. Knowing that the span is $L = 4260$ ft, determine the change in length of the cables due to extreme temperature changes.

SOLUTION

Eq. 7.10:

$$s_B = x_B\left[1+\frac{2}{3}\left(\frac{y_B}{x_B}\right)^2 - \frac{2}{5}\left(\frac{y_B}{x_B}\right)^4 + \cdots\right]$$

Winter:

$$y_B = h = 386 \text{ ft}, \quad x_B = \frac{1}{2}L = 2130 \text{ ft}$$

$$s_B = (2130)\left[1+\frac{2}{3}\left(\frac{386}{2130}\right)^2 - \frac{2}{5}\left(\frac{386}{2130}\right)^4 + \cdots\right] = 2175.715 \text{ ft}$$

Summer:

$$y_B = h = 394 \text{ ft}, \quad x_B = \frac{1}{2}L = 2130 \text{ ft}$$

$$s_B = (2130)\left[1+\frac{2}{3}\left(\frac{394}{2130}\right)^2 - \frac{2}{5}\left(\frac{394}{2130}\right)^4 + \cdots\right] = 2177.59 \text{ ft}$$

$$\Delta = 2(\Delta s_B) = 2(2177.59 \text{ ft} - 2175.715 \text{ ft}) = 2(1.875 \text{ ft})$$

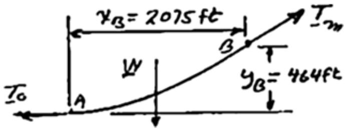
Change in length = 3.75 ft ◀

PROBLEM 7.111

Each cable of the Golden Gate Bridge supports a load w= 11.1 kips/ft along the horizontal. Knowing that the span L is 4150 ft and that the sag h is 464 ft, determine (*a*) the maximum tension in each cable, (*b*) the length of each cable.

SOLUTION

Eq. (7.8) Page 386:

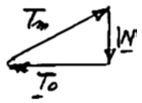


At B:

$$y_B = \frac{wx_B^2}{2T_0}$$

$$T_0 = \frac{wx_B^2}{2y_B} = \frac{(11.1\text{ kip/ft})(2075\text{ ft})^2}{2(464\text{ ft})}$$

(*a*)



$$T_0 = 51.500\text{ kips}$$

$$W = wx_B = (11.1\text{ kips/ft})(2075\text{ ft}) = 23.033\text{ kips}$$

$$T_m = \sqrt{T_0^2 + W^2} = \sqrt{(51.500\text{ kips})^2 + (23.033\text{ kips})^2}$$

$$T_m = 56,400\text{ kips} \blacktriangleleft$$

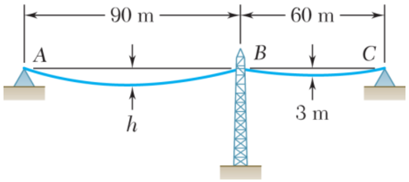
(*b*)

$$s_B = x_B\left[1 + \frac{2}{3}\left(\frac{y_B}{x_B}\right)^2 - \frac{2}{5}\left(\frac{y_B}{y_B}\right)^4 + \cdots\right] \qquad \frac{y_B}{x_B} = \frac{464\text{ ft}}{2075\text{ ft}} = 0.22361$$

$$s_B = (2075\text{ ft})\left[1 + \frac{2}{3}(0.22361)^2 - \frac{2}{5}(0.22361)^4 + \cdots\right] = 2142.1\text{ ft}$$

Length $= 2s_B = 2(2142.1\text{ ft})$

Length $= 4284$ ft ◀

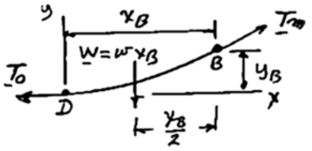


PROBLEM 7.112

Two cables of the same gauge are attached to a transmission tower at *B*. Since the tower is slender, the horizontal component of the resultant of the forces exerted by the cables at *B* is to be zero. Knowing that the mass per unit length of the cables is 0.4 kg/m, determine (*a*) the required sag *h*, (*b*) the maximum tension in each cable.

SOLUTION

$$W = wx_B$$



$$+\circlearrowleft \Sigma M_B = 0: \quad T_0 \; y_B - (wx_B)\frac{y_B}{2} = 0$$

(*a*) $$\text{Horiz. comp.} = T_0 = \frac{wx_B^2}{2y_B}$$

Cable *BC*: $x_B = 30 \text{ m}, \quad y_B = 3 \text{ m}$

$$T_0 = \frac{wx_B^2}{2y_B} = \frac{(3.924 \text{ N/m})(30 \text{ m})^2}{2(3 \text{ m})} = 588.6 \text{ N} \quad \text{(Checks)}$$

$$W = wx_B = (3.924 \text{ N/m})(30 \text{ m}) = 117.72 \text{ N}$$

$$T_m^2 = (588.6 \text{ N})^2 + (117.72 \text{ N})^2$$

For *BC*: $T_m = 600 \text{ N}$ ◀

PROBLEM 7.113

A 76-m length of wire having a mass per unit length of 2.2 kg/m is used to span a horizontal distance of 75 m. Determine (a) the approximate sag of the wire, (b) the maximum tension in the wire. [Hint: Use only the first two terms of Eq. (7.10).]

SOLUTION

First two terms of Eq. 7.10

(*a*)

$$s_B = \frac{1}{2}(76\text{ m}) = 38\text{ m},$$

$$x_B = \frac{1}{2}(75\text{ m}) = 37.5\text{ m}$$

$$y_B = h$$

$$s_B = x_B\left[1 + \frac{2}{3}\left(\frac{y_B}{x_B}\right)^2\right]$$

$$38\text{ m} = 37.5\text{ m}\left[1 - \frac{2}{3}\left(\frac{y_B}{x_B}\right)^2\right]$$

$$\left(\frac{y_B}{x_B}\right)^2 = 0.02$$

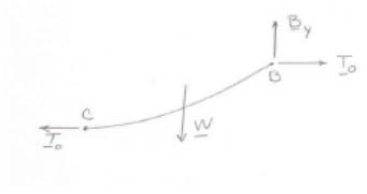
$$\frac{y_B}{x_B} = 0.141421$$

$$\frac{h}{37.5\text{ m}} = 0.141421$$

$$h = 5.3033\text{ m}$$

$h = 5.30\text{ m}$ ◀

(*b*) Free body: Portion *CB*



$$w = (2.2\text{ kg/m})(9.81\text{m}) = 21.582\text{ N/m}$$

$$W = s_B\ w = (38\text{ m})(21.582\text{ N/m})$$

$$W = 820.12\text{ N}$$

$$y_B = \frac{w{x_B}^2}{2y_B}: \quad T_0 = \frac{(2.2\text{ kg/m})(9.81\text{ m/s}^2)(37.5\text{ m})^2}{2(5.3033\text{ m})}$$

$$T_0 = 2861.6\text{ N}$$

$$B_x = T_0 = 2861.6\text{ N}$$

PROBLEM 7.113 (Continued)

$+\uparrow \Sigma F_y = 0: \quad B_y - 820.12 \text{ N} = 0 \quad B_y = 820.12 \text{ N}$

$T_m = \sqrt{B_x^2 + B_y^2} = \sqrt{(2861.6 \text{ N})^2 + (820.12 \text{ N})^2} \qquad T_m = 2980 \text{ N}$ ◀

PROBLEM 7.114

A cable of length $L + \Delta$ is suspended between two points that are at the same elevation and a distance L apart. (*a*) Assuming that Δ is small compared to L and that the cable is parabolic, determine the approximate sag in terms of L and Δ. (*b*) If $L = 100$ ft and $\Delta = 4$ ft, determine the approximate sag. [*Hint:* Use only the first two terms of Eq. (7.10).

SOLUTION

Eq. 7.10 (First two terms)

(*a*)

$$s_B = x_B\left[1+\frac{2}{3}\left(\frac{y_B}{x_B}\right)^2\right]$$

$$x_B = L/2$$

$$s_B = \frac{1}{2}(L+\Delta)$$

$$y_B = h$$

$$\frac{1}{2}(L+\Delta) = \frac{L}{2}\left[1+\frac{2}{3}\left(\frac{h}{\frac{L}{2}}\right)^2\right]$$

$$\frac{\Delta}{2} = \frac{4}{3}\frac{h^2}{L}; \quad h^2 = \frac{3}{8}L\Delta; \qquad h = \sqrt{\frac{3}{8}L\Delta} \blacktriangleleft$$

(*b*)

$$L = 100 \text{ ft}, \quad h = 4 \text{ ft}. \qquad h = \sqrt{\frac{3}{8}(100)(4)}; \qquad h = 12.25 \text{ ft} \blacktriangleleft$$

1100 ft
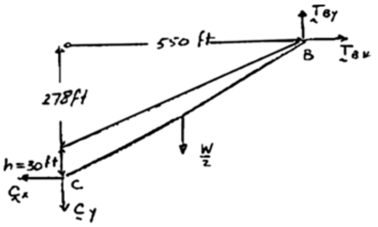
T_{Bx}
B
h
496 ft
C
A
A_x
A_y
$W = (10.2 \frac{kips}{ft})(1100 ft)$
$= 11,220$ kips

$$\circlearrowleft \Sigma M_A = 0\text{:}\quad (1100\text{ ft})T_{By} - (496\text{ ft})T_{Bx} - (550\text{ ft})W = 0$$

$$11T_{By} - 4.96T_{Bx} = 5.5W \qquad (1)$$

FBD CB:



T_{By}
550 ft
B
T_{Bx}
278 ft
$h = 30$ ft
$\frac{W}{2}$
C_x
C
C_y

$$\circlearrowleft \Sigma M_C = 0\text{:}\quad (550\text{ ft})T_{By} - (278\text{ ft})T_{Bx} - (275\text{ ft})\frac{W}{2} = 0$$

$$11T_{By} - 5.56T_{Bx} = 2.75W \qquad (2)$$

Solving (1) and (2) $\quad T_{By} = 28,798$ kips

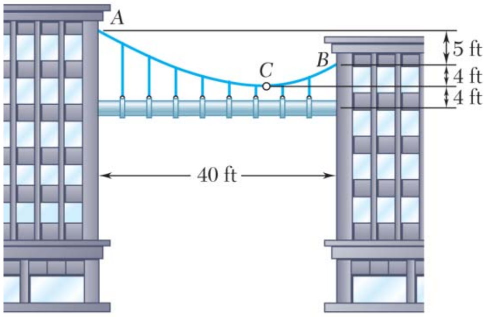
$$T_{Bx} = 51,425\text{ kips}$$

$$T_{\max} = T_B = \sqrt{T_{B_x}^2 + T_{B_y}^2} \qquad \tan\theta_B = \frac{T_{B_y}}{T_{B_x}}$$

So that

(*a*) $T_{\max} = 58,900$ kips ◀

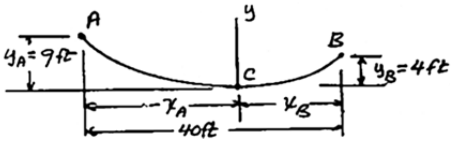
(*b*) $\theta_B = 29.2°$ ◀



PROBLEM 7.118

A steam pipe weighting 45 lb/ft that passes between two buildings 40 ft apart is supported by a system of cables as shown. Assuming that the weight of the cable system is equivalent to a uniformly distributed loading of 5 lb/ft, determine (*a*) the location of the lowest Point *C* of the cable, (*b*) the maximum tension in the cable.

SOLUTION



Note: $x_B - x_A = 40$ ft

or $x_A = x_B - 40$ ft

(*a*) Use Eq. 7.8

Point *A*: $y_A = \dfrac{wx_A^2}{2T_0}; \quad 9 = \dfrac{w(x_B - 40)^2}{2T_0}$ (1)

Point *B*: $y_B = \dfrac{wx_B^2}{2T_0}; \quad 4 = \dfrac{wx_B^2}{2T_0}$ (2)

Dividing (1) by (2): $\dfrac{9}{4} = \dfrac{(x_B - 40)^2}{x_B^2}; \quad x_B = 16$ ft

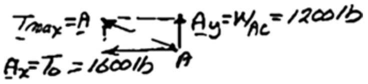
Point *C* is 16.00 ft to left of *B* ◀

(*b*) Maximum slope and thus $T_{\max}$ is at *A*

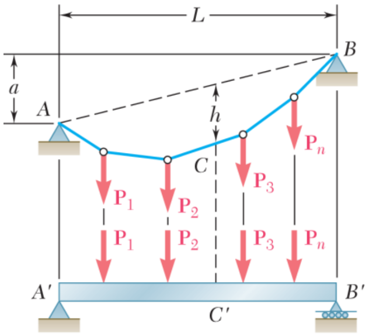
$$x_A = x_B - 40 = 16 - 40 = -24 \text{ ft}$$

$$y_A = \frac{wx_A^2}{2T_0}; \quad 9 \text{ ft} = \frac{(50 \text{ lb/ft})(-24 \text{ ft})^2}{2T_0}; \quad T_0 = 1600 \text{ lb}$$

$$W_{AC} = (50 \text{ lb/ft})(24 \text{ ft}) = 1200 \text{ lb}$$



$T_{\max} = 2000$ lb ◀



PROBLEM 7.119*

A cable *AB* of span *L* and a simple beam *A′B′* of the same span are subjected to identical vertical loadings as shown. Show that the magnitude of the bending moment at a point *C′* in the beam is equal to the product T_0h, where T_0 is the magnitude of the horizontal component of the tension force in the cable and *h* is the vertical distance between Point *C* and the chord joining the points of support *A* and *B*.

D

Geometry:

Given: $d_C = d_B$

Then, $3.75 + h_C = 6 + h_B$

$$h_C = 2.25 + h_B \qquad (1)$$

Since $M=T_0h$, h is proportional to M. Thus,

$$\frac{h_B}{M_B} = \frac{h_C}{M_C} \quad \text{or,} \quad \frac{h_B}{19.2} = \frac{h_C}{30}$$

$$h_B = 0.64 h_C \qquad (2)$$

Substituting (2) into (1):

$$h_C = 2.25 + 0.64 h_C \qquad h_C = 6.25 \text{ ft}$$

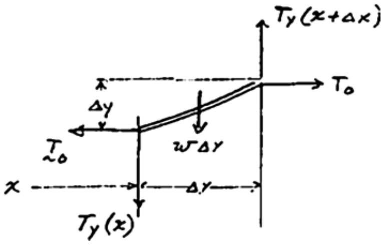
Then, $d_C = 3.75 + h_C = 3.75 + 6.25$ $\quad d_C = 10.00 \text{ ft}$ ◀

PROBLEM 7.124*

Show that the curve assumed by a cable that carries a distributed load $w(x)$ is defined by the differential equation $d^2y/dx^2 = w(x)/T_0$, where T_0 is the tension at the lowest point.

SOLUTION

FBD Elemental segment:



$$+\!\uparrow \Sigma F_y = 0: \quad T_y(x+\Delta x) - T_y(x) - w(x)\Delta x = 0$$

So $$\frac{T_y(x+\Delta x)}{T_0} - \frac{T_y(x)}{T_0} = \frac{w(x)}{T_0}\Delta x$$

But $$\frac{T_y}{T_0} = \frac{dy}{dx}$$

So $$\frac{\left.\frac{dy}{dx}\right|_{x+\Delta x} - \left.\frac{dy}{dx}\right|_{x}}{\Delta x} = \frac{w(x)}{T_0}$$

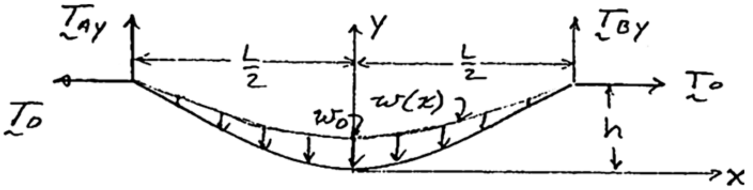
In $\lim\limits_{\Delta x \to 0}$: $$\frac{d^2 y}{dx^2} = \frac{w(x)}{T_0}$$ Q.E.D.

PROBLEM 7.125*

Using the property indicated in Problem 7.124, determine the curve assumed by a cable of span L and sag h carrying a distributed load $w=w_0 \cos(\pi x/L)$, where x is measured from mid-span. Also determine the maximum and minimum values of the tension in the cable.

PROBLEM 7.124 Show that the curve assumed by a cable that carries a distributed load $w(x)$ is defined by the differential equation $d^2y/dx^2=w(x)/T_0$, where $T_0$is the tension at the lowest point.

SOLUTION



$$w(x) = w_0 \cos\frac{\pi x}{L}$$

From Problem 7.124

$$\frac{d^2y}{dx^2} = \frac{w(x)}{T_0} = \frac{w_0}{T_0}\cos\frac{\pi x}{L}$$

So
$$\frac{dy}{dx} = \frac{W_0 L}{T_0 \pi}\sin\frac{\pi x}{L} \quad \left(\text{using } \left.\frac{dy}{dx}\right|_0 = 0\right)$$

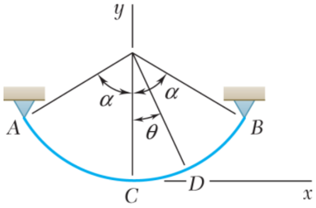
$$y = \frac{w_0 L^2}{T_0 \pi^2}\left(1-\cos\frac{\pi x}{L}\right) \quad [\text{using } y(0)=0] \blacktriangleleft$$

But
$$y\left(\frac{L}{2}\right) = h = \frac{w_0 L^2}{T_0 \pi^2}\left(1-\cos\frac{\pi}{2}\right) \quad \text{so} \quad T_0 = \frac{w_0 L^2}{\pi^2 h}$$

And
$$T_0 = T_{\min} \quad \text{so} \qquad T_{\min} = \frac{w_0 L^2}{\pi^2 h} \blacktriangleleft$$

$$T_{\max} = T_A = T_B: \quad \frac{T_{By}}{T_0} = \left.\frac{dy}{dx}\right|_{x=L/2} = \frac{w_0 L}{T_0 \pi}$$

$$T_{By} = \frac{w_0 L}{\pi} \qquad T_{\max} = \sqrt{T_{By}^2 + T_0^2} = \frac{w_0 L}{\pi}\sqrt{1+\left(\frac{L}{\pi h}\right)^2} \blacktriangleleft$$



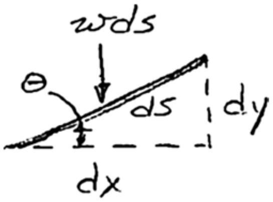
PROBLEM 7.126*

If the weight per unit length of the cable *AB* is $w_0/\cos^2\theta$, prove that the curve formed by the cable is a circular arc. (*Hint:* Use the property indicated in Problem 7.124.)

PROBLEM 7.124 Show that the curve assumed by a cable that carries a distributed load $w(x)$ is defined by the differential equation $d^2y/dx^2 = w(x)/T_0$, where T_0 is the tension at the lowest point.

SOLUTION

Elemental Segment:



Load on segment* $$w(x)dx = \frac{w_0}{\cos^2\theta}ds$$

But $$dx = \cos\theta ds, \quad \text{so} \quad w(x) = \frac{w_0}{\cos^3\theta}$$

From Problem 7.119 $$\frac{d^2y}{dx^2} = \frac{w(x)}{T_0} = \frac{w_0}{T_0\cos^3\theta}$$

In general $$\frac{d^2y}{dx^2} = \frac{d}{dx}\left(\frac{dy}{dx}\right) = \frac{d}{dx}(\tan\theta) = \sec^2\theta\frac{d\theta}{dx}$$

So $$\frac{d\theta}{dx} = \frac{w_0}{T_0\cos^3\theta\sec^2\theta} = \frac{w_0}{T_0\cos\theta}$$

or $$\frac{T_0}{w_0}\cos\theta d\theta = dx = rd\theta\cos\theta$$

Giving $r = \dfrac{T_0}{w_0} = \text{constant.}$ So curve is circular arc Q.E.D.

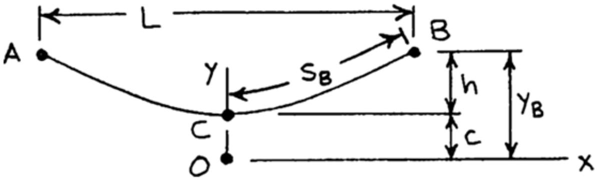
*For large sag, it is not appropriate to approximate *ds* by *dx*.

PROBLEM 7.127

A 25-ft chain with a weight of 30 lb is suspended between two points at the same elevation. Knowing that the sag is 10 ft, determine (*a*) the distance between the supports, (*b*) the maximum tension in the chain.

SOLUTION

$$w = (30\text{ lb})/(25\text{ ft}) = 1.2\text{ lb/ft}$$



Eq. 7.17:
$$y_B^2 - s_B^2 = c^2; \quad (10\text{ ft} + c)^2 - (12.5\text{ ft})^2 = c^2$$

$$100 + 20c + c^2 - 156.25 = c^2$$

$$c = 2.8125\text{ ft}$$

Eq. 7.18:
$$T_m = wy_B = (1.2\text{ lb/ft})(10\text{ ft} + 2.8125\text{ ft})$$

$$T_m = 15.375\text{ lb} \qquad T_m = 15.38\text{ lb} \blacktriangleleft$$

Eq. 7.15:
$$s_B = c\sinh\frac{x_B}{c}; \quad 12.5 = (2.8125\text{ ft})\sinh\frac{x_B}{c}$$

$$\sinh\frac{x_B}{c} = 4.444; \quad \frac{x_B}{c} = 2.1972$$

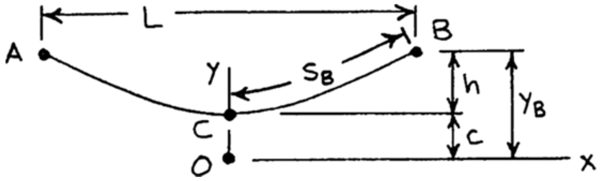
$$x_B = 2.1972(2.8125\text{ ft}) = 6.1796\text{ ft}; \quad L = 2x_B = 2(6.1796\text{ ft}) = 12.3592\text{ ft}$$

$$L = 12.36\text{ ft} \blacktriangleleft$$

PROBLEM 7.128

A 500-ft-long aerial tramway cable having a weight per unit length of 2.8 lb/ft is suspended between two points at the same elevation. Knowing that the sag is 125 ft, find (*a*) the horizontal distance between the supports, (*b*) the maximum tension in the cable.

SOLUTION



Given:

$$\text{Length} = 500 \text{ ft}$$
$$\text{Unit mass} = 2.8 \text{ lb/ft}$$
$$h = 125 \text{ ft}$$

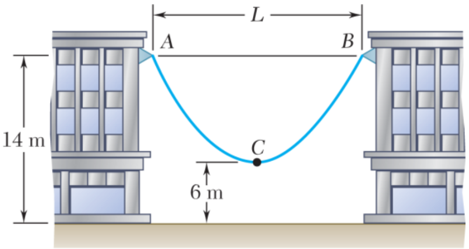
Then,

$$s_B = 250 \text{ ft}$$
$$y_B = h + c = 125 \text{ ft} + c$$
$$y_B^2 - s_B^2 = c^2; \quad (125 + c)^2 - (250)^2 = c^2$$
$$125^2 + 250c + c^2 - 250^2 = c^2$$
$$c = 187.50 \text{ ft}$$

$$s_B = c \sinh \frac{x_B}{c}; \quad 250 = 187.50 \sinh \frac{x_B}{187.50}$$
$$x_B = 206.06 \text{ ft}$$

$$\text{span} = L = 2x_B = 2(206.06 \text{ ft})$$ $L = 412$ ft ◀

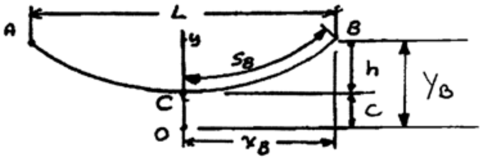
$$T_m = wy_B = (2.8 \text{ lb/ft})(125 \text{ ft} + 187.50 \text{ ft})$$ $T_m = 875$ lb ◀



PROBLEM 7.129

A 40-m cable is strung as shown between two buildings. The maximum tension is found to be 350 N, and the lowest point of the cable is observed to be 6 m above the ground. Determine (*a*) the horizontal distance between the buildings, (*b*) the total mass of the cable.

SOLUTION



$$s_B = 20 \text{ m}$$

$$T_m = 350 \text{ N}$$

$$h = 14 \text{ m} - 6 \text{ m} = 8 \text{ m}$$

$$y_B = h + c = 8 \text{ m} + c$$

Eq. 7.17:

$$y_B^2 - s_B^2 = c^2; \quad (8+c)^2 - 20^2 = c^2$$

$$64 + 16c + c^2 - 400 = c^2$$

$$c = 21.0 \text{ m}$$

Eq. 7.15:

$$s_B = c \sinh \frac{x_B}{c}; \quad 20 = (21.0)\sinh \frac{x_B}{21.0}$$

(*a*) $x_B = 17.7933 \text{ m}; \quad L = 2x_B$ $\quad L = 35.6 \text{ m}$ ◀

(*b*) Eq. 7.18:

$$T_m = wy_B; \quad 350 \text{ N} = w(8 + 21.0)$$

$$w = 12.0690 \text{ N/m}$$

$$W = 2s_B w = (40 \text{ m})(12.0690 \text{ N/m})$$

$$= 482.76 \text{ N}$$

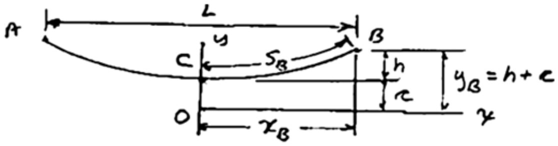
$$m = \frac{W}{g} = \frac{482.76 \text{ N}}{9.81 \text{ m/s}^2}$$

Total mass = 49.2 kg ◀

PROBLEM 7.130

A 50-m steel surveying tape has a mass of 1.6 kg. If the tape is stretched between two points at the same elevation and pulled until the tension at each end is 60 N, determine the horizontal distance between the ends of the tape. Neglect the elongation of the tape due to the tension.

SOLUTION



$$s_B = 25\text{ m}$$

$$w = \left(\frac{1.6\text{ kg}}{50\text{ m}}\right)\left(9.81\text{ m/s}^2\right) = 0.31392\text{ N/m} \quad T_m = 60\text{ N}$$

Eq. 7.18: $$T_m = wy_B; \quad 60\text{ N} = (0.31392\text{ N/m})y_B; \quad y_B = 191.131\text{ m}$$

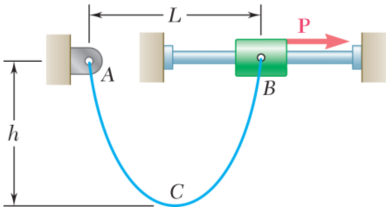
Eq. 7.17: $$y_B^2 - s_B^2 = c^2; \quad (191.131)^2 - (25)^2 = c^2; \quad c = 189.489\text{ m}$$

Eq. 7.15: $$s_B = c\sinh\frac{x_B}{c}; \quad 25 = 189.489\sinh\frac{x_B}{c}$$

$$\sinh\frac{x_B}{c} = 0.131933; \quad \frac{x_B}{c} = 0.131553\text{ m}$$

$$x_B = (0.131553)(189.489\text{ m}) = 24.928\text{ m}$$

$$L = 2x_B = 2(24.928\text{ ft})$$ $L = 49.86$ ft ◀

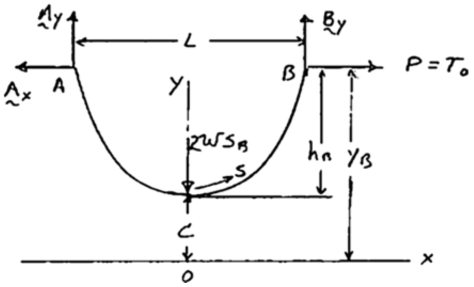


PROBLEM 7.131

A 20-m length of wire having a mass per unit length of 0.2 kg/m is attached to a fixed support at *A* and to a collar at *B*. Neglecting the effect of friction, determine (*a*) the force **P** for which *h*= 8 m, (*b*) the corresponding span *L*.

SOLUTION

FBD Cable:



$$s_T = 20\text{ m} \quad \left(\text{so } s_B = \frac{20\text{ m}}{2} = 10\text{ m}\right)$$

$$w = (0.2\text{ kg/m})(9.81\text{ m/s}^2)$$
$$= 1.96200\text{ N/m}$$

$$h_B = 8\text{ m}$$

$$y_B^2 = (c + h_B)^2 = c^2 + s_B^2$$

So $$c = \frac{s_B^2 - h_B^2}{2h_B}$$

$$c = \frac{(10\text{ m})^2 - (8\text{ m})^2}{2(8\text{ m})}$$
$$= 2.250\text{ m}$$

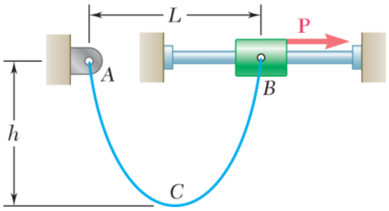
Now $$s_B = c\sinh\frac{x_B}{c} \rightarrow x_B = c\sinh^{-1}\frac{s_B}{c}$$

$$= (2.250\text{ m})\sinh^{-1}\left(\frac{10\text{ m}}{2.250\text{ m}}\right)$$

$$x_B = 4.9438\text{ m}$$

$P = T_0 = wc = (1.96200\text{ N/m})(2.250\text{ m})$ (*a*) $\mathbf{P} = 4.41\text{ N} \longrightarrow$ ◀

$L = 2x_B = 2(4.9438\text{ m})$ (*b*) $L = 9.89\text{ m}$ ◀

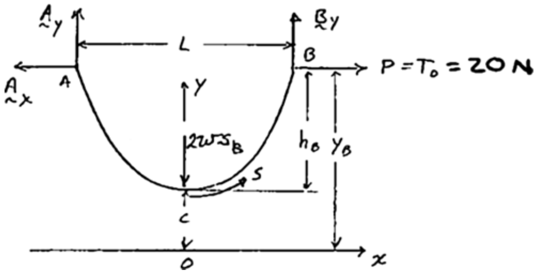


PROBLEM 7.132

A 20-m length of wire having a mass per unit length of 0.2 kg/m is attached to a fixed support at *A* and to a collar at *B*. Knowing that the magnitude of the horizontal force applied to the collar is $P = 20$ N, determine (*a*) the sag *h*, (*b*) the span *L*.

SOLUTION

FBD Cable:



$$s_T = 20 \text{ m}, \quad w = (0.2 \text{ kg/m})(9.81 \text{ m/s}^2) = 1.96200 \text{ N/m}$$

$$P = T_0 = wc \quad c = \frac{P}{w}$$

$$c = \frac{20 \text{ N}}{1.9620 \text{ N/m}} = 10.1937 \text{ m}$$

$$y_B^2 = (h_B + c)^2 = c^2 + s_B^2$$

$$h^2 + 2ch - s_B^2 = 0 \quad s_B = \frac{20 \text{ m}}{2} = 10 \text{ m}$$

$$h^2 + 2(10.1937 \text{ m})h - 100 \text{ m}^2 = 0$$

$$h = 4.0861 \text{ m}$$

(*a*) $h = 4.09 \text{ m}$ ◀

$$s_B = c\sinh\frac{x_A}{c} \rightarrow x_B = c\sinh^{-1}\frac{s_B}{c} = (10.1937 \text{ m})\sinh^{-1}\left(\frac{10 \text{ m}}{10.1937 \text{ m}}\right)$$

$$= 8.8468 \text{ m}$$

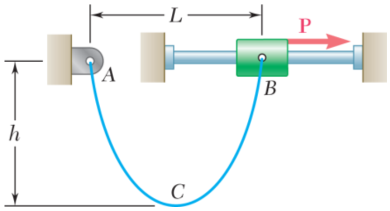
(*b*) $L = 17.69 \text{ m}$ ◀

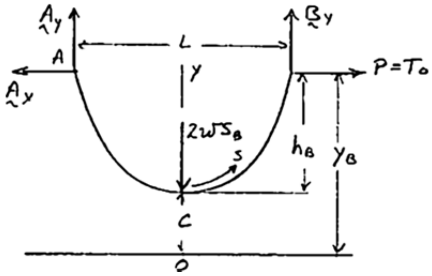


PROBLEM 7.133

A 20-m length of wire having a mass per unit length of 0.2 kg/m is attached to a fixed support at *A* and to a collar at *B*. Neglecting the effect of friction, determine (*a*) the sag *h* for which *L*= 15 m, (*b*) the corresponding force **P**.

SOLUTION

FBD Cable:



$$s_T = 20\text{ m} \rightarrow s_B = \frac{20\text{ m}}{2} = 10\text{ m}$$

$$w = (0.2\text{ kg/m})(9.81\text{ m/s}^2) = 1.96200\text{ N/m}$$

$$L = 15\text{ m}$$

$$s_B = c\sinh\frac{x_B}{c} = c\sinh\frac{\frac{L}{2}}{c}$$

$$10\text{ m} = c\sinh\frac{7.5\text{ m}}{c}$$

Solving numerically: $c = 5.5504\text{ m}$

$$y_B = c\cosh\left(\frac{x_B}{c}\right) = (5.5504)\cosh\left(\frac{7.5}{5.5504}\right)$$

$$y_B = 11.4371\text{ m}$$

$$h_B = y_B - c = 11.4371\text{ m} - 5.5504\text{ m}$$

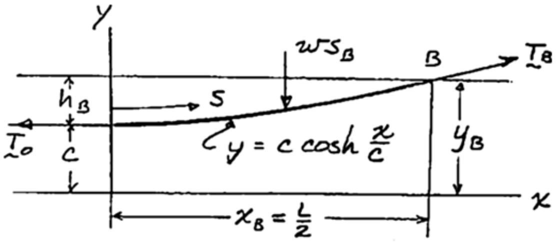
(*a*) $h_B = 5.89\text{ m}$ ◀

$P = wc = (1.96200\text{ N/m})(5.5504\text{ m})$ (*b*) $\mathbf{P} = 10.89\text{ N} \longrightarrow$ ◀

PROBLEM 7.134

Determine the sag of a 30-ft chain that is attached to two points at the same elevation that are 20 ft apart.

SOLUTION



$$s_B = \frac{30\text{ ft}}{2} = 15\text{ ft} \quad L = 20\text{ ft}$$

$$x_B = \frac{L}{2} = 10\text{ ft}$$

$$s_B = c\sinh\frac{x_B}{c}$$

$$15\text{ ft} = c\sinh\frac{10\text{ ft}}{c}$$

Solving numerically: $c = 6.1647\text{ ft}$

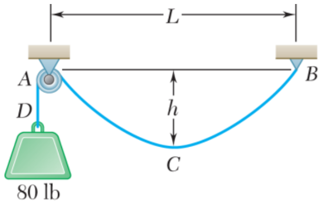
$$y_B = c\cosh\frac{x_B}{c}$$

$$= (6.1647\text{ ft})\cosh\frac{10\text{ ft}}{6.1647\text{ ft}}$$

$$= 16.2174\text{ ft}$$

$$h_B = y_B - c = 16.2174\text{ ft} - 6.1647\text{ ft}$$

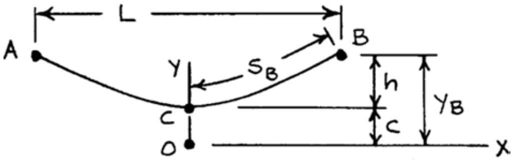
$h_B = 10.05$ ft ◀



PROBLEM 7.135

A counterweight D is attached to a cable that passes over a small pulley at A and is attached to a support at B. Knowing that $L = 45$ ft and $h = 15$ ft, determine (*a*) the length of the cable from A to B, (*b*) the weight per unit length of the cable. Neglect the weight of the cable from A to D.

SOLUTION



Given:

$$L = 45 \text{ ft}$$

$$h = 15 \text{ ft}$$

$$T_A = 80 \text{ lb}$$

$$x_B = 22.5 \text{ ft}$$

By symmetry: $T_B = T_A = T_m = 80 \text{ lb}$

We have $y_B = c\cosh\frac{x_B}{c} = c\cosh\frac{22.5}{c}$

and $y_B = h + c = 15 + c$

Then $c\cosh\frac{22.5}{c} = 15 + c$

or $\cosh\frac{22.5}{c} = \frac{15}{c} + 1$

Solve by trial for c: $c = 18.9525 \text{ ft}$

(*a*)

$$s_B = c\sinh\frac{x_B}{c}$$

$$= (18.9525 \text{ ft})\sinh\frac{22.5}{18.9525}$$

$$= 28.170 \text{ ft}$$

Length $= 2s_B = 2(28.170 \text{ ft}) = 56.3 \text{ ft}$ ◀

(*b*)

$$T_m = wy_B = w(h + c)$$

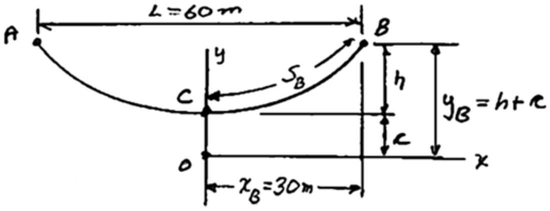
$$80 \text{ lb} = w(15 \text{ ft} + 18.9525 \text{ ft})$$

$w = 2.36 \text{ lb/ft}$ ◀

PROBLEM 7.136

A 90-m wire is suspended between two points at the same elevation that are 60 m apart. Knowing that the maximum tension is 300 N, determine (*a*) the sag of the wire, (*b*) the total mass of the wire.

SOLUTION



$$s_B = 45 \text{ m}$$

Eq. 7.17:
$$s_B = c \sinh \frac{x_B}{c}$$
$$45 = c \sinh \frac{30}{c}; \quad c = 18.494 \text{ m}$$

Eq. 7.16:
$$y_B = c \cosh \frac{x_B}{c}$$
$$y_B = (18.494) \cosh \frac{30}{18.494}$$
$$y_B = 48.652 \text{ m}$$
$$y_B = h + c$$
$$48.652 = h + 18.494$$
$$h = 30.158 \text{ m} \qquad\qquad h = 30.2 \text{ m} \blacktriangleleft$$

Eq. 7.18:
$$T_m = w y_B$$
$$300 \text{ N} = w(48.652 \text{ m})$$
$$w = 6.166 \text{ N/m}$$

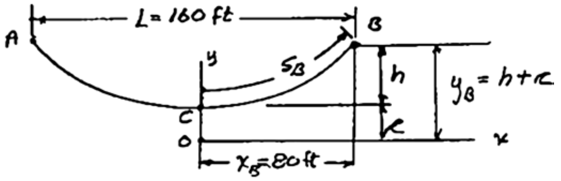
Total weight of cable
$$W = w(\text{Length})$$
$$= (6.166 \text{ N/m})(90 \text{ m})$$
$$= 554.96 \text{ N}$$

Total mass of cable
$$m = \frac{W}{g} = \frac{554.96 \text{ N}}{9.81 \text{ m/s}} = 56.57 \text{ kg} \qquad\qquad m = 56.6 \text{ kg} \blacktriangleleft$$

PROBLEM 7.137

A cable weighing 2 lb/ft is suspended between two points at the same elevation that are 160 ft apart. Determine the smallest allowable sag of the cable if the maximum tension is not to exceed 400 lb.

SOLUTION



Eq. 7.18: $T_m = wy_B; \quad 400 \text{ lb} = (2 \text{ lb/ft})y_B; \quad y_B = 200 \text{ ft}$

Eq. 7.16: $y_B = c\cosh\dfrac{x_B}{c}$

$$200 \text{ ft} = c\cosh\frac{80 \text{ ft}}{c}$$

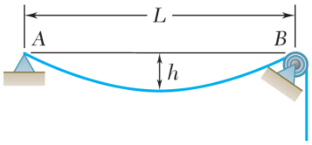
Solve for c: $c = 182.148$ ft and $c = 31.592$ ft

$$y_B = h + c; \quad h = y_B - c$$

For $c = 182.148$ ft; $h = 200 - 182.147 = 17.852$ ft ◁

For $c = 31.592$ ft; $h = 200 - 31.592 = 168.408$ ft ◁

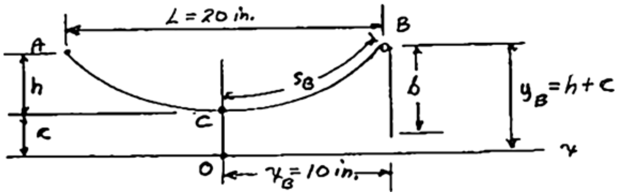
For $T_m \le 400$ lb: smallest $h = 17.85$ ft ◀



PROBLEM 7.138

A uniform cord 50 in. long passes over a pulley at *B* and is attached to a pin support at *A*. Knowing that *L*= 20 in. and neglecting the effect of friction, determine the smaller of the two values of *h* for which the cord is in equilibrium.

SOLUTION



Length of overhang: $b = 50\text{ in.} - 2s_B$

Weight of overhang equals max. tension

$$T_m = T_B = wb = w(50\text{ in.} - 2s_B)$$

Eq. 7.15: $s_B = c\sinh\dfrac{x_B}{c}$

Eq. 7.16: $y_B = c\cosh\dfrac{x_B}{c}$

Eq. 7.18: $T_m = wy_B$

$$w(50\text{ in.} - 2s_B) = wy_B$$

$$w\left(50\text{ in.} - 2c\sinh\frac{x_B}{c}\right) = wc\cosh\frac{x_B}{c}$$

$$x_B = 10: \quad 50 - 2c\sinh\frac{10}{c} = c\cosh\frac{10}{c}$$

Solve by trial and error: $c = 5.549\text{ in.}$ and $c = 27.742\text{ in.}$

For $c = 5.549$ in.

$$y_B = (5.549\text{ in.})\cosh\frac{10\text{ in.}}{5.549\text{ in.}} = 17.277\text{ in.}$$

$$y_B = h + c; \quad 17.277\text{ in.} = h + 5.549\text{ in.}$$

$$h = 11.728\text{ in.}$$

$h = 11.73$ in. ◀

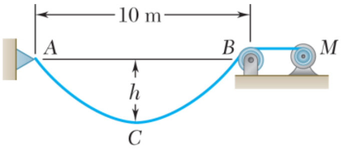
For $c = 27.742$ in.

$$y_B = (27.742\text{ in.})\cosh\frac{10\text{ in.}}{27.742\text{ in.}} = 29.564\text{ in.}$$

$$y_B = h + c; \quad 29.564\text{ in.} = h + 27.742\text{ in.}$$

$$h = 1.8219\text{ in.}$$

$h = 1.822$ in. ◀



PROBLEM 7.139

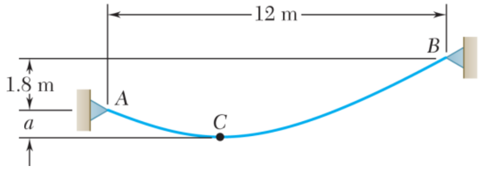
$$y_B = h_B + c = 3 \text{ m} + 4.5945 \text{ m}$$

$$= 7.5945 \text{ m}$$

$$T_{\max} = T_B = wy_B$$

$$= (0.4 \text{ kg/m})(9.81 \text{ m/s}^2)(7.5945 \text{ m})$$

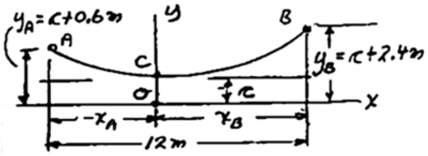
$T_{\max} = 29.8 \text{ N}$ ◀



PROBLEM 7.141

The cable *ACB* has a mass per unit length of 0.45 kg/m. Knowing that the lowest point of the cable is located at a distance *a*= 0.6 m below the support *A*, determine (*a*) the location of the lowest Point *C*, (*b*) the maximum tension in the cable.

SOLUTION



Note: $x_B - x_A = 12\text{ m}$

or, $-x_A = 12\text{ m} - x_B$

Point *A*: $$y_A = c\cosh\frac{-x_A}{c};\quad c + 0.6 = c\cosh\frac{12 - x_B}{c} \tag{1}$$

Point *B*: $$y_B = c\cosh\frac{x_B}{c};\quad c + 2.4 = c\cosh\frac{x_B}{c} \tag{2}$$

From (1): $$\frac{12}{c} - \frac{x_B}{c} = \cosh^{-1}\left(\frac{c+0.6}{c}\right) \tag{3}$$

From (2): $$\frac{x_B}{c} = \cosh^{-1}\left(\frac{c+2.4}{c}\right) \tag{4}$$

Add (3) + (4): $$\frac{12}{c} = \cosh^{-1}\left(\frac{c+0.6}{c}\right) + \cosh^{-1}\left(\frac{c+2.4}{c}\right)$$

Solve by trial and error: $c = 13.6214\text{ m}$

Eq. (2): $$13.6214 + 2.4 = 13.6214\cosh\frac{x_B}{c}$$

$$\cosh\frac{x_B}{c} = 1.1762;\quad \frac{x_B}{c} = 0.58523$$

$$x_B = 0.58523(13.6214\text{ m}) = 7.9717\text{ m}$$

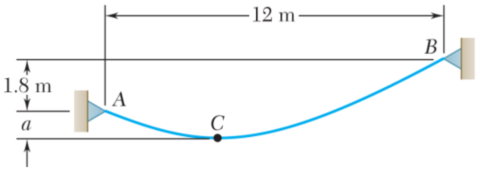
Point *C* is 7.97 m to left of *B* ◀

$$y_B = c + 2.4 = 13.6214 + 2.4 = 16.0214\text{ m}$$

Eq. 7.18: $$T_m = wy_B = (0.45\text{ kg/m})(9.81\text{ m/s}^2)(16.0214\text{ m})$$

$$T_m = 70.726\text{ N}$$

$T_m = 70.7$ N ◀

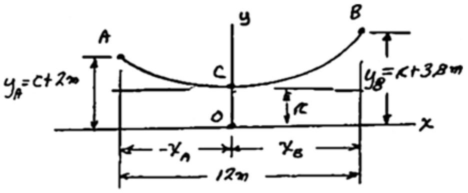


PROBLEM 7.142

The cable *ACB* has a mass per unit length of 0.45 kg/m. Knowing that the lowest point of the cable is located at a distance *a*= 2 m below the support *A*, determine (*a*) the location of the lowest Point *C*, (*b*) the maximum tension in the cable.

SOLUTION

Note:



$$x_B - x_A = 12 \text{ m}$$

or

$$-x_A = 12 \text{ m} - x_B$$

Point *A*: $$y_A = c\cosh\frac{-x_A}{c}; \quad c+2 = c\cosh\frac{12-x_B}{c} \qquad (1)$$

Point *B*: $$y_B = c\cosh\frac{x_B}{c}; \quad c+3.8 = c\cosh\frac{x_B}{c} \qquad (2)$$

From (1): $$\frac{12}{c} - \frac{x_B}{c} = \cosh^{-1}\left(\frac{c+2}{c}\right) \qquad (3)$$

From (2): $$\frac{x_B}{c} = \cosh^{-1}\left(\frac{c+3.8}{c}\right) \qquad (4)$$

Add (3) + (4): $$\frac{12}{c} = \cosh^{-1}\left(\frac{c+2}{c}\right) + \cosh^{-1}\left(\frac{c+3.8}{c}\right)$$

Solve by trial and error: $c = 6.8154 \text{ m}$

Eq. (2): $$6.8154 \text{ m} + 3.8 \text{ m} = (6.8154 \text{ m})\cosh\frac{x_B}{c}$$

$$\cosh\frac{x_B}{c} = 1.5576 \quad \frac{x_B}{c} = 1.0122$$

$$x_B = 1.0122(6.8154 \text{ m}) = 6.899 \text{ m}$$

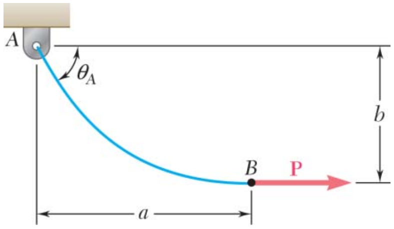
Point *C* is 6.90 m to left of *B* ◀

$$y_B = c + 3.8 = 6.8154 + 3.8 = 10.6154 \text{ m}$$

Eq. (7.18): $$T_m = wy_B = (0.45 \text{ kg/m})(9.81 \text{ m/s}^2)(10.6154 \text{ m})$$

$$T_m = 46.86 \text{ N}$$

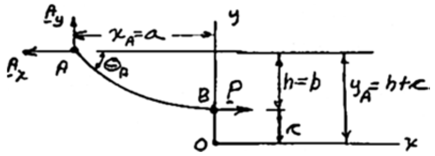
$T_m = 46.9$ N ◀



PROBLEM 7.143

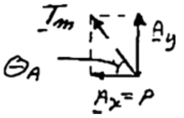
A uniform cable weighing 3 lb/ft is held in the position shown by a horizontal force **P** applied at *B*. Knowing that *P*=180lbandθ_A =60°, determine (*a*) the location of Point *B*, (*b*) the length of the cable.

SOLUTION



Eq. 7.18: $T_0 = P = cw$

$$c = \frac{P}{w} = \frac{180 \text{ lb}}{3 \text{ lb/ft}} \quad c = 60 \text{ ft}$$



At *A*:

$$T_m = \frac{P}{\cos 60°}$$

$$= \frac{cw}{0.5} = 2cw$$

(*a*) Eq. 7.18:

$$T_m = w(h+c)$$

$$2cw = w(h+c)$$

$$2c = h + c \quad h = b = c$$

$b = 60.0$ ft ◀

Eq. 7.16:

$$y_A = c\cosh\frac{x_A}{c}$$

$$h + c = c\cosh\frac{x_A}{c}$$

$$(60 \text{ ft} + 60 \text{ ft}) = (60 \text{ ft}) \quad \cosh\frac{x_A}{60}$$

$$\cosh\frac{x_A}{60 \text{ m}} = 2 \quad \frac{x_A}{60 \text{ m}} = 1.3170$$

$$x_A = 79.02 \text{ ft}$$

$a = 79.0$ ft ◀

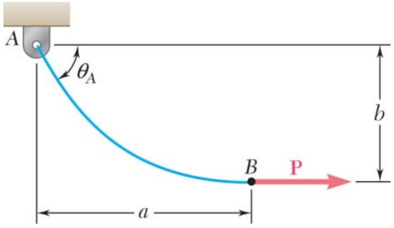
(*b*) Eq. 7.15:

$$s_A = c\sinh\frac{x_B}{c} = (60 \text{ ft})\sinh\frac{79.02 \text{ ft}}{60 \text{ ft}}$$

$$s_A = 103.92 \text{ ft}$$

$$\text{length} = s_A$$

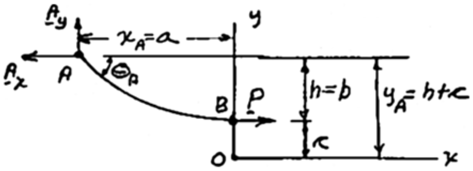
$s_A = 103.9$ ft ◀



PROBLEM 7.144

A uniform cable weighing 3 lb/ft is held in the position shown by a horizontal force **P** applied at B. Knowing that P =150lbandθ_A=60°, determine (*a*) the location of Point B, (*b*) the length of the cable.

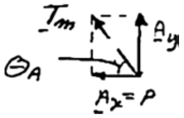
SOLUTION



Eq. 7.18:

$$T_0 = P = cw$$

$$c = \frac{P}{w} = \frac{150 \text{ lb}}{3 \text{ lb/ft}} = 50 \text{ ft}$$



At A:

$$T_m = \frac{P}{\cos 60°}$$

$$= \frac{cw}{0.5} = 2\,cw$$

(*a*) Eq. 7.18:

$$T_m = w(h+c)$$

$$2cw = w(h+c)$$

$$2c = h + c \quad h = c = b$$

$b = 50.0$ ft ◀

Eq. 7.16:

$$y_A = c\cosh\frac{x_A}{c}$$

$$h + c = c\cosh\frac{x_A}{c}$$

$$(50 \text{ ft} + 50 \text{ ft}) = (50 \text{ ft})\cosh\frac{x_A}{c}$$

$$\cosh\frac{x_A}{c} = 2 \quad \frac{x_A}{c} = 1.3170$$

$$x_A = 1.3170(50 \text{ ft}) = 65.85 \text{ ft}$$

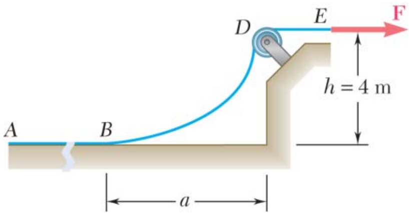
$a = 65.8$ ft ◀

(*b*) Eq. 7.15:

$$s_A = c\sinh\frac{x_A}{c} = (50 \text{ ft})\sinh\frac{65.85 \text{ ft}}{50 \text{ ft}}$$

$$s_A = 86.6 \text{ ft}$$

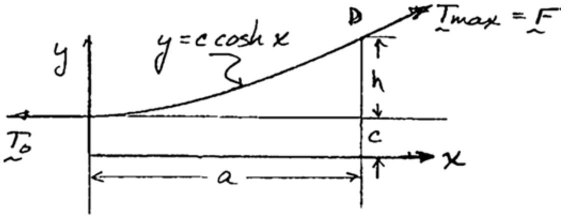
length $= s_A = 86.6$ ft ◀



PROBLEM 7.145

To the left of Point *B* the long cable *ABDE* rests on the rough horizontal surface shown. Knowing that the mass per unit length of the cable is 2 kg/m, determine the force **F** when *a*= 3.6 m.

SOLUTION



$$x_D = a = 3.6 \text{ m} \quad h = 4 \text{ m}$$

$$y_D = c\cosh\frac{x_D}{c}$$

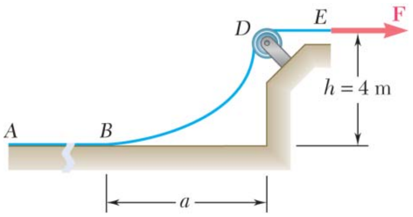
$$h + c = c\cosh\frac{a}{c}$$

$$4 \text{ m} = c\left(\cosh\frac{3.6 \text{ m}}{c} - 1\right)$$

Solving numerically: $c = 2.0712 \text{ m}$

Then $y_B = h + c = 4 \text{ m} + 2.0712 \text{ m} = 6.0712 \text{ m}$

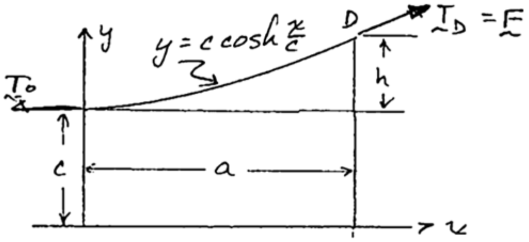
$$F = T_{\max} = wy_B = (2 \text{ kg/m})(9.81 \text{ m/s}^2)(6.0712 \text{ m}) \qquad \mathbf{F} = 119.1 \text{ N} \longrightarrow ◀$$



PROBLEM 7.146

To the left of Point *B* the long cable *ABDE* rests on the rough horizontal surface shown. Knowing that the mass per unit length of the cable is 2 kg/m, determine the force **F** when *a*= 6 m.

SOLUTION



$$x_D = a = 6\text{ m} \quad h = 4\text{ m}$$

$$y_D = c\cosh\frac{x_D}{c}$$

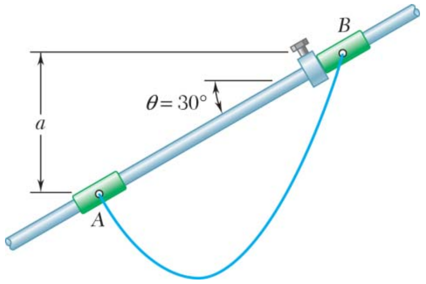
$$h + c = c\cosh\frac{a}{c}$$

$$4\text{ m} = c\left(\cosh\frac{6\text{ m}}{c} - 1\right)$$

Solving numerically: $c = 5.054\text{ m}$

$$y_B = h + c = 4\text{ m} + 5.054\text{ m} = 9.054\text{ m}$$

$$F = T_D = wy_D = (2\text{ kg/m})(9.81\text{ m/s}^2)(9.054\text{ m}) \qquad \mathbf{F} = 177.6\text{ N} \longrightarrow ◀$$

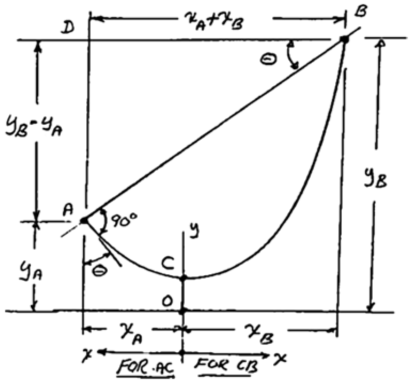


PROBLEM 7.147*

The 10-ft cable *AB* is attached to two collars as shown. The collar at *A* can slide freely along the rod; a stop attached to the rod prevents the collar at *B* from moving on the rod. Neglecting the effect of friction and the weight of the collars, determine the distance *a*.

SOLUTION

Collar at *A*: Since $\mu = 0,$ cable ' rod



Point *A*:

$$y = c\cosh\frac{x}{c}; \quad \frac{dy}{dx} = \sinh\frac{x}{c}$$

$$\tan\theta = \left|\frac{dy}{dx}\right|_A = \sinh\frac{x_A}{c}$$

$$\frac{x_A}{c} = \sinh(\tan(90° - \theta))$$

$$x_A = c\sinh(\tan(90° - \theta)) \qquad (1)$$

Length of cable= 10 ft

$$10 \text{ ft} = AC + CB$$

$$10 = c\sinh\frac{x_A}{c} + c\sinh\frac{x_B}{c}$$

$$\sinh\frac{x_B}{c} = \frac{10}{c} - \sinh\frac{x_A}{c}$$

$$x_B = c\sinh^{-1}\left[\frac{10}{c} - \sinh\frac{x_A}{c}\right] \qquad (2)$$

$$y_A = c\cosh\frac{x_A}{c} \quad y_B = c\cosh\frac{x_B}{c} \qquad (3)$$

In ΔABD:

$$\tan\theta = \frac{y_B - y_A}{x_B + x_A} \qquad (4)$$

PROBLEM 7.147* (Continued)

Method of solution:

For given value of θ, choose trial value of c and calculate:

From Eq. (1): x_A

Using value of x_A and c, calculate:

From Eq. (2): x_B

From Eq. (3): y_A and y_B

Substitute values obtained for x_A, x_B, y_A, y_B into Eq. (4) and calculate θ

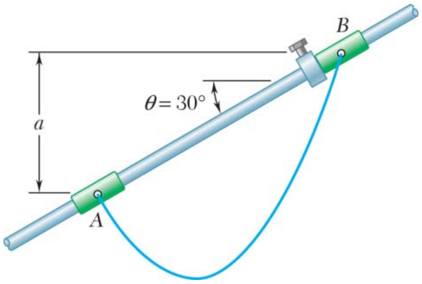
Choose new trial value of θ and repeat above procedure until calculated value of θ is equal to given value of θ.

For $\theta = 30°$

Result of trial and error procedure:

$$c = 1.803 \text{ ft}$$
$$x_A = 2.3745 \text{ ft}$$
$$x_B = 3.6937 \text{ ft}$$
$$y_A = 3.606 \text{ ft}$$
$$y_B = 7.109 \text{ ft}$$
$$\begin{aligned} a &= y_B - y_A \\ &= 7.109 \text{ ft} - 3.606 \text{ ft} \\ &= 3.503 \text{ ft} \end{aligned}$$

$a = 3.50$ ft ◀



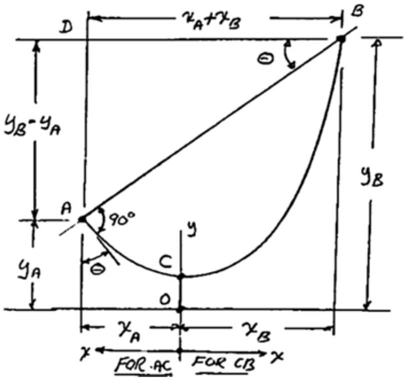
PROBLEM 7.148*

Solve Problem 7.147 assuming that the angle θ formed by the rod and the horizontal is 45°.

PROBLEM 7.147 The 10-ft cable *AB* is attached to two collars as shown. The collar at *A* can slide freely along the rod; a stop attached to the rod prevents the collar at *B* from moving on the rod. Neglecting the effect of friction and the weight of the collars, determine the distance *a*.

SOLUTION

Collar at *A*: Since $\mu = 0,$ cable ' rod



Point *A*:

$$y = c\cosh\frac{x}{c}; \quad \frac{dy}{dx} = \sinh\frac{x}{c}$$

$$\tan\theta = \left|\frac{dy}{dx}\right|_A = \sinh\frac{x_A}{c}$$

$$\frac{x_A}{c} = \sinh(\tan(90° - \theta))$$

$$x_A = c\sinh(\tan(90° - \theta)) \qquad (1)$$

Length of cable= 10 ft

$$10 \text{ ft} = AC + CB$$

$$10 = c\sinh\frac{x_A}{c} + c\sinh\frac{x_B}{c}$$

$$\sinh\frac{x_B}{c} = \frac{10}{c} - \sinh\frac{x_A}{c}$$

$$x_B = c\sinh^{-1}\left[\frac{10}{c} - \sinh\frac{x_A}{c}\right] \qquad (2)$$

$$y_A = c\cosh\frac{x_A}{c} \quad y_B = c\cosh\frac{x_B}{c} \qquad (3)$$

PROBLEM 7.148* (Continued)

In ΔABD: $$\tan\theta = \frac{y_B - y_A}{x_B + x_A} \tag{4}$$

Method of solution:

For given value of θ, choose trial value of c and calculate:

From Eq. (1): x_A

Using value of x_A and c, calculate:

From Eq. (2): x_B

From Eq. (3): y_A and y_B

Substitute values obtained for x_A, x_B, y_A, $y_B$into Eq. (4) and calculate θ

Choose new trial value of $\theta$and repeat above procedure until calculated value of θ is equal to given value of θ.

For $\theta = 45°$

Result of trial and error procedure:

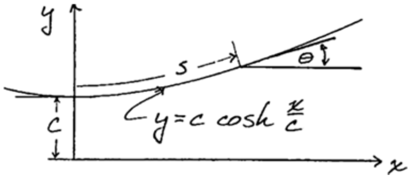
$$c = 1.8652 \text{ ft}$$
$$x_A = 1.644 \text{ ft}$$
$$x_B = 4.064 \text{ ft}$$
$$y_A = 2.638 \text{ ft}$$
$$y_B = 8.346 \text{ ft}$$
$$\begin{aligned} a &= y_B - y_A \\ &= 8.346 \text{ ft} - 2.638 \text{ ft} \\ &= 5.708 \text{ ft} \end{aligned}$$

$a = 5.71$ ft ◀

PROBLEM 7.149

Denoting by θ the angle formed by a uniform cable and the horizontal, show that at any point (*a*) $s = c\tan\theta$, (*b*) $y = c\sec\theta$.

SOLUTION



(*a*) $$\tan\theta = \frac{dy}{dx} = \sinh\frac{x}{c}$$

$$s = c\sinh\frac{x}{c} = c\tan\theta \qquad \text{Q.E.D.}$$

(*b*) Also $$y^2 = s^2 + c^2(\cosh^2 x = \sinh^2 x + 1)$$

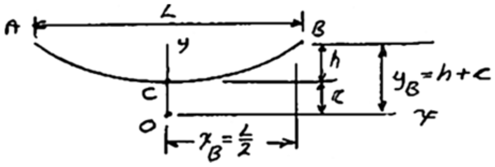
so $$y^2 = c^2(\tan^2\theta + 1)c^2\sec^2\theta$$

and $$y = c\sec\theta \qquad \text{Q.E.D.}$$

PROBLEM 7.150*

(*a*) Determine the maximum allowable horizontal span for a uniform cable of weight per unit length *w* if the tension in the cable is not to exceed a given value T_m. (*b*) Using the result of part *a*, determine the maximum span of a steel wire for which $w = 0.25$ lb/ft and $T_m = 8000$ lb.

SOLUTION



(*a*)

$$T_m = wy_B$$

$$= wc\cosh\frac{x_B}{c}$$

$$= wx_B\left(\frac{1}{\frac{x_B}{c}}\right)\cosh\frac{x_B}{c}$$

We shall find ratio $\left(\frac{x_B}{c}\right)$ for when T_m is minimum

$$\frac{dT_m}{d\left(\frac{x_B}{c}\right)} = wx_B\left[\frac{1}{\frac{x_B}{c}}\sinh\frac{x_B}{c} - \left(\frac{1}{\frac{x_B}{c}}\right)^2\cosh\frac{x_B}{c}\right] = 0$$

$$\frac{\sinh\frac{x_B}{c}}{\cosh\frac{x_B}{c}} = \frac{1}{\frac{x_B}{c}}$$

$$\tanh\frac{x_B}{c} = \frac{c}{x_B}$$

Solve by trial and error for: $\frac{x_B}{c} = 1.200$ (1)

$s_B = c\sinh\frac{x_B}{c} = c\sinh(1.200)$: $\frac{s_B}{c} = 1.509$

Eq. 7.17: $y_B^2 - s_B^2 = c^2$

$$y_B^2 = c^2\left[1 + \left(\frac{s_B}{c}\right)^2\right] = c^2(1 + 1.509^2)$$

$$y_B = 1.810c$$

PROBLEM 7.150* (Continued)

Eq. 7.18:
$$T_m = wy_B$$
$$= 1.810\,wc$$
$$c = \frac{T_m}{1.810\,w}$$

Eq. (1):
$$x_B = 1.200c = 1.200\frac{T_m}{1.810w} = 0.6630\frac{T_m}{w}$$

Span:
$$L = 2x_B = 2(0.6630)\frac{T_m}{w}$$
$$L = 1.326\frac{T_m}{w} \blacktriangleleft$$

(*b*) For $w = 0.25\,\text{lb/ft}$ and $T_m = 8000\text{ lb}$

$$L = 1.326\frac{8000\text{ lb}}{0.25\,\text{lb/ft}}$$
$$= 42,432\,\text{ft}$$
$$L = 8.04\ \text{miles} \blacktriangleleft$$

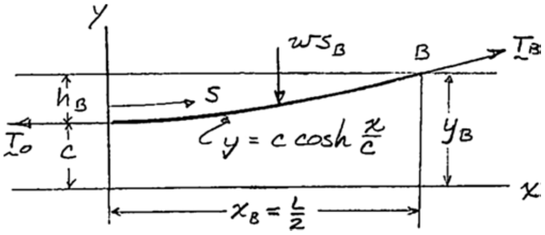
PROBLEM 7.152*

Determine the sag-to-span ratio for which the maximum tension in the cable is equal to the total weight of the entire cable *AB*.

SOLUTION



y
ws_B
B
T_B
h_B
s
T_0
c
$y = c\cosh\frac{x}{c}$
y_B
x
$x_B = \frac{L}{2}$

$$T_{\max} = wy_B = 2ws_B$$

$$y_B = 2s_B$$

$$c\cosh\frac{L}{2c} = 2c\sinh\frac{L}{2c}$$

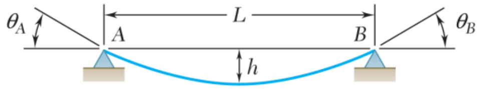
$$\tanh\frac{L}{2c} = \frac{1}{2}$$

$$\frac{L}{2c} = \tanh^{-1}\frac{1}{2} = 0.549306$$

$$\frac{h_B}{c} = \frac{y_B - c}{c} = \cosh\frac{L}{2c} - 1 = 0.154701$$

$$\frac{h_B}{L} = \frac{\frac{h_B}{c}}{2\left(\frac{L}{2c}\right)} = \frac{0.5(0.154701)}{0.549306} = 0.14081$$

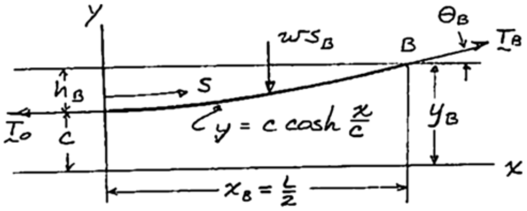
$$\frac{h_B}{L} = 0.1408 \blacktriangleleft$$



PROBLEM 7.153*

A cable of weight per unit length w is suspended between two points at the same elevation that are a distance L apart. Determine (a) the sag-to-span ratio for which the maximum tension is as small as possible, (b) the corresponding values of θ_B and T_m.

SOLUTION



(a)

$$T_{\max} = wy_B = wc\cosh\frac{L}{2c}$$

$$\frac{dT_{\max}}{dc} = w\left(\cosh\frac{L}{2c} - \frac{L}{2c}\sinh\frac{L}{2c}\right)$$

For $\quad \min T_{\max}, \quad \frac{dT_{\max}}{dc} = 0$

$$\tanh\frac{L}{2c} = \frac{2c}{L} \rightarrow \frac{L}{2c} = 1.1997$$

$$\frac{y_B}{c} = \cosh\frac{L}{2c} = 1.8102$$

$$\frac{h}{c} = \frac{y_B}{c} - 1 = 0.8102$$

$$\frac{h}{L} = \left[\frac{1}{2}\frac{h}{c}\left(\frac{2c}{L}\right)\right] = \frac{0.8102}{2(1.1997)} = 0.3375 \qquad \frac{h}{L} = 0.338 \blacktriangleleft$$

(b)

$$T_0 = wc \quad T_{\max} = wc\cosh\frac{L}{2c} \quad \frac{T_{\max}}{T_0} = \cosh\frac{L}{2c} = \frac{y_B}{c}$$

But $\quad T_0 = T_{\max}\cos\theta_B \quad \frac{T_{\max}}{T_0} = \sec\theta_B$

So $\quad \theta_B = \sec^{-1}\left(\frac{y_B}{c}\right) = \sec^{-1}(1.8102) = 56.46° \qquad \theta_B = 56.5° \blacktriangleleft$

$$T_{\max} = wy_B = w\frac{y_B}{c}\left(\frac{2c}{L}\right)\left(\frac{L}{2}\right) = w(1.8102)\frac{L}{2(1.1997)} \qquad T_{\max} = 0.755wL \blacktriangleleft$$

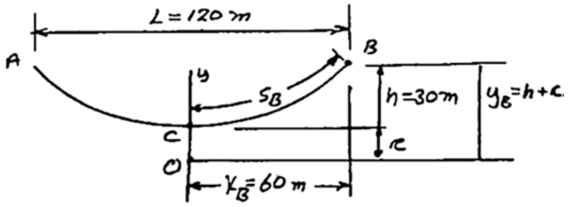
PROBLEM 7.164

A wire having a mass per unit length of 0.65 kg/m is suspended from two supports at the same elevation that are 120 m apart. If the sag is 30 m, determine (*a*) the total length of the wire, (*b*) the maximum tension in the wire.

SOLUTION



Eq. 7.16:

$$y_B = c\cosh\frac{x_B}{c}$$

$$30m + c = c\cosh\frac{60}{c}$$

Solve by trial and error: $c = 64.459\text{ m}$

Eq. 7.15:

$$s_B = c\sin h\frac{x_B}{c}$$

$$s_B = (64.456\text{ m})\sinh\frac{60\text{ m}}{64.459\text{ m}}$$

$$s_B = 69.0478\text{ m}$$

Length $= 2s_B = 2(69.0478\text{ m}) = 138.0956\text{ m}$ $L = 138.1\text{ m}$ ◀

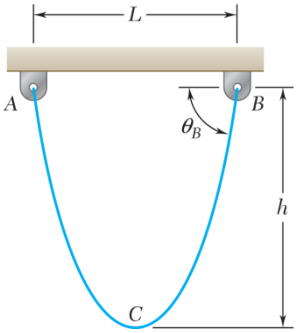
Eq. 7.18:

$$T_m = wy_B = w(h+c)$$

$$= (0.65\text{ kg/m})(9.81\text{ m/s}^2)(30\text{ m} + 64.459\text{ m})$$

$$T_m = 602.32\text{ N}$$

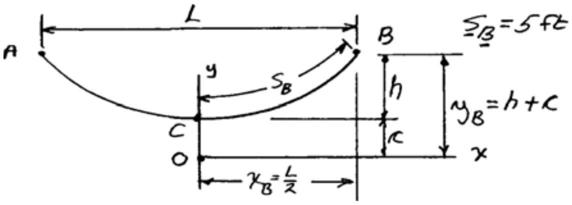
$T_m = 602\text{ N}$ ◀



PROBLEM 7.165

A 10-ft rope is attached to two supports A and B as shown. Determine (a) the span of the rope for which the span is equal to the sag, (b) the corresponding angle θ_B.

SOLUTION



Note: Since $L = h$,

$$x_B = \frac{L}{2} = \frac{h}{2}$$

Eq. 7.16:

$$y_B = \cosh\frac{x_B}{c}$$

$$h + c = c\cosh\frac{h/2}{c}$$

$$\frac{h}{c} + 1 = \cosh\left(\frac{1}{2}\frac{h}{c}\right)$$

Solve for h/c:

$$\frac{h}{c} = 4.933$$

Eq. 7.16:

$$y = c\cosh\frac{x}{c}$$

$$\frac{dy}{dx} = \sinh\frac{x}{c}$$

At B:

$$\tan\theta_B = \left.\frac{dy}{dx}\right|_B = \sinh\frac{x_B}{c}$$

Substitute

$$x_B = \frac{h}{2}: \quad \tan\theta_B = \sinh\left(\frac{1}{2}\frac{h}{c}\right) = \sinh\left(\frac{1}{2} \times 4.933\right)$$

$$\tan\theta_B = 5.848$$

$\theta_B = 80.3°$ ◀

PROBLEM 7.165 (Continued)

Eq. 7.17:

$$s_B = c\sinh\frac{x_B}{c} = c\sinh\left(\frac{1}{2}\frac{h}{c}\right)$$

$$5\text{ ft} = c\sinh\left(\frac{1}{2}\times 4.933\right)$$

$$5\text{ ft} = c(5.848)$$

$$c = 0.855$$

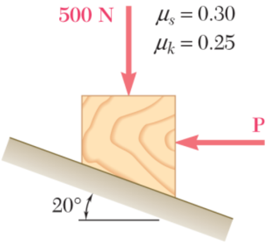
Recall that

$$\frac{h}{c} = 4.933$$

$$h = 4.933(0.855) = 4.218$$

$$h = 4.22\text{ ft} \blacktriangleleft$$

CHAPTER 8

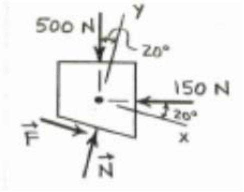


PROBLEM 8.1

Determine whether the block shown is in equilibrium and find the magnitude and direction of the friction force when $P = 150$ N.

SOLUTION

Assume equilibrium:



$$\overset{+}{\searrow} \Sigma F_x = 0: \quad F + (500 \text{ N})\sin 20° - (150 \text{ N})\cos 20° = 0$$

$$F = -30.056 \text{ N} \quad \mathbf{F} = 30.056 \text{ N} \nwarrow$$

$$+\nearrow \Sigma F_y = 0: \quad N - (500 \text{ N})\cos 20° - (150 \text{ N})\sin 20° = 0$$

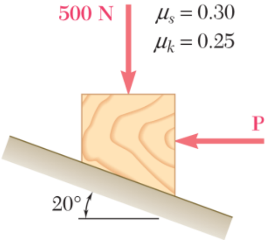
$$N = +521.15 \text{ N} \quad \mathbf{N} = 521.15 \text{ N} \nearrow$$

Maximum friction force:

$$\begin{aligned} F_m &= \mu_s N \\ &= 0.30(521.15 \text{ N}) \\ &= 156.345 \text{ N} \end{aligned}$$

Since $\mathbf{F}$ is $\nwarrow$ and $F < F_m$, block is in equilibrium ◀

$\mathbf{F} = 30.1 \text{ N} \nwarrow 20.0°$ ◀

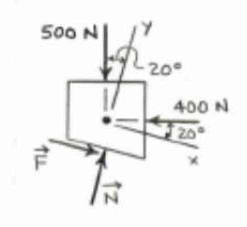


PROBLEM 8.2

Determine whether the block shown is in equilibrium and find the magnitude and direction of the friction force when $P = 400$ N.

SOLUTION

Assume equilibrium:



$\overset{+}{\searrow}\ \Sigma F_x = 0\colon\quad F + (500\text{ N})\sin 20° - (400\text{ N})\cos 20° = 0$

$F = +204.87\text{ N} \qquad \mathbf{F} = 204.87\text{ N} \searrow$

$+\nearrow\ \Sigma F_y = 0\colon\quad N - (500\text{ N})\cos 20° - (400\text{ N})\sin 20° = 0$

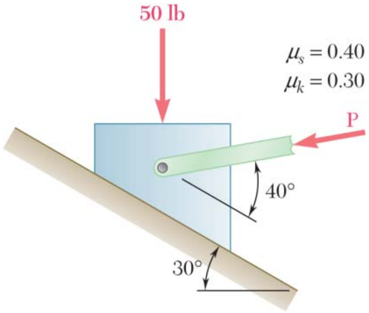
$N = +606.65\text{ N} \quad \mathbf{N} = 606.65\text{ N} \nearrow$

Maximum friction force:

$$\begin{aligned} F_m &= \mu_s N \\ &= 0.30(606.65\text{ N}) \\ &= 181.995\text{ N} \end{aligned}$$

Since $F > F_m$, block moves up ◀

Actual friction force: $F = F_k = \mu_k N = 0.25(606.65\text{ N})$ $\qquad \mathbf{F} = 151.7\text{ N} \nwarrow 20.0°$ ◀

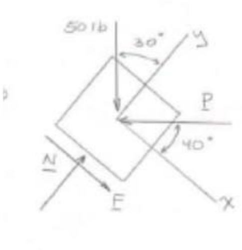


PROBLEM 8.3

Determine whether the block shown is in equilibrium and find the magnitude and direction of the friction force when $P = 120$ lb.

SOLUTION

Assume equilibrium:



$$\overset{+}{\searrow} \Sigma F_x = 0: \quad F + (50 \text{ lb})\sin 30° - (120 \text{ lb})\cos 40° = 0$$

$$F = +66.925 \text{ lb}$$

$$+\nearrow \Sigma F_y = 0: \quad N - (50 \text{ lb})\cos 30° - (120 \text{ lb})\sin 40° = 0$$

$$N = +120.436 \text{ lb}$$

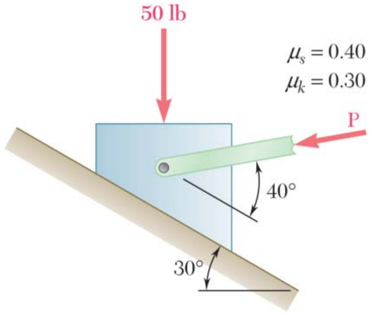
Maximum friction force:

$$\begin{aligned} F_m &= \mu_s N \\ &= 0.40(120.436 \text{ lb}) \\ &= 48.174 \text{ lb} \end{aligned}$$

We note that $F > F_m$. Thus, block moves up◀

Actual friction force:

$F = F_k = \mu_k N = 0.30(120.436 \text{ lb}) = 36.131$ lb, **F** = 36.1 lb ↖ 30.0° ◀

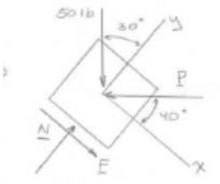


PROBLEM 8.4

Determine whether the block shown is in equilibrium and find the magnitude and direction of the friction force when $P = 80$ lb.

SOLUTION

Assume equilibrium:



$$\overset{+}{\searrow}\Sigma F_x = 0: \quad F + (50\text{ lb})\sin 30° - (80\text{ lb})\cos 40° = 0$$

$$F = +36.284\text{ lb}$$

$$+\nearrow \Sigma F_y = 0: \quad N - (50\text{ lb})\cos 30° - (80\text{ lb})\sin 40° = 0$$

$$N = +94.724\text{ lb}$$

Maximum friction force:

$$\begin{aligned} F_m &= \mu_s N \\ &= 0.40(94.724\text{ lb}) \\ &= 37.890\text{ lb} \end{aligned}$$

We note that $F < F_m$. Thus, block is in equilibrium◀

Thus $\mathbf{F} = 36.3\text{ lb} \nwarrow 30.0°$ ◀

Note: $F_k = \mu_k N = 0.30(94.724\text{ lb}) = 28.417\text{ lb}$, $F > F_K$. If block is originally in motion, it will keep moving with $F_K = 28.4$ lb.

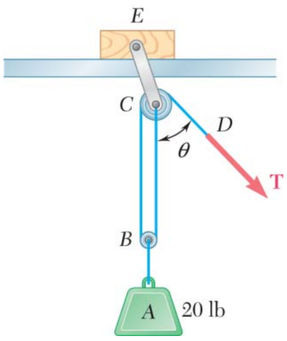
$P = 66.3$ lb ◀



PROBLEM 8.6

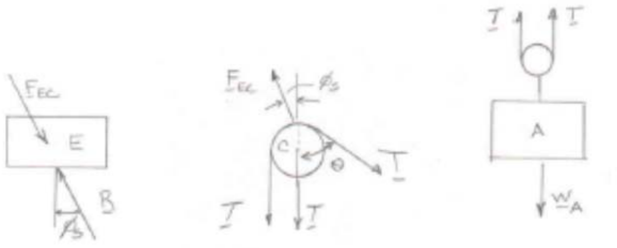
The 20-lb block A hangs from a cable as shown. Pulley C is connected by a short link to block E, which rests on a horizontal rail. Knowing that the coefficient of static friction between block E and the rail is μs = 0.35 and neglecting the weight of block E and the friction in the pulleys, determine the maximum allowable value of θ if the system is to remain in equilibrium.

SOLUTION

Free-body diagrams:

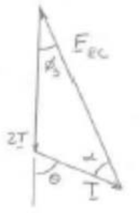
$\mu_s = 0.35$

$\phi_s = \tan^{-1} 0.35 = 19.29°$



Force triangle for pulley C:

Law of sines:



$$\frac{\sin\alpha}{2T} = \frac{\sin\phi_s}{T}$$

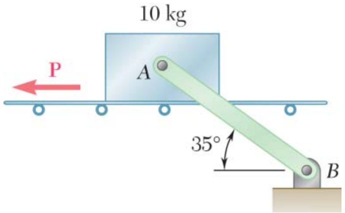
$$\sin\alpha = 2\sin\phi_s = 2\sin 19.29^\circ$$

$$\alpha = 41.35^\circ$$

$$\theta = \phi_s + \alpha = 19.29 + 41.35$$

$\theta = 60.6^\circ$ ◀

Note: Answer is independent of W_A.



PROBLEM 8.7

The 10-kg block is attached to link *AB* and rests on a moving belt. Knowing that $\mu_s = 0.30$ and $\mu_k = 0.25$ and neglecting the weight of the link, determine the magnitude of the horizontal force **P** that should be applied to the belt to maintain its motion (*a*) to the left as shown, (*b*) to the right.

SOLUTION

Link *AB* is a two-force member.

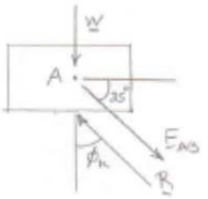
(a) Free-body diagram of block:

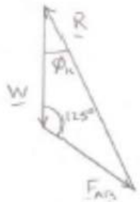
Since there is motion between block and belt, use

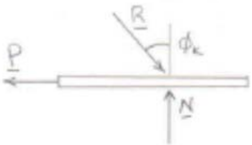
$$\mu_k = 0.25$$

$$\phi_k = \tan^{-1} 0.25 = 14.04°$$ Free-body diagram of belt:

$$W = 98.1 \text{ N}$$







Force triangle:

$$\frac{F_{AB}}{\sin 14.04°} = \frac{R}{\sin 125^\circ} = \frac{98.1 \text{ N}}{\sin 40.96}$$

$F_{AB} = 36.3 \text{ N } T$

$$R = 122.586 \text{ N}$$

From free-body diagram of belt: $\Sigma F_x = 0: \quad (122.586 \text{ N})\sin 14.04^\circ - P = 0$

P = 29.7 N ⟵ ◀

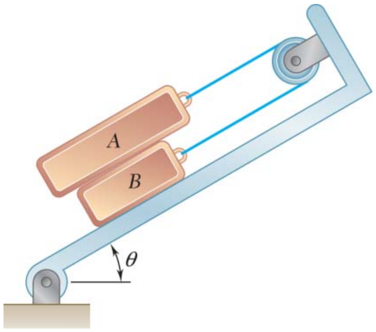
$$\sin\left(\theta - 24.23^\circ\right) = 0.67093$$

$$\theta - 24.23^\circ = 42.14^\circ$$

$$\theta = 66.37^\circ$$

$$17.91^\circ \le \theta \le 66.4^\circ \blacktriangleleft$$



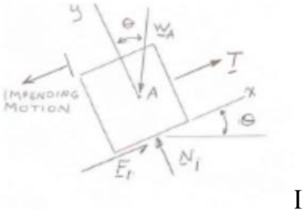
PROBLEM 8.11

The 50-lb block *A* and the 25-lb block *B* are supported by an incline that is held in the position shown. Knowing that the coefficient of static friction is 0.15 between the two blocks and zero between block *B* and the incline, determine the value of θ for which motion is impending.

SOLUTION

Since motion impends, $F = \mu_s N$ between *A*+*B*

Free body: Block *A*



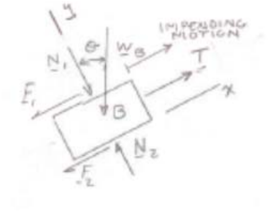
$$\text{Impending motion: } \Sigma F_y = 0: \quad N_1 - 50\cos\theta = 0$$

$N_1 = 50\cos\theta$

$$\Sigma F_x = 0: \quad T - 50\sin\theta + \mu_1 N_1 = 0$$

$$T = 50\sin\theta - \mu_1(50)\cos\theta \qquad (1)$$

Free body: Block *B*



$$\text{Impending motion: } \Sigma F_y = 0: \quad N_2 - N_1 - 25\cos\theta = 0$$

$$N_2 = 75\cos\theta$$

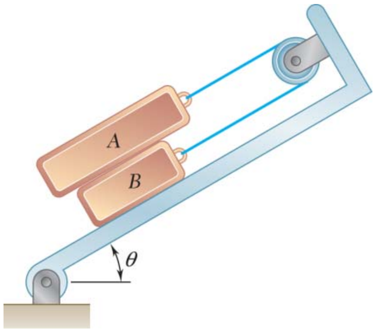
$$\Sigma F_x: \quad T - \mu_1 N_1 - \mu_2 N_2 - 25\sin\theta$$

$$T = \mu_1(50)\cos\theta + \mu_2(75)\cos\theta + 25\sin\theta \qquad (2)$$

Eq. (1)-Eq. (2): $$0 = 25\sin\theta - \mu_1(100)\cos\theta - \mu_2(75)\cos\theta = 0$$

Substituting in for $\mu_1 = 0.15,\ \mu_2 = 0,$ we have:

$$15\cos\theta = 25\sin\theta: \quad \tan\theta = \frac{15}{25}; \qquad \theta = 31.0° ◀$$



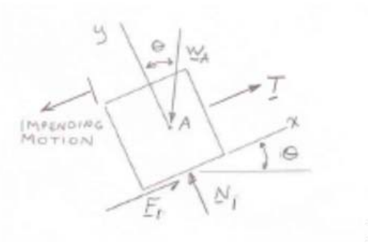
PROBLEM 8.12

The 50-lb block *A* and the 25-lb block *B* are supported by an incline that is held in the position shown. Knowing that the coefficient of static friction is 0.15 between all surfaces of contact, determine the value of θ for which motion is impending.

SOLUTION

Since motion impends, $F = \mu_s N$ between *A*+*B*

Free body: Block *A*



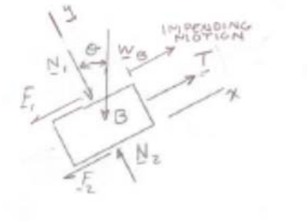
Impending motion: $\Sigma F_y = 0\colon \quad N_1 - 50\cos\theta = 0$

$N_1 = 50\cos\theta$

$$\Sigma F_x = 0\colon \quad T - 50\sin\theta + \mu_1 N_1 = 0$$

$$T = 50\sin\theta - \mu_1(50)\cos\theta \tag{1}$$

Free body: Block *B*



Impending motion: $\Sigma F_y = 0\colon \quad N_2 - N_1 - 25\cos\theta = 0$

$$N_2 = 75\cos\theta$$

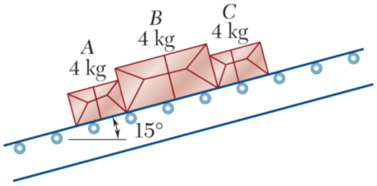
$$\Sigma F_x\colon \quad T - \mu_1 N_1 - \mu_2 N_2 - 25\sin\theta$$

$$T = \mu_1(50)\cos\theta + \mu_2(75)\cos\theta + 25\sin\theta \tag{2}$$

Eq. (1)-Eq. (2): $\quad 0 = 25\sin\theta - \mu_1(100)\cos\theta - \mu_2(75)\cos\theta = 0$

Substituting in for $\mu_1 = \mu_2 = 0.15$, we have:

$$175(0.15)\cos\theta = 25\sin\theta\colon \quad \tan\theta = \frac{26.25}{25}; \qquad \theta = 46.4° \blacktriangleleft$$

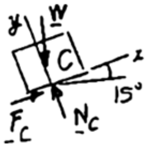


PROBLEM 8.13

Three 4-kg packages *A*, *B*, and *C* are placed on a conveyor belt that is at rest. Between the belt and both packages *A* and *C* the coefficients of friction are $\mu_s = 0.30$ and $\mu_k = 0.20$; between package *B* and the belt the coefficients are $\mu_s = 0.10$ and $\mu_k = 0.08$. The packages are placed on the belt so that they are in contact with each other and at rest. Determine which, if any, of the packages will move and the friction force acting on each package.

SOLUTION

Consider *C* by itself: Assume equilibrium



$$+\nwarrow \Sigma F_y = 0: \quad N_C - W\cos 15° = 0$$

$$N_C = W\cos 15° = 0.966W$$

$$+\nearrow \Sigma F_x = 0: \quad F_C - W\sin 15° = 0$$

$$F_C = W\sin 15° = 0.259W$$

But
$$\begin{aligned} F_m &= \mu_s N_C \\ &= 0.30(0.966W) \\ &= 0.290W \end{aligned}$$

Thus, $F_C < F_m$ Package *C* does not move ◀

$$\begin{aligned} F_C &= 0.259W \\ &= 0.259(4\text{ kg})(9.81\text{ m/s}^2) \\ &= 10.16\text{ N} \end{aligned}$$

$\mathbf{F}_C = 10.16\text{ N} \nearrow$ ◀

Consider *B* by itself: Assume equilibrium. We find,

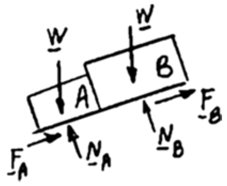
$$F_B = 0.259W$$
$$N_B = 0.966W$$

But
$$\begin{aligned} F_m &= \mu_s N_B \\ &= 0.10(0.966W) \\ &= 0.0966W \end{aligned}$$

Thus, $F_B > F_m$. Package *B* would move if alone ◀

PROBLEM 8.13 (Continued)

Consider *A* and *B* together: Assume equilibrium



$$F_A = F_B = 0.259W$$

$$N_A = N_B = 0.966W$$

$$F_A + F_B = 2(0.259W) = 0.518W$$

$$(F_A)_m + (F_B)_m = 0.3N_A + 0.1N_B = 0.386W$$

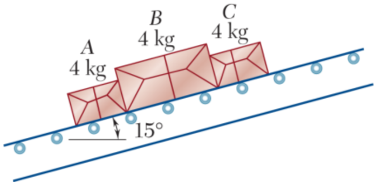
Thus, $F_A + F_B > (F_A)_m + (F_B)_m$ *A* and *B* move◀

$$F_A = \mu_k N_A = 0.2(0.966)(4)(9.81)$$

$\mathbf{F}_A = 7.58$ N ↗ ◀

$$F_B = \mu_k N_B = 0.08(0.966)(4)(9.81)$$

$\mathbf{F}_B = 3.03$ N ↗ ◀



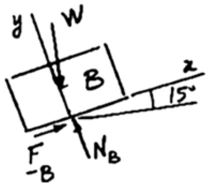
PROBLEM 8.14

Solve Problem 8.13 assuming that package *B* is placed to the right of both packages *A* and *C*.

PROBLEM 8.13 Three 4-kg packages*A*, *B*, and *C* are placed on a conveyor belt that is at rest. Between the belt and both packages *A* and *C* the coefficients of friction are $\mu_s = 0.30$ and $\mu_k = 0.20$; between package *B* and the belt the coefficients are $\mu_s = 0.10$ and $\mu_k = 0.08$. The packages are placed on the belt so that they are in contact with each other and at rest. Determine which, if any, of the packages will move and the friction force acting on each package.

SOLUTION

Consider package *B* by itself: Assume equilibrium



$$+\nwarrow \Sigma F_y = 0\colon \quad N_B - W\cos 15° = 0$$

$$N_B = W\cos 15° = 0.966W$$

$$+\nearrow \Sigma F_x = 0\colon \quad F_B - W\sin 15° = 0$$

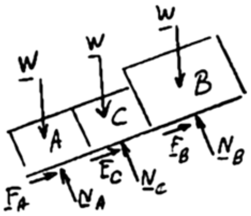
$$F_B = W\sin 15° = 0.259W$$

But
$$F_m = \mu_s N_B$$
$$= 0.10(0.966W)$$
$$= 0.0966W$$

Thus, F_B . F_m. Package *B* would move if alone.

Consider all packages together: Assume equilibrium. In a manner similar to above, we find

$$N_A = N_B = N_C = 0.966W$$
$$F_A = F_B = F_C = 0.259W$$
$$F_A + F_B + F_C = 3(0.259W)$$
$$= 0.777W$$



But
$$(F_A)_m = (F_C)_m = \mu_s N$$
$$= 0.30(0.966W)$$
$$= 0.290W$$

and
$$(F_B)_m = 0.10(0.966W)$$
$$= 0.0966W$$

PROBLEM 8.14 (Continued)

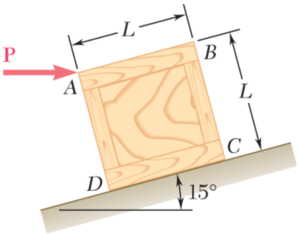
Thus, $$(F_A)_m + (F_C)_m + (F_B)_m = 2(0.290W) + 0.0966W$$
$$= 0.677W$$

and we note that $$F_A + F_B + F_C \;.\; (F_A)_m + (F_C)_m + (F_B)_m$$

All packages move◀

$$F_A = F_C = \mu_k N$$
$$= 0.20(0.966)(4\text{ kg})(9.81\text{ m/s}^2)$$
$$= 7.58\text{ N}$$
$$F_B = \mu_k N$$
$$= 0.08(0.966)(4\text{ kg})(9.81\text{ m/s}^2)$$
$$= 3.03\text{ N}$$

$\mathbf{F}_A = \mathbf{F}_C = 7.58\text{ N}$ ↗ ; $\mathbf{F}_B = 3.03\text{ N}$ ↗ ◀



PROBLEM 8.15

A uniform crate with a massof 30 kg must be moved up along the 15° incline without tipping. Knowing that force **P** is horizontal, determine (*a*) the largest allowable coefficient of static friction between the crate and the incline, (*b*) the corresponding magnitude of force **P**.

SOLUTION

(*a*) Free-body diagram

For tipping to be impending, reaction is at *C*,

Since the crate is a 3-force body. **C** must pass through *E* where **P** and **W** intersect.

Geometry analysis:

$$HJ = \frac{L}{2}\tan\theta \quad HG = \frac{L}{2} - HJ = \frac{L}{2}(1-\tan\theta) \quad GE = HG\cos\theta = \frac{L}{2}(1-\tan\theta)\cos\theta$$

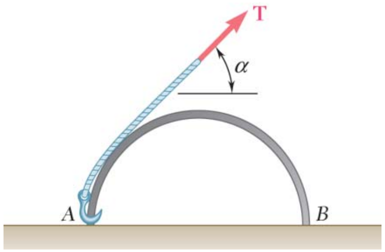
$$P = 173.91\text{ N}$$

$$P = 173.9\text{ N} \blacktriangleleft$$



PROBLEM 8.17

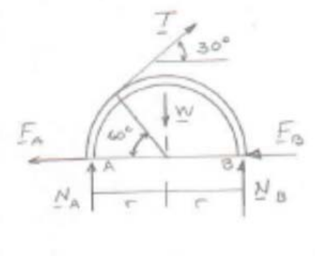
A half-section of pipe weighing 200 lb is pulled by a cable as shown. The coefficient of static friction between the pipe and the floor is 0.40. If $\alpha = 30°$, determine (*a*) the tension T required to move the pipe, (*b*) whether the pipe will slide or tip.

SOLUTION

(*a*)FBD pipe:*Note:* assume that pipe slides

$$\uparrow \Sigma F_y = 0; \quad N_A + N_B - 200 + T\sin 30^\circ = 0$$

$$N_A + N_B = 200 - 0.5T$$



$$F_A + F_B = \mu_s N_A + \mu_s N_B = \mu_s\left(N_A + N_B\right)$$

$$F_A + F_B = 0.4\left(200 - 0.5T\right) \qquad (1)$$

$$\longrightarrow \Sigma F_x = 0: \quad T\cos 30^\circ - F_A - F_B = 0$$

$$0.866T - \left(80 - 0.2T\right) = 0$$

$T = 75.0$ lb ◀

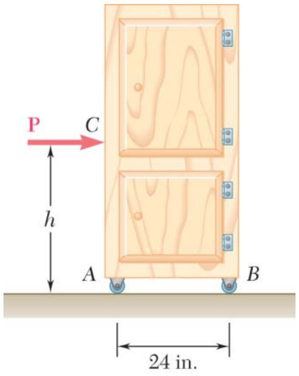
(*b*) Check that pipe does not tip about B: $\circlearrowleft$

$$\Sigma M_B = 0: \quad (200\text{ lb})r - N_A(2r) - \left(T\cos 30^\circ\right)\left(r\sin 60^\circ\right) - \left(T\sin 30^\circ\right)\left(r + r\cos 60^\circ\right) = 0$$

$$2N_A = 200\text{ lb} - T(\cos 30^\circ \sin 60^\circ + \sin 30^\circ + \sin 30^\circ \sin 30^\circ \cos 60^\circ)$$

$$N_A = 43.7\text{ lb}$$

Since $N_A > 0$, pipe does not tip. ◀

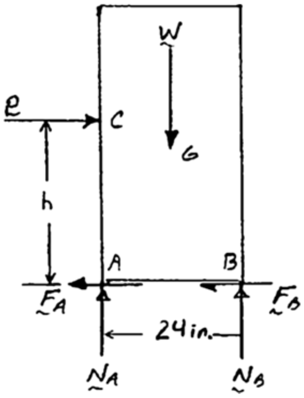


PROBLEM 8.18

A 120-lb cabinet is mounted on casters that can be locked to prevent their rotation. The coefficient of static friction between the floor and each caster is 0.30. Assuming that the casters at both *A* and *B* are locked, determine (*a*) the force **P** required to move the cabinet to the right, (*b*) the largest allowable value of *h* if the cabinet is not to tip over.

SOLUTION

FBD cabinet:



(*a*)

$$\uparrow \Sigma F_y = 0: \quad N_A + N_B - W = 0$$

$$N_A + N_B = W$$

Impending slip:

$$F_A = \mu_s N_A$$

$$F_B = \mu_s N_B$$

So

$$F_A + F_B = \mu_s W$$

$$\xrightarrow{} \Sigma F_x = 0: \quad P - F_A - F_B = 0$$

$$P = F_A + F_B = \mu_s W$$

$W = 120$ lb

$\mu_s = 0.3$

$$P = 0.3(120 \text{ lb}) = 141.26 \text{ N}$$

$\mathbf{P} = 36.0 \text{ lb} \longrightarrow$ ◀

(*b*) For tipping, $N_A = F_A = 0$

$$\circlearrowleft \Sigma M_B = 0: \quad hP - (12 \text{ in.})W = 0$$

$$h_{\max} = (12 \text{ in.})\frac{W}{P} = (12 \text{ in.})\frac{1}{\mu_s} = \frac{12 \text{ in.}}{0.3}$$

$h_{\max} = 40.0$ in. ◀

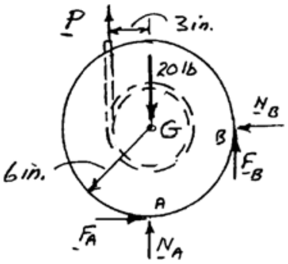
PROBLEM 8.19

Wire is being drawn at a constant rate from a spool by applying a vertical force **P** to the wire as shown. The spool and the wire wrapped on the spool have a combined weight of 20 lb. Knowing that the coefficients of friction at both *A* and *B* are $\mu_s = 0.40$ and $\mu_k = 0.30$, determine the required magnitude of the force **P**.

SOLUTION



Since spool is rotating

$$F_A = \mu_k N_A \qquad F_B = \mu_k N_B$$

$$+\circlearrowright \Sigma M_G = 0: \quad P(3 \text{ in.}) - F_A(6 \text{ in.}) - F_B(6 \text{ in.}) = 0$$

$$3P - 6\mu_k(N_A + N_B) = 0 \tag{1}$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad F_A - N_B = 0$$

$$N_B = \mu_k N_A \tag{2}$$

$$+\uparrow \Sigma F_y = 0: \quad P + N_A + F_B - 20 \text{ lb} = 0$$

$$P + N_A + \mu_k N_B - 20 = 0$$

Substitute for N_B from (2):

$$P + N_A + \mu_k N_A - 20 = 0$$

$$N_A = \frac{20 - P}{1 + \mu_{k^2}} \tag{3}$$

Substitute from (2) into (1):

$$3P - 6\mu_k(N_A + \mu_k N_A) = 0$$

$$N_A = \frac{1}{2}\frac{P}{\mu_k(1 + \mu_k)} \tag{4}$$

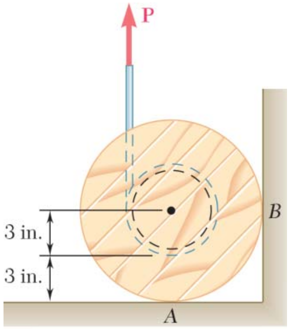
(3)=(4):

$$\frac{20 - P}{1 + \mu_k^2} = \frac{P}{2(\mu_k + \mu_k^2)}$$

Substitute $\mu_k = 0.30$:

$$\frac{20 - P}{1 + (0.3)^2} \; \frac{P}{2(0.3)(1.03)}$$

$20 - P = 1.3974P; \quad 2.3974P = 20;$ $\qquad P = 8.34 \text{ lb}$ ◀

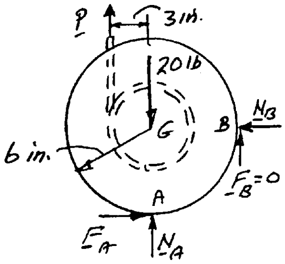


PROBLEM 8.20

Solve Problem 8.19 assuming that the coefficients of friction at *B* are zero.

PROBLEM 8.19 Wire is being drawn at a constant rate from a spool by applying a vertical force **P** to the wire as shown. The spool and the wire wrapped on the spool have a combined weight of 20 lb. Knowing that the coefficients of friction at both *A* and *B* are $\mu_s = 0.40$ and $\mu_k = 0.30$, determine the required magnitude of the force **P**.

SOLUTION



Since spool is rotating

$$F_A = \mu_k N_A$$

$$+\circlearrowright \Sigma M_G = 0: \quad P(3 \text{ in.}) - F_A(6 \text{ in.}) = 0$$

$$P = 2F_A = 2\mu_k N_A \qquad (1)$$

$$+\uparrow \Sigma F_y = 20: \quad P - 20 \text{ lb} + N_A = 0$$

$$N_A = 20 - P \qquad (2)$$

Substitute for N_A from (2) into (1) $\quad P = 2\mu_k(20 - P)$

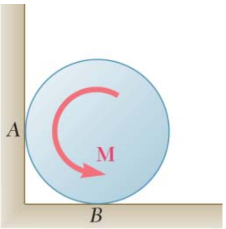
Substitute $\mu_k = 0.30$: $\quad P = 2(0.3)(20 - P)$

$$1.667P = 20 - P$$

$$2.667P = 20$$

$$P = 7.50 \text{ lb}$$

$P = 7.50$ lb ◀

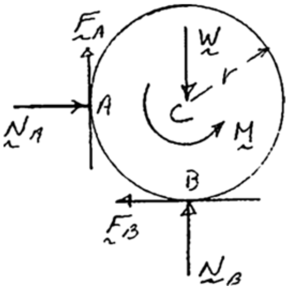


PROBLEM 8.21

The cylinder shown is of weight W and radius r. Express in terms W and r the magnitude of the largest couple **M** that can be applied to the cylinder if it is not to rotate, assuming the coefficient of static friction to be (*a*) zero at A and 0.30 at B, (*b*) 0.25 at A and 0.30 at B.

SOLUTION

FBD cylinder:



For maximum M, motion impends at both A and B

$$F_A = \mu_A N_A$$
$$F_B = \mu_B N_B$$

$$\xrightarrow{} \Sigma F_x = 0: \quad N_A - F_B = 0$$
$$N_A = F_B = \mu_B N_B$$

$$F_A = \mu_A N_A = \mu_A \mu_B N_B$$

$$\uparrow \Sigma F_y = 0: \quad N_B + F_A - W = 0$$
$$N_B(1 + \mu_A \mu_B) = W$$

or

$$N_B = \frac{1}{1 + \mu_A \mu_B} W$$

and

$$F_B = \mu_B N_B = \frac{\mu_B}{1 + \mu_A \mu_B} W$$

$$F_A = \mu_A \mu_B N_B = \frac{\mu_A \mu_B}{1 + \mu_A \mu_B} W$$

$$\circlearrowleft \Sigma M_C = 0: \quad M - r(F_A + F_B) = 0$$

$$M = Wr\mu_B \frac{1 + \mu_A}{1 + \mu_A \mu_B}$$

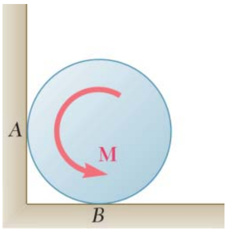
(*a*) For $\mu_A = 0$ and $\mu_B = 0.30$:

$M = 0.300Wr$ ◀

(*b*) For $\mu_A = 0.25$ and $\mu_B = 0.30$:

$M = 0.349Wr$ ◀

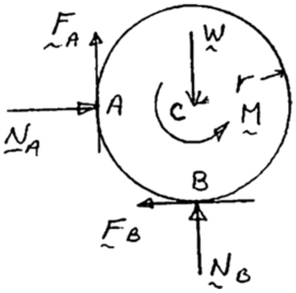
PROBLEM 8.22



The cylinder shown is of weight W and radius r, and the coefficient of static friction μ_s is the same at A and B. Determine the magnitude of the largest couple **M** that can be applied to the cylinder if it is not to rotate.

SOLUTION

FBD cylinder:



For maximum M, motion impends at both A and B

$$F_A = \mu_s N_A$$
$$F_B = \mu_s N_B$$

$$\rightarrow \Sigma F_x = 0: \quad N_A - F_B = 0$$
$$N_A = F_B = \mu_s N_B$$

$$F_A = \mu_s N_A = \mu_s^2 N_B$$

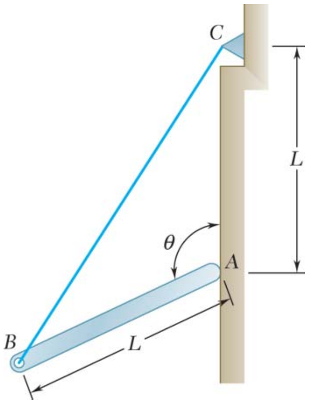
$$\uparrow \Sigma F_y = 0: \quad N_B + F_A - W = 0$$
$$N_B + \mu_s^2 N_B = W$$

or
$$N_B = \frac{W}{1+\mu_s^2}$$

and
$$F_B = \frac{\mu_s W}{1+\mu_s^2}$$
$$F_A = \frac{\mu_s^2 W}{1+\mu^2}$$

$$\circlearrowleft \Sigma M_C = 0: \quad M - r(F_A + F_B) = 0$$
$$M = r\left(\mu_s + \mu_s^2\right)\frac{W}{1+\mu_s^2}$$

$$M_{\max} = Wr\mu_s \frac{1+\mu_s}{1+\mu_s^2} \blacktriangleleft$$



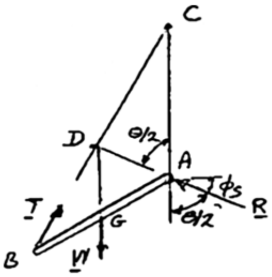
PROBLEM 8.23

End A of a slender, uniform rod of length L and weight W bears on a surface as shown, while end B is supported by a cord BC. Knowing that the coefficients of friction are $\mu_s = 0.40$ and $\mu_k = 0.30$, determine (*a*) the largest value of θ for which motion is impending, (*b*) the corresponding value of the tension in the cord.

SOLUTION

Free-body diagram

Three-force body. Line of action of **R** must pass through *D*, where **T** and **R** intersect.



Motion impends:

$$\tan\phi_s = 0.4$$

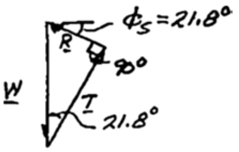
$$\phi_s = 21.80°$$

(*a*) Since *BG*=*GA*, it follows that *BD*=*DC* and *AD* bisects $\angle BAC$

$$\frac{\theta}{2} + \phi_s = 90°$$

$$\frac{\theta}{2} + 21.8° = 90°$$

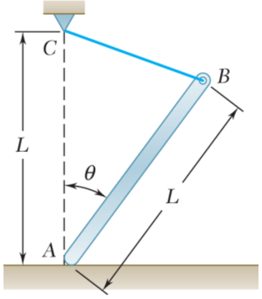
$\theta = 136.4°$ ◀



(*b*) Force triangle (right triangle):

$$T = W\cos 21.8°$$

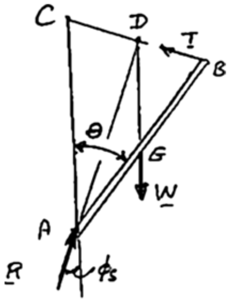
$T = 0.928W$ ◀



PROBLEM 8.24

End A of a slender, uniform rod of length L and weight W bears on a surface as shown, while end B is supported by a cord BC. Knowing that the coefficients of friction are $\mu_s = 0.40$ and $\mu_k = 0.30$, determine (*a*) the largest value of θ for which motion is impending, (*b*) the corresponding value of the tension in the cord.

SOLUTION



Free-body diagram

Rod AB is a three-force body. Thus, line of action of **R** must pass through D, where **W** and **T** intersect.

Since AG=GB, CD=DB and the median AD of the isosceles triangle ABC bisects the angle θ.

(*a*) Thus,

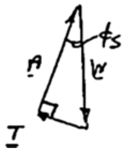
$$\phi_s = \frac{1}{2}\theta$$

Since motion impends,

$$\phi_s = \tan^{-1} 0.40 = 21.80^\circ$$
$$\theta = 2\phi_s = 2(21.8^\circ)$$

$\theta = 43.6^\circ$ ◀

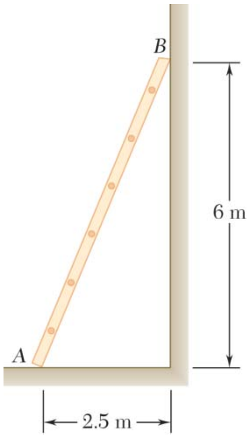
(*b*) Force triangle:



This is a right triangle.

$$T = W\sin\phi_s$$
$$= W\sin 21.8^\circ$$

$T = 0.371W$ ◀



PROBLEM 8.25

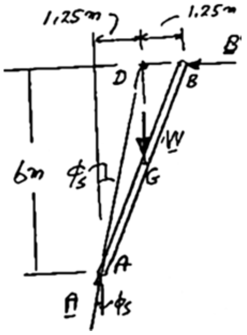
A 6.5-m ladder *AB* leans against a wall as shown. Assuming that the coefficient of static friction μ_s is zero at *B*, determine the smallest value of μ_s at *A* for which equilibrium is maintained.

SOLUTION

Free body: Ladder

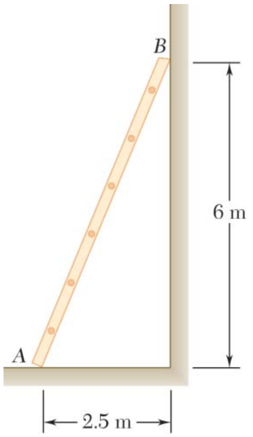
Three-force body.

Line of action of **A** must pass through *D*, where **W** and **B** intersect.



At *A*: $$\mu_s = \tan\phi_s = \frac{1.25\text{ m}}{6\text{ m}} = 0.2083$$

$\mu_s = 0.208$ ◀



PROBLEM 8.26

A 6.5-m ladder *AB* leans against a wall as shown. Assuming that the coefficient of static friction μ_s is the same at *A* and *B*, determine the smallest value of μ_s for which equilibrium is maintained.

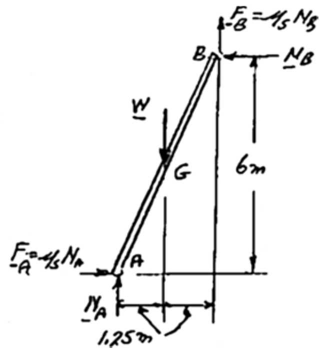
SOLUTION

Free body: Ladder

Motion impending:

$$F_A = \mu_s N_A$$

$$F_B = \mu_s N_B$$



$$+\circlearrowleft \Sigma M_A = 0: \quad W(1.25\text{ m}) - N_B(6\text{ m}) - \mu_s N_B(2.5\text{ m}) = 0$$

$$N_B = \frac{1.25W}{6+2.5\mu_s} \qquad (1)$$

$$+\uparrow \Sigma F_y = 0: \quad N_A + \mu_s N_B - W = 0$$

$$N_A = W - \mu_s N_B$$

$$N_A = W - \frac{1.25\mu_s W}{6+2.5\mu_s} \qquad (2)$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad \mu_s N_A - N_B = 0$$

Substitute for N_A and N_B from Eqs. (1) and (2):

$$\mu_s W - \frac{1.25\mu_s^2 W}{6+2.5\mu_s} = \frac{1.25W}{6+2.5\mu_s}$$

$$6\mu_s + 2.5\mu_s^2 - 1.25\mu_s^2 = 1.25$$

$$1.25\mu_s^2 + 6\mu_s - 1.25 = 0$$

$$\mu_s = 0.2$$

and $\mu_s = -5$ (Discard)

$\mu_s = 0.200$ ◀

PROBLEM 8.28

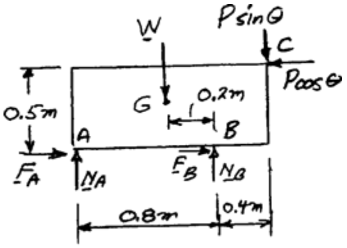
The machine base shown has a mass of 75 kg and is fitted with skids at *A* and *B*. The coefficient of static friction between the skids and the floor is 0.30. If a force **P** of magnitude 500 N is applied at corner *C*, determine the range of values of *θ* for which the base will not move.

SOLUTION

Free-body: Machine base

$$m = (75\text{ kg})(9.81\text{ m/s}^2) = 735.75\text{ N}$$

Assume sliding impends



$$F_A = \mu_s N_A \qquad F_B = \mu_s N_B$$

$$+\uparrow \Sigma F_y = 0: \quad N_A + N_B - W - P\sin\theta = 0$$

$$(N_A + N_B) = W + P\sin\theta \tag{1}$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad F_A + F_B - P\cos\theta = 0$$

$$\mu_s(N_A + N_B) = P\cos\theta = 0 \tag{2}$$

$\dfrac{\text{Eq. (2)}}{\text{Eq. (1)}}$:

$$\mu_s = \frac{P\cos\theta}{W + P\sin\theta}$$

$$\mu_s W + \mu_s P\sin\theta = P\cos\theta$$

$$0.30(735.75\text{ N}) + 0.30(500\text{ N})\sin\theta = 500\cos\theta$$

$$500\cos\theta - 150\sin\theta = 220.73$$

Solve for θ: $\quad \theta = 48.28°$

Assume tipping about *B* impends: $\quad \therefore N_A = 0$

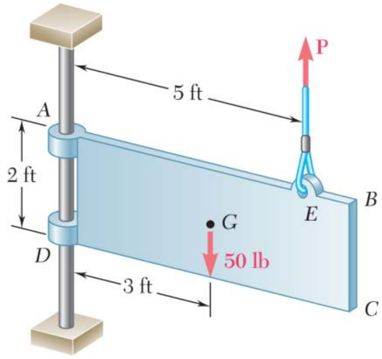
$$+\circlearrowright \Sigma M_B = 0: \quad P\sin\theta(0.4\text{ m}) - P\cos\theta(0.5\text{ m}) - W(0.2\text{ m}) = 0$$

$$500\sin\theta(0.4) - 500\cos\theta(0.5) - 735.75(0.2\text{ m}) = 0$$

$$200\sin\theta - 250\cos\theta = 147.15$$

Solve for θ: $\quad \theta = 78.70°$

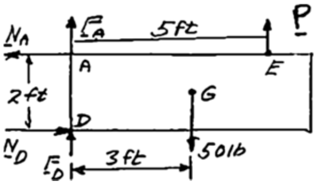
Range for no motion: $\quad 48.3° \le \theta \le 78.7°$ ◀



PROBLEM 8.29

The 50-lb plate *ABCD* is attached at *A* and *D* to collars that can slide on the vertical rod. Knowing that the coefficient of static friction is 0.40 between both collars and the rod, determine whether the plate is in equilibrium in the position shown when the magnitude of the vertical force applied at *E* is (*a*) $P = 0$, (*b*) $P = 20$ lb.

SOLUTION



(*a*) P= 0

$$+\circlearrowleft \Sigma M_D = 0: \quad N_A(2\text{ ft}) - (50\text{ lb})(3\text{ ft}) = 0$$

$$N_A = 75\text{ lb}$$

$$\Sigma F_x = 0: \quad N_D = N_A = 75\text{ lb}$$

$$+\uparrow \Sigma F_y = 0: \quad F_A + F_D - 50\text{ lb} = 0$$

$$F_A + F_D = 50\text{ lb}$$

But:

$$(F_A)_m = \mu_s N_A = 0.40(75\text{ lb}) = 30\text{ lb}$$
$$(F_D)_m = \mu_s N_D = 0.40(75\text{ lb}) = 30\text{ lb}$$

Thus:

$$(F_A)_m + (F_D)_m = 60\text{ lb}$$

and

$$(F_A)_m + (F_D)_m > F_A + F_D$$

Plate is in equilibrium ◀

(*b*) P= 20 lb

$$+\circlearrowleft \Sigma M_D = 0: \quad N_A(2\text{ ft}) - (50\text{ lb})(3\text{ ft}) + (20\text{ lb})(5\text{ ft}) = 0$$

$$N_A = 25\text{ lb}$$

$$\Sigma F_x = 0: \quad N_D = N_A = 25\text{ lb}$$

$$+\uparrow \Sigma F_y = 0: \quad F_A + F_D - 50\text{ lb} + 20\text{ lb} = 0$$

$$F_A + F_D = 30\text{ lb}$$

But:

$$(F_A)_m = \mu_s N_A = 0.4(25\text{ lb}) = 10\text{ lb}$$
$$(F_D)_m = \mu_s N_D = 0.4(25\text{ lb}) = 10\text{ lb}$$

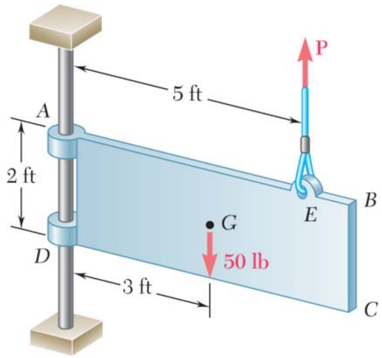
Thus:

$$(F_A)_m + (F_D)_m = 20\text{ lb}$$

and

$$F_A + F_D > (F_A)_m + (F_D)_m$$

Plate moves downward ◀

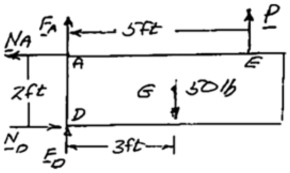


PROBLEM 8.30

In Problem 8.29, determine the range of values of the magnitude P of the vertical force applied at E for which the plate will move downward.

PROBLEM 8.29 The 50-lb plate *ABCD* is attached at *A* and *D* to collars that can slide on the vertical rod. Knowing that the coefficient of static friction is 0.40 between both collars and the rod, determine whether the plate is in equilibrium in the position shown when the magnitude of the vertical force applied at *E* is (*a*) $P = 0$, (*b*) $P = 20$ lb.

SOLUTION



We shall consider the following two cases:

(1) $0 < P < 30$ lb

$$+\circlearrowleft \Sigma M_D = 0: \quad N_A(2\text{ ft}) - (50\text{ lb})(3\text{ ft}) + P(5\text{ ft}) = 0$$

$$N_A = 75\text{ lb} - 2.5P$$

(*Note:* $N_A \geq 0$ and directed ⟵ for $P \leq 30$ lb as assumed here)

$$\Sigma F_x = 0: \quad N_A = N_D$$

$$+\uparrow \Sigma F_y = 0: \quad F_A + F_D + P - 50 = 0$$

$$F_A + F_D = 50 - P$$

But:

$$(F_A)_m = (F_0)_m = \mu_s N_A$$
$$= 0.40(75 - 2.5P)$$
$$= 30 - P$$

Plate moves $\downarrow$ if:

$$F_A + F_D > (F_A)_m + (F_D)_m$$

or

$$50 - P > (30 - P) + (30 - P)$$

$P > 10$ lb ◁

(2) $30\text{ lb} < P < 50$ lb

$$+\circlearrowleft \Sigma M_D = 0: \quad -N_A(2\text{ ft}) - (50\text{ lb})(3\text{ ft}) + P(5\text{ ft}) = 0$$

$$N_A = 2.5P - 75$$

(*Note:* $N_A >$ and directed ⟶ for $P > 30$ lb as assumed)

$$\Sigma F_x = 0: \quad N_A = N_D$$

$$+\uparrow \Sigma F_y = 0: \quad F_A + F_D + P - 50 = 0$$

$$F_A + F_D = 50 - P$$

PROBLEM 8.30 (Continued)

But:

$$\begin{aligned}(F_A)_m &= (F_D)_m = \mu_s N_A \\ &= 0.40(2.5P - 75) \\ &= P - 30 \text{ lb}\end{aligned}$$

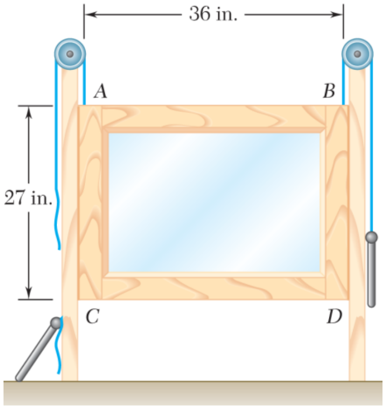
Plate moves ↓ if:

$$F_A + F_D > (F_A)_m + (F_D)_m$$

$$50 - P > (P - 30) + (P - 30) \qquad P < \frac{110}{3} = 36.7 \text{ lb} \ \triangleleft$$

Thus, plate moves downward for: $10.00 \text{ lb} < P < 36.7 \text{ lb}$ ◀

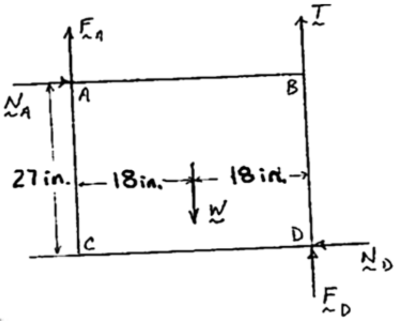
(*Note:* For $P > 50$ lb, plate is in equilibrium)



PROBLEM 8.31

A window sash weighing 10 lb is normally supported by two 5-lb sash weights. Knowing that the window remains open after one sash cord has broken, determine the smallest possible value of the coefficient of static friction. (Assume that the sash is slightly smaller than the frame and will bind only at Points *A* and *D*.)

SOLUTION



FBD window: $T = 5\text{ lb}$

$$\xrightarrow{\quad} \Sigma F_x = 0: \quad N_A - N_D = 0$$

$$N_A = N_D$$

Impending motion:

$$F_A = \mu_s N_A$$

$$F_D = \mu_s N_D$$

$$\circlearrowleft \Sigma M_D = 0: \quad (18\text{ in.})W - (27\text{ in.})N_A - (36\text{ in.})F_A = 0 \qquad W = 10\text{ lb}$$

$$W = \frac{3}{2}N_A + 2\mu_s N_A$$

$$N_A = \frac{2W}{3 + 4\mu_s}$$

$$\uparrow \Sigma F_y = 0: \quad F_A - W + T + F_D = 0$$

$$F_A + F_D = W - T = \frac{W}{2}$$

Now

$$F_A + F_D = \mu_s(N_A + N_D)$$
$$= 2\mu_s N_A$$

Then

$$\frac{W}{2} = 2\mu_s \frac{2W}{3 + 4\mu_s}$$

or

$$\mu_s = 0.750 \blacktriangleleft$$

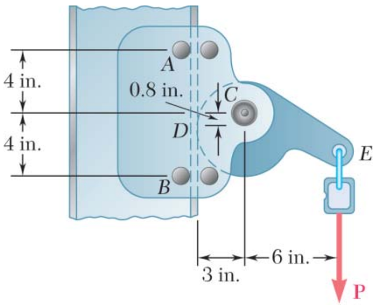
Then $$550\mu_C - 15 = 500\frac{F_A}{N_C}$$

But $$N_C = N_A \quad \text{and} \quad \frac{F_A}{N_A} = \mu_A = 0.13636$$

So $550\mu_C = 15 + 500(0.13636)$ $\mu_C = 0.1512$ ◀

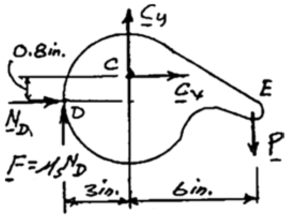


PROBLEM 8.34

A safety device used by workers climbing ladders fixed to high structures consists of a rail attached to the ladder and a sleeve that can slide on the flange of the rail. A chain connects the worker's belt to the end of an eccentric cam that can be rotated about an axle attached to the sleeve at *C*. Determine the smallest allowable common value of the coefficient of static friction between the flange of the rail, the pins at *A* and *B*, and the eccentric cam if the sleeve is not to slide down when the chain is pulled vertically downward.

SOLUTION

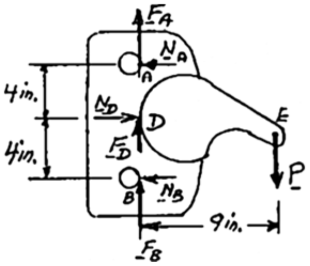
Free body: Cam



$$+\circlearrowleft \Sigma M_C = 0: \quad N_D(0.8 \text{ in.}) - \mu_s N_D(3 \text{in.}) - P(6 \text{ in.}) = 0$$

$$N_D = \frac{6P}{0.8 - 3\mu_s} \qquad (1)$$

Free body: Sleeve and cam



$$\xrightarrow{+} \Sigma F_x = 0: \quad N_D - N_A - N_B = 0$$

$$N_A + N_B = N_D \qquad (2)$$

$$+\!\uparrow \Sigma F_y = 0: \quad F_A + F_B + F_D - P = 0$$

or

$$\mu_s(N_A + N_B + N_D) = P \qquad (3)$$

Substitute from Eq. (2) into Eq. (3): $\mu_s(2N_D) = P \qquad N_D = \dfrac{P}{2\mu_s}$ (4)

Equate expressions for N_D from Eq. (1) and Eq. (4):

$$\frac{P}{2\mu_s} = \frac{6P}{0.8 - 3\mu_s}; \quad 0.8 - 3\mu_s = 12\mu_s$$

$$\mu_s = \frac{0.8}{15} \qquad \mu_s = 0.0533 \blacktriangleleft$$

(*Note:* To verify that contact at pins *A* and *B* takes places as assumed, we shall check that $N_A > 0$ and $N_B = 0$.)

PROBLEM 8.34 (Continued)

From Eq. (4): $$N_D = \frac{P}{2\mu_s} = \frac{P}{2(0.0533)} = 9.375P$$

From free body of cam and sleeve:

$$+\circlearrowleft \Sigma M_B = 0: \quad N_A(8 \text{ in.}) - N_D(4 \text{ in.}) - P(9 \text{ in.}) = 0$$

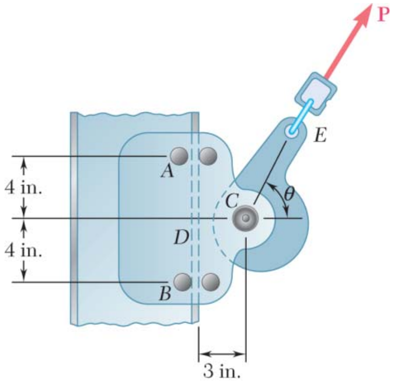
$$8N_A = (9.375P)(4) + 9P$$

$$N_A = 5.8125P > 0 \quad \text{OK}$$

From Eq. (2): $$N_A + N_B = N_D$$

$$5.8125P + N_B = 9.375P$$

$$N_B = 3.5625P > 0 \quad \text{OK}$$



PROBLEM 8.35

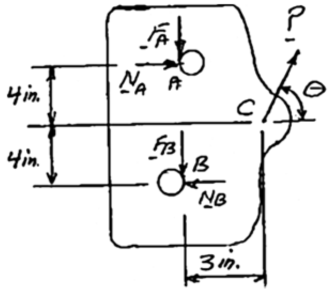
To be of practical use, the safety sleeve described in Problem 8.34 must be free to slide along the rail when pulled upward. Determine the largest allowable value of the coefficient of static friction between the flange of the rail and the pins at *A* and *B* if the sleeve is to be free to slide when pulled as shown in the figure, assuming (*a*) $\theta = 60°$, (*b*) $\theta = 50°$, (*c*) $\theta = 40°$.

SOLUTION

Note the cam is a two-force member.

Free body: Sleeve

We assume contact between rail and pins as shown.



$$+\circlearrowleft \Sigma M_C = 0: \quad F_A(3\text{ in.}) + F_B(3\text{ in.}) - N_A(4\text{ in.}) - N_B(4\text{ in.}) = 0$$

But $\quad F_A = \mu_s N_A$

$$F_B = \mu_s N_B$$

We find $\quad 3\mu_s(N_A + N_B) - 4(N_A + N_B) = 0$

$$\mu_s = \frac{4}{3} = 1.33333$$

We now verify that our assumption was correct.

$$\xrightarrow{+} \Sigma F_x = 0: \quad N_A - N_B + P\cos\theta = 0$$

$$N_B - N_A = P\cos\theta \qquad (1)$$

$$+\uparrow \Sigma F_y = 0: \quad -F_A - F_B + P\sin\theta = 0$$

$$\mu_s N_A + \mu_s N_B = P\sin\theta$$

$$N_A + N_B = \frac{P\sin\theta}{\mu_s} \qquad (2)$$

Add Eqs. (1) and (2): $\quad 2N_B = P\left(\cos\theta + \frac{\sin\theta}{\mu_s}\right) > 0 \quad$ OK

PROBLEM 8.35 (Continued)

Subtract Eq. (1) from Eq. (2):

$$2N_A = P\left(\frac{\sin\theta}{\mu_s} - \cos\theta\right)$$

$N_A > 0$ only if

$$\frac{\sin\theta}{\mu_s} - \cos\theta > 0$$

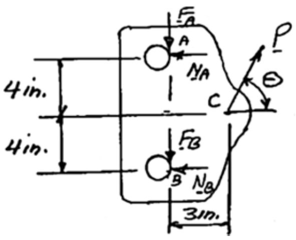
$$\tan\theta > \mu_s = 1.33333$$

$$\theta = 53.130°$$

(*a*) For case (*a*): Condition is satisfied, contact takes place as shown. Answer is correct.

$\mu_s = 1.333$ ◀

But for (*b*) and (*c*): $\theta < 53.130°$ and our assumption is wrong, N_A is directed to left.



$$\xrightarrow{+} \Sigma F_x = 0: \quad -N_A - N_B + P\cos\theta = 0$$

$$N_A + N_B = P\cos\theta \tag{3}$$

$$+\!\uparrow \Sigma F_y = 0: \quad -F_A - F_A + P\sin\theta = 0$$

$$\mu_s(N_A + N_B) = P\sin\theta \tag{4}$$

Divide Eq. (4) by Eq. (3):

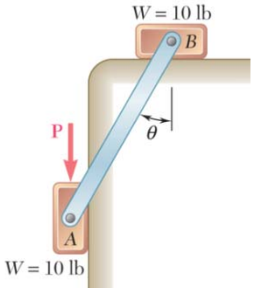
$$\mu_s = \tan\theta \tag{5}$$

(*b*) We make $\theta = 50°$ in Eq. (5):

$\mu_s = \tan 50°$ $\mu_s = 1.192$ ◀

(*c*) We make $\theta = 40°$ in Eq. (5):

$\mu_s = \tan 40°$ $\mu_s = 0.839$ ◀



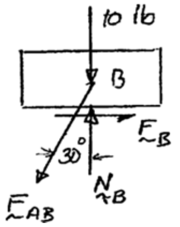
PROBLEM 8.36

Two 10-lb blocks A and B are connected by a slender rod of negligible weight. The coefficient of static friction is 0.30 between all surfaces of contact, and the rod forms an angle $\theta = 30°$. with the vertical. (a) Show that the system is in equilibrium when $P = 0$. (b) Determine the largest value of P for which equilibrium is maintained.

SOLUTION

FBD block$B$:

(a) Since $P = 2.69$ lb to initiate motion, equilibrium exists with $P = 0$ ◀



(b) For $P_{\max}$, motion impends at both surfaces:

Block B: $+\uparrow \Sigma F_y = 0$: $N_B - 10\,\text{lb} - F_{AB}\cos 30° = 0$

$$N_B = 10\text{ lb} + \frac{\sqrt{3}}{2}F_{AB} \quad (1)$$

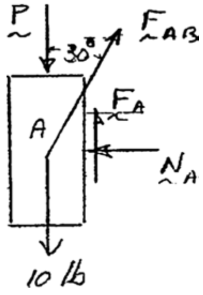
Impending motion: $F_B = \mu_s N_B = 0.3N_B$

$\xrightarrow{+} \Sigma F_x = 0$: $F_B - F_{AB}\sin 30° = 0$

$$F_{AB} = 2F_B = 0.6N_B \quad (2)$$

Solving Eqs. (1) and (2): $N_B = 10\text{ lb} + \dfrac{\sqrt{3}}{2}(0.6N_B) = 20.8166$ lb

FBD block$A$:



Then $F_{AB} = 0.6N_B = 12.4900$ lb

Block A: $\xrightarrow{+} \Sigma F_x = 0$: $F_{AB}\sin 30° - N_A = 0$

$$N_A = \frac{1}{2}F_{AB} = \frac{1}{2}(12.4900\text{ lb}) = 6.2450\text{ lb}$$

Impending motion: $F_A = \mu_s N_A = 0.3(6.2450\text{ lb}) = 1.8735$ lb

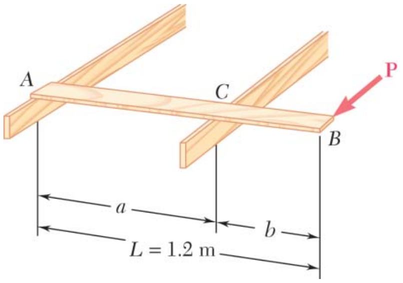
$+\uparrow \Sigma F_y = 0$: $F_A + F_{AB}\cos 30° - P - 10\text{ lb} = 0$

$$P = F_A + \frac{\sqrt{3}}{2}F_{AB} - 10\text{ lb}$$

$$= 1.8735\text{ lb} + \frac{\sqrt{3}}{2}(12.4900\text{ lb}) - 10\text{ lb}$$

$$= 2.69\text{ lb}$$

$P = 2.69$ lb ◀



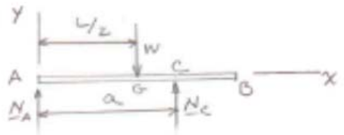
PROBLEM 8.37

A 1.2-m plank with a mass of 3 kg rests on two joists. Knowing that the coefficient of static friction between the plank and the joists is 0.30, determine the magnitude of the horizontal force required to move the plank when (*a*) $a = 750$ mm, (*b*) $a = 900$ mm.

SOLUTION

Free body member *AB*:

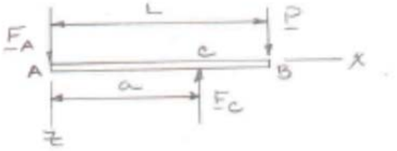
In the vertical plane,



$$+\circlearrowleft \Sigma M_A = 0: \quad N_C a - W\frac{L}{2} = 0 \quad \text{hence } N_C = W\frac{L}{2a} \qquad (1)$$

$$+\uparrow \Sigma F_y = 0: \quad N_A + N_C - W = 0 \quad \text{hence} \quad N_A = W\frac{2a - L}{2a} \qquad (2)$$

In the horizontal plane,



$$+\circlearrowleft \Sigma M_A = 0: \quad F_C a - PL = 0 \quad \text{hence} \quad \mathrm{F}_C = P\frac{L}{a} \qquad (3)$$

$$+\downarrow \Sigma F_Z = 0: \quad F_A + P - F_C = 0 \quad \text{hence} \quad F_A = P\frac{L - a}{a} \qquad (4)$$

(a) Substituting given data: $a = 0.75$ m, $L = 1.2$ m, $\mu_s = 0.30$, $W = (3\text{ kg})(9.81\text{ m/s}^2) = 29.430$ N

$$N_C = 0.8W, \quad N_A = 0.2W, \quad F_C = 1.6P, \quad F_A = 0.6P$$

To slip at *A*, $\quad F_A = \mu_s N_A \quad$ or $\quad 0.6P = 0.30(0.2W) \qquad P = 0.1W$

To slip at *C*, $\quad F_C = \mu_s N_C \quad$ or $\quad 1.6P = 0.30(0.8W) \qquad P = 0.15W$

The plank will slip at *A* $\qquad P = 2.94$ N ◀

PROBLEM 8.37 (Continued)

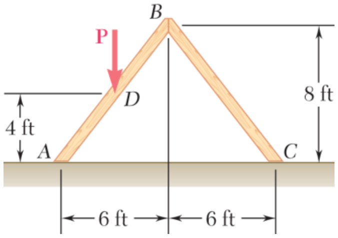
(b) Substituting given data: $a = 0.9\text{ m},\ L = 1.2\text{ m},\ \mu_s = 0.30,\ W = (3\text{ kg})(9.81\text{ m/s}^2) = 29.430\text{ N}$

$$N_C = \frac{2}{3}W,\ N_A = \frac{1}{3}W,\ F_C = \frac{4}{3}P,\ F_A = \frac{1}{3}P$$

To slip at A, $F_A = \mu_s N_A$ or $\frac{1}{3}P = 0.30\left(\frac{1}{3}W\right)$ $P = 0.3W$

To slip at C, $F_C = \mu_s N_C$ or $\frac{4}{3}P = 0.30\left(\frac{2}{3}W\right)$ $P = 0.15W$

The plank will slip at C for $P = 0.15(29.43\text{ N})$ $P = 4.41\text{ N}$ ◀

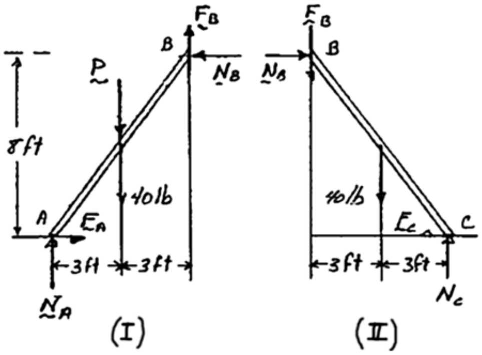


PROBLEM 8.38

Two identical uniform boards, each of weight 40 lb, are temporarily leaned against each other as shown. Knowing that the coefficient of static friction between all surfaces is 0.40, determine (*a*) the largest magnitude of the force **P** for which equilibrium will be maintained, (*b*) the surface at which motion will impend.

SOLUTION

Board FBDs:



Assume impending motion at C, so

$$F_C = \mu_s N_C = 0.4 N_C$$

FBD II: $\circlearrowleft \Sigma M_B = 0\colon \quad (6\text{ ft})N_C - (8\text{ ft})F_C - (3\text{ ft})(40\text{ lb}) = 0$

$$[6\text{ ft} - 0.4(8\text{ ft})]N_C = (3\text{ ft})(40\text{ lb})$$

or $$N_C = 42.857\text{ lb}$$

and $$F_C = 0.4N_C = 17.143\text{ lb}$$

$$\xrightarrow{} \Sigma F_x = 0\colon \quad N_B - F_C = 0$$

$$N_B = F_C = 17.143\text{ lb}$$

$$\uparrow \Sigma M_y = 0\colon \quad -F_B - 40\text{ lb} + N_C = 0$$

$$F_B = N_C - 40\text{ lb} = 2.857\text{ lb}$$

Check for motion at B: $\dfrac{F_B}{N_B} = \dfrac{2.857\text{ lb}}{17.143\text{ lb}} = 0.167 < \mu_s$, OK, no motion.

FBD I: $\circlearrowleft \Sigma M_A = 0\colon \quad (8\text{ ft})N_B + (6\text{ ft})F_B - (3\text{ ft})(P + 40\text{ lb}) = 0$

$$P = \frac{(8\text{ ft})(17.143\text{ lb}) + (6\text{ ft})(2.857\text{ lb})}{3\text{ ft}} - 40\text{ lb}$$

$$= 11.429\text{ lb}$$

PROBLEM 8.38 (Continued)

Check for slip at *A* (unlikely because of *P*):

$$\xrightarrow{} \Sigma F_x = 0: \quad F_A - N_B = 0 \quad \text{or} \quad F_A = N_B = 17.143 \text{ lb}$$

$$\uparrow \Sigma F_y = 0: \quad N_A - P - 40 \text{ lb} + F_B = 0$$

or

$$N_A = 11.429 \text{ lb} + 40 \text{ lb} - 2.857 \text{ lb}$$
$$= 48.572 \text{ lb}$$

Then

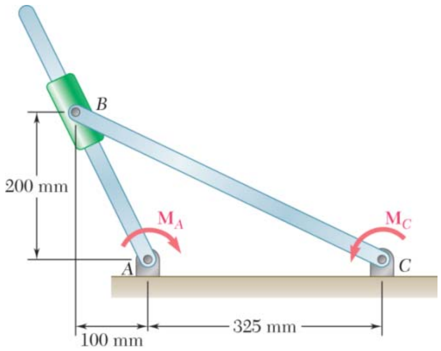
$$\frac{F_A}{N_A} = \frac{17.143 \text{ lb}}{48.572 \text{ lb}} = 0.353 < \mu_s$$

OK, no slip $\Rightarrow$ assumption is correct.

Therefore

(*a*) $P_{\max} = 11.43 \text{ lb}$ ◀

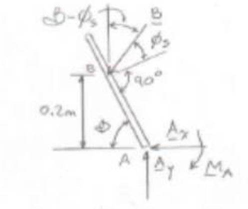
(*b*) Motion impends at *C* ◀



PROBLEM 8.39

Two rods are connected by a collar at *B*. A couple $\mathbf{M}_A$ with a magnitude of 15 N·m is applied to rod *AB*. Knowing that the coefficient of static friction between the collar and the rod is 0.30, determine the largest couple $\mathbf{M}_C$ for which equilibrium will be maintained.

SOLUTION



$$\tan\beta = \frac{0.2}{0.1} \qquad \beta = 63.43^\circ$$

$$\tan\theta = \frac{0.2}{0.425} \qquad \theta = 25.2^\circ$$

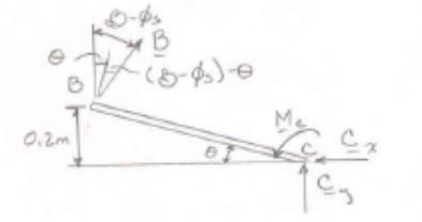
$$\tan\phi_s = \mu_s = 0.3 \qquad \phi_s = 16.7^\circ$$

For largest M_C, motion of *B* impends downward.

$$AB = \frac{0.2}{\sin 63.43^\circ} = 0.22362 \text{ m}$$

$$+\circlearrowleft \Sigma M_A = 0: \quad B\cos\phi_s\left(AB\right) - M_A = 0$$

$$B\cos 16.7^\circ\left(0.22362 \text{ m}\right) - 15 \text{ N}\cdot\text{m} = 0 \qquad\qquad B = 70.032 \text{ N}$$

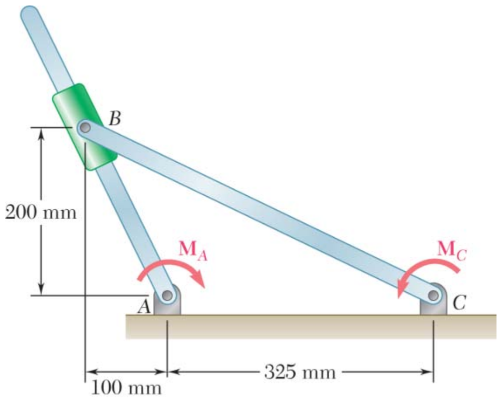


$$BC = \frac{0.2}{\sin 25.2^\circ} = 0.46973 \text{ m}$$

$$+\circlearrowleft \Sigma M_C = 0: \quad M_C - B\cos(\beta - \phi_s - \theta)\left(BC\right) = 0$$

$$M_C = (70.032 \text{ N})\cos\left(63.43^\circ - 16.7^\circ - 25.2^\circ\right)\left(0.46973 \text{ m}\right)$$

$$\mathbf{M}_C = 30.6 \text{ N}\cdot\text{m} \circlearrowleft \blacktriangleleft$$



PROBLEM 8.40

In Prob. 8.39, determine the smallest couple $\mathbf{M}_C$ for which equilibrium will be maintained.

PROBLEM 8.39

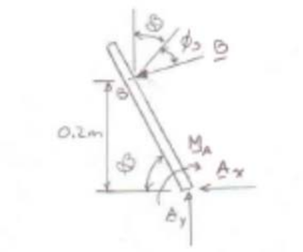
Two rods are connected by a collar at *B*. A couple $\mathbf{M}_A$ with a magnitude of 15 N·m is applied to rod *AB*. Knowing that the coefficient of static friction between the collar and the rod is 0.30, determine the largest couple $\mathbf{M}_C$ for which equilibrium will be maintained.

SOLUTION

$$\tan\beta = \frac{0.2}{0.1} \quad \beta = 63.43^\circ$$

$$\tan\theta = \frac{0.2}{0.425} \quad \theta = 25.2^\circ$$

$$\tan\phi_s = \mu_s = 0.3 \quad \phi_s = 16.7^\circ$$



For smallest M_C, motion of *B* impends upward.

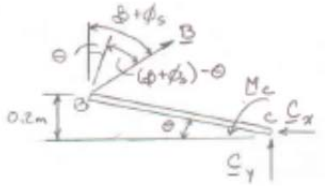
$$AB = \frac{0.2}{\sin 63.43^\circ} = 0.22362 \text{ m}$$

$$+\circlearrowleft \Sigma M_A = 0: \quad B\cos\phi_s(AB) - M_A = 0$$

$$B\cos 16.7^\circ (0.22362 \text{ m}) - 15 \text{ N}\cdot\text{m} = 0 \qquad B = 70.032 \text{ N}$$

$$BC = \frac{0.2}{\sin 25.2^\circ} = 0.46973 \text{ m}$$

PROBLEM 8.40 (Continued)

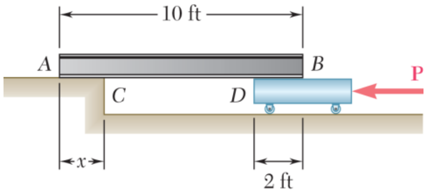


$$+\circlearrowleft \Sigma M_C = 0: \quad M_C - B\cos(\beta + \phi_s - \theta)\left(BC\right) = 0$$

$$M_C = (70.032\text{ N})\cos\left(63.43^\circ + 16.7^\circ - 25.2^\circ\right)\left(0.46973\text{ m}\right)$$

$$\mathbf{M}_C = 18.90\text{ N}\cdot\text{m} \circlearrowleft \blacktriangleleft$$

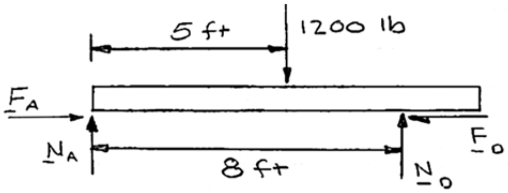
PROBLEM 8.41



A 10-ft beam, weighing 1200 lb, is to be moved to the left onto the platform. A horizontal force **P** is applied to the dolly, which is mounted on frictionless wheels. The coefficients of friction between all surfaces are $\mu_s = 0.30$ and $\mu_k = 0.25$, and initially $x = 2$ ft. Knowing that the top surface of the dolly is slightly higher than the platform, determine the force **P** required to start moving the beam. (*Hint:* The beam is supported at *A* and *D*.)

SOLUTION

FBD beam:



$$+\circlearrowleft \Sigma M_A = 0: \quad N_D(8\text{ ft}) - (1200\text{ lb})(5\text{ ft}) = 0$$

$$\mathbf{N}_D = 750\text{ lb}\uparrow$$

$$+\uparrow \Sigma F_y = 0: \quad N_A - 1200 + 750 = 0$$

$$\mathbf{N}_A = 450\text{ lb}\uparrow$$

$$(F_A)_m = \mu_s N_A = 0.3(450) = 135.0\text{ lb}$$

$$(F_D)_m = \mu_s N_D = 0.3(750) = 225\text{ lb}$$

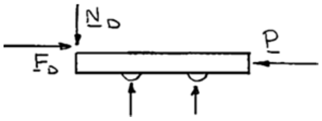
Since $(F_A)_m < (F_D)_m$, sliding first impends at *A* with

$$F_A = (F_A)_m = 135\text{ lb}$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad F_A - F_D = 0$$

$$F_D = F_A = 135.0\text{ lb}$$

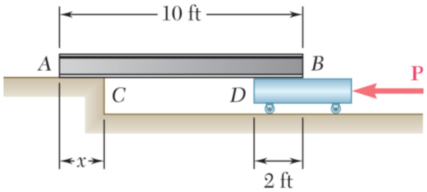
FBD dolly:



From *FBD* of dolly:

$$\xrightarrow{+} \Sigma F_x = 0: \quad F_D - P = 0$$

$$P = F_D = 135.0\text{ lb} \qquad P = 135.0\text{ lb} ◀$$



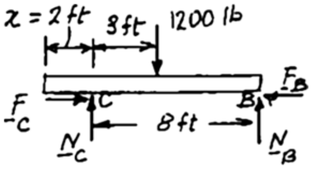
PROBLEM 8.42

(*a*) Show that the beam of Problem 8.41 *cannot* be moved if the top surface of the dolly is slightly *lower* than the platform. (*b*) Show that the beam *can* be moved if two 175-lb workers stand on the beam at *B* and determine how far to the left the beam can be moved.

PROBLEM 8.41 A 10-ft beam, weighing 1200 lb, is to be moved to the left onto the platform. A horizontal force **P** is applied to the dolly, which is mounted on frictionless wheels. The coefficients of friction between all surfaces are $\mu_s = 0.30$ and $\mu_k = 0.25$, and initially $x = 2$ ft. Knowing that the top surface of the dolly is slightly higher than the platform, determine the force **P** required to start moving the beam. (*Hint:* The beam is supported at *A* and *D*.)

SOLUTION

(*a*) Beam alone



$$+\circlearrowleft \Sigma M_C = 0: \quad N_B(8\text{ ft}) - (1200\text{ lb})(3\text{ ft}) = 0$$

$$\mathbf{N}_B = 450\text{ lb}\uparrow$$

$$+\uparrow F_y = 0: \quad N_C + 450 - 1200 = 0$$

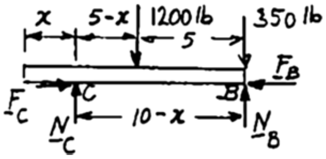
$$\mathbf{N}_C = 750\text{ lb}\uparrow$$

$$(F_C)_m = \mu_s N_C = 0.3(750) = 225\text{ lb}$$

$$(F_B)_m = \mu_s N_B = 0.3(450) = 135\text{ lb}$$

Since $(F_B)_m < (F_C)_m$, sliding first impends at *B*, and Beam cannot be moved ◀

(*b*) Beam with workers standing at *B*



$$+\circlearrowleft \Sigma M_C = 0: \quad N_B(10-x) - (1200)(5-x) - 350(10-x) = 0$$

$$N_B = \frac{9500 - 1550x}{10 - x}$$

$$+\circlearrowleft \Sigma M_B = 0: \quad (1200)(5) - N_C(10-x) = 0$$

$$N_C = \frac{6000}{10 - x}$$

PROBLEM 8.42 (Continued)

Check that beam starts moving for *x*= 2 ft:

For *x*= 2 ft: $N_B = \dfrac{9500 - 1550(2)}{10 - 2} = 800 \text{ lb}$

$$N_C = \frac{6000}{10 - 2} = 750 \text{ lb}$$

$$(F_C)_m = \mu_s N_C = 0.3(750) = 225 \text{ lb}$$

$$(F_B)_m = \mu_s N_B = 0.3(800) = 240 \text{ lb}$$

Since $(F_C)_m < (F_B)_m$, sliding first impends at *C*, Beam moves◀

How far does beam move?

Beam will stop moving when

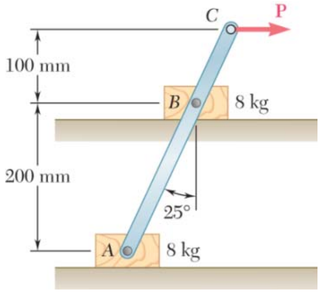
$$F_C = (F_B)_m$$

But $F_C = \mu_k N_C = 0.25 \dfrac{6000}{10 - x} = \dfrac{1500}{10 - x}$

and $(F_B)_m = \mu_s N_B = 0.30 \dfrac{9500 - 1550x}{10 - x} = \dfrac{2850 - 465x}{10 - x}$

Setting $F_C = (F_B)_m$: $1500 = 2850 - 465x$ $x = 2.90 \text{ ft}$ ◀

(*Note:* We have assumed that, once started, motion is continuous and uniform (no acceleration).)

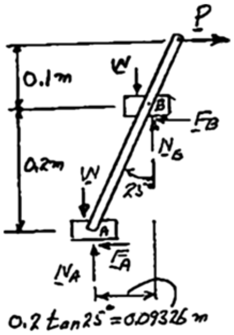


PROBLEM 8.43

Two 8-kg blocks *A* and *B* resting on shelves are connected by a rod of negligible mass. Knowing that the magnitude of a horizontal force **P** applied at *C* is slowly increased from zero, determine the value of *P* for which motion occurs, and what that motion is, when the coefficient of static friction between all surfaces is (*a*) $\mu_s = 0.40$, (*b*) $\mu_s = 0.50$.

SOLUTION

(*a*) $\underline{\mu_s = 0.40}$: Assume blocks slide to right.



$$W = mg = (8 \text{ kg})(9.81 \text{ m/s}^2) = 78.48 \text{ N}$$
$$F_A = \mu_s N_A$$
$$F_B = \mu_s N_B$$

$$+\uparrow \Sigma F_y = 0: \quad N_A + N_B - 2W = 0$$

$$N_A + N_B = 2W$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad P - F_A - F_B = 0$$

$$P = F_A + F_B = \mu_s (N_A + N_B) = \mu_s (2W) \qquad (1)$$
$$P = 0.40(2)(78.48 \text{ N}) = 62.78 \text{ N}$$

$$+\circlearrowright \Sigma M_B = 0: \quad P(0.1 \text{ m}) - (N_A - W)(0.09326 \text{ m}) + F_A(0.2 \text{ m}) = 0$$

$$(62.78)(0.1) - (N_A - 78.48)(0.09326) + (0.4)(N_B)(0.2) = 0$$

$$0.17326 N_A = 1.041$$

$$N_A = 6.01 \text{ N} > 0 \quad \text{OK}$$

System slides: $P = 62.8$ N ◀

(*b*) $\underline{\mu_s = 0.50}$: See part *a*.

Eq. (1): $P = 0.5(2)(78.48 \text{ N}) = 78.48 \text{ N}$

$$+\circlearrowright \Sigma M_B = 0: \quad P(0.1 \text{ m}) + (N_A - W)(0.09326 \text{ m}) + F_A(0.2 \text{ m}) = 0$$

$$(78.48)(0.1) + (N_A - 78.48)(0.09326) + (0.5)N_A(0.2) = 0$$

$$0.19326 N_A = -0.529$$

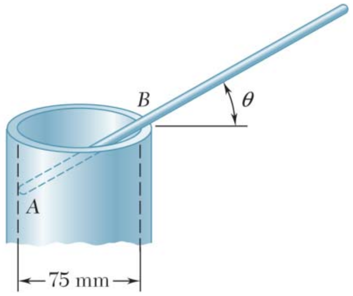
$$N_A = -2.73 \text{ N} < 0 \ \text{ uplift, rotation about } B$$

PROBLEM 8.43 (Continued)

For $N_A = 0$: $\circlearrowright \Sigma M_B = 0$: $P(0.1\text{ m}) - W(0.09326\text{ m}) = 0$

$$P = (78.48\text{ N})(0.09326\text{ m})/(0.1) = 73.19$$

System rotates about *B*: $P = 73.2\text{ N}$ ◀

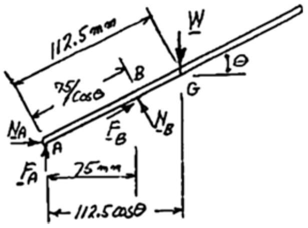


PROBLEM 8.44

A slender steel rod of length 225 mm is placed inside a pipe as shown. Knowing that the coefficient of static friction between the rod and the pipe is 0.20, determine the largest value of θ for which the rod will not fall into the pipe.

SOLUTION

Motion of rod impends down at *A* and to left at *B*.



$$F_A = \mu_s N_A \quad F_B = \mu_s N_B$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad N_A - N_B \sin\theta + F_B \cos\theta = 0$$

$$N_A - N_B \sin\theta + \mu_s N_B \cos\theta = 0$$

$$N_A = N_B(\sin\theta - \mu_s \cos\theta) \qquad (1)$$

$$+\!\uparrow \Sigma F_y = 0: \quad F_A + N_B \cos\theta + F_B \sin\theta - W = 0$$

$$\mu_s N_A + N_B \cos\theta + \mu_s N_B \sin\theta - W = 0 \qquad (2)$$

Substitute for N_A from Eq. (1) into Eq. (2):

$$\mu_s N_B(\sin\theta - \mu_s \cos\theta) + N_B \cos\theta + \mu_s N_B \sin\theta - W = 0$$

$$N_B = \frac{W}{(1-\mu_s^2)\cos\theta + 2\mu_s \sin\theta} = \frac{W}{(1-0.2^2)\cos\theta + 2(0.2)\sin\theta} \qquad (3)$$

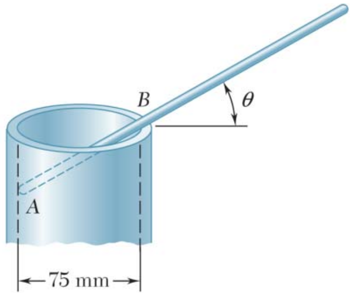
$$+\circlearrowleft \Sigma M_A = 0: \quad N_B\left(\frac{75}{\cos\theta}\right) - W(112.5\cos\theta) = 0$$

Substitute for N_B from Eq. (3), cancel *W*, and simplify to find

$$9.6\cos^3\theta + 4\sin\theta\cos^2\theta - 6.6667 = 0$$

$$\cos^3\theta(2.4 + \tan\theta) = 1.6667$$

Solve by trial & error: $\theta = 35.8° ◀$



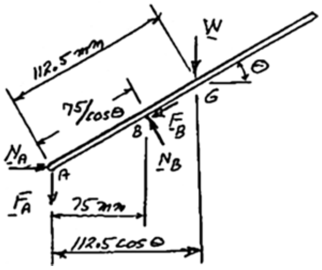
PROBLEM 8.45

In Problem 8.44, determine the smallest value of θ for which the rod will not fall out the pipe.

PROBLEM 8.44 A slender steel rod of length 225 mm is placed inside a pipe as shown. Knowing that the coefficient of static friction between the rod and the pipe is 0.20, determine the largest value of θ for which the rod will not fall into the pipe.

SOLUTION

Motion of rod impends up at A and right at B.



$$F_A = \mu_s N_A \qquad F_B = \mu_s N_B$$

$$\xrightarrow{+}\Sigma F_x = 0: \quad N_A - N_B \sin\theta - F_B \cos\theta = 0$$

$$N_A - N_B \sin\theta - \mu_s N_B \cos\theta = 0$$

$$N_A = N_B(\sin\theta + \mu_s \cos\theta) \tag{1}$$

$$+\!\uparrow \Sigma F_y = 0: \quad -F_A + N_B \cos\theta - F_B \sin\theta - W = 0$$

$$-\mu_s N_A + N_B \cos\theta - \mu_s N_B \sin\theta - W = 0 \tag{2}$$

Substitute for N_A from Eq. (1) into Eq. (2):

$$-\mu_s N_B(\sin\theta + \mu_s \cos\theta) + N_B \cos\theta - \mu_s N_B \sin\theta - W = 0$$

$$N_B = \frac{W}{(1-\mu_s^2)\cos\theta - 2\mu_s \sin\theta} = \frac{W}{(1-0.2^2)\cos\theta - 2(0.2)\sin\theta} \tag{3}$$

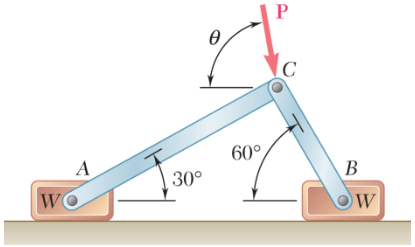
$$+\circlearrowleft \Sigma M_A = 0: \quad N_B\left(\frac{75}{\cos\theta}\right) - W(112.5\cos\theta) = 0$$

Substitute for N_B from Eq. (3), cancel W, and simplify to find

$$9.6\cos^3\theta - 4\sin\theta\cos^2\theta - 6.6667 = 0$$

$$\cos^3\theta(2.4 - \tan\theta) = 1.6667$$

Solve by trial + error: $\theta = 20.5°$ ◀

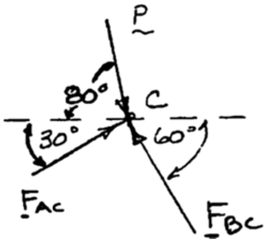


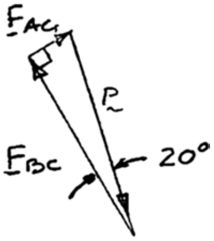
PROBLEM 8.46

Two slender rods of negligible weight are pin-connected at C and attached to blocks A and B, each of weight W. Knowing that $\theta = 80°$ and that the coefficient of static friction between the blocks and the horizontal surface is 0.30, determine the largest value of P for which equilibrium is maintained.

SOLUTION

FBD pin$C$:



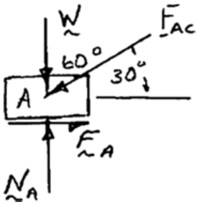


$$F_{AC} = P\sin 20° = 0.34202P$$

$$F_{BC} = P\cos 20° = 0.93969P$$

$\uparrow \Sigma F_y = 0$: $N_A - W - F_{AC}\sin 30° = 0$

or $N_A = W + 0.34202P\sin 30° = W + 0.171010P$



FBD block$A$: $\longrightarrow \Sigma F_x = 0$: $F_A - F_{AC}\cos 30° = 0$

or $F_A = 0.34202P\cos 30° = 0.29620P$

For impending motion at A: $F_A = \mu_s N_A$

Then $N_A = \dfrac{F_A}{\mu_s}$: $W + 0.171010P = \dfrac{0.29620}{0.3}P$

or $P = 1.22500W$

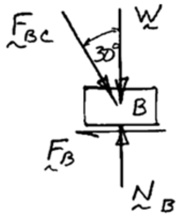
$\uparrow \Sigma F_y = 0$: $N_B - W - F_{BC}\cos 30° = 0$

$$N_B = W + 0.93969P\cos 30° = W + 0.81380P$$

$\longrightarrow \Sigma F_x = 0$: $F_{BC}\sin 30° - F_B = 0$

$$F_B = 0.93969P\sin 30° = 0.46985P$$

PROBLEM 8.46 (Continued)



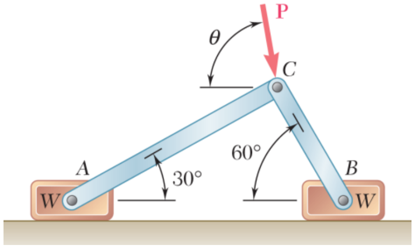
FBD block *B*:

For impending motion at *B*: $F_B = \mu_s N_B$

Then $N_B = \dfrac{F_B}{\mu_s}$: $W + 0.81380P = \dfrac{0.46985P}{0.3}$

or $P = 1.32914W$

Thus, maximum *P* for equilibrium $P_{\max} = 1.225W$ ◀



PROBLEM 8.47

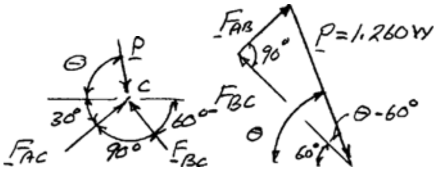
Two slender rods of negligible weight are pin-connected at *C* and attached to blocks *A* and *B*, each of weight *W*. Knowing that $P = 1.260W$ and that the coefficient of static friction between the blocks and the horizontal surface is 0.30, determine the range of values of θ, between 0 and 180°, for which equilibrium is maintained.

SOLUTION

AC and *BC* are two-force members

Free body: Joint *C*

Force triangle:



From Force triangle:

$$F_{AB} = P\sin(\theta - 60°) = 1.26W\sin(\theta - 60°) \qquad (1)$$

$$F_{BC} = P\cos(\theta - 60°) = 1.26W\cos(\theta - 60°) \qquad (2)$$

We shall, in turn, seek θ corresponding to impending motion of each block

For motion of *A* impending to left

from solution of Prob. 8.46: $F_{AC} = 0.419W$

EQ (1):

$$F_{AC} = 0.419W = 1.26W\sin(\theta - 60°)$$

$$\sin(\theta - 60°) = 0.33254$$

$$\theta - 60° = 19.423°$$

$$\theta = 79.42° \quad \triangleleft$$

For motion of *B* impending to right.

from solution of Prob. 8.46: $F_{BC} = 1.249W$

Eq. (2):

$$F_{BC} = 1.249W = 1.26W\cos(\theta - 60°)$$

$$\cos(\theta - 60°) = 0.99127$$

$$\theta - 60° = \pm 7.58°$$

$$\theta - 60° = +7.58° \qquad \theta = 67.6° \triangleleft$$

$$\theta - 60° = -7.58° \qquad \theta = 52.4° \triangleleft$$

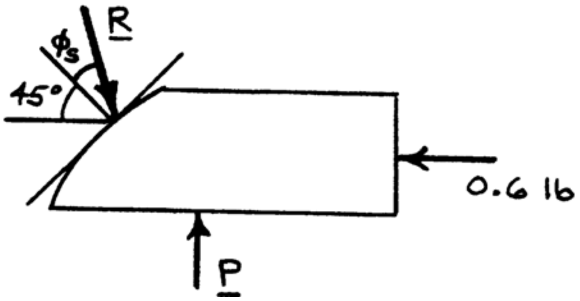
PROBLEM 8.60

The spring of the door latch has a constant of 1.8 lb/in. and in the position shown exerts a 0.6-lb force on the bolt. The coefficient of static friction between the bolt and the strike plate is 0.40; all other surfaces are well lubricated and may be assumed frictionless. Determine the magnitude of the force **P** required to start closing the door.

SOLUTION

Free body: Bolt



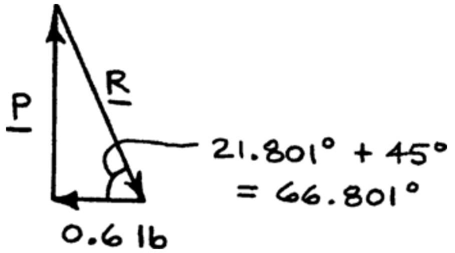
R
ϕ_s
45°
0.6 lb
P

$$\mu_s = 0.40$$

$$\phi_s = \tan^{-1} 0.40$$

$$= 21.801°$$

Force triangle:



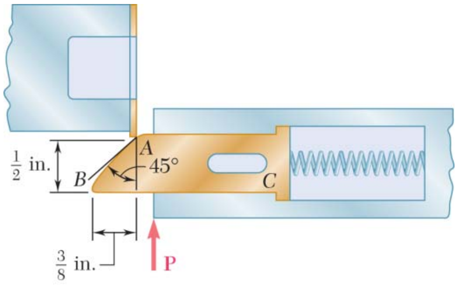
P
R
21.801° + 45°
= 66.801°
0.6 lb

From force triangle,

$$P = (0.6 \text{ lb}) \tan 66.801°$$

$$P = 1.39997 \text{ lb}$$

$P = 1.400$ lb ◀



PROBLEM 8.61

In Problem 8.60, determine the angle that the face of the bolt should form with the line *BC* if the force **P** required to close the door is to be the same for both the position shown and the position when *B* is almost at the strike plate.

PROBLEM 8.60 The spring of the door latch has a constant of 1.8 lb/in. and in the position shown exerts a 0.6-lb force on the bolt. The coefficient of static friction between the bolt and the strike plate is 0.40; all other surfaces are well lubricated and may be assumed frictionless. Determine the magnitude of the force **P** required to start closing the door.

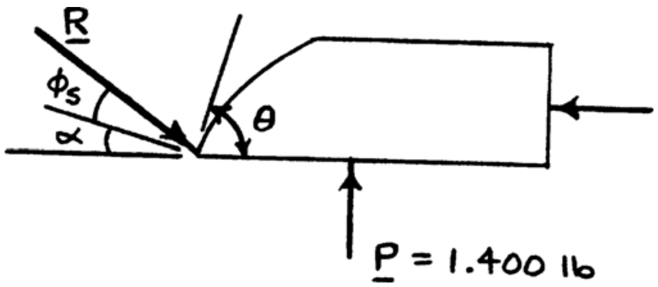
SOLUTION

For position shown in figure:

From Prob. 8.60: $P = 1.400 \text{ lb}$

For position when *B* reaches strike plate:

Free body: Bolt



$$\mu_s = 0.40$$

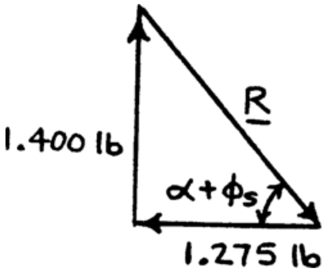
$$\phi_s = \tan^{-1} 0.40 = 21.801°$$

$$F = 0.6 \text{ lb} + kx$$

$$= 0.6 \text{ lb} + (1.8 \text{ lb/in.})\left(\frac{3}{8} \text{ in.}\right)$$

$$= 1.275 \text{ lb}$$

Force triangle:



From force triangle,

$$\tan(\alpha - \phi_s) = \frac{1.400 \text{ lb}}{1.275 \text{ lb}} = 1.09804$$

$$\alpha + \phi_s = 47.675°$$

$$\alpha = 47.675° - 21.801° = 25.874°$$

$$\theta = 180° - 90° - \alpha = 90° - \alpha = 90° - 25.874° \qquad \theta = 64.1° ◀$$

B_y

$$+\circlearrowleft \Sigma M_B = 0: \quad (1400\text{ lb})(20\text{ in}) - A_y(70\text{ in}) = 0$$

$$A_y = 400\text{ lb}$$

$$\xrightarrow{+} \Sigma F_y = 0: \quad A_y + B_y - 1400\text{ lb} = 0$$

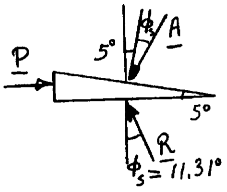
$$B_y = 1400 - 400 = 1000\text{ lb}$$

Free body: Wedge

(Assume machine will not move)

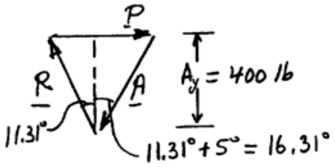
$$\mu_s = 0.20, \quad \phi_s = \tan 0.20 = 11.31°$$

We know that $A_y = 400\text{ lb}$



P
5°
ϕ_s
A
5°
R
$\phi_s = 11.31°$

Force triangle:



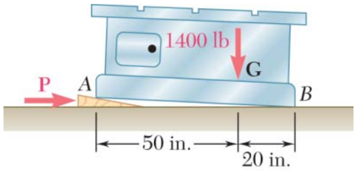
P
R
A
$A_y = 400$ lb
11.31°
11.31° + 5° = 16.31°

(*a*) $$P = (400\text{ lb})(\tan 11.31° + \tan 16.31°) = 197.0\text{ lb}$$ $\mathbf{P} = 197.0\text{ lb} \longrightarrow$ ◀

(*b*) Total maximum friction force at *A* and *B*:

$$F_m = \mu_c W = 0.20(1400\text{ lb}) = 280\text{ lb}$$

Since $P < F_m$: Machine base will not move ◀



PROBLEM 8.63

Solve Problem 8.62 assuming that the wedge is to be forced under the machine base at *B* instead of *A*.

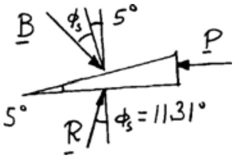
PROBLEM 8.62 A 5° wedge is to be forced under a 1400-lb machine base at *A*. Knowing that the coefficient of static friction at all surfaces is 0.20, (*a*) determine the force **P** required to move the wedge, (*b*) indicate whether the machine base will move.

SOLUTION

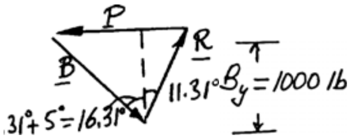
See solution to Prob. 8.62 for F.B.D. of machine base and determination of $B_y = 1000$ lb.

Free body: Wedge (Assume machine will not move)

$$\mu_s = 0.20 \qquad \phi_s = \tan^{-1} 0.20 = 11.31°$$



Force triangle:



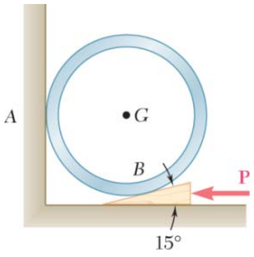
$$P = (1000 \text{ lb})(\tan 11.31° + \tan 16.31°) = 493 \text{ lb}$$

Total maximum friction force at *A* and *B*:

$$F_m = \mu_s W = 0.20(1400 \text{ lb}) = 280 \text{ lb} < 493 \text{ lb}$$

(*b*) Since $P > F_m$, machine base will move with wedge ◀

(*a*) We then have $P = F_m$, **P** = 280 lb ← ◀



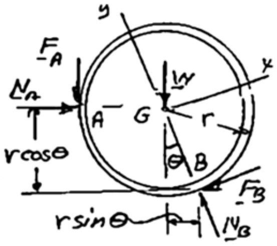
PROBLEM 8.64

A 15° wedge is forced under a 50-kg pipe as shown. The coefficient of static friction at all surfaces is 0.20. (*a*) Show that slipping will occur between the pipe and the vertical wall. (*b*) Determine the force **P** required to move the wedge.

SOLUTION

Free body: Pipe

$$+\circlearrowleft \Sigma M_B = 0: \quad Wr\sin\theta + F_A r(1+\sin\theta) - N_A r\cos\theta = 0$$



Assume slipping at A:

$$F_A = \mu_s N_A$$

$$N_A\cos\theta - \mu_s N_A(1+\sin\theta) = W\sin\theta$$

$$N_A = \frac{W\sin\theta}{\cos\theta - \mu_s(1+\sin\theta)}$$

$$N_A = \frac{W\sin 15^\circ}{\cos 15^\circ - (0.20)(1+\sin 15^\circ)}$$

$$= 0.36241W$$

$$+\nearrow \Sigma F_x = 0: \quad -F_B - W\sin\theta - F_A\sin\theta + N_A\cos\theta = 0$$

$$F_B = N_A\cos\theta - \mu_s N_A\sin\theta - W\sin\theta$$

$$F_B = 0.36241W\cos 15^\circ - 0.20(0.36241W)\sin 15^\circ - W\sin 15^\circ$$

$$F_B = 0.072482W$$

$$+\nwarrow \Sigma F_y = 0: \quad N_B - W\cos\theta - F_A\cos\theta - N_A\sin\theta = 0$$

$$N_B = N_A\sin\theta + \mu_s N_A\cos\theta + W\cos\theta$$

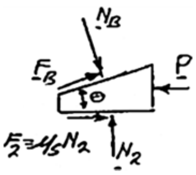
$$N_B = (0.36241W)\sin 15^\circ + 0.20(0.36241W)\cos 15^\circ + W\cos 15^\circ$$

$$N_B = 1.12974W$$

Maximum available: $F_B = \mu_s N_B = 0.22595W$

(*a*) We note that $F_B < F_{\max}$ No slip at B ◀

(*b*) Free body: Wedge $+\uparrow \Sigma F_y = 0: \quad N_2 - N_B\cos\theta + F_B\sin\theta = 0$



$$N_2 = N_B\cos\theta - F_B\sin\theta$$

$$N_2 = (1.12974W)\cos 15^\circ - (0.07248W)\sin 15^\circ$$

$$N_2 = 1.07249W$$

PROBLEM 8.64 (Continued)

$$\xrightarrow{+} \Sigma F_x = 0: \quad F_B \cos\theta + N_B \sin\theta + \mu_s N_2 - P = 0$$

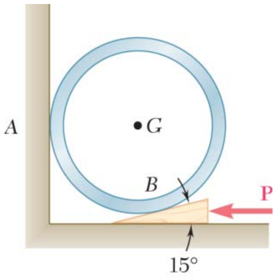
$$P = F_B \cos\theta + N_B \sin\theta + \mu_s N_2$$

$$P = (0.07248W)\cos 15° + (1.12974W)\sin 15° + 0.2(1.07249W)$$

$$P = 0.5769W$$

$$W = mg: \quad P = 0.5769(50 \text{ kg})(9.81 \text{ m/s}^2)$$

$\mathbf{P} = 283 \text{ N} \longleftarrow$ ◀

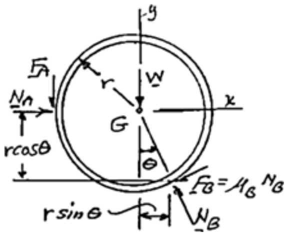


PROBLEM 8.65

A 15° wedge is forced under a 50-kg pipe as shown. Knowing that the coefficient of static friction at both surfaces of the wedge is 0.20, determine the largest coefficient of static friction between the pipe and the vertical wall for which slipping will occur at *A*.

SOLUTION

Free body: Pipe



$$+\circlearrowleft \Sigma M_A = 0: \quad N_B r\cos\theta - \mu_B N_B r - (\mu_B N_B \sin\theta)r - Wr = 0$$

$$N_B = \frac{W}{\cos\theta - \mu_B(1+\sin\theta)}$$

$$N_B = \frac{W}{\cos 15° - 0.2(1+\sin 15°)}$$

$$N_B = 1.4002W$$

$$\xrightarrow{+} \Sigma F_x = 0: \quad N_A - N_B \sin\theta - \mu_B N_B \cos\theta = 0$$

$$N_A = N_B(\sin\theta + \mu_B\cos\theta)$$

$$= (1.4002W)(\sin 15° + 0.2\times\cos 15°)$$

$$N_A = 0.63293W$$

$$+\uparrow \Sigma F_y = 0: \quad -F_A - W + N_B\cos\theta - \mu_B N_B \sin\theta = 0$$

$$F_A = N_B(\cos\theta - \mu_B\sin\theta) - W$$

$$F_A = (1.4002W)(\cos 15° - 0.2\times\sin\theta) - W$$

$$F_A = 0.28001W$$

For slipping at *A*: $F_A = \mu_A N_A$

$$\mu_A = \frac{F_A}{N_A} = \frac{0.28001W}{0.63293W}$$

$\mu_A = 0.442$ ◀

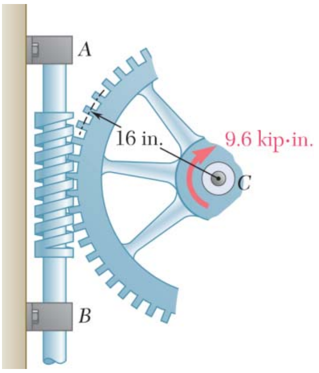
$$\text{Torque} = 16.05 \text{ lb} \cdot \text{ft} \blacktriangleleft$$



PROBLEM 8.70

In Problem 8.69, determine the couple that must be applied to shaft *AB* in order to rotate the large gear clockwise.

PROBLEM 8.69 The square-threaded worm gear shown has a mean radius of 2 in. and a lead of 0.5 in. The large gear is subjected to a constant clockwise couple of 9.6 kip · in. Knowing that the coefficient of static friction between the two gears is 0.12, determine the couple that must be applied to shaft *AB* in order to rotate the large gear counterclockwise. Neglect friction in the bearings at *A*, *B*, and *C*.

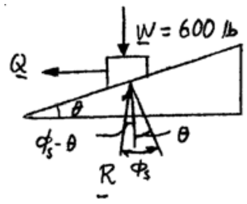
SOLUTION

Free body: Large gear

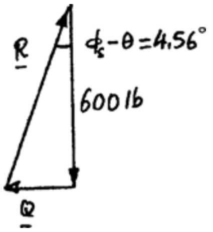
See solution to Prob. 8.69. We find $W = 600$ lb

Block-and-incline analysis of worm gear

From Prob. 8.69 we have $\theta = 2.28°$ and $\phi_s = 6.84°$. Since $\theta < \phi_s$, gear is self-looking and a torque must be applied to it to rotate large gear clockwise.



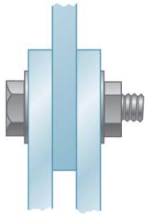
$$\phi_s - \theta = 6.84° - 2.28° = 4.56°$$



$$Q = (600 \text{ lb}) \tan 4.56°$$
$$= 47.85 \text{ lb}$$

$$\text{Torque} = Q_r = (47.85 \text{ lb})(2 \text{ in.})$$
$$= 95.70 \text{ lb} \cdot \text{in.}$$

$$\text{Torque} = 7.98 \text{ lb} \cdot \text{ft} \blacktriangleleft$$

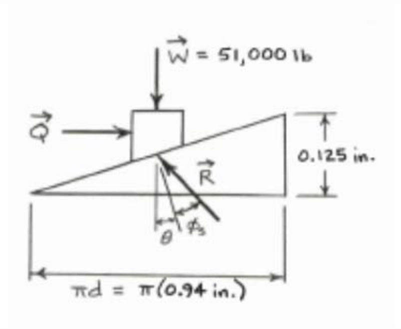


PROBLEM 8.71

High-strength bolts are used in the construction of many steel structures. For a 1-in.-nominal-diameter bolt, the required minimum bolt tension is 51 kips. Assuming the coefficient of friction to be 0.30, determine the required couple that should be applied to the bolt and nut. The mean diameter of the thread is 0.94 in., and the lead is 0.125 in. Neglect friction between the nut and washer, and assume the bolt to be square-threaded.

SOLUTION

Block-and-incline analysis of bolt and nut:



$\vec{W}$ = 51,000 lb
$\vec{Q}$
$\vec{R}$
0.125 in.
θ
ϕ_s
$\pi d = \pi(0.94 \text{ in.})$

$$\theta = \tan^{-1}\frac{0.125 \text{ in.}}{(0.94 \text{ in.})\pi}$$

$$= 2.4238°$$

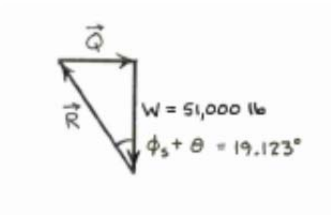
$$\phi_s = \tan^{-1}\mu_s = \tan^{-1} 0.30$$

$$\phi_s = 16.6992°$$

From force triangle:

$$Q = (51{,}000 \text{ lb}) \tan(19.123°)$$

$$Q = 17{,}683.3 \text{ lb}$$



$\vec{Q}$
$\vec{R}$
W = 51,000 lb
$\phi_s + \theta = 19.123°$

$$\text{Torque} = Qr = Q\frac{d}{2}$$

$$= (17{,}683.3 \text{ lb})\frac{0.94 \text{ in.}}{2}$$

$$= 8311.1 \text{ lb} \cdot \text{in.}$$

$$\text{Torque} = 693 \text{ lb} \cdot \text{ft} \blacktriangleleft$$

SOLUTION

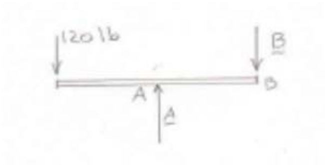
Free body: Lower Jaw



$$+\circlearrowleft \Sigma M_B = 0: \quad (120 \text{ lb})(10 \text{ in.}) - A(5 \text{ in.}) = 0$$

$$A = 240 \text{ lb}$$

$$+\uparrow \Sigma F_y = 0: \quad A - B - 120 \text{ lb} = 0$$

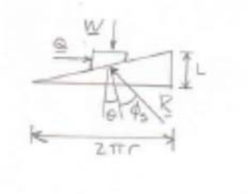
$$B = 120 \text{ lb}$$

Since $B < A$, Screw *A* should be adjusted first. ◀

Block-and-incline analysis of screw *B*:

For double-threaded screw: Lead = 2 × Pitch

$$L = 2(0.08 \text{ in.}) = 0.16 \text{ in.}$$

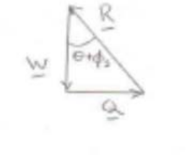


$$\tan\theta = \frac{L}{2\pi r} = \frac{0.16 \text{ in.}}{2\pi(0.25 \text{ in.})} = 0.101859 \quad \theta = 5.816^\circ$$

PROBLEM 8.74 (Continued)

$\phi_s = \tan^{-1}\mu_s = \tan^{-1}(0.35)$

$\phi_s = 19.29^\circ \ \theta + \phi_s = 25.11^\circ$



$Q = W\tan(25.11^\circ)$

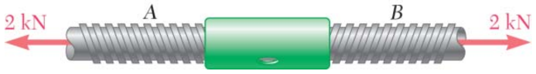
$Q = (120 \text{ lb})\tan 25.11^\circ$

$Q = 56.238 \text{ lb}$

$\text{Torque} = Qr = (56.238 \text{ lb})(0.25 \text{ in.})$ $\qquad \text{Torque} = 14.06 \text{ lb}\cdot\text{in.}$ ◀

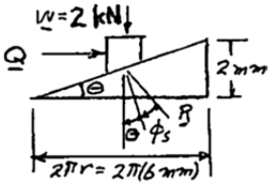
PROBLEM 8.75

The ends of two fixed rods *A* and *B* are each made in the form of a single-threaded screw of mean radius 6 mm and pitch 2 mm. Rod *A* has a right-handed thread and rod *B* has a left-handed thread. The coefficient of static friction between the rods and the threaded sleeve is 0.12. Determine the magnitude of the couple that must be applied to the sleeve in order to draw the rods closer together.



SOLUTION

To draw rods together:



Screw at *A*

$$\tan\theta = \frac{2\text{ mm}}{2\pi(6\text{ mm})}$$

$$\theta = 3.037°$$

$$\phi_s = \tan^{-1} 0.12$$

$$= 6.843°$$

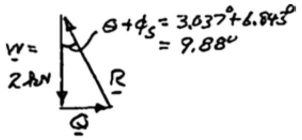
$$Q = (2\text{ kN})\tan 9.88°$$

$$= 348.3\text{ N}$$

$$\text{Torque at } A = Qr$$

$$= (348.3\text{ N})(0.006\text{ m})$$

$$= 2.0898\text{ N}\cdot\text{m}$$



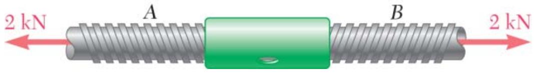
Same torque required at *B*

Total torque $= 4.18\text{ N}\cdot\text{m}$ ◀

PROBLEM 8.76

Assuming that in Problem 8.75 a right-handed thread is used on *both* rods *A* and *B*, determine the magnitude of the couple that must be applied to the sleeve in order to rotate it.

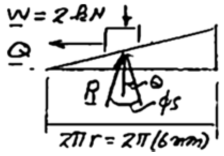
PROBLEM 8.75 The ends of two fixed rods *A* and *B* are each made in the form of a single-threaded screw of mean radius 6 mm and pitch 2 mm. Rod *A* has a right-handed thread and rod *B* has a left-handed thread. The coefficient of static friction between the rods and the threaded sleeve is 0.12. Determine the magnitude of the couple that must be applied to the sleeve in order to draw the rods closer together.



SOLUTION

From the solution to Problem 8.70,

$$\text{Torque at } A = 2.09 \text{ N}\cdot\text{m}$$



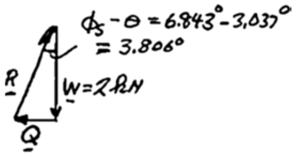
Screw at *B*: Loosening

$$\theta = 3.037°$$

$$\phi_s = 6.843°$$

$$Q = (2 \text{ kN}) \tan 3.806°$$

$$= 133.1 \text{ N}$$



$$\text{Torque at } B = Qr$$

$$= (133.1 \text{ N})(0.006 \text{ m})$$

$$= 0.79860 \text{ N}\cdot\text{m}$$

$$\text{Total torque } = 2.0848 \text{ N}\cdot\text{m} + 0.79860 \text{ N}\cdot\text{m}$$

Total torque $= 2.89 \text{ N}\cdot\text{m}$ ◀

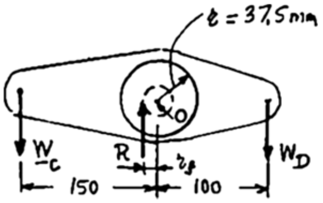
100 mm

PROBLEM 8.77

A lever of negligible weight is loosely fitted onto a 75-mm-diameter fixed shaft. It is observed that the lever will just start rotating if a 3-kg mass is added at C. Determine the coefficient of static friction between the shaft and the lever.

SOLUTION



r = 37.5 mm
O
W_C
R
r_f
W_D
150
100

$$+\circlearrowleft \Sigma M_O = 0: \quad W_C(150) - W_D(100) - Rr_f = 0$$

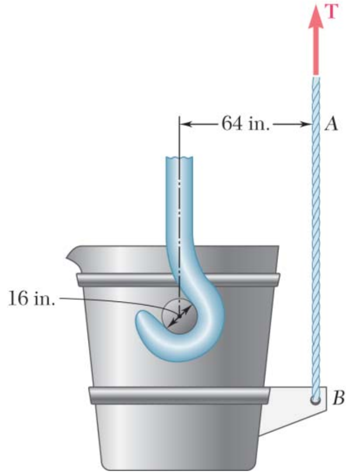
But
$$W_C = (23\text{ kg})(9.81\text{ m/s}^2)$$
$$W_D = (30\text{ kg})(9.81\text{ m/s}^2)$$
$$R = W_C + W_D = (53\text{ kg})(9.81)$$

Thus, after dividing by 9.81,

$$23(150) - 30(100) - 53\,r_f = 0$$
$$r_f = 8.49\text{ mm}$$

But
$$\mu_s \approx \frac{r_f}{r} = \frac{8.49\text{ mm}}{37.5\text{ mm}}$$

$\mu_s \approx 0.226$ ◀

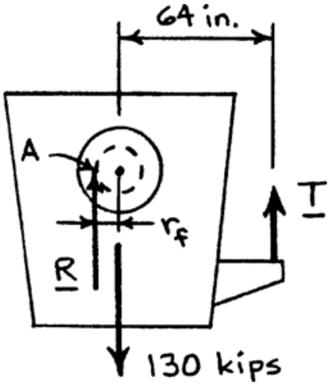


PROBLEM 8.78

A hot-metal ladle and its contents weigh 130 kips. Knowing that the coefficient of static friction between the hooks and the pinion is 0.30, determine the tension in cable *AB* required to start tipping the ladle.

SOLUTION

Free body: Ladle



$$\sin\phi_s \approx \tan\phi_s = \mu_s = 0.30$$

$$r_{\text{bearing}} = 8 \text{ in.}$$

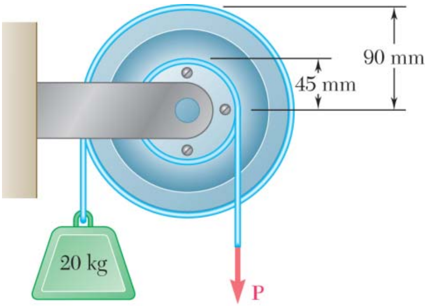
$$r_f = r_{\text{bearing}} \sin\phi_s = (8 \text{ in.})(0.30) = 2.4 \text{ in.}$$

R is tangent to friction circle at *A*.

$$+\circlearrowleft \Sigma M_A = 0: \quad T(64 \text{ in.} + r_f) - (130 \text{ kips})r_f = 0$$

$$T(64 + 2.4) - (130)(2.4) = 0$$

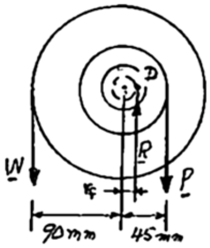
$$T = 4.70 \text{ kips} \blacktriangleleft$$



PROBLEM 8.79

The double pulley shown is attached to a 10-mm-radius shaft that fits loosely in a fixed bearing. Knowing that the coefficient of static friction between the shaft and the poorly lubricated bearing is 0.40, determine the magnitude of the force **P** required to start raising the load.

SOLUTION



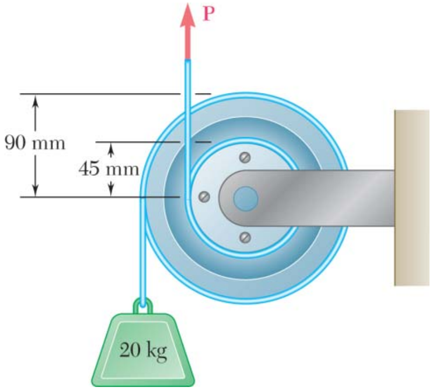
$$+\circlearrowright \Sigma M_D = 0: \quad P(45 - r_f) - W(90 + r_f) = 0$$

$$P = W\frac{90 + r_f}{45 - r_f}$$

$$= (196.2\text{ N})\frac{90\text{ mm} + 4\text{ mm}}{45\text{ mm} - 4\text{ mm}}$$

$$P = 449.82\text{ N}$$

$P = 450$ N ◀

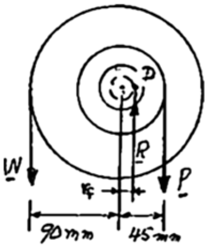


PROBLEM 8.80

The double pulley shown is attached to a 10-mm-radius shaft that fits loosely in a fixed bearing. Knowing that the coefficient of static friction between the shaft and the poorly lubricated bearing is 0.40, determine the magnitude of the force **P** required to start raising the load.

SOLUTION

Find **P** required to start raising load



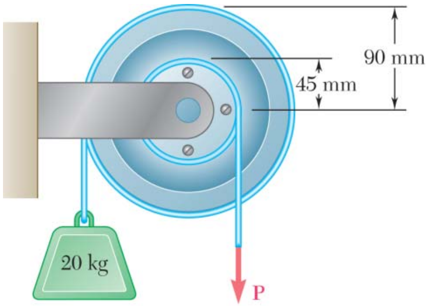
$$+\circlearrowright \Sigma M_D = 0: \quad P(45 - r_f) - W(90 - r_f) = 0$$

$$P = W\frac{90 - r_f}{45 - r_f}$$

$$= (196.2\text{ N})\frac{90\text{ mm} - 4\text{ mm}}{45\text{ mm} - 4\text{ mm}}$$

$$P = 411.54\text{ N}$$

$P = 412$ N ◀

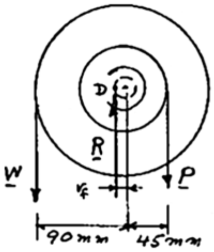


PROBLEM 8.81

The double pulley shown is attached to a 10-mm-radius shaft that fits loosely in a fixed bearing. Knowing that the coefficient of static friction between the shaft and the poorly lubricated bearing is 0.40, determine the magnitude of the smallest force **P** required to maintain equilibrium.

SOLUTION

Find smallest **P** to maintain equilibrium



$$+\circlearrowright \Sigma M_D = 0: \quad P(45 + r_f) - W(90 - r_f) = 0$$

$$P = W\frac{90 - r_f}{45 + r_f}$$

$$= (196.2\text{ N})\frac{90\text{ mm} - 4\text{ mm}}{45\text{ mm} + 4\text{ mm}}$$

$$P = 344.35\text{ N}$$

$P = 344$ N ◀

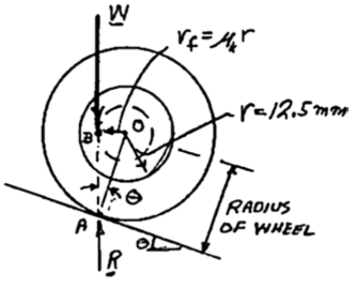
PROBLEM 8.85

A scooter is to be designed to roll down a 2 percent slope at a constant speed. Assuming that the coefficient of kinetic friction between the 25-mm-diameter axles and the bearings is 0.10, determine the required diameter of the wheels. Neglect the rolling resistance between the wheels and the ground.

SOLUTION



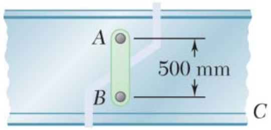
$$\tan\theta = \frac{2}{100} = 0.02$$

Since a scooter rolls at constant speed, each wheel is in equilibrium. Thus, **W** and **R** must have a common line of action tangent to the friction circle.

$$r_f = \mu_k r = (0.10)(12.5\text{ mm})$$
$$= 1.25\text{ mm}$$

$$OA = \frac{OB}{\tan\theta} = \frac{r_f}{\tan\theta} = \frac{1.25\text{ mm}}{0.02}$$
$$= 62.5\text{ mm}$$

$$\text{Diameter of wheel} = 2(OA) = 125.0\text{ mm} \blacktriangleleft$$

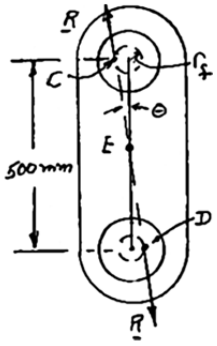


PROBLEM 8.86

The link arrangement shown is frequently used in highway bridge construction to allow for expansion due to changes in temperature. At each of the 60-mm-diameter pins *A* and *B* the coefficient of static friction is 0.20. Knowing that the vertical component of the force exerted by *BC* on the link is 200 kN, determine (*a*) the horizontal force that should be exerted on beam *BC* to just move the link, (*b*) the angle that the resulting force exerted by beam *BC* on the link will form with the vertical.

SOLUTION

Bearing:

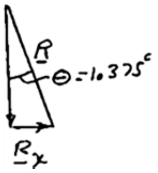


$$r = 30 \text{ mm}$$

$$r_f = \mu_s r$$
$$= 0.20(30 \text{ mm})$$
$$= 6 \text{ mm}$$

Resultant forces **R** must be tangent to friction circles at Points *C* and *D*.

(*a*)



$$R_y = \text{Vertical component} = 200 \text{ kN}$$

$$R_x = R_y \tan\theta$$
$$= (200 \text{ kN}) \tan 1.375°$$
$$= 4.80 \text{ kN}$$

Horizontal force = 4.80 kN ◀
